The great main point is that the railroads to-day are the ones that have the power of appeal, and use the power of appeal, and use it to the Commerce Court, to the district court, to the Supreme Court, to any court. When you present the question to your body of shippers and say, "Gentlemen, you have the right to petition the Interstate Commerce Commission in regard to these terminal charges, or bridge charges, or whatever they may be, but if the Interstate Commerce Commission says it does not come within the purview of the interstate-commerce law, then, gentlemen, you are out of court. If they say it does come within the jurisdiction of the Interstate Commerce Commission, then, if they are wrong in that decision, the railroads could have appealed." This is not equality for the shippers. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. BROUSSARD. Mr. Chairman, I have some amendments I want to offer. This first amendment is contingent upon the defeat of the amendment introduced by the gentleman from Missouri [Mr. BORLAND], and inasmuch as it is decided to be pending, and I have nothing to conceal in my efforts, I would be satisfied to have it reported now for information and considered as pending.

The CHAIRMAN. The gentleman from Louisiana [Mr. BROUSSARD] offers an amendment, which will be considered as pending. The Clerk will report it.

The Clerk read as follows:

On page 21, line 11, after the word "thirteen," strike out the comma and insert a period. Strike out, after said period, the balance of page 21 and all of pages 22, 23, 24, and strike out all of that part of page 25 up to and including line 17 and insert in lieu thereof the following: "And no court in the United States shall entertain jurisdiction of any suit to enforce, suspend, set aside, in whole or in part, any order of the Interstate Commerce Commission, but such orders of said commission shall be final as to questions of law as well as to questions of fact."

Mr. SIMS. Mr. Chairman, I make the point of order against all of this amendment as legislation upon what the courts can do or can not do in the future, because certainly it is not within the proper legislative provisions of this appropriation bill, made in order by the rule.

The CHAIRMAN. The Chair will reserve his decision until the amendment comes up for consideration. The Chair understands this amendment will not be offered if the other is adopted.

Mr. BROUSSARD. If the other amendment is adopted, then of course everybody has an equal chance, and I will withdraw this one. If the other is defeated, then I propose to press this amendment.

Mr. SIMS. If the amendment which was discussed by the

gentleman from Missouri [Mr. BORLAND] is adopted, then you do not propose to offer yours?

Mr. BROUSSARD. I do not.

Mr. SIMS. I want to make the point of order in time.

The CHAIRMAN. The point of order will be considered as made.

Mr. SIMS. If the gentleman has other amendments to offer, I shall be glad to have him offer them as he did this, and let us know what they are.

Mr. BROUSSARD. This is all. The gentleman from Illinois offered one amendment which I intended to offer.

Mr. SIMS. I did not know how many the gentleman intended to offer. I thought he had about four.

Mr. BROUSSARD. Mr. Chairman, I can use some of my time now.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana.

Mr. BROUSSARD. Mr. Chairman, this controversy over the Commerce Court has been going on ever since the creation of that court. There never has been a time when the lines of gentlemen fighting for and against the continuation of that court could be outlined with certainty until this very moment. As soon as the decision to which the gentleman from Kansas referred was announced by the Commerce Court and was reviewed by the Supreme Court of the United States the shippers of the country, who over the protest of every railroad in the country had been solely responsible for the creation of the Commerce Court, commenced their appeal to Congress by petition to give them an equal right with the railroads under the law. They came here and they found that there were two committees which claimed jurisdiction over this subject matter. They came here not by ones or tens or dozens, but by tens of thousands to petition Congress. Representative merchants, men of business, shippers—all came from every quarter of this Republic. They came from New Orleans, Boston, San Francisco, New York, Chicago, Philadelphia, St. Louis, Kansas City, and everywhere. They did not say, as my friend interprets the situation, that the Commerce Court had undertaken to override the work of the Interstate Commerce Commission, but they said that the Commerce Court was intended to give them their day in court and that Congress had permanently denied them that right. Scarcely had that decision been printed in the newspapers when the gentleman from Missouri had a bill before the Judiciary Committee which is the basis and wording of the resolution upon which I asked him to speak and in whose behalf he had spoken before the Judiciary Committee. At that time I was a member of the Interstate and Foreign Commerce Committee, which had reported the bill creating that court, and that very day I had a bill which I was trying to get out of the committee to give the shippers of the country an equal chance with the railroads. From that day to this we have fought, in and out. But now the proposition comes in this wise: The resolution means that, whether you maintain the Commerce Court or whether you vest the jurisdiction in the district courts of the United States, the shipper may be permitted, upon questions of law, to enter any court that the railroads are permitted to enter.

The second proposition I have is that if you will not give that right to the shipper, then take that right also from the railroads. You should align yourselves one way or the other on the proposition. What right has a corporation to be permitted to go into courts where the shipper is not permitted to go? Why do you insist upon giving the railroads the right to walk into the Commerce Court as they have been doing into the district court as is proposed in this bill unless the shipper also is given an equal opportunity to have an interpretation of the law involved in the order issued by the commission? I say the shipper ought to have his day in court, and if you say he shall not have it, then the railroads ought not to have it.

So I have offered two propositions, one to vest the jurisdiction in the district court, or the circuit court, or the Commerce Court, or in any other court that a railroad may go into, so as to have the law of the commission interpreted; that if the railroads may go into court to have the law interpreted the shipper may likewise step into that same court and have the law of the commission's order interpreted when the order is against him. If you will not give the shipper that right, when he alone is responsible for the creation of the Commerce Court, why will you give the same right to the railroads? Have they more rights than the shippers? Why will you give the right to the steamboat companies? Why will you give the right to the steamship companies, of which we hear so much about their controlling the transportation all around our 7,000 miles of coast line to the exclusion of every other country? Why should they have the right to go into court and your constituents from Indiana and mine from New Orleans not have the same right?

God knows they have been driven out of business time and time again over the protest of the commission of Louisiana, of the Board of Trade of New Orleans, and every commercial body in the State, just simply because the Interstate Commerce Commission said, "No, we will not give you an order." An order of the Interstate Commerce Commission only lasts for 24 months, and under the old order of things it took the court more than 24 months to bring a case to a final decision, so that in many cases no result at all beneficial to the people was reached and the commission's order was absolutely nullified by the delays of the court in the trial of those orders, provoked by the carriers, to which the shippers were ever excluded, to the profit of the carrier and the confusion of the shipper, whether he was an individual or a community.

It all amounts to this, and I predict now that if you adopt this proposition you will not have any order of the commission not consented to by the railroads that will ever become effective. Why do I say that? I say that because I have talked with the Attorney General and have gone over the facts with him, and he says that the Interstate Commerce Commission's order is dead unless the railroad consents to it, and otherwise if any one of the 85 district judges in this Republic signs an injunction.

Why do I say this? Because the Interstate Commerce Commission says it. They have said it, they have published it. This is true if there can be found in the country a judge along the line of the traffic from the point of shipment to the point of destination who will sign an injunction against the shipper who commenced action, and he might as well abandon the suit, and the shipper might as well become ready to pay the railroad rates demanded, in the face of the decision of the orders of the Interstate Commerce Commission.

Now, I am putting this proposition fairly before you. I have no interest in the matter beyond the business interest of the city that stands at the mouth of the Mississippi River, which we believe, perhaps erroneously, will be the great gateway of the great valley when the Panama Canal is opened in the next 24 months. I have no interest in the matter except the demand of the individual shippers and commercial organizations of the city of New Orleans, of the railroad commission of my State, of Arkansas and of other Southern States, of the people living in the great Mississippi Valley, and of Kansas City, St. Louis, and every large town clear up the River to the Great Lakes demanding that if there is going to be any appeal from the findings of the Interstate Commerce Commission the shipper may come in equally and have an equal opportunity with the carriers—railroad and all.

Who stands here as the particular representatives of the carriers of the country? Who are standing as their spokesmen? Let me read you just one letter showing that there is nobody. You can not find in any of the hearings before the Committee on Interstate and Foreign Commerce, or the Judiciary Committee, or any other committee, one solitary shipper anywhere in the United States defending the abolition of this court.

You will find that they want the court abolished unless they themselves are given an equal opportunity with the railroads as the carriers, so they likewise can go before the courts upon questions of law.

Let me show you how the railroads view it. I have here a letter from the vice president of the New York, New Haven & Hartford Railroad Co. Let me show you how he looks at the matter as a railroad man and as a citizen:

I have thought of you frequently during these last months, and of what it seems to me an unwise and unjust action by Congress in attempting to terminate the Commerce Court. From the standpoint of a railroad man perhaps I ought to be glad that we can go back to the district courts and have all of the delays and confusion arising from congested dockets and different lines of decision, but I hope that my sense of duty as a citizen overtops my railroad prejudices.

That is as close as you can get anybody to say he wants the abolishment of the Commerce Court. He hopes it will be advantageous to his corporation, but he hopes his duty as a citizen overtops his duty as a railroad man.

My friends, there can be no escape from the proposition. There is no question upon which there has been more misinformation than upon this question. I have not time to go over the whole matter. Take what my friend, the gentleman from Georgia [Mr. BARTLETT], usually a most accurate man, said awhile ago, that this court was trying to estop the Interstate Commerce Commission from enforcing the law which Congress had intrusted to that commission for interpretation and enforcement. Let me read to the gentleman from Georgia, if he is here, an opinion of the Assistant Attorney General, given the other day before the Judiciary Committee upon this point—the man who has looked after the cases arising from the Interstate Commerce Commission.

He says:

The orders of the commission upheld by the circuit courts in only 42 per cent of the cases, by the Supreme Court in 56 per cent, and by the Commerce Court in 67 per cent.

Here are the figures and the cases. And yet you say, men usually well informed, like my friend from Georgia [Mr. BARTLETT], like my friend from Kansas [Mr. MURDOCK], say that the moment the court was created it sought to strangle the efforts of the commission, and yet the court to which they proposed to refer under this proposition did not come within 40 per cent of upholding the commission as did the court which they propose to abolish. I cite that as an example of how they misrepresent the whole situation.

The fact is that when the Commerce Court was created the railroads, when orders were issued against them, were able through the law to delay matters to the length of 23½ months, and when the railroads lost their cases the people under the law got the benefit of the ruling for two-fifths of one year. When they got before the Commerce Court their cases were decided in 9½ months and orders were effective for nearly 15 months. The people got the benefit of that. What happened? Congress had refused to allow the people to go into the courts and they permitted only the corporations to go in them, and then the railroads very adroitly desired to do what this proposed legislation intends—to go into the district courts and have the delays to which this railroad gentleman refers in this letter, part of which I have read. They undertook to say to the people of our country that the Commerce Court was the enemy of the shippers, and was trying to throttle the Interstate Commerce Commission, when in fact that court had advanced the decision of cases until the case, as in the intermountain case, in which the constituents of the gentleman from Wyoming [Mr. MONDELL] are interested, was heard on a second trial in 76 days.

It is possible to make effective the commission's orders through this court; but if you are not going to maintain the court, then give the people an equal chance with the carriers in the court. If you do not want to give the people an equal chance with the carriers, then deprive the carriers of the court as well. The people are willing to stand by the decision of the Interstate Commerce Commission, but they are unwilling to stand by a one-sided court, where everyone opposed to the shippers can get an injunction and every decision that favors the shipper can not be tried in the courts. So I say that the proposition now comes for the first time in a logical way. We have never had an opportunity to present this matter in the way in which it is now presented.

Mr. OGLESBY. Mr. Chairman, will the gentleman yield?

Mr. BROUSSARD. Certainly.

Mr. OGLESBY. Will the gentleman kindly tell us which proposition he favors, whether he thinks the right of appeal should be taken from the railroads or should be given to the shippers?

Mr. BROUSSARD. I favor that right being given to the shippers. I believe there ought to be courts and that these courts ought to interpret the law of the land; so I favor the Commerce Court.

Mr. OGLESBY. That is, that both should have the right to appeal?

Mr. BROUSSARD. Yes; but I can not get anybody to hear the shippers' side on this floor. I have not been able for the last two years, any more than the gentleman from Missouri [Mr. BORLAND], even though backed up by the entire membership of the Judiciary Committee, to have a hearing on his bill until it was offered as an amendment in this way. Is it possible that the Congress has gotten to the point where the shipper can not get a hearing?

Is it possible that he is to be thrown out of Congress entirely and kept out forever from having this law interpreted? Is it possible that Congress has gotten to the point where no one can be heard on the floor unless he speaks for the carriers of the country? It is said that those who are talking for the people are simply talking to throttle the commission itself.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. BROUSSARD. Certainly.

Mr. COX. The gentleman has studied this question exhaustively?

Mr. BROUSSARD. Yes; for the last two years.

Mr. COX. The gentleman's amendment, as I understand it, will give the shipper an equal chance along with the railroads to have his day in court?

Mr. BROUSSARD. Yes.

Mr. COX. And unless the gentleman's amendment is adopted the shipper will not have it?

Mr. BROUSSARD. He will not; and if it is not adopted, then the other amendment ought to be adopted and keep the railroads also out of the courts. Let us have the commission settle the whole thing. I am not afraid of the commission. I know the men on that commission as well as any man on the floor of this House. We are appropriating \$300,000 in this bill to start the physical valuation of railroads in this country. Let me tell you that the commission is of the opinion now that it will take eight years to carry out what we instructed them to do in the last Congress with regard to the physical valuation of railroads and eight more years to have the court decide whether they are right or wrong if this bill goes through. There are 16 years in front of us. With \$300,000 appropriated in this bill, we start to expend over \$10,000,000 to do what? To accomplish a thing which, if everything runs smoothly, we will be able to legislate about in 16 years.

Now, is there any gentleman who doubts—

Mr. BARKLEY. Will the gentleman yield for a question?

Mr. BROUSSARD. First, let me finish this. Is there any one who doubts there ought to be a central court here, so that the question of the physical valuation may be tried at once, so that the Illinois Central in Illinois, the Southern Pacific in Louisiana and California, and others may not have their physical valuation held from one end to the other, until the Supreme Court has an opportunity for a final judgment upon the physical cost of some railroad somewhere in New England, or possibly in my little borough down home, in order that it may take and construe the law and give effect to what Congress intended when it contemplated the expenditure of ten millions to get a physical valuation of railroads in order that we may legislate intelligently and assist the Interstate Commerce Commission in regulating rates? Is it possible we are going to abolish this court without any more thought, without any committee having considered the legislation? Is it possible we are going to sandbag the court? It is not as decent as the recall, because the recall of the court, that device for the distortion of justice, is predicated at least upon the law giving the people the right to do that, but here the people as a force throughout the United States are demanding the retention of a central court that it may make effective the legislation of this country. And yet we sit here and blackjack this court. We refuse to pay the man who sweeps the floor of that court. We have not paid him since the 1st of July. We have held the court up to opprobrium. We say: "We will not let you try any case; and if you do not try your case, you are held up and crucified before the public and in the press of the country as favoring the carrier as against the shipper. We propose to sandbag you. We will blackjack you out of existence. We will abolish your court. We will put the court out of business. Your marshal goes out of business. We will close your office. You have not paid the rent even. You have not paid the rent since the 1st of July. We will cripple your office. You have not even paid the telephone girl in the office."

I say the recall of judges does not compare with the conduct of Congress toward this court. I know nothing of the men who compose it, but that court, in my judgment, has stood with dignity assaults which were not borne out by the facts. It has stood there with dignity issuing its decrees regardless of opinions but simply praying that opportunity might be given it for the shipper to step into that court some day and say: "I would like to have the right of injunction because the law of my case is at fault." Congress is responsible for the condition in the court. Congress is responsible for it, not the law. Congress is responsible for it in every way, and Congress will have to reckon with that when they have abolished the court, for if you abolish that court you shall create another one within 24 months. Before this Congress goes out you will have another court to replace this one giving the shipper a chance in that court, and I know whereof I speak. I have over 10,000 petitions in my office about it asking me to urge that this thing be done. They do not come from any particular section, but from everywhere.

Mr. BARKLEY. Will the gentleman now yield to my question?

Mr. BROUSSARD. Certainly; I beg the gentleman's pardon.

Mr. BARKLEY. Is the amendment of the gentleman so framed that if this Commerce Court should be abolished, in the interpretation of the law as given by the district courts the shipper will have the right to appeal whether the Commerce Court is continued or discontinued?

Mr. BROUSSARD. Yes; but let me illustrate it by saying this: If a man in Florida ships a package of vegetables to Fairbanks, Alaska—and they do so ship—all the railroads over which that package travels have the right to go into any court

that touches that railroad, so in that case the shipper would have to go to one particular court and the railroad might take him to Fairbanks in Alaska to try whether they have charged him 13 cents too much a package of vegetables going to Alaska. If a man in Louisiana ships a crate of strawberries to Nome, Alaska—which they do—and they beat him out of 2 cents a box on those strawberries, he will have to go to try his case at Nome to get his 2 cents. If a man in California ships a package of fruit to Boston—oranges, say—and the railroads refuse to accede to the Interstate Commerce Commission's order, they can go to Boston and get their case tried there. If the judge there will not grant the order, the railroad can go to Kansas City and get it, and drag a man from California, from Florida, from Louisiana, and so forth, to make good the deficit.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BROUSSARD. I wish I had an hour of time to discuss further this subject.

Mr. QUIN rose.

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. QUIN. I would like to get some time.

The CHAIRMAN. The time has been divided between the gentleman from Illinois [Mr. MANN] and the gentleman from Georgia [Mr. BARTLETT].

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from Wisconsin [Mr. ESCH].

The CHAIRMAN. The gentleman from Wisconsin [Mr. ESCH] is recognized for five minutes.

Mr. ESCH. Mr. Chairman, when the proposition providing for the Commerce Court was before the Committee on Interstate and Foreign Commerce there were several arguments proposed upon which the committee based its action. Those arguments were these, in brief: By the establishment of a Commerce Court the disposition of cases arising out of the interstate-commerce act would be expedited; we would have a harmonious line of decisions rendered by an expert tribunal and at less expense than under the preceding system.

There is no question in my mind but that the establishment and maintenance of a Commerce Court begets uniformity of decisions, and uniformity of decisions begets stability in the law itself. Before the Commerce Court was established the decisions were made by the circuit judges throughout the United States, and there are some 30 of these. They sometimes differed as to the law upon the same state of facts, and the records show that in one State the circuit court would hand down a decision on a given state of facts and in the next State along the line of the same carrier another circuit court might hand down a different decision upon the same state of facts. Now, inasmuch as instability in decisions of courts undermines confidence in the law itself, when we have one tribunal to try all cases of the same kind we are sure of a uniformity of decisions.

Mr. FITZGERALD. Mr. Chairman, will the gentleman yield for a question?

Mr. ESCH. Yes; for a question.

Mr. FITZGERALD. Does not that objection exist to permitting circuit courts to exist at all? Is there not the same liability in other classes of cases?

Mr. ESCH. In some measure; but here we eliminate that lack of uniformity by having one court.

Again, the establishment and maintenance of a Commerce Court gives us a tribunal of experts in these interstate-commerce cases. There are district judges and judges of the court of appeals who really do not wish to try cases arising out of or connected with railroad rates, because of the highly technical character of this litigation. But with a Commerce Court, the men in it would soon become efficient judges.

It is true that under the law that exists the judges are to go to the circuit bench after a period of years' service on this tribunal, but after one year's absence therefrom they can be reappointed thereto.

Again, the Commerce Court is more economical to the litigant because it shortens the period in which the litigation is pending, and because the records of the Commerce Court, being here in Washington, are accessible and available in the event the case is appealed to the Supreme Court; and it is certainly more expeditious to have one court before which all actions can be brought and from which appeal can be had to the Supreme Court than to have litigation pending, as is now proposed, in the 86 district courts of the United States. From these districts an appeal is to be allowed to the Circuit Court of Appeals, and from thence to the Supreme Court.

The delay caused by these repeated appeals is almost ruinous to the average litigant. This Commerce Court saves the time of litigation and expedites the trial and hearings. There is no one charge against American judicature so well founded as the delay in the trial of causes. The Commerce Court gives us

expedition in trials, and for these reasons I have always been a firm believer in the efficacy of the court, and I believe that it ought to be sustained. [Applause.]

Mr. BARTLETT. Mr. Chairman, I yield 10 minutes to the gentleman from Tennessee [Mr. SIMS].

The CHAIRMAN. The gentleman from Tennessee [Mr. SIMS] is recognized for 10 minutes.

Mr. SIMS. Mr. Chairman, before I begin, I ask permission to extend my remarks in the RECORD, because I can not hope to cover the subject in 10 minutes.

The CHAIRMAN. The gentleman from Tennessee [Mr. SIMS] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. SIMS. Mr. Chairman, I want to reply very briefly to the argument of the gentleman who has just taken his seat [Mr. ESCH], to the effect that litigation is liable to be delayed if this amendment is adopted.

How many suits were brought in the last fiscal year from July 1, 1912, to July 1, 1913, in this court? Just 20. Only 20 suits brought, and you must have 5 judges to try 20 suits. That is only 4 cases to a judge. They talk about it being an economical court, when each of these judges gets \$7,000 and \$1,500 extra for being required to stay in Washington, where we Members have been all the summers for the past six years with no extra pay or allowances.

Gentlemen talk about the expediting of suits. Who brings these suits? Only the railroad companies. Whose suits do you want to expedite? The suit of a railway company, that is brought to nullify the orders of the Interstate Commerce Commission.

No one except a friend of the railroads wants to expedite the ruin of the work of the commission. When it used to be that a suit had to be brought by the commission in order to have an order of the commission executed, what railroad man or railroad lawyer was asking for expedition?

I drew up the provisions carried in this bill, not exactly in this form as to some details, and sent it to the Interstate Commerce Commission for remarks, and I read the letter of the commission in reply to the request:

INTERSTATE COMMERCE COMMISSION,
Washington, June 6, 1913.

Hon. T. W. SIMS,
House of Representatives, Washington.

DEAR SIR: In reply to yours of the 30th and referring to bill H. R. 5611. I am directed by the commission to say that the only suggestion which occurs to us in connection with this bill is that if it is to become law it would seem advisable to insert the words "and for other purposes" in the title of the bill, for the reason that, in addition to the purposes now stated in the title, the bill proposes material changes in the law, particularly with reference to the granting of preliminary injunctions and stay orders.

I might add that if the jurisdiction is to be transferred the provision that applications for restraining or stay orders shall be heard before three judges and upon due notice to the commission is highly commendable.

Yours, truly,

E. E. CLARK, Chairman.

The legislation contained in this bill simply abolishes a court that ought never to have been created and vests the jurisdiction which it now exercises in the district courts of the United States. That is all of it, and that is all there ought to be of it. There ought not to be any attempt to enact substantive law in this bill. There ought not to be any attempt to have an increase or decrease of the powers of the commission, and there ought not to be any attempt to increase or decrease the jurisdiction of the district courts over that of the Commerce Court. The only reason why the district courts are designated instead of the circuit courts is that the circuit courts have been abolished since the Commerce Court was created.

Let me tell you what else the Commerce Court has done. You wanted an expert court. Why did you want it? The argument was that it would come nearer deciding a case right; that it would reduce the number of appeals to the Supreme Court. How has it been with the Commerce Court? Twelve cases that have been appealed from the Commerce Court to the Supreme Court of the United States have been decided by that court. In how many do you suppose the action of this expert court was approved and sustained? In 2 cases out of 12. The Supreme Court reversed the Commerce Court in 10 out of the 12 cases. Pray, my friend from Wisconsin, do you want any more expert courts? This court has been expert in error, expert in failing to understand and interpret the law, and the Supreme Court has reversed it in 10 out of 12 cases, and in 1 case in which it was sustained it was simply in the granting of a preliminary injunction. Ought any court to be fed and clothed that can not guess better than that? Show me the justice of the peace, show me the police judge, show me the most inferior court which is wrong in 10 out of 12 of its decisions.

They said, "Oh, this is going to be an economy." How long are you going to take to educate a court that is wrong 10 times out of 12? What are you going to do with all these questions that come up, if they have to go through this court that is wrong 5 times out of every 6 cases it tries? Talk about expedition. I will tell you what expedition this court is bringing about. It is expediting the ruin, annihilation, the destruction of the interstate-commerce law. [Applause.]

My friend Mr. BROUSSARD and my friend Mr. BORLAND are the gentlemen whom I expected to reply to. There is too much in this subject to undertake it in 10 minutes. They get up here and cry themselves hoarse in behalf of the shipper and want the shipper to have the same rights that the railroads have. Bless their souls, I will make them happy right now by telling them they have the same right that the railroads have. Show me where a railroad can go into any court under heaven to test the validity of what they call a negative order. Not one. What is a negative order? There is no such thing. It is a misnomer. There is no such thing as a negative order. The only kind of orders the commission can make are affirmative orders. The commission either directs a railroad to do something it has not been doing or to cease and desist from doing something it has been doing. Chief Justice White stated plainly and emphatically that if the Commerce Court had the power it claimed it had, the whole scheme and purpose of the interstate-commerce law would be in confusion and destroyed.

Why do they make an order against a railroad company? It is a public carrier. It is dealing with the public, and the public is dealing with it. Do you not see that the moment you go into court to test the question whether the commission ought to have acted or not you have substituted the judgment of the court for the judgment of the commission? A court can not legislate. A court can not make a rate for the future. That is an exercise of legislative power. A court could not, by mandamus or otherwise, order the commission to make a rate for the future.

The commission itself up to 1906 had no power to make a rate for the future. Remember that the Interstate Commerce Commission has no jurisdiction to act in any case until it fully passes upon the question of law that the existing rate is unreasonable. It has no jurisdiction to make another rate; it has no jurisdiction to make any kind of an order in the case, until it first determines that the rate attacked, the existing rate, is unreasonable. When it does this, then, and not until then, does it have the right under existing law to determine what rate shall be made to take the place of the condemned rate for the future.

Now, what would a court do with such a proposition? Talk about the shippers. Who receives the benefits of rebates and discriminations except favored shippers and favored localities? The law was made to prevent discrimination in favor of shippers. My friend from Louisiana [Mr. BROUSSARD] goes almost into hysterics over the rights of the shippers, over the wrongs to the shippers. We want to control the big shippers, the big towns, the big cities, the Standard Oil Co., the Steel Trust, and other great shippers. These are the people who get favors from the carriers; who call themselves shippers; who ask permission to do something, and when they fail to get permission to do it they want to come into the courts and have the courts do for them that which the commission would not do, under the disguise of acting on or passing on a so-called negative order of the commission.

Whenever you write into the interstate-commerce law the amendment offered by the gentleman from Louisiana [Mr. BROUSSARD], to give the court jurisdiction of the nonaction of the commission, you substitute for the judgment of this expert administrative board the court's judgment, and when this is done the law will not be worth a bawbee.

Mr. BORLAND. Will the gentleman yield?

Mr. SIMS. I will.

Mr. BORLAND. The gentleman realizes that it is a question of law.

Mr. SIMS. There can not be any case arise before the commission that does not involve a question of law. The question of whether or not an existing rate is unreasonable is a question of law. The question of whether the commission has jurisdiction is a question of law. So the right to appeal by a shipper from the action of the commission in saying it had no power to act, or that a rate is not unreasonable, is a question of law; and when you give the courts power to review negative orders, so called, on questions of law, you give them power to review every case that can possibly be brought before the commission.

Mr. Chairman, the Commerce Court assumed that it had the power sought to be given the courts by this proposed amendment to review so-called negative orders of the Interstate Commerce Commission in the Procter & Gamble Co. case. The Supreme Court, by unanimous decision in that case, held

that the Commerce Court had no jurisdiction to pass on the validity of anything but the affirmative orders of the commission. Chief Justice White, in delivering the opinion of the Supreme Court, commented at length on the effect such jurisdiction in the courts would have on the whole scheme of Government regulation of railroads, and in order to make no mistake in stating what Chief Justice White said as to the effect of an exercise of such power, I quote as follows from the language of the Chief Justice in delivering the opinion of the court in the Procter & Gamble Co. case:

We might well be content to rest our conclusion upon the considerations just stated. In view, however, of the importance of the subject we do not do so, but shall consider the matter in a broader aspect for the purpose of demonstrating that to give to the statute a meaning contrary to that which we have found results from its text, and therefore to recognize the existence in the court below of the power which it deemed it possessed would result in frustrating the legislative public policy which led to the adoption of the act to regulate commerce, would render impossible a resort to the remedies which the statute was enacted to afford, would multiply the evils which the act to regulate commerce was adopted to prevent, and thus bring about disaster by creating confusion and conflict where clearness and unity of action was contemplated.

Now, Mr. Chairman, language could not be clearer or more distinct than what I have just read in your hearing from the learned Chief Justice. So in his language if we give by legislation the power the Commerce Court deemed it possessed and exercised to review the so-called negative orders of the commission it will be impossible to resort to the remedies which the commerce law was enacted to afford and will multiply the evils which the act to regulate commerce was adopted to prevent and bring disaster by creating confusion and conflict where clearness and unity of action was contemplated. Is it possible to bring a stronger indictment against any court than is thus brought against the Commerce Court by the highest court of the land?

Further on in the same opinion Chief Justice White says:

Originally the duty of the courts to determine whether an order of the commission should or not be enforced carried with it the obligation to consider both the facts and the law. But it had come to pass prior to the passage of the act creating the Commerce Court that in considering the subject of orders of the commission for the purpose of enforcing or restraining their enforcement, the courts were confined by statutory operation to determining whether there had been violations of the Constitution, a want of conformity to statutory authority, or of ascertaining whether power had been so arbitrarily exercised as virtually to transcend the authority conferred although it may be not technically doing so. Interstate Commerce Commission v. Union Pacific Railroad (222 U. S., 541, 547); Interstate Commerce Commission v. Illinois Central Railroad (215 U. S., 452). So also at the time the law creating the Commerce Court was passed, suits to compel obedience to orders of the commission or to restrain an enforcement of such orders were required to be brought in the circuit court of the United States in the district where a carrier or one of two or more carriers to whom the order was directed had its principal operating office.

In view of the provisions of the act to regulate commerce just referred to as originally enacted, of the legislative evolution of that act, its uniform practical enforcement and the constant judicial interpretation which we have thus briefly indicated, it is impossible, we think, in reason, to give to the act creating the Commerce Court the meaning affixed to it by the court below, since to do so would be virtually to overthrow the entire system which had arisen from the adoption and enforcement of the act to regulate commerce.

Mr. Chairman, does it not seem to be a ridiculous contention on the part of anyone that this Commerce Court should be given one hour of additional life after the decision of the Supreme Court in the Procter & Gamble Co. case? To call such a tribunal an expert court is a misuse of the English language. It is seen that to give the act creating the Commerce Court the meaning affixed to it by that court would overthrow the entire system to regulate commerce. This court could lay no claim to being experts at anything unless it was in its power to destroy the law it was created to enforce.

But the seeming efforts of this court to destroy the acts of Congress to regulate commerce between the States did not stop with the Procter & Gamble Co. case. It will be recalled that prior to the act of June 18, 1910, the fourth section of the act of 1887, known as the long and short haul clause, provided in substance that no greater charge should be made for a shorter than for a longer haul under similar circumstances and conditions over the same road, the shorter being contained in the longer haul. This language, "similar circumstances and conditions," was so construed by the courts as to virtually destroy the intent and purpose of the fourth section. In the new act of 1910 the above language was eliminated. The new long and short haul clause or new fourth section reads as follows:

SEC. 4 (as amended June 18, 1910). That it shall be unlawful for any common carrier subject to the provisions of this act to charge or receive any greater compensation in the aggregate for the transportation of passengers, or of like kind of property, for a shorter than for a longer distance over the same line or route in the same direction, the shorter being included within the longer distance, or to charge any greater compensation as a through route than the aggregate of the intermediate rates subject to the provisions of this act; but this shall not be construed as authorizing any common carrier within the terms of this act to charge or receive as great compensation for a shorter

as for a longer distance: *Provided, however*, That upon application to the Interstate Commerce Commission such common carrier may in special cases, after investigation, be authorized by the commission to charge less for longer than for shorter distances for the transportation of passengers or property; and the commission may from time to time prescribe the extent to which such designated common carrier may be relieved from the operation of this section: *Provided, further*, That no rates or charges lawfully existing at the time of the passage of this amendatory act shall be required to be changed by reason of the provisions of this section prior to the expiration of six months after the passage of this act, nor in any case where application shall have been filed before the commission, in accordance with the provisions of this section, until a determination of such application by the commission.

Whenever a carrier by railroad shall in competition with a water route or routes reduce the rates on the carriage of any species of freight to or from competitive points, it shall not be permitted to increase such rates unless after hearing by the Interstate Commerce Commission it shall be found that such proposed increase rests upon changed conditions other than the elimination of water competition.

The commission proceeded under this new fourth section to dispose of many thousands of applications filed by the railroads to be permitted to continue to charge less for a longer than for a shorter haul, under the provisions of this new section, and in doing so divided up the territory of the whole country into zones Nos. 1, 2, 3, 4, and 5, beginning on the Pacific coast, and permitted the carriers by rail to charge less for a longer than for a shorter haul in certain of the above-named zones, giving the differences in percentages. The railroads brought suit in the Commerce Court attacking the action of the commission. These suits are commonly called the intermountain rate cases. The Commerce Court held that the commission exceeded its powers, and that its orders were void. In the opinion of the Interstate Commerce Commission, the practical effect of the decision of the Commerce Court is to perpetuate the old system; that the amended act as to the long and short haul provisions is precisely to-day what it was before its amendment, to every practical intent. So we see that the Commerce Court, in utter disregard of the evident intent of Congress, has so construed the new fourth section of the act of June 18, 1910, as to render it nugatory. It is true that these cases were appealed to the Supreme Court, where they are now pending, but the decision of the Commerce Court shows how willing it is to solve every doubt in favor of the carriers, against the obvious intent and purpose of Congress. It shows a readiness to destroy the law by construction, rather than to give the acts of Congress a broad and liberal construction, such as any remedial statute ought to receive at the hands of any court.

Mr. Chairman, in the act of June 10, 1910, Congress undertook to place the pipe lines used by the great Standard Oil Co. and its subsidiaries under the control of the Interstate Commerce Commission. But when the commission undertook to exercise its authority thus conferred, or attempted to be conferred, the Commerce Court, in line with its course of destructive decisions, did not hesitate to hold the amendment conferring this power in the commission to be void, again giving the benefit of the doubt to the instruments of monopoly. It is true these cases are also pending in the Supreme Court on appeal, but the action of the Commerce Court shows its persistent leaning against a broad, liberal, and remedial construction of the acts of Congress in its efforts to furnish an effective but just regulation of interstate carriers.

Mr. Chairman, in drafting the provisions of the bill that have been incorporated in this appropriation bill I have only intended to abolish the court and vest the jurisdiction now vested in it in the district courts of the United States. There is no provision in the bill to abolish the tenure of the circuit judges assigned to duty in this court. They are simple circuit judges and can be assigned to duty in the several district courts of the country. I have thought it unwise to attempt to remove these judges from office and thus raise a constitutional question that might delay the passage of the bill or possibly meet with another veto. I hope those who want to remove the judges now assigned to duty in the Commerce Court will be willing to resort to a separate bill for that purpose and not incorporate it in this bill.

I have personally not the slightest ill feeling against any of these judges, and do not think that a just attempt to abolish a useless court ought to be attributed to a desire to remove certain judges from office. I would be as much in favor of abolishing this court as I am now if I was permitted to name every judge on its bench.

Mr. Chairman, I have seen a good deal in certain newspapers recently to the effect that the shippers were demanding the continuance of the Commerce Court. Of course, all those shippers who have been deprived of rebates and other unlawful advantages by the action of the Interstate Commerce Commission, like the tap-line railroads, who were held by the commission not to be common carriers as to their own products, are clamorous for the continuance of the Commerce Court as a handicap to the commission. But, Mr. Chairman, there are other ship-

pers who do not seek rebates or resort to rebating devices who are very anxious for the abolition of this useless court.

I recently received a letter from the traffic man of one of the largest shippers in this country, giving his analysis of the work of the Commerce Court up to June 16, 1913, together with the cost and expenses incident to the court since its establishment and organization in February, 1911. I do not give his name, for the reason that in his letter transmitting these tables to me he closes it by saying:

If you use any of the figures or statements that I have sent you, it will not be necessary to refer to them as coming from me, as I am not sure how far the friends of this court would go in a follow up.

NEW YORK, N. Y., June —, 1913.

I inclose herewith some tables covering the work of the Commerce Court: No. 1. Commerce Court work shows on an average nine decisions per year for the three-year period, at an approximate cost of maintaining the court to date of \$225,000. At this time there is only one case open for trial and three cases waiting decision in this court. Organized to consist of five members for work of a little over two opinions per judge per year.

The remarkable thing is that practically all of the opinions have been appealed to the Supreme Court—the only ones not appealed were small reparation cases.

We could certainly trust the district judges with these cases (with the restrictions on issuing injunction as covered by House bill 5611), as they are capable of rendering opinions as sound as any that have come out of the Commerce Court to date.

Uniformity of decisions is asked by the friends of this court. The only uniformity up to the present time is that they are overruled by the higher court.

No. 2 shows the expenses of this court. In connection with this I refer you to the following House documents:

No. 311, Sixty-second Congress, second session; No. 1081, Sixty-second Congress, third session; and the following discussion in the CONGRESSIONAL RECORD on these expenditures: June 8, 1912, page 8304; June 11, 1912, page 8450; January 15, 1913, pages 1565 to 1569.

No. 3. Statement of expenditures for furnishings of the Commerce Court. No. 4 shows yearly losses to shippers on account of injunctions issued by the Commerce Court against the orders of the Interstate Commerce Commission.

I would also refer you to the testimony taken in Judge Archbald's impeachment trials, CONGRESSIONAL RECORD, January 6, 1913, page 1048; January 7, 1913, pages 1121 to 1123; or Senate Document No. 1140, record of impeachment, pages 1264 to 1267, 1332 to 1337, showing how the court reversed itself, with the exception of Judge Mack, and came over to the views of Judge Archbald after the Bruce correspondence.

As in the other cases, the shippers were saved by the Supreme Court reversing this decision of the Commerce Court.

COMMERCE COURT WORK AS OF JUNE 20, 1913.

Court created June 18, 1910. Period of review of litigation covers three years, as none of the circuit or district courts acted on cases before them after the Commerce Court was authorized, and the accumulated cases were transferred to this court on its organization, February 28, 1911.

Number of cases docketed, 94; number of cases dismissed without consideration, 34; number of decisions rendered 34, covering 48 docket numbers, leaving undisposed of 12.

Average number of decisions per year of litigation, 11. Eliminating decisions rendered in cases not within the jurisdiction of this court, as held by the Supreme Court, makes average per year 9; number of decisions appealed to Supreme Court 22, covering 35 docket numbers; decisions sustained by Supreme Court, 2; decisions overruled by Supreme Court, 10.

Commerce Court expenses.

	5 months to June 30, 1911.	Year end- ing June 30, 1912.	Year end- ing June 30, 1913.	Year end- ing June 30, 1914.

Furnishings for the Commerce Court.

(See H. Docs. Nos. 311 and 1081, 62d Cong.)

Furniture, \$18,115.82 in 1911 and \$14,458.67 in 1912.
Some of the new items appearing in 1912 report:

Fitting pasteboard pipes in drapery	\$150.00
Slip covers for 55 window draperies and 7 court screens	145.00
13 mahogany and silk sliding window shades	122.00
Altering 5 judges' court-room chairs (original cost \$945)	425.00
72 feet mahogany bookcase	1,404.00
1 leather davenport	175.00
Models for carved work	160.00
5 judges' court-room chairs	690.00
3 plate-glass tops for desks	57.00
7 leather pillows	70.00

CHAIRS FOR THE COMMERCE COURT.

5 swivel chairs, \$61.25 each	306.25
6 swivel chairs, \$28.75 each	172.50
25 armchairs, \$58.75 each	1,468.75
35 armchairs, \$26 each	910.00
12 armchairs, \$23.50 each	282.00
7 davenports, \$175 each	1,225.00
6 chairs, \$90 each	540.00
10 court-room chairs, \$52 each	520.00
5 chairs, altering, new leather	425.00
8 armchairs	192.00
5 armchairs	60.00
18 armchairs	270.00
3 revolving chairs	80.25
1 swivel chair	38.00
1 easy-chair	90.00
1 davenport	175.00
5 judges' chairs	690.00
2 armchairs	52.00
1 revolving chair	11.25
2 side chairs	19.00
6 revolving chairs	76.50
2 wood chairs	12.00
1 swivel chair	28.75
7 leather pillows	70.00
2 revolving chairs	25.50
1 judges' bench	1,055.00
6 benches, \$159 each	945.00

Total.....9,639.75

Yearly loss to shippers due to injunctions issued by the Commerce Court.

Docket No. 1, California switching	\$110,705
Docket No. 2, California switching	144,430
Docket No. 4, New Orleans class rates	260,000
Docket No. 7, California lemons	225,000
Docket No. 41, precooling California fruit	600,000
Dockets Nos. 50 and 51, long and short haul clause	3,000,000
Docket No. 58, Florida vegetables	100,000

Total.....4,440,135

Docket No. 38, lighterage allowances to Sugar Trust denied independent plants.

Dockets Nos. 46 and 47, grain transit Nashville denied Atlanta and other Southern cities.

These amounts are taken from carriers' statements in briefs and arguments before the court.

Mr. BARTLETT. Mr. Chairman, how does the time stand?

The CHAIRMAN. The gentleman from Georgia has 24 minutes remaining and the gentleman from Illinois 15 minutes.

Mr. BARTLETT. I ask that the gentleman from Illinois use some of his time.

Mr. MANN. I will yield five minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Chairman, I think it is a very conservative statement that any action of legislation taken in a spirit of pique, in a spirit of prejudice, in a spirit of reprisal, is likely to be an unwise act. Gentlemen propose to abolish the Commerce Court because they do not like some of its decisions. They entirely lose sight of the fact that the court was established for the benefit of the shippers of this country; they entirely lose sight of the fact that the establishment of the court has not only greatly expedited the action upon cases, but that it tends to uniformity of decision, and therefore, in the long run, to the settlement of a vast number of cases without appeal and upon the order of the Interstate Commerce decision instant. But the gentlemen are piqued, the gentlemen are prejudiced, the gentlemen, in a spirit of reprisal, want to dispense with the court because that court in its judgment did not always decide just as they think it ought to have decided. The court did make some mistakes, no doubt. The highest tribunal in the land has said that it made mistakes and has by its decisions established a guide for this court for the future, so that the court could not make these same mistakes again, at least.

Who knows but that among the district courts of the country infinitely more and more grievous mistakes might have been made if these cases had gone to the district courts instead of going to the Court of Commerce? The court was established for the purpose of expediting cases, for the benefit of shippers, for the purpose of securing speedy and uniform decisions which were appealable to the highest court of the land which, by its decision, finally settled these cases. We make a grievous mistake when we deprive the people of this machinery, simply because the personnel of the court as first established did not

exactly suit everyone, simply because the court in some of its first decisions erred. We make a mistake when, by reprisal, we attempt to deprive these gentlemen of their offices and recall their decisions by legislation. My opinion is there is not a gentleman here present who votes for this decision to-day who will not live to rue it and who will not live to find his constituents demanding of him that he remedy the error and again provide for the establishment of a tribunal of this sort before which all cases arising under the interstate-commerce law shall be brought.

I yield back the balance of my time.

Mr. BARTLETT. Mr. Chairman, I yield five minutes to the gentleman from Indiana [Mr. CULLOP].

Mr. CULLOP. Mr. Chairman, I send the following amendment to the desk and ask to have it pending.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 21, line 19, amend by striking out the words "some or all of," after the word "where," and in line 20, after the word "has," the word "either," and after the words "its origin," "or destination."

Mr. CULLOP. If the amendment I have just offered be adopted, Mr. Chairman, it will read then:

Shall be in the judicial district where the transportation covered by the order has its origin.

I offer that amendment fixing the jurisdiction of the beginning of the process to meet an objection that was made to this provision by the gentleman from Louisiana [Mr. BROUSSARD]. I do not believe that this section ought to be left open to the extensive jurisdiction in the filing of a suit to which the attention of the committee has been called by the gentleman from Louisiana and as the provision now, in my judgment, authorizes. I think this amendment on the question of jurisdiction of the beginning of suits ought to be adopted. It makes certain that which as now contained in the bill is uncertain.

As to the amendment of the gentleman from Georgia [Mr. BARTLETT], I am opposed to that for the reason that I think it is directly infringing upon a constitutional provision. Section 1 of Article III of the Constitution reads as follows:

The judicial power of the United States shall be vested in one Supreme Court and in such inferior courts as the Congress may from time to time ordain and establish. The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall at stated times receive for their services a compensation, which shall not be diminished during their continuance in office.

If the gentleman's amendment as now proposed should be adopted, it would be in direct conflict with that provision of the Constitution. The Congress can not legislate a judge in office out of office. It may abolish his office after he has resigned, if he ever does resign, or after he has been removed, if he is ever removed, or after his death, but you can not, while he is holding office and that constitutional provision stands, abolish the office and turn him out of office.

Mr. Chairman, it matters not how much we may desire to wipe out of existence every vestige of the Commerce Court, every memory associated with it, yet if a constitutional barrier is interposed, we are estopped. The constitutional provision I have read stands squarely between Congress and legislating these five circuit judges out of office. We may abolish the court, and of that legislation I am in favor, but we can not abolish the offices of the judges who hold that court while these judges are in office. This constitutional provision is wise. It was written into our Constitution as a cautionary measure—to curb inconsiderate action by Congress against the Federal judiciary; to prevent hasty and passionate action.

Its adoption would constitute a dangerous precedent, one that doubtless some day might rise to vex and harass Congress and humiliate the judiciary, and could be used as an instrument of coercion. This we would all deplore. Above all things, the judiciary should be preserved from dangers of this kind.

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

Mr. CULLOP. Not now. He is a circuit judge. His office was named as such. He was appointed as a circuit judge, not as a judge of the Commerce Court. He was appointed as one of the circuit judges of the United States. His jurisdiction was defined, the same as the jurisdiction of other circuit judges, and he was only designated by the President, as the law provides, creating the Commerce Court, to hold the Commerce Court, and for a specified time. They are to be rotated in office, but the judges are of the circuit bench, and belong to the class of circuit judges of the United States; and if this amendment be passed, it would be absolutely invalid, because it conflicts with that provision of the Constitution. I hope for that reason it will not be passed.

Mr. BARTLETT. Is that the only objection the gentleman has to it?

Mr. CULLOP. That is the best reason I have.

Mr. BARTLETT. Is that the only one?

Mr. CULLOP. No; I have another reason, that before these men would pass out of office, if they lived the usual time, with the congested condition of some of the court dockets that is complained of here, there would be a necessity for creating that many or more. There is work for them to do, and I am reliably informed they can be utilized and perform a much-needed service to the country. It is reliably asserted that dockets in various parts of the country are congested, and courts are behind with their work. If this be true, then these judges should be designated to assist in that work in order that all such dockets may be cleared and the work dispatched. Here is a work for them to perform, and in doing it they will render a valuable service to the country.

To-day, according to reports we hear from Pennsylvania, there is a demand for one of these judges to be sent to hold a court in Philadelphia, and he ought to be designated for that purpose. Now, I think the Commerce Court ought to be abolished. I was opposed to it when it was instituted. I opposed the enactment of the law creating it. It is taking the litigation before it too far away from the litigant. So the shipper institutes this litigation thousands of miles away from the city of Washington. He is compelled to come here to try his case, and thereby expenses are increased, so that in many cases it works a denial of justice and enables the transportation companies to impose on the shipping public. I never believed its purpose was really to help the shipper, and I think experience has demonstrated that in this respect I was right. The district courts should hear and determine the cases now tried by it, with the right of appeal granted the aggrieved party. This method would better serve the purpose for which it was created.

Mr. MANN. I yield five minutes to my colleague from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Chairman, it is not fair to say the shippers of the country are not in favor of the continuation of this court. This is really the shippers' court. Up to the time of the organization of this court the shippers all over the United States found difficulty in having differences between themselves and the railroads adjudicated. It is said that only 20 cases have been started since the establishment of this court. Well, do you wonder that is so in the face of the fact that the Democratic Congresses have embarrassed the court in every way in their power ever since the Democratic Congresses came into power? For, in the first place, they refused to make appropriations to continue the work of the court. There is no doubt whatever but that a court of experts dealing with the propositions with which they are familiar are better qualified to decide those questions than men who have had no experience on the subject, and the purpose of the organization of this court was to educate a set of judges who would become expert in the matter of interstate-commerce law and who would be familiar with the conditions under which disputes between shippers and carriers arose, and the shippers all over the United States pleaded very urgently for the establishment of this court, and they still continue to plead for its continuation.

There is no justification for the abolishment of the court. There ought not to be any disposition on the part of the Congress not to continue the appropriations needed to make the court as efficient as it would be if they had the facilities with which to continue the business for which the court was created, and the shippers of the Nation do not want to go back to the old familiar practice of having their cases tried here, there, and everywhere. They want the records of disputes between the railroads and the shippers to be in some central place, and they want precedents established by means of which their cases can be conducted along lines of a well-fixed policy. And so I say that I hope this House will not agree to the recommendations made by the Committee on Appropriations, the members of which continue to pare down the appropriations to a point where the business of the Nation can not be efficiently conducted except in cases where they might add to the political prestige of the party to which they belong. There ought not to be any such practice indulged in as this committee has indulged in in a case of this importance. They ought to remember the interests of the great communities of the Nation and they ought to do everything in their power to facilitate the settlement of the disputes between those shippers and the great carriers of the country. [Applause.]

I yield back the balance of my time.

Mr. ADAMSON. How much time remains to the gentleman from New York?

The CHAIRMAN. Nineteen minutes.

Mr. BARTLETT. I yield four minutes to the gentleman from Pennsylvania [Mr. KELLY].

Mr. KELLY of Pennsylvania. Mr. Chairman, the Interstate Commerce Commission to my mind is an agency of Congress to represent the people. We have heard a great deal from the gentleman from Louisiana [Mr. BROUSSARD] regarding the rights of the shippers and the protection of the rights of the shippers by the Commerce Court; but the idea in the creation of the Interstate Commerce Commission was that of protecting all the people against the encroachment of both the railroads and the shippers.

By the term "people" I mean not simply the collection of individuals living in this Nation, but a political entity, conscious of its own existence and able to express its will through laws. This body of the citizenship protects itself against the rapacious few who through violence or subtlety would secure and maintain advantages for themselves at the expense of the rest.

The argument of the gentleman from Louisiana [Mr. BROUSSARD] that the shippers make up the "people" is not true. The fact is that the Interstate Commerce Commission bears the responsibility of protecting the whole people against injustice, whether it be injustice on the part of the railroad companies or the shippers. A man may be a part of the sovereign people and yet in his business capacity be an enemy of the people and their best interests.

There may be those who violate the laws while forming a part of the citizenship of this country, but they are not a part of the political entity which unites in upholding the laws and makes their enforcement possible. In acknowledgment of that the encroachments of the shippers as well as of the railroads were regarded in the creation of the Interstate Commerce Commission.

I favor the abolishment of this Commerce Court and uphold this provision of the bill, because the Commerce Court steps in between the litigants and this agency, representing the people, and distorts the issue and complicates the situation unnecessarily. The situation has become such that it is necessary to strip away some of the jungle and underbrush of technicality, so that the will of the people can be carried out promptly and efficiently. This underbrush must not be used to delay justice and, in fact, create a denial of justice.

Mr. BROUSSARD. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Louisiana?

Mr. KELLY of Pennsylvania. I do.

Mr. BROUSSARD. Is it not a fact that it took more than 24 months for the two most important cases that this country has ever known, emanating from the Interstate Commerce Commission by injunction from the railroads, to be decided so that the decisions were futile and meant nothing to the shippers of the country? Does not the gentleman believe that we ought to return to a system where the important questions wherein the shippers of the country have rights should get back to the commission that we created?

Mr. KELLY of Pennsylvania. I say the people of the country want full justice to the shippers, but they also want to strip away some of these useless obstructions of justice to the whole people.

Mr. BROUSSARD. Then, why not do away with the courts entirely?

Mr. KELLY of Pennsylvania. I have but a moment. I decline further to yield.

The CHAIRMAN. The gentleman from Pennsylvania declines to yield.

Mr. KELLY of Pennsylvania. I want to say, Mr. Chairman, that the people of this country demand that the Interstate Commerce Commission be given full power in dealing with interstate commerce. The people have confidence in that tribunal, and they demand that the power which comes from the people shall be exerted for the people's interests.

I favor the amendment that has been proposed by the gentleman from Georgia [Mr. BARTLETT]. While we are abolishing the Commerce Court, let us abolish the offices which were created at the same time. If the creation of these judgeships was a mistake, their continuance now will be equally a mistake. I believe that a great deal of the distrust and complaint which is prevalent throughout the country in regard to the courts is due to the fact that they have usurped sovereign power and rest secure in that usurpation because the possibility of prevention is very slight.

I would refer the Democrats of this House to their patron saint, Thomas Jefferson, when he discussed the judiciary bodies, which were supposed to be the most helpless and harmless members of the Government, but which have become the most powerful.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. KELLY of Pennsylvania. Mr. Chairman, I ask unanimous consent to extend in the RECORD a paragraph from Jefferson's remarks.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. KELLY] asks unanimous consent to extend his remarks in the RECORD by inserting the statement he indicates. Is there objection?

There was no objection.

Following is the extract referred to:

The judiciary is the subtle corps of sappers and miners, constantly working underground to undermine the foundations of our confederated fabric. * * * Having found from experience that impeachment is an impracticable thing, a mere scarecrow, they consider themselves secure. They skulk from responsibility to public opinion, the only remaining hold on them, under a practice introduced into England by Lord Mansfield.

An opinion is huddled up in conclave, perhaps by a majority of one, delivered as if unanimous—and with the silent acquiescence of lazy or timid associates—by a crafty chief judge, who sophisticates the law to his mind by the turn of his own reasoning. * * * A judiciary independent of a king or an executive alone is a good thing, but independence of the will of the people is a solecism in a republican government. * * *

The judiciary bodies were supposed to be the most helpless and harmless members of the Government. Experience soon showed, however, in what way they were to become the most dangerous; that the insufficiency of the means provided for their removal gave them a free hold and irresponsibility in office; that their decisions, seeming to concern individual suitors only, pass silent and unheeded by the public at large; that these decisions nevertheless become law by precedent, sapping by little and little the foundations of the Constitution and working its change by construction before anyone has perceived that that invisible and helpless worm has been busily employed in consuming its substance.

Mr. BARTLETT. Mr. Chairman, we have got one more speech on this side.

Mr. MANN. And only one more on this side.

Mr. BARTLETT. I wish the gentleman from Illinois would use his time.

Mr. MANN. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. Seven minutes.

Mr. MANN. Mr. Chairman, some years ago William Randolph Hearst, then a Member of the House, introduced a bill creating a court of transportation. I believe that was the first time it had been proposed to have a court located in Washington, although as far back as 1893 the organizations of shippers had asked for the creation of a special court of commerce in each of the judicial districts.

The court of transportation proposed by the Hearst bill was not favorably reported upon, and in 1905 Mr. TOWNSEND, now Senator TOWNSEND, then a Member of the House, introduced a bill providing for a court of transportation. That bill was merged in what was known as the Esch-Townsend bill, introduced by Mr. TOWNSEND a few days later, in January, 1905, and that was the bill upon which President Roosevelt made his determined effort to have legislation.

It is very peculiar that the gentlemen now following that distinguished President are all in favor of abolishing the court, which really received its impetus from the Esch-Townsend bill, so strenuously advocated by President Roosevelt. It is true that in the last campaign President Roosevelt took occasion to say that the Commerce Court ought to be abolished. Probably he had forgotten that his campaign in favor of amending the interstate-commerce law was based primarily upon a court of transportation, which is exactly the same thing as is covered by the Commerce Court. It was to a large extent the advocacy of that measure by President Roosevelt which led President Taft to have incorporated in the administration bill when he came into power the provision for a Commerce Court.

I am frank to say that I never was enthusiastically in favor of creating the Commerce Court. The original court of transportation, which President Roosevelt so urgently insisted upon, did not seem to me very desirable, and I was denounced by many gentlemen because I did not favor that bill at that time. Most of those gentlemen are now in the Progressive Party, denouncing the Commerce Court.

Mr. Chairman, the Commerce Court was finally provided for. It has not yet been fairly tested. I do not know whether it is desirable in the long run to maintain special courts in Washington, such as the Customs Court, the Commerce Court, the proposed patent court, or other special courts, to be presided over by judges who become experts in the line of work demanded by the courts. I have sometimes thought it was better to let judges who were more familiar with the ordinary litigation decide that which was expert. But we have not yet tested the Commerce Court. Because Congress has changed its political complexion, because the exigencies of a campaign led

President Roosevelt to denounce the court for whose creation he was more responsible than anyone else in the land, we have come to the point where both the Democracy and the Progressive Party propose to abolish this court without a reasonable test. The shippers of the country generally were and are in favor of the Commerce Court, believing that the work can be expedited, that the hearings will not be so long delayed, that the decisions will come quicker through a court located here, presided over by the same judges. It has been said by the gentleman from Tennessee [Mr. SIMS] that there were only 20 cases before the Commerce Court last year, and therefore that the court had only 4 cases to adjust. That is hardly as fair a statement as the gentleman from Tennessee usually makes; because under the law these judges are assigned to any circuit in the United States where the Chief Justice may deem it proper to send them. One of them has been holding court in Richmond; one of them has been holding court in New Mexico. There being only four of them now, they have all been holding court in different parts of the country, and they have done the full amount of work which can be asked of any judge in any of the circuits. They have not been loafing in Washington. They have been doing the work which they can properly do in those circuits and districts where additional work is required. I fear it is a mistake to abolish the court without making the test now, because, in my judgment, if the court is abolished now there will be that delay in the decision of cases which will require the shippers of the country to demand additional legislation to test the same court over again.

These cases have been long delayed. We have enacted legislation time after time, giving preference in the Supreme Court to every phase of interstate-commerce litigation arising out of the act to regulate commerce. We have repeatedly provided that cases arising out of this act shall, upon the request of the parties in interest, have preference in the Supreme Court, and notwithstanding all this, notwithstanding the provision by which these cases were expedited in the lower court and were expedited in the Supreme Court, the cases were long delayed until the Commerce Court was created, and the decisions were seldom made until after their application had expired. These orders of the Interstate Commerce Commission are only good for two years, and in nearly every case which was decided by the courts under the old system the order of the court came after the expiration of the two years.

The CHAIRMAN. The time of the gentleman from Illinois has expired. The gentleman from Georgia [Mr. BARTLETT] has 16 minutes remaining.

Mr. BARTLETT. I yield one minute to the gentleman from Mississippi [Mr. Sisson].

Mr. Sisson. Mr. Chairman, I will not take the minute allotted to me, but simply want to state that being on the subcommittee that prepared this bill I agree with the gentleman from Georgia [Mr. BARTLETT] in his conclusion in reference to the law, and in reference to the right of Congress not only to abolish the court, but to abolish the judges. The gentleman from Georgia and I reserved the right to offer this amendment in the House. Being a member of the committee, I have thought it proper to make this explanation.

Mr. BARTLETT. I yield the balance of my time to my colleague from Georgia [Mr. ADAMSON].

The CHAIRMAN. The gentleman from Georgia [Mr. ADAMSON] is recognized for 15 minutes.

Mr. ADAMSON. Mr. Chairman, when I was a very young man I was advised by an old friend of mine, "Never throw dollars back over your shoulder." I thought he was talking in a foolish way, and asked him what he meant. He said, "If you have any dollars to throw away, or imagine you have, throw them in front of you, so you will not have to lose time in going back to pick them up in case you find you need them." He explained the moral of that to me, and it has been percolating into my head ever since. It is that every time you make a mistake you must take the time and trouble to go back and correct that mistake.

The creation of this Commerce Court was a great mistake made by Congress.

That mistake was caused by the absence of our colleagues at a baseball game. Two or three times efforts to eliminate the court failed on a tie vote. A newspaper in the district I represent, noticing that some Members were dragged away from the baseball park to make a quorum in the House, remarked that—

It served them right. They ought to have had more sense than to try to hold a session of Congress during the baseball season.

At the first opportunity we introduced a bill to abolish the court. That was vetoed by the late President. I think we

have a President in the White House now who will sign the bill when it reaches him, and therefore I am anxious to pass a bill abolishing the court. I wish to say to you, gentlemen, that the distinguished gentleman from Illinois [Mr. MANN], who for so long was a member of our committee, a long time its distinguished chairman, has always been moderate, industrious, and fair, and his talk just now indicated his line of conduct all the time on that committee.

It is true as he said—and I am not allowed to state what occurred in committee every time; if so, I could give you some interesting statements about some of these bills for the Commerce Court. Suffice it to say that when this administration bill was finally introduced, no man has ever stated positively or has been able to state how it was inspired, who imposed on the President, who has been described as a great big fat man entirely surrounded by men who knew what they wanted. It was bifurcated, and one leg got into the House and one leg just like it into the Senate, and both Houses went to work upon it at once. Without violating any confidence, I desire to say that the gentleman from Illinois and other able Republicans cooperated with Democrats and managed to abstract and eliminate from the bill many iniquitous features and incorporate some good ones. It came into the House in such a shape that its own mother would not have known it, and then, with such help as we could get to eliminate the bad things, we fused with the other branch of the Republican Party and worked out all of the other bad features except the Commerce Court. We must now correct the mistake of leaving that in the bill, and that is the object of this meeting. [Laughter.]

Mr. MANN. Will the gentleman yield?

Mr. ADAMSON. I will yield for a question, but I will say to the gentleman from Illinois that while I am always ready from the beginning to the end to answer any question, I prefer to wait until I get through and then let him cross-examine me.

Mr. MANN. That will be too late. The gentleman has always been opposed to the creation of a special court, has he?

Mr. ADAMSON. Yes.

Mr. MANN. Did the gentleman vote for the Esch-Townsend bill creating a special court?

Mr. ADAMSON. I guess I did finally after I did the best I could to secure something better and failed.

Mr. MANN. The Esch-Townsend bill?

Mr. ADAMSON. I was never for that bill. In the Republican House it was the best we could secure in the way of regulation. We could not afford to vote against conferring the power to make rates.

Mr. MANN. But the gentleman did finally vote for it?

Mr. ADAMSON. I think I did; but I never did vote for the last administration bill, although we worked on it and improved it in committee, and when it came into the House there was still too much of iniquity in it to commend it to my support and consideration. What good things there were in it we put in and were contrary to the wishes of those who inspired its introduction. I know that the gentleman from Illinois did not inspire it, but the transmogrification he helped us make of it trimmed it and helped it mightily. It changed the sponsorship of it, and he brought it in instead of the author who introduced it. The purpose of that bill, I believe, was to emasculate the Interstate Commerce Commission. The first thing the Commerce Court did was to assume and usurp jurisdiction unconstitutional and never intended, designed, or desired by Congress. Then the friends and relatives of that court began to take great interest in it and said that the shippers were being outraged. My God, if it had not been for the shippers there would have been no Interstate Commerce Commission. There never would have been a case before the commission. Let me give you briefly the theory on which this regulation proceeds. Congress has the right to legislate and make rates by legislative act. Some things the commission does as an administrative body, as an executive, just as the President does. The carriers are public officials just as much as you are. They call them quasi, but the duties are not quasi; the duties are entirely solid and whole.

We have a right in the interest of the people, by whose grace these carriers were chartered and do business and take charge of us and jeopardize our lives and property and charge us for it, to regulate them by law. How would you do it? Would Congress sit here and regulate every rate? No. That would take forever. We would be here every summer, every winter, every autumn, until Gabriel blew his horn. The President could not administer all of these things without appointing some agency. We may just as well constitute an agency to administer while creating a commission to legislate. Then we provided that this commission should receive complaints from shippers who thought the railroads were not giving them fair rates.

The shipper went in there and the railroad was cited; and if the commission thought it was a case to act it acted, just as Congress would do in passing a bill. It was a public instrumentality delegated by Congress to legislate rates for a public servant. If the commission acted, the railroad company was then affected. If its property was confiscated, if the commission had no constitutional authority to pass the order, the railroad had a right to hale it into court and attack the validity of it, just as you can attack the validity of anything unconstitutionally affecting your rights anywhere in any court, and no act of Congress can deprive you or the railroad of the constitutional right. The proposition now is to change the entire character of that commission and destroy the system of regulation. The commission is not a court at all. It is a legislative body to make rates. It is an administrative body to execute some things that are determined upon and intrusted to it. If Congress refuses to pass a bill, your remedy is to introduce another bill. You can not substitute the conscience of a court for the Congress if Congress fails to act; neither can you carry up the refusal of a commission acting for Congress in that way to act where there is no cause shown. That is the shipper's case, but he can file a new complaint. If the railroad is injured, it takes steps to attack the order of the commission.

The gentleman says the shipper must have his day in court. He has had his day in court up to that time, and if he has not gotten all that he wants all he has to do is to file another application and make a better case. [Applause.] That is all there is to that. They say, Take up the case. Are you going to substitute another commission? Are you going to do the foolish thing of saying a court can make a rate when the commission has refused to make a rate? That is nonsense. You may just as well try to take to the courts the refusal of Congress to pass a bill, and you may just as well take to the court the refusal of the President to pardon a criminal, if the commission is acting in its administrative capacity. If under the Constitution you should provide to substitute the judgment of a court, you would overturn the entire character of the scheme, and you would make a court out of a commission and have two authorities to make rates instead of one, which would be ridiculous, if not unconstitutional.

Let me tell you where the gentlemen got their hallucination about shippers. We have been working on this question ever since 1887. The first bill was passed at that time. Brother MANN and I went on the committee at the same time, 17 years ago. This identical proposition has been urged every time there has been a revision of the commerce laws. The gentleman from Illinois [Mr. MANN] I am sure agrees with me in my views of the functions and powers and purposes of the commission. Time after time when we revised the commerce law we refused to do this thing because it would have been subversive of the very character and purpose of the Commerce Commission. Let me tell you how this trouble arose and at the same time explain to you how the statement "the shippers are complaining" can be true and the only way it can be true, for the only persons complaining are those mentioned in two paragraphs of the commerce law, the first of which is as follows and which we put in as the last paragraph of section 1 on the demand of the industrial enterprises throughout the country, who desired legislative coercion to make the railroads facilitate shipping the products of their plants and receiving their supplies.

The following is the paragraph:

Any common carrier subject to the provisions of this act, upon application of any lateral, branch line of railroad, or of any shipper tendering interstate traffic for transportation, shall construct, maintain, and operate upon reasonable terms a switch connection with any such lateral, branch line of railroad, or private sidetrack which may be constructed to connect with its railroad, where such connection is reasonably practicable and can be put in with safety and will furnish sufficient business to justify the construction and maintenance of the same; and shall furnish cars for the movement of such traffic to the best of its ability without discrimination in favor of or against any such shipper. If any common carrier shall fail to install and operate any such switch or connection as aforesaid, on application therefor in writing by any shipper or owner of such lateral, branch line of railroad, such shipper or owner of such lateral, branch line of railroad may make complaint to the commission, as provided in section 13 of this act, and the commission shall hear and investigate the same and shall determine as to the safety and practicability thereof and justification and reasonable compensation therefor, and the commission may make an order, as provided in section 15 of this act, directing the common carrier to comply with the provisions of this section in accordance with such order, and such order shall be enforced as hereinafter provided for the enforcement of all other orders by the commission, other than orders for the payment of money.

Having secured that provision compelling the railroads to connect with their track, run on their switches, to load and unload, and taking and delivering their cars, these several thousand industrial enterprises, now referred to as shippers, and referred to in the act as shippers, decided that they wanted some remuneration for contributing to the transportation,

Their tracks were used, sometimes their cars were used. In other ways they substantially contributed to the transportation of their commodities. They then requested, and at their demand we enacted, the following provision for their benefit:

If the owner of property transported under this act directly or indirectly renders any service connected with such transportation, or furnishes any instrumentality used therein, the charge and allowance therefor shall be no more than is just and reasonable, and the commission may, after hearing on a complaint or on its own initiative, determine what is a reasonable charge as the maximum to be paid by the carrier or carriers for the services so rendered or for the use of the instrumentality so furnished, and fix the same by appropriate order, which order shall have the same force and effect and be enforced in like manner as the orders above provided for under this section.

It will be observed that in this provision they are referred to as "owners of the property," but nevertheless they are recognized as the shippers of that property. These shippers, being sugar mills, lumbering mills, coal mines, brickyards, wholesale stores, and every conceivable enterprise, having forced the railroads to make physical connections and having gotten in the habit of being paid for all contributions to transportation, became quite cocky and bumptious and concluded they would claim to be common carriers and insist on participating with the through carriers in through routes and joint rates. The Interstate Commerce Commission failing to see the matter in that light overruled their contention, holding that they were not common carriers subject to the act to regulate commerce. In the Procter & Gamble case the Supreme Court set out at length our whole theory and purpose and practice in our efforts to regulate commerce just exactly as I have stated it here to you to-day, justifying the action of the Commerce Commission. That is all there is to it.

Mr. MANN. Will the gentleman yield?

Mr. ADAMSON. Yes, sir.

Mr. MANN. Is it a fact if they had this right they would get for themselves a lower rate than a competitor who did not happen to have a sidetrack?

Mr. ADAMSON. I think the great objection the commission always found to it was that they used it for rebates.

Mr. BORLAND. Did not the Tap Line cases finally get into court?

Mr. ADAMSON. Yes; by usurpation of authority by a court that was created for the purpose of destroying the Commerce Commission and after getting it decided that the Commerce Commission was right. The Supreme Court went further and decided that, while they did stumble along and decide the merits of the case right, they were guilty of usurpation and taking jurisdiction of something they had no business with, and turned the tap lines out of court. Now, as to the operations of the court. I have never stated, and I do not care, how many cases they have decided right or wrong. I say they have no business with them. The court is taking away business from the Federal courts, and to that extent relieving them from doing anything, and none of the Federal judges are worked to death. I have never heard of one being buried from overwork, never. [Applause.] I will tell you as to this talk about uniformity. We have every kind of a case on earth in all the States, including all questions. The common head is the Supreme Court of the United States, and that is the final arbiter and unifier. There and there only you will secure uniformity. Oh, but they say you have to scatter about the litigation. That is exactly what I want. The people are scattered all over these States and Territories. They have a right to litigate at home in the vicinage. I object to their having to come to Washington. But who is benefited by that. The railroads first. The railroads can all unite and retain two or three lawyers, and it is mighty easy for those lawyers to go before the court and try all the cases for all the carriers and they get out easy. If they should have much business there would be congestion and delay.

Talk about hearings. We have had hearings for 17 years to my knowledge—and we knew just what the law was, and we were not surprised at the Procter & Gamble case at all. When the gentleman from Louisiana and the gentleman from Missouri became excited over the subject and undertook to remove the regulation of commerce to another committee we went right on with hearings on bills before our committee. We examined the members of the Commerce Commission. We examined the lawyers who are assembled in Washington and who would find it very convenient and profitable if they could assemble all litigation against the carriers and be permitted to conduct it all before one court here. We demonstrated on that hearing the hallucination that any shippers except the tap lines and their lawyers were agitated on the subject. We showed that the imaginary and loudly and widely heralded demand from shippers found its only basis in responses to stereotyped statements sent out from Washington. All that howling storm of

clamor from the shippers was but the echo responding to statements from interested attorneys in Washington, and in making their responses they were misled by erroneous statements to the effect that the shippers had no chance; that the railroads had their day in court with the right to appeal, but that the shipper had no chance anywhere. All this will appear from the hearings taken a year ago by our committee. Not one solitary demand has ever come to our committee from a shipper, nor anybody claiming to be shippers, except some letters suggested and inspired by the erroneous statements already referred to, that the poor shipper was robbed and buffeted about and had no chance; that under the system erected by Congress everything and everybody was for the railroads and nobody for the shipper; when the truth is the only shippers who have ever complained are the tap-line tracks erected by industrial institutions as facilities for their own accommodation, and they were never turned down as shippers. The law itself recognized them as shippers, gave them all they were entitled to as shippers, but when they undertook to become carriers then it was a fight between tap-line railroad and trunk-line railroad, and they lost their complaint, not as shippers, but as pretended and self-assumed carriers, a character under which the Interstate Commerce Commission declined to recognize them, and claiming privileges as carriers which the law denied them. There was never a position so false, there was never an argument so sophistical, there was never a proposition fraught with so much poppy-cock as that urged in the amendments supported by the gentlemen from Louisiana and Missouri.

There is another great trouble about the gentleman from Louisiana. He has introduced a pair of contradictory propositions, either of which if successful would destroy the Interstate Commerce Commission and all our efforts to regulate, and both are in harmony with the spirit which supports the Commerce Court. His first proposition is to make the courts the guardians of the Commerce Commission, to correct it when it fails to modify a rate, and take charge and itself regulate the rate, a proposition unconstitutional, impracticable, and ridiculous. The second, he proposes to make all orders final, so as to deny redress in the courts to anybody. Of course everybody knows that is unconstitutional.

The CHAIRMAN. All time has expired. [Applause.]

The question is on the amendment offered by the gentleman from Georgia [Mr. BARTLETT].

Mr. FITZGERALD. Mr. Chairman, what is the amendment? Let us have it again reported.

The CHAIRMAN. The Clerk will again report the amendment.

The amendment was again reported.

The question was taken; and the Chair announced the ayes seemed to have it.

On a division (demanded by Mr. FITZGERALD) there were—ayes 82, noes 36.

Mr. MANN. Mr. Chairman, let us have tellers.

Tellers were ordered.

The committee again divided, and the tellers [Mr. FITZGERALD and Mr. BARTLETT] reported that there were—ayes 80, noes 40. So the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

Mr. MANN. Is not the amendment to strike out the paragraph?

The CHAIRMAN. Yes.

Mr. MANN. That should be voted on last.

The CHAIRMAN. The Clerk will report the first amendment offered by the gentleman from Louisiana [Mr. BROUSSARD].

Mr. BROUSSARD. Mr. Chairman, in view of the action taken by the committee in adopting the Bartlett amendment, where does this amendment come in giving jurisdiction to the district courts? Of course the amendment of the gentleman from Georgia still leaves the proposition of the decisions of the Interstate Commerce Commission to be reviewable by the district courts, and the amendment now under consideration is an amendment to give additional jurisdiction to the district courts. At what part would this amendment come in under that amendment? I am not clear as to that.

Mr. FITZGERALD. Let the amendment be again reported so we will know what it is.

The CHAIRMAN. The Clerk will again report the amendment.

The first amendment of Mr. BROUSSARD was again reported.

Mr. BORLAND. That is the one that is identical with the Borland bill of the last session.

Mr. BROUSSARD. Yes.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken; and the Chairman announced that the yeas seemed to have it.

Mr. BROUSSARD. A division, Mr. Chairman.

The CHAIRMAN. The gentleman from Louisiana [Mr. BROUSSARD] demands a division.

The committee divided; and there were—ayes 8, yeas 67.

So the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment offered by the gentleman from Louisiana [Mr. BROUSSARD]. That is the amendment to which the gentleman from Tennessee [Mr. SIMS] reserved a point of order.

Mr. SIMS. Yes; I reserved a point of order, but it might take a longer time to discuss it.

The Clerk read as follows:

On page 21, line 11, after the word "thirteen," strike out the comma and insert a period. Strike out, after said period, the balance of page 21 and all of pages 22, 23, and 24, and strike out all of that part of page 25 up to and including line 17, and insert in lieu thereof the following: "And no court in the United States shall entertain jurisdiction of any suit to enforce, suspend, set aside, in whole or in part, any order of the Interstate Commerce Commission, but such orders of said commission shall be final as to questions of law, as well as to questions of fact."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the Chairman announced that the "yeas" seemed to have it.

Mr. BROUSSARD. I call for a division, Mr. Chairman.

The CHAIRMAN. The gentleman from Louisiana asks for a division.

The committee divided; and there were—ayes 3, yeas 70.

So the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment, which is the amendment offered by the gentleman from Indiana [Mr. CULLOP].

The Clerk read as follows:

Amend, page 21, line 19, by striking out the words "some or all of," after the word "where," and in line 20, after the word "has" strike out the word "either," and after the word "origin" strike out the words "or destination," so that the paragraph will read "The venue of any suit hereafter brought to enforce, suspend, or set aside, in whole or in part, any order of the Interstate Commerce Commission shall be in the judicial district where the transportation covered by the order has its origin," etc.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the Chairman announced that the "yeas" seemed to have it.

Mr. MURDOCK. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 34, yeas 58.

So the amendment was rejected.

The CHAIRMAN. The question now is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MANN]. The Clerk will report it.

The Clerk read as follows:

Strike out the paragraph from line 4, page 21, to line 17, page 25, both lines inclusive.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

Mr. FITZGERALD. Is that all of the amendments, Mr. Chairman?

The CHAIRMAN. That is all.

Mr. FITZGERALD. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] offers an amendment which the Clerk will report.

The Clerk read as follows:

For compensation (not exceeding in the aggregate \$15,000 and at a monthly compensation not exceeding \$300 each, to be fixed by the Secretary of the Treasury) and traveling expenses of agents to select and recommend sites that have been authorized by law for public buildings for the fiscal year 1914, \$30,000.

Mr. BROUSSARD. Mr. Chairman, I want to reserve the right to have a vote in the House upon the two amendments which I offered.

The CHAIRMAN. The Chair did not catch the gentleman's request.

Mr. BROUSSARD. I say, Mr. Chairman, I want to reserve the right to ask for a separate vote in the House upon the amendments which I offered, which have been defeated in the committee.

The CHAIRMAN. The gentleman would not be in order, the amendments having been lost in the committee.

Mr. BROUSSARD. My amendments were lost in the committee. I want to reserve the right for a roll call in the House.

Mr. FITZGERALD. The gentleman can ask for his rights in the House.

The CHAIRMAN. The Chair would advise the gentleman from Louisiana to submit that proposition to the Speaker when we get into the House.

Mr. BROUSSARD. I do not want to lose my rights; that is all.

Mr. MONDELL. Mr. Chairman, I desire to submit a few remarks on this matter, but as it is quite late I ask unanimous consent that I may extend them in the Record.

The CHAIRMAN. The gentleman from Wyoming [Mr. MONDELL] asks unanimous consent to extend his remarks in the Record. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, I listened with much interest to observations made by gentlemen during the debate yesterday relative to the standardization of public buildings and in criticism or condemnation of the policy of erecting public buildings in relatively small cities and towns. To my surprise a number of gentlemen on the other side of the aisle expressed a rather remarkable change of opinion on the subject of public buildings in communities of less than metropolitan size; and for fear that it might be understood that this change of opinion was quite universal I have felt it my duty to say a few words on the subject.

One of the gentlemen who spoke has expressed the opinion that no public building should be erected in a city of less than 100,000 inhabitants, other gentlemen have placed the limit considerably lower, but still exclusive of a very large class of thriving towns. Other gentlemen would establish the rule that no public building shall be erected unless it is cheaper for the Government to build and maintain than to pay rent. Very briefly I desire to dissent from the opinions thus expressed.

It is and has been a very cheap and easy criticism of public-building bills to refer to them as pork-barrel bills. With certain classes of people every appropriation is a pork-barrel appropriation unless the money is to be spent to pay the salaries of men in uniform, for \$15,000,000 battleships, for arms and munitions of war, or for costly structures to adorn great cities.

On what theory all expenditures for public buildings are to be limited to cities of upward of 100,000 people I do not know. If it is on the theory that as a cold business proposition it pays better to build than to rent I fear that an unbiased investigation would develop the fact that, assuming that the money we take from the people in taxes to build public buildings is worth 5 per cent to them and taking into consideration every element of cost and upkeep, there are very few places where the Government could not rent accommodations which would serve the purpose much better than the buildings that the Government ordinarily rents in small towns for much less than it costs to build and maintain. The gentlemen who have advanced the theory that the Government should erect no buildings to serve the purposes of peace except upon conclusive proof that such building is essentially a matter of economy will find mighty few buildings to erect.

Possibly gentlemen argue that none but the largest communities and cities should have post-office buildings, because they, as clearing houses of postal business, receive the major portion of the postal revenues. One would judge from the pride and complacency with which gentlemen from large cities refer to the enormous postal receipts in such cities that they imagine that these receipts flow entirely from billet-doux and parcel-post transactions between and among the favored inhabitants of their and like communities.

Gentlemen seem to forget that if it was not for the people on the farms and in the small towns the postal receipts of these great centers would dwindle amazingly. Gentlemen who can not view these things except from the standpoint of the metropolitan citizen are not satisfied apparently that the cities shall have all the advantage which comes to the manufacturer, the finisher, the jobber, the middleman, while the country and the small towns and cities in the person of the ultimate consumer pays the fiddler. In addition to that it is their desire that when it comes to Government expenditures for permanent structures the hundreds and thousands of smaller communities which make up postal receipts shall not only receive no consideration but they—the larger communities—shall be the sole beneficiary of the aggregate of receipts contributed by many smaller communities.

I am not one of those who believe that the committee or the Congress, which passed the last public-building bill, is properly subject to any considerable censure in that behalf. No doubt they provided for buildings which we could do without, as, in fact, we could do without the monumental structure, beautiful and inspiring in situation and design, which we have just com-

pleted for the Bureau of Printing and Engraving in this city; but in my philosophy no properly planned and constructed public building in any growing community represents either a waste or a misappropriation of public funds. In many communities it is the only permanent, visible, tangible evidence of the existence of the Federal Government, and justifiable from that standpoint alone.

Some gentlemen who are not willing to go to the length of confining Federal construction to large cities would standardize all structures. If small cities and towns must have a public building, the theory seems to be that a glorified soap box, with a few tin trimmings painted, I suppose, to correspond with the tone of the landscape—a bright green in Virginia, a dull drab in Texas, and a dust color in Utah—would be about the thing. Standardization within reason is a good thing, but I have been inclined to the opinion that in late years we have been standardizing quite enough in the general plan and style of public buildings, though possibly not as much as we could or should in the matter of detail. My experience with public buildings is that they exert a most helpful and salutary influence upon the towns in which they are built. A public building of a design in harmony with its surroundings, of material that can be utilized without excessive cost in the better class of private structures, is a constant inspiration to the community and exerts a continuous, helpful influence in the improvement in plan and permanence in private structures.

I can not agree with the views that have been expressed by one or two of the gentlemen to the effect that we are not and have not been getting our money's worth in public buildings. I do not pretend to know what happens in large cities, where men make diligent study of sharp practice and tricks of the trade, but I do know that in the part of the country from which I hail the Government—not only the Post Office Department, but the War Department—has been erecting buildings as cheaply as the same class of buildings could be erected by anyone; in fact, I have in mind instances in which it has been a matter of surprise to well-informed people that a building of the kind could be constructed as cheaply as the Government has been constructing them. Gentlemen should bear in mind that these buildings are constructed with a degree of thoroughness and permanence that private individuals are inclined to think they can not afford, though, as I have said, the influence of these structures in the encouragement of good taste and permanence in private structures is very great. It should also be remembered that in Government construction of all kinds it is the practice to compel a closer adherence to specifications than in the case of private construction, and this of course has a tendency to somewhat increase cost.

Gentlemen have complained that the cost of the Supervising Architect's Office is excessive. As to that I am not informed, but we all know that a great variety of work performed through public agencies is more expensive than like work performed by private enterprise.

I expect to continue to support reasonable appropriations for Government expenditures along all proper lines, but I adhere to the belief that the flag floating from a Government building of pleasing design and appropriate finish in the small towns and cities of the country is at least as fine an inspiration of patriotism and good citizenship as is the banner floating from a \$5,000,000 building in a great city or from the peak of a \$15,000,000 battleship.

Mr. AUSTIN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD with respect to the Supervising Architect's Office.

The CHAIRMAN. The gentleman from Tennessee [Mr. AUSTIN] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. POWERS. Mr. Chairman, I make the same request.

Mr. OGLESBY. And, Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection to the request of the gentleman from Kentucky [Mr. POWERS] and the request of the gentleman from New York [Mr. OGLESBY]?

There was no objection.

[Mr. AUSTIN addressed the committee. See Appendix.]

Mr. POWERS. It has been so, Mr. Chairman, for many, many years that every time a Post Office appropriation bill, or anything akin to it, was up for discussion before Congress, and every time such a bill was passed by either House of the National Legislative body, there was a great hue and cry raised about "pork-barrel" legislation—about Congressmen getting things for their districts, and all that. What are Members sent here for except to do what they can, and all they can, for the

constituents who sent them? Oh, but the point is raised that when one is elected a Member in Congress he is then a representative of all the people, and that he should be broad and fair enough to look at the general welfare of all the people; and if a certain proposed measure does not redound to the benefit of a majority of all the people, in that event he should not favor the legislation, even if it should greatly benefit and bless the people of his own district. It may be a narrow view for me to take, but I am for the people of my district first and the rest of the world afterwards. If every Member here should take that view of it there would never be any legislation passed that was not in harmony with the views, wishes, and welfare of a majority of all the people of this great country, because all the people of this great country are represented, or supposedly represented, by the 435 Members of the House of Representatives.

The people in the district I have the honor to represent are citizens and taxpayers of this great and glorious old country of ours, and, as such, they are entitled to have, at least, some of the immense appropriations of this Congress redound directly to their benefit. We have no great rivers, no bays, no harbors, no great lakes touching our territory. We have no great cities down there, no great navies nor standing armies. We have virtually none of the things in the district upon which the Government has been spending large sums of money. And, if the plan contended for here by some gentlemen be adopted that no money should be appropriated with which to erect a public building unless the population in the town or city exceed 100,000 people, in that event the district I have the honor to represent would get no appropriations whatever. Federal aid to public roads will come some time, and the upper Cumberland will some day, and I hope soon, be locked and dammed from its mouth to Burnside, Ky. But at present no appropriations of that character are being made. There is not a town in any county in the district I represent that has a population of over 10,000 people. A good many of the other Members of Congress are similarly situated. That is true of Congressman LANGLEY's district north of me. It is true of Congressman AUSTIN's district in the State of Tennessee, just south and east of the district I represent. It is true of a host of districts throughout the Union. Are they to have no appropriations for the erection of public buildings in these districts because, forsooth, there are no cities of at least 100,000 population within their boundary lines? Unfortunately, too, there are some congressional districts whose people measure the fitness of their Congressman to represent them by the number and size of the appropriations he is able to obtain for his district.

If he obtains none, in the minds of some people he is an unfit representative, however able and untiring he may be in his efforts to serve his constituency both faithfully and well. He may be instrumental in helping shape the great legislative measures of the country. He may have reflected credit upon the people of the district who gave him a seat in Congress, and all that, still when he becomes a candidate to succeed himself his enemies will yell themselves hoarse asking what he has done for his district; and unless he is able to point to some visible thing which money in the form of an appropriation has erected or constructed there are too many who are prone to say, "I can not see anything that he has done."

One of the dangers to our Republic is that the people have been flocking from the farms to the cities. By reason of this the farms have become partially deserted, production thereon has not kept pace with the ever-increasing tide of humanity, and as a result of it all prices of farm products have soared heavenward. "Back to the farm," is now the cry. "Back to the soil," is now the watchword and shibboleth of the advocates of a reduced cost of living. It was the reduction of the "robber" tariff for a while, you know. Are these advocates in Congress—these strenuous advocates—now wanting to adopt a policy to reward the people who live in the cities of immense size and punish the people who live in the country by giving appropriations to the one and denying it to the other? Consistency, consistency! It can be found everywhere except in politics and the American Congress. And why do you gentlemen trouble your souls about the high cost of living? You Democratic spellbinders on the raging stump in the last campaign told the confiding public that if they would just turn the robbing Republican scoundrels out of office and put your pious but red-nosed scoundrels in that all would be lovely; that the high cost of living would melt away like the mist before the rising sun; and that peace, plenty, and right living would be the common heritage of all. But lo, and behold! Lo and behold! Human nature has not changed. Wickedness is yet abroad in the land. The high cost of living each day continues to soar still higher. The third Maine district has gone Republican. There is a day

of reckoning for you gay deceivers. The people are deserting the party of asininity, deception, and failure.

[Mr. OGLESBY addressed the committee. See Appendix.]

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from New York [Mr. FITZGERALD].

The question was taken, and the amendment was agreed to.

Mr. FITZGERALD. Mr. Chairman, I move that the committee do now rise and report the bill favorably to the House with amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee determined to rise; and the Speaker having resumed the chair, Mr. Flood of Virginia, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7898, the urgent deficiency bill, and had directed him to report the same back with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. FITZGERALD. Mr. Speaker, I move the previous question on the bill and amendments to final passage.

The motion was agreed to.

The SPEAKER. Is a separate vote demanded on any amendment?

Mr. MANN. Mr. Speaker, I ask for a separate vote on the Bartlett amendment to the Commerce Court proposition abolishing the judges.

The SPEAKER. The gentleman from Illinois demands a separate vote on the Bartlett amendment to the Commerce Court proposition.

Mr. BROUSSARD. Mr. Speaker, I ask for a separate vote on both amendments that I offered.

The SPEAKER. Both amendments were lost, were they not?

Mr. BROUSSARD. Yes.

The SPEAKER. The gentleman can not have a vote upon them. Is a separate vote demanded on any other amendment, and if not, the Chair will put the rest of them en gros.

There was no further demand for a separate vote, and the remaining amendments were agreed to.

The SPEAKER. The Clerk will report the Bartlett amendment.

The Clerk read as follows:

Amend by adding on page 21, in line 15, after "repealed":

"The five additional circuit judgeships provided for by the act of Congress approved June 18, 1910, and by chapter 9 of the act entitled 'An act to codify, revise, and amend the laws relating to the judiciary,' approved March 3, 1911, are hereby abolished, and the authority in said acts of Congress for the President, by and with the advice and consent of the Senate, to appoint five additional circuit judges is hereby repealed, and the number of circuit judges is hereby reduced to 29. So much of the acts of June 18, 1910, and of March 3, 1911, as authorize or direct the said five judges to preside in the circuit or district courts of the United States or in the circuit courts of appeals or to exercise any of the powers, duties, or authority of circuit or district judges, or of said circuit or district courts or of said circuit courts of appeals, is hereby repealed."

The SPEAKER. The question is on the amendment.

The question was taken; and on a division (demanded by Mr. MANN) there were—92 ayes and 45 noes.

Mr. MANN. Mr. Speaker, I make the point of order that no quorum is present.

The SPEAKER. The Chair will count. [After counting.] One hundred and fifty-two Members present; not a quorum.

ADJOURNMENT.

Mr. FITZGERALD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 20 minutes p. m.) the House adjourned until to-morrow, Tuesday, September 9, 1913, at 12 o'clock noon.

EXECUTIVE COMMUNICATION.

Under clause 2 of Rule XXIV, a letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report of examination of Paint Rock River, Ala. (H. Doc. No. 227), was taken from the Speaker's table, referred to the Committee on Rivers and Harbors, and ordered to be printed.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 2750) granting a pension to Stanley S. Stout; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 3306) granting an increase of pension to Charles Wilson; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. SMITH of Idaho: A bill (H. R. 7968) to provide for the erection of a Federal building at Blackfoot, Idaho; to the Committee on Public Buildings and Grounds.

By Mr. BRITTEN: A bill (H. R. 7969) to prohibit the killing and interstate shipment of beef cattle under a certain age; to the Committee on Interstate and Foreign Commerce.

By Mr. SUMNERS: A bill (H. R. 7970) to establish in the Department of Agriculture a bureau of marketing; to the Committee on Agriculture.

By Mr. BORLAND: A bill (H. R. 7971) to provide for the construction of sanitary dwellings at a low rental for unskilled wage earners in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. CARTER: A bill (H. R. 7972) providing for the holding of the United States district and circuit courts at Hugo, Okla.; to the Committee on the Judiciary.

By Mr. HOBSON: A bill (H. R. 7973) to provide for the publication of an official journal; to the Committee on Printing.

By Mr. STEPHENS of Texas: A bill (H. R. 7974) to adjust the tribal rolls and to settle the affairs of the Five Civilized Tribes in Oklahoma; to the Committee on Indian Affairs.

By Mr. BOOHER: Resolution (H. Res. 245) directing the Secretary of Agriculture to communicate to the House of Representatives the cost and result of the investigation of the hog-cholera plague; to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BRITTEN: A bill (H. R. 7975) for the relief of the heirs of Claud Graham; to the Committee on Claims.

By Mr. DYER: A bill (H. R. 7976) granting a pension to Charles F. Lang; to the Committee on Invalid Pensions.

By Mr. FORDNEY: A bill (H. R. 7977) granting a pension to George Oatten; to the Committee on Pensions.

By Mr. HOUSTON: A bill (H. R. 7978) granting an increase of pension to Thomas Davis; to the Committee on Invalid Pensions.

By Mr. KIESS of Pennsylvania: A bill (H. R. 7979) granting a pension to Lucy M. Cooke; to the Committee on Pensions.

By Mr. LOBECK: A bill (H. R. 7980) granting a pension to George J. Jarchow; to the Committee on Pensions.

Also, a bill (H. R. 7981) granting an increase of pension to John K. Lowry; to the Committee on Invalid Pensions.

By Mr. PATTON of Pennsylvania: A bill (H. R. 7982) granting a pension to George M. Maginnis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7983) granting a pension to Mary E. Schnell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7984) granting an increase of pension to Dallas Patrick; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7985) granting an increase of pension to William M. McIntosh; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7986) granting an increase of pension to Charles H. Else; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7987) granting an increase of pension to James T. Herrington; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7988) granting an increase of pension to William Jones; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7989) granting an increase of pension to Alfred Richards; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7990) granting an increase of pension to William Colpetzer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7991) granting an increase of pension to Elizabeth A. Clemson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7992) granting an increase of pension to Seymour Ross; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7993) granting an increase of pension to Irvin G. Alexander; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7994) granting an increase of pension to Cyrus Wilson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7995) granting an increase of pension to Charles F. Heichtel; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7996) granting an honorable discharge to C. H. Cole; to the Committee on Military Affairs.

Also, a bill (H. R. 7997) granting an increase of pension to Christian H. Buckwalter; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7998) granting an increase of pension to George W. Brink; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7999) granting an increase of pension to John Anderson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8000) granting an increase of pension to Jacob Woodruff; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8001) granting an increase of pension to Marshall C. Conroe; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8002) granting an increase of pension to John C. Rote; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8003) granting an increase of pension to J. Milton Carlisle; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8004) granting an increase of pension to Lavina Sharp; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8005) granting an increase of pension to Joseph Gates; to the Committee on Invalid Pensions.

By Mr. SINNOTT: A bill (H. R. 8006) granting an increase of pension to Sarah A. Tillard; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BURNETT: Petition of the Association of German Authors of America, New York, N. Y., and of the Alabama State Branch of the German-American National Alliance, Mobile, Ala., protesting against placing a tariff on books printed in languages other than English; to the Committee on Ways and Means.

Also, petition of the Switchmen's Union of North America, Houston, Tex., protesting against the schedule of compensation provided for in the workmen's compensation bill; to the Committee on the Judiciary.

Also, petition of sundry business men of the seventh congressional district of Alabama, favoring the passage of legislation compelling concerns selling goods direct to the consumer by mail to contribute their portion of the funds for the development of the local community, county, and State; to the Committee on Interstate and Foreign Commerce.

Also, petition of Fred J. Buchmann, Cullman, Ala., and J. J. Tucker, Crane Hill, Ala., protesting against including mutual life insurance companies in the income-tax bill; to the Committee on Ways and Means.

By Mr. BRITTEN: Papers to accompany bill for the relief of the heirs of Claude Graham; to the Committee on Claims.

By Mr. CAMPBELL: Petition of sundry business men of the third congressional district of Kansas, favoring the passage of legislation compelling concerns selling goods direct to the consumer by mail to contribute their portion of the funds for the development of the local community, county, and State; to the Committee on Interstate and Foreign Commerce.

By Mr. CLARK of Florida: Petition of the city council of Jacksonville, Fla., favoring the passage of legislation for national aid for the construction of good roads; to the Committee on Roads.

By Mr. DYER: Petition of the Missouri Old Trails Road Association, Booneville, Mo., favoring the passage of legislation making an appropriation for the continuance of the Cumberland Road through the States of Ohio, Indiana, Illinois, and Missouri; to the Committee on Roads.

By Mr. SAMUEL W. SMITH: Petition of Williamston (Kans.) Grange, No. 115, protesting against the passage of the Underwood tariff bill; to the Committee on Ways and Means.

Also, petition of sundry business men of 29 towns of the State of Michigan, favoring the passage of legislation compelling concerns selling goods direct to the consumer by mail to contribute their portion of the funds for the development of the local community, county, and State; to the Committee on Interstate and Foreign Commerce.

SENATE.

TUESDAY, September 9, 1913.

The Senate met at 9 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

The Journal of yesterday's proceedings was read and approved.

MEMORIAL.

Mr. POINDEXTER presented a memorial of Local Camp No. 2, Sons of Veterans, of Spokane, Wash., remonstrating against any change in the design of the American flag, which was referred to the Committee on Military Affairs.

NATIONAL CONSERVATION EXPOSITION, KNOXVILLE, TENN.

Mr. ASHURST, from the Committee on Industrial Expositions, to which was referred S. Res. 175, to provide for a committee to accept on behalf of the Senate an invitation to

visit the National Conservation Exposition, reported it without amendment, submitted a report (No. 111) thereon, and moved that it be referred to the Committee to Audit and Control the Contingent Expenses of the Senate, which was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. OWEN:

A bill (S. 3099) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes; to the Committee on Banking and Currency.

By Mr. GORE:

A bill (S. 3100) fixing the compensation of letter carriers of the Rural Delivery Service at a salary not exceeding \$120 per month; to the Committee on Post Offices and Post Roads.

AMENDMENT TO DEFICIENCY APPROPRIATION BILL.

Mr. PENROSE submitted an amendment proposing to appropriate \$10,000 for completion of post-office building under present limit at Hanover, Pa., etc., intended to be proposed by him to the urgent deficiency appropriation bill (H. R. 7898), which was referred to the Committee on Appropriations and ordered to be printed.

PUBLIC LANDS IN CALIFORNIA.

Mr. WORKS submitted an amendment intended to be proposed by him to the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes, which was referred to the Committee on Public Lands and ordered to be printed.

THE TARIFF.

The VICE PRESIDENT. The morning business is closed.

Mr. SIMMONS. I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. SMOOT. Mr. President, I believe we should have a quorum before we start with the consideration of the bill. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Brandegee	McCumber	Pomerene	Smoot
Bristow	Martin, Va.	Robinson	Sterling
Chamberlain	Myers	Sheppard	Thomas
Gallinger	Nelson	Sherman	Walsh
James	Norris	Shields	Works
Jones	Owen	Simmons	
Kenyon	Page	Smith, Ga.	
Lane	Perkins	Smith, S. C.	

Mr. STERLING. I desire to announce that my colleague [Mr. CRAWFORD] is unavoidably absent.

Mr. JONES. I desire to state that the junior Senator from Michigan [Mr. TOWNSEND] is necessarily absent from the city. He is paired with the Senator from Florida [Mr. BRYAN].

The VICE PRESIDENT. Twenty-nine Senators have answered to the roll call.

Mr. BRANDEGEE. I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The VICE PRESIDENT. May the Chair suggest to the Senator from Connecticut that the roll of absentees be first called?

Mr. BRANDEGEE. Certainly; I shall be very glad to have that done.

The Secretary called the names of the absent Senators, and Mr. ASHURST, Mr. HOLLIS, Mr. KERN, Mr. LEA, Mr. SHIPLEY, and Mr. VARDAMAN answered to their names when called.

Mr. SHEPPARD (when Mr. CULBERSON's name was called). My colleague, the senior Senator from Texas, is necessarily absent. He is paired with the Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

Mr. McCUMBER (when Mr. GRONNA's name was called). My colleague is necessarily absent.

Mr. FLETCHER, Mr. HUGHES, Mr. BRYAN, Mr. LA FOLLETTE, and Mr. THORNTON entered the Chamber and answered to their names.

The VICE PRESIDENT. Forty Senators have answered to the roll call. There is not a quorum present.

Mr. SIMMONS. Mr. President—

Mr. BRANDEGEE. I renew my motion.

The VICE PRESIDENT. The Senator from Connecticut moves that the Sergeant at Arms be directed to request the attendance of absent Senators.

Mr. SIMMONS. I rose to make that motion.

The motion was agreed to.

The VICE PRESIDENT. The Sergeant at Arms will execute the order of the Senate.

Mr. RANDELL, Mr. OLIVER, Mr. CATRON, Mr. WILLIAMS, Mr. OVERMAN, Mr. JOHNSON, Mr. SAULSBURY, Mr. CUMMINS, Mr. REED, and Mr. BRADLEY entered the Chamber and answered to their names.

The VICE PRESIDENT (at 9 o'clock and 35 minutes a. m.). Forty-eight Senators have answered to the roll call. There is a quorum present.

Mr. BRANDEGEE. Mr. President, I ask unanimous consent that further proceedings under the order of the Senate directing the Sergeant at Arms to request the presence of absent Senators be dispensed with.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the order is vacated. The pending amendment is the amendment offered by the Senator from Washington [Mr. JONES].

Mr. JONES. On that I ask for a roll call.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. NELSON (when his name was called). I have a general pair with the Senator from Georgia [Mr. BACON], and withhold my vote for that reason.

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. COLT] to the Senator from Oklahoma [Mr. GORE] and vote "nay."

Mr. SUTHERLAND (when his name was called). I ask whether the Senator from Arkansas [Mr. CLARKE] has voted?

The VICE PRESIDENT. The Chair is informed that he has not voted.

Mr. SUTHERLAND. Then I withhold my vote on account of my pair with that Senator.

Mr. THOMAS (when his name was called). I have a general pair with the Senator from Ohio [Mr. BURTON], which I transfer to the senior Senator from Nevada [Mr. NEWLANDS], and vote "nay."

Mr. WILLIAMS (when his name was called). I wish to announce my general pair with the senior Senator from Pennsylvania [Mr. PENROSE] and the transfer of that pair to the Senator from Nevada [Mr. PITTMAN]. I vote "nay."

The roll call was concluded.

Mr. WILLIAMS (after having voted in the negative). I have just been informed that the senior Senator from Pennsylvania [Mr. PENROSE], if present, would vote "nay," and therefore, without any transfer of my pair with him, I take the liberty of allowing my vote to stand.

Mr. GALLINGER (after having voted in the negative). I inquire if the junior Senator from New York [Mr. O'GORMAN] has voted?

The VICE PRESIDENT. The Chair is informed that he has not voted.

Mr. GALLINGER. I am paired with that Senator. I transfer the pair to the junior Senator from Maine [Mr. BURLEIGH] and will allow my vote to stand.

Mr. CLARK of Wyoming. I ask if the senior Senator from Missouri [Mr. STONE] has voted?

The VICE PRESIDENT. The Chair is informed that he has not voted.

Mr. CLARK of Wyoming. I have a general pair with that Senator, and therefore withhold my vote.

Mr. REED. My colleague, the senior Senator from Missouri, is unavoidably detained from the Chamber.

I have a pair with the Senator from Michigan [Mr. SMITH]. I transfer that pair to the Senator from Maryland [Mr. SMITH] and vote "nay."

Mr. FLETCHER (after having voted in the negative). I understand the Senator from Wyoming [Mr. WARREN], with whom I am paired, has not voted. I transfer that pair to the junior Senator from Virginia [Mr. SWANSON] and will allow my vote to stand.

Mr. CLARK of Wyoming. As I have stated, I have a general pair with the senior Senator from Missouri [Mr. STONE]. I transfer that pair to the Senator from Vermont [Mr. DILLINGHAM] and vote "yea."

Mr. LEA. I transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the junior Senator from Ohio [Mr. POMERENE] and will vote. I vote "nay."

The result was announced—yeas 8, nays 42, as follows:

YEAS—8.			
Bradley	Catron	Jones	Perkins
Brandegee	Clark, Wyo.	Norris	Sherman
NAYS—42.			
Ashurst	Kern	Page	Smoot
Bristow	Lane	Reed	Sterling
Chamberlain	Lea	Robinson	Thomas
Cummins	McCumber	Saulsbury	Thompson
Fletcher	McLean	Shafroth	Thornton
Gallinger	Martin, Va.	Sheppard	Vardaman
Hollis	Martine, N. J.	Shields	Walsh
Hughes	Myers	Shively	Williams
James	Oliver	Simmons	Works
Johnson	Overman	Smith, Ga.	
Kenyon	Owen	Smith, S. C.	
NOT VOTING—45.			
Bacon	Culberson	Lodge	Smith, Mich.

Chilton	Hitchcock	Pomerene	Warren
Clapp	Jackson	Ransdell	Weeks
Clarke, Ark.	La Follette	Root	
Colt	Lewis	Smith, Ariz.	
Crawford	Lippitt	Smith, Md.	

So the amendment of Mr. JONES was rejected.

Mr. JONES. Mr. President, I offer another amendment. I am not going to ask for a roll call upon it. I desire to say that it restricts the provisions of the bill, as sent here by the House, to vessels built in this country, and also to vessels registered prior to the passage of the bill, and puts in a provision for abrogating the treaties.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to insert, after the word "vessels," on line 13, the words "built in the United States or"; and after the word "registration," to insert the words "prior to the passage of this act," and to add as a proviso the following:

Provided, That the President is directed to cause to be abrogated without unnecessary delay, and in the manner therein provided, all treaties which contravene this provision; and, until so abrogated, this provision shall not apply to goods, wares, and merchandise imported in vessels affected by such treaties.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. JONES. On the question of concurring in the committee amendment made as in Committee of the Whole, which strikes out the House provision, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. NORRIS. Mr. President—

Mr. ASHURST. Mr. President, may the question be stated?

The VICE PRESIDENT. The Chair must recognize the Senator from Nebraska, who first rose.

Mr. NORRIS. I rose for the purpose of getting information upon the pending question. I did not hear it and do not understand it. In order that we may know what the question is, I should like to have the Senator from Washington state it.

The VICE PRESIDENT. The Secretary will state the question.

The SECRETARY. In the Committee of the Whole the Senate agreed to an amendment, on page 263, beginning on line 11, J, subsection 7, to strike out that subsection. The Senator from Washington [Mr. JONES] now asks for the yeas and nays upon concurring in that action of the Senate as in Committee of the Whole.

The VICE PRESIDENT. The Secretary will call the roll.

Mr. McCUMBER (when Mr. GRONNA's name was called). My colleague [Mr. GRONNA] is unavoidably absent from the city. He is paired with the junior Senator from Illinois [Mr. LEWIS]. I will let this announcement stand for every vote during the day.

Mr. JAMES (when his name was called). Mr. President, there is a great deal of confusion on this side of the Chamber as to just what question we are voting upon. I should like to have the Chair let us know.

The VICE PRESIDENT. The question is upon concurring in the amendment agreed to as in Committee of the Whole.

Mr. JAMES. As agreed upon in Committee of the Whole?

The VICE PRESIDENT. Yes.

Mr. McCUMBER. Mr. President, there is a little confusion also on this side, and we did not hear the Chair, because his face was turned the other way. If the Chair will repeat the statement, we shall be much obliged.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole as to J, sub-

section 7. The action taken by the Committee of the Whole consisted in striking out the subsection.

Mr. LEA (when his name was called). I transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the junior Senator from Oklahoma [Mr. GORE] and will vote. I vote "yea."

Mr. REED. I transfer my pair, as I did on the last vote, to the senior Senator from Maryland [Mr. SMITH] and will vote. I vote "yea." At this time I should like to announce that my colleague [Mr. STONE] is unavoidably detained from the Chamber this morning, but will be here later.

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. COLT] to the junior Senator from Nevada [Mr. PITTMAN] and will vote. I vote "yea."

Mr. SUTHERLAND (when his name was called). Again announcing my pair with the senior Senator from Arkansas [Mr. CLARKE], on account of his absence I withhold my vote.

Mr. THOMAS (when his name was called). I make the same transfer as heretofore and will vote. I vote "yea."

Mr. WILLIAMS (when his name was called). I announce my pair with the senior Senator from Pennsylvania [Mr. PENROSE] and withhold my vote.

The roll call was concluded.

Mr. FLETCHER. I have a pair with the junior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Virginia [Mr. SWANSON] and will vote. I vote "yea."

Mr. BRYAN. I have a pair with the junior Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the junior Senator from Arizona [Mr. SMITH] and will vote. I vote "yea."

Mr. CLARK of Wyoming (after having voted in the negative). I announce my pair with the senior Senator from Missouri [Mr. STONE], which I transfer to the senior Senator from Vermont [Mr. DILLINGHAM] and will allow my vote to stand.

Mr. GALLINGER (after having voted in the affirmative). I inquire whether the junior Senator from New York [Mr. O'GORMAN] has voted?

The VICE PRESIDENT. He has not.

Mr. GALLINGER. I am paired with that Senator. I transfer the pair to the junior Senator from Maine [Mr. BURLEIGH] and will allow my vote to stand.

I also desire to announce pairs between the senior Senator from Idaho [Mr. BORAH] and the senior Senator from Nebraska [Mr. HITCHCOCK]; the senior Senator from Delaware [Mr. DU PONT] and the senior Senator from Texas [Mr. CULBERSON]; the junior Senator from West Virginia [Mr. GOFF] and the Senator from Alabama [Mr. BANKHEAD]; and the junior Senator from Wisconsin [Mr. STEPHENSON] and the senior Senator from South Carolina [Mr. TILMAN].

Mr. PITTMAN. Mr. President, I understand I am paired upon this vote. Therefore I withhold my vote.

Mr. GALLINGER. The senior Senator from Connecticut [Mr. BRANDEGEE] has been called from the Chamber. He is paired with the junior Senator from Ohio [Mr. POMERENE].

Mr. SMITH of Arizona. I understand I am paired on this vote, and therefore withhold my vote.

The result was announced—yeas 41, nays 12, as follows:

YEAS—41.

Ashurst	Kenyon	Owen	Smith, S. C.
Bacon	Kern	Ransdell	Smoot
Bristow	Lane	Reed	Sterling
Bryan	Lea	Robinson	Thomas
Chamberlain	Lodge	Saulsbury	Thompson
Cummins	McCumber	Shafroth	Thornton
Fletcher	McLean	Sheppard	Vardaman
Gallinger	Martin, Va.	Shields	Walsh
Hollis	Martine, N. J.	Shively	
James	Myers	Simmons	
Johnson	Overman	Smith, Ga.	

NAYS—12.

Bradley	Jones	Oliver	Sherman
Catron	Nelson	Page	Weeks
Clark, Wyo.	Norris	Perkins	Works

NOT VOTING—42.

Bankhead	Culbertson	Lewis	Smith, Mich.
Borah	Dillingham	Lippitt	Stephenson
Brady	du Pont	Newlands	Stone
Brandeggee	Fall	O'Gorman	Sutherland
Burleigh	Goff	Penrose	Swanson
Burton	Gore	Pittman	Tillman
Chilton	Gronna	Poindexter	Townsend
Clapp	Hitchcock	Pomerene	Warren
Clarke, Ark.	Hughes	Root	Williams
Colt	Jackson	Smith, Ariz.	
Crawford	La Follette	Smith, Md.	

So the amendment was concurred in.

Mr. JONES. I ask unanimous consent to insert in the remarks that I made last night a few extracts from the report of the House committee and also from the treaty.

The VICE PRESIDENT. Is there objection? The Chair hears none, and that action will be taken.

Mr. SMOOT. Yesterday there was no reservation made of paragraph 657. Therefore I suppose I am not authorized to move an amendment to that paragraph, but I have just received a letter from Mr. Walter West, of the Decorative Glass Workers' Protective Association, and I ask unanimous consent that the letter be printed in the RECORD without reading.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECORATIVE GLASS WORKERS' PROTECTIVE ASSOCIATION
OF NEW YORK AND VICINITY,
Washington, D. C., September 8, 1913.

Hon. REED SMOOT,
United States Senate, Washington, D. C.

DEAR SIR: The voices of 10,000 people or more employed in the stained-glass industry of this country and their dependents are crying out in desperation to you not to allow paragraph 657 of the Underwood-Simmons bill to pass. It is ambiguous and meaningless so far as its intent or purpose in giving to the industry the slightest protection.

Senator WILLIAMS's amendment to paragraph 657—stained-glass item—does not give the slightest protection to the stained-glass industry in this country, for the very reason that there are no stained-glass windows imported to this country except for churches.

By the adoption of Senator WILLIAMS's amendment paragraph 97 becomes an ignominious parody so far as bestowing to the industry any protection whatsoever.

The hue and cry of taxing the churches is instigated and has been a plan well mapped out by the representative of the foreign houses for years past, and the Members of Congress should understand this. The stereotyped letters and the signatures thereto can be had for the asking in lieu of promises of a return.

Stained glass is a luxury and not a necessary of life. Are you going to tell us you will legislate in the interest of the foreign manufacturer; that you are going to take our means of livelihood away from us; that we must give up the industry followed for years which has provided bread and butter for ourselves and children, and with one stroke wipe out this industry in the United States?

We emphatically demand for ourselves and families the reenactment of the present Payne-Aldrich law, with the possible adoption of the proposed changes of duty in paragraph 97 from 45 per cent to 30 per cent.

Respectfully submitted.

WALTER WEST,
Representing above organization and Amalgamated Glass
Workers' International Association of America.

The SECRETARY. On page 55 the Senator from Kansas [Mr. BRISTOW] reserved paragraph 188. The Senate, as in Committee of the Whole, struck out the paragraph. It reads as follows: 188. Cattle, 10 per cent ad valorem.

Mr. BRISTOW. Before that is voted upon I desire to offer an amendment. I move to insert as paragraph 188:

Swine, cattle, sheep, and all other domestic live animals, 15 per cent ad valorem.

Mr. President, I desire to say that the duty suggested is a very reasonable one. It is a smaller rate than is imposed on most of the articles that are imported. I see no reason why the products of the American farm should not have some protection in the form of import duties.

I ask for the yeas and nays on the amendment.

The VICE PRESIDENT. The amendment proposed by the Senator from Kansas will be stated.

The SECRETARY. On page 55 insert a new paragraph, as follows:

188½. Swine, cattle, sheep, and all other domestic live animals, 15 per cent ad valorem.

The VICE PRESIDENT. Is the demand for the yeas and nays seconded?

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair and withhold my vote because of the absence of the Senator from Michigan [Mr. TOWNSEND].

Mr. CLARK of Wyoming (when his name was called). Again announcing the transfer of my pair to the Senator from Vermont [Mr. DILLINGHAM], I vote "yea."

Mr. STERLING (when Mr. CRAWFORD's name was called). I wish to announce the necessary absence of my colleague [Mr. CRAWFORD] and to state that he is paired with the Senator from Tennessee [Mr. LEA].

Mr. FLETCHER (when his name was called). Under the same announcement as heretofore, I vote "nay."

Mr. GALLINGER (when his name was called). Making the same transfer as on the last two votes, I vote "yea."

Mr. LEA (when his name was called). I again transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the junior Senator from Oklahoma [Mr. GORE] and vote "nay."

Mr. REED (when his name was called). I pass my vote for the present.

Mr. THOMAS (when his name was called). I make the same transfer as heretofore and vote "nay."
The roll call was concluded.

Mr. SUTHERLAND. I will transfer my pair with the Senator from Arkansas [Mr. CLARKE] to the Senator from New York [Mr. Root] and vote. I vote "yea."

Mr. REED. I desire to announce my pair with the Senator from Michigan [Mr. SMITH]. I have been unable to obtain a transfer. If I could vote, I would vote "nay."

Mr. JACKSON (after having voted in the affirmative). I have a general pair with the senior Senator from West Virginia [Mr. CHILTON]. I understand that he has not voted. I transfer my pair with that Senator to the Senator from Rhode Island [Mr. LIPPITT] and allow my vote to stand.

The result was announced—yeas 29, nays 33, as follows:

YEAS—29.

Bradley	Gallinger	Nelson	Sterling
Brady	Jackson	Norris	Sutherland
Bristow	Jones	Oliver	Thornton
Catron	Kenyon	Page	Weeks
Clapp	La Follette	Perkins	Works
Clark, Wyo.	Lodge	Ransdell	
Colt	McCumber	Sherman	
Cummins	McLean	Smoot	

NAYS—33.

Ashurst	Lane	Saulsbury	Smith, S. C.
Bacon	Lea	Shafroth	Thomas
Chamberlain	Martin, Va.	Sheppard	Thompson
Fletcher	Martine, N. J.	Shields	Vardaman
Hollis	Myers	Shively	Walsh
Hughes	Overman	Simmons	Williams
James	Owen	Smith, Ariz.	
Johnson	Pittman	Smith, Ga.	
Kern	Robinson	Smith, Md.	

NOT VOTING—33.

Bankhead	Culberson	Lippitt	Stephenson
Borah	Dillingham	Newlands	Stone
Brandegge	du Pont	O'Gorman	Swanson
Bryan	Fall	Penrose	Tillman
Burleigh	Goff	Poinexter	Townsend
Burton	Gore	Pomerene	Warren
Chilton	Gronna	Reed	
Clarke, Ark.	Hitchcock	Root	
Crawford	Lewis	Smith, Mich.	

So Mr. BRISTOW's amendment was rejected.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole striking out paragraph 188 from the bill.

Mr. BRISTOW. The House, in paragraph 188, imposed a duty of 10 per cent ad valorem on cattle. I want the Senate to have an opportunity to do as well by the cattle producers of our country as the House did, and I ask for the yeas and nays on concurring in the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I transfer my pair with the Senator from Michigan [Mr. TOWNSEND] to the Senator from Mississippi [Mr. VARDAMAN] and vote "yea."

Mr. CLARK of Wyoming (when his name was called). Again announcing the transfer of my pair, I vote "nay."

Mr. STERLING (when Mr. CRAWFORD's name was called). I make the same announcement as before as to the necessary absence of my colleague [Mr. CRAWFORD] and his pair with the Senator from Tennessee [Mr. LEA].

Mr. GALLINGER (when his name was called). Making the same transfer of my pair, I vote "nay."

Mr. LEA (when his name was called). I transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the junior Senator from Oklahoma [Mr. GORE] and vote "yea."

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced and vote "yea."

Mr. WILLIAMS (when his name was called). I again announce my pair. If the Senator from Pennsylvania [Mr. PENROSE] were present, I should vote "yea."

The roll call was concluded.

Mr. CLARK of Wyoming (after having voted in the negative). The Senator from Vermont [Mr. DILLINGHAM] having entered the Chamber, I will transfer my pair to the Senator from Rhode Island [Mr. LIPPITT] and allow my vote to stand.

Mr. BANKHEAD. I am paired with the junior Senator from West Virginia [Mr. Goff] and withhold my vote.

Mr. REED. I again announce my pair and withhold my vote. If permitted to vote, I would vote "yea."

Mr. LEA (after having voted in the affirmative). The junior Senator from Oklahoma [Mr. GORE] having returned to the Chamber, I withdraw my vote. I am paired with the senior Senator from South Dakota [Mr. CRAWFORD]. If at liberty to vote, I would vote "yea."

Mr. BACON. I understand that the Senator from Minnesota [Mr. NELSON] has not voted.

The VICE PRESIDENT. He has not.

Mr. BACON. I therefore withhold my vote. If at liberty to vote, I would vote "yea."

The result was announced—yeas 33, nays 28, as follows:

YEAS—33.

Ashurst	James	Pittman	Smith, Ga.
Bryan	Johnson	Robinson	Smith, Md.
Chamberlain	Kern	Saulsbury	Smith, S. C.
Chilton	Lane	Shafroth	Thomas
Clarke, Ark.	Martin, Va.	Sheppard	Thompson
Fletcher	Martine, N. J.	Shields	Walsh
Gore	Myers	Shively	
Hollis	Overman	Simmons	
Hughes	Owen	Smith, Ariz.	

NAYS—28.

Bradley	Cummins	Lodge	Sherman
Brady	Dillingham	McCumber	Smoot
Bristow	Gallinger	McLean	Sterling
Catron	Jackson	Norris	Sutherland
Clapp	Jones	Page	Thornton
Clark, Wyo.	Kenyon	Perkins	Weeks
Colt	La Follette	Ransdell	Works

NOT VOTING—34.

Bacon	Fall	O'Gorman	Stone
Bankhead	Goff	Oliver	Swanson
Borah	Gronna	Penrose	Tillman
Brandegge	Hitchcock	Poinexter	Townsend
Burleigh	Lea	Pomerene	Vardaman
Burton	Lewis	Reed	Warren
Crawford	Lippitt	Root	Williams
Culberson	Nelson	Smith, Mich.	
du Pont	Newlands	Stephenson	

So the amendment was concurred in.

The SECRETARY. On page 55, paragraph 189 was reserved by Mr. BRISTOW. In the paragraph the Senate, as in Committee of the Whole, in line 10, after the words "horses and mules," struck out the words "valued at \$200 or less per head, \$15 per head; if valued at over \$200 per head," so that as amended the paragraph reads:

Horses and mules, 10 per cent ad valorem.

Mr. BRISTOW. I will not ask for a roll call on that amendment.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole.

The amendment was concurred in.

The SECRETARY. On page 55, paragraph 190 was reserved. The Senate, as in Committee of the Whole, struck out the paragraph in the following words:

190. Sheep, 10 per cent ad valorem.

Mr. BRISTOW. Mr. President, I have offered one amendment this morning placing a duty of 15 per cent ad valorem on sheep and cattle. That amendment was defeated. Then I demanded a roll call on the amendment of the committee striking out the duty of 10 per cent on cattle, and that duty was stricken out. The duty placed in the bill by the other House, in paragraph 190, is 10 per cent on sheep. It seems to me that it is wasting the time of the Senate to demand a roll call on this paragraph. I take it for granted that it will be stricken out, the same as was the paragraph as it came from the House placing a duty on cattle, the Senate having already refused to put a duty of 15 per cent on both sheep and cattle.

I regret very much that the growers and producers of domestic animals are being treated by the Senate as they are. I think they are entitled to better consideration, but my efforts up to this time have proven fruitless. So I shall not demand a roll call on the amendment, as it appears to be useless to do so.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole.

The amendment was concurred in.

The SECRETARY. On page 56, paragraph 198 was reserved. In Committee of the Whole the Senate struck out the paragraph, as follows:

198. Wheat, 10 cents per bushel.

Mr. McCUMBER. Mr. President, I understand, for all intents and purposes, that the paragraph now stands as stricken out, so I move to amend by inserting a new paragraph 198, on page 56, to read as follows:

198. Wheat, 15 cents per bushel.

I only wish to say that under the present law the duty on wheat is 25 cents a bushel. My amendment would be a reduction of 10 cents a bushel on the present tariff. Our tariff laws have shown that the protection we actually receive on wheat has been about one-half the amount of duty, which makes only about 7½ cents a bushel upon a 15 per cent duty. I ask for the yeas and nays upon the amendment.

Mr. REED. Mr. President, I want to appeal to Senators upon the other side not to continually demand the yeas and nays, and

for this reason: So long as there was any reasonable anticipation of changing the result by a roll call or so long as it was necessary to make a record for every Senator upon this side of the Chamber and make a corresponding record for every Senator on the other side of the Chamber, I think the roll calls were highly proper; but certainly that record has been made; certainly the position of each side has been defined; certainly the country now understands for what each Senator stands. That being true, I hope we shall not be compelled to vote by roll call on every question. I am not objecting to the roll call at this time, but I hope that Senators on the other side of the Chamber will be more considerate of the matter of time and not demand a roll call unless there is some good purpose to be served. I do not say that in criticism of this demand.

Mr. McCUMBER. Mr. President, we have had a roll call on a great many questions where the value of the product involved was very light indeed. On this the value of the product in the United States is from \$650,000,000 to \$700,000,000. If the duty should be made 10 cents a bushel, we would have from \$65,000,000 to \$70,000,000 involved on that basis. It is of sufficient importance to justify the demand that every Senator go upon record upon the treatment to be given to that great cereal.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Dakota [Mr. McCUMBER], on which he asks for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I transfer my pair with the Senator from Michigan [Mr. TOWNSEND] to the Senator from Mississippi [Mr. VARDAMAN], who is absent on important business. I vote "nay."

Mr. CLARK of Wyoming (when his name was called). I transfer the pair which I have with the senior Senator from Missouri [Mr. STONE] to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. POMERENE (when his name was called). I have been temporarily paired with the Senator from Connecticut [Mr. BRANDEGEE], and therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. REED (when his name was called). I have a pair with the senior Senator from Michigan [Mr. SMITH], and therefore withhold my vote.

Mr. THOMAS (when his name was called). I make the same transfer of my pair as heretofore announced and vote "nay."

Mr. WILLIAMS (when his name was called). I have a general pair with the senior Senator from Pennsylvania [Mr. PENROSE] and therefore withhold my vote. If he were present, I should vote "nay."

The roll call was concluded.

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. As he has not voted, I withhold my vote.

Mr. FLETCHER. I have a pair with the Senator from Wyoming [Mr. WARREN], who is not present, and therefore withhold my vote.

Mr. SAULSBURY. I am requested by the senior Senator from Tennessee [Mr. LEA] to announce that he is absent on important business and is paired with the Senator from South Dakota [Mr. CRAWFORD].

The result was announced—yeas 29, nays 35, as follows:

YEAS—29.			
Bradley	Dillingham	Nelson	Sterling
Brady	Gallinger	Norris	Sutherland
Bristow	Jackson	Page	Thornton
Catron	Jones	Perkins	Weeks
Clapp	Kenyon	Poindexter	Works
Clark, Wyo.	Lodge	Ransdell	
Coit	McCumber	Sherman	
Cummins	McLean	Smoot	
NAYS—35.			
Ashurst	Johnson	Owen	Smith, Ariz.
Bacon	Kern	Pittman	Smith, Ga.
Bryan	La Follette	Robinson	Smith, Md.
Chilton	Lane	Saulsbury	Smith, S. C.
Clarke, Ark.	Martin, Va.	Shafroth	Swanson
Gore	Martine, N. J.	Sheppard	Thomas
Hollis	Myers	Shields	Thompson
Hughes	O'Gorman	Shively	Walsh
James	Overman	Simmons	
NOT VOTING—31.			
Bankhead	du Pont	Lippitt	Stephenson
Borah	Fall	Newlands	Stone
Brandeggee	Fletcher	Oliver	Tillman
Burleigh	Goff	Penrose	Townsend
Burton	Gronna	Pomerene	Vardaman
Chamberlain	Hitchcock	Reed	Warren
Crawford	Lea	Root	Williams
Culberson	Lewis	Smith, Mich.	

So Mr. McCUMBER's amendment was rejected.

The VICE PRESIDENT. The question now recurs on concurring in the amendment made as in Committee of the Whole.

The amendment was concurred in.

The SECRETARY. Paragraph 208, on page 57, was reserved.

Mr. BRISTOW. What became of paragraph 198? The vote just taken was on the amendment of the Senator from North Dakota [Mr. McCUMBER].

The VICE PRESIDENT. The amendment to paragraph 198 has just been concurred in.

Mr. BRISTOW. Very well. I did not intend to demand a roll call anyway, because it is useless to do so.

The SECRETARY. Paragraph 208, on page 57, was amended as in Committee of the Whole, in line 21, after the numerals 208, by striking out "Eggs not specially provided for in this section, 2 cents per dozen; eggs," and inserting "Eggs," on page 58, line 1, after the word "containers," by striking out "2½" and inserting "2," and in the same line, after the word "pound," by inserting "frozen or liquid egg albumen, 1 cent per pound."

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole.

Mr. BRISTOW. Mr. President, not satisfied with putting the products of the farmer on the free list, the framers of this bill now propose to put the products of the farmer's wife on the free list. They not only invade the wheat fields and the herds, but they rob the henhouse as well. Inasmuch, however, as we only have a limited time and there are many votes to be taken to-day, I will not waste the time of the Senate by asking for a roll call upon this amendment, knowing that it will suffer the same fate. I will simply content myself with the protest against this kind of treatment for the farmer's wife.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole.

The amendment was concurred in.

The SECRETARY. Paragraph 227, page 62, relating to pineapples, was reserved. The Senate, as in Committee of the Whole, agreed to an amendment in the paragraph, in line 3, after the word "thousand," to insert "bananas, one-tenth of 1 cent per pound."

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole.

Mr. BRISTOW. Mr. President, I should like to inquire of the chairman of committee, since the committee has increased the tax on incomes, whether it is still necessary to place a tax of two and a quarter million dollars on the bananas consumed by the people of this country?

Mr. SIMMONS. In answer to the Senator, I will state that I do not think we are going to be overburdened with revenue. Notwithstanding the increase in the rates upon incomes, I think we will need the revenue; but, outside of and independent of that, we are in favor of this proposed duty on bananas.

Mr. BRISTOW. Since a vote was taken on this amendment as in Committee of the Whole, I will not ask to repeat it here.

Mr. GALLINGER. Mr. President, before the vote is taken I wish to avail myself of the privilege of reading a portion of a very interesting and illuminating editorial in a recent issue of the Boston Herald, a well-known independent newspaper of New England. It is headed "The poor man's table," and is as follows:

"THE POOR MAN'S TABLE."

The Democratic platform adopted at Baltimore a year ago declared that the one duty of the Democratic Party was to cut off the high duties on food. "The high cost of living," said the party creed, "is a serious problem in every American home."

All through the campaign the Democrats demanded the abolition of "the taxes on the food on the poor man's table."

And now the Democrats at Washington insist that "in order to secure enough revenue" they are "forced" to tax bananas, the one fruit which is most used among the poor.

The people of the United States alone consume, every year, more than 60 bananas per capita; in other words, more than 6,000,000,000 bananas are eaten every year in this country. And yet Senator WILLIAMS has very kindly explained that when the framers of the tax considered the subject they taxed bananas because they are merely a luxury of the rich and are not in common use among the families of American wage earners.

It looks to-day as if there were no immediate prospect of any cheaper food in this country under the Underwood tariff bill. And, on the other hand, the Democrats have picked out the one food which has not advanced in price in the last 10 years and have imposed a tax of 5 cents a bunch, which is going to add to the price of every single banana sold at retail, because the fruit is so perishable and so many bananas spoil in the hands of the retail dealers that they can not afford to pay the extra tax without passing it along to consumers.

In Congress some Democratic orators insist that the tax is justified by being imposed upon the big fruit company, which they denounce as a trust. In the meantime, the independent importers are charging that the "trust" really inspired the idea of the tax, and they claim that its chief effect will be to wipe out the independent dealer and put the entire business hereafter wholly under trust control. The public, however, has little interest in these charges and countercharges. What concerns the public is that the tariff makers have gone out of their way to increase the cost of the food on the "poor man's table." And the bitter feeling certain to result if the tax goes into effect is likely to show in election returns sooner or later.

But, wholly apart from the tax on food, there is another and a very serious side to this proposed tax. For the past five years every business organization in the country has been making an effort to help to capture the trade of Latin America for the United States. The boats which bring the 6,000,000,000 bananas to the United States go back empty unless they can carry American goods to South or Central America. Hence freight rates have been low and a big trade has been created, a trade which promised to be one of the most important, eventually, this country could have. With the tax on this business, what is going to happen to this promising line of commerce? The question practically answers itself.

Not only will the proposed tax tend to hurt the commerce to Latin America, but it is practically certain that the "touch" inhabitants of Latin America will find a special grievance against this country. Both President Taft and President Wilson have gone on record to the effect that the United States should make all reasonable effort to cultivate better relations with the people of Latin America, inasmuch as the policy of the Roosevelt administration created such a widespread hostility to the United States that it has taken all this time to counteract that unfair but widespread hostility to the United States. If the United States singles out one common article of export for a special tax, does it need a diagram to explain what the influence will be on American trade to the South?

The Boston business interests, fresh from a tour of Latin America, have recently protested to President Wilson against this tax as probably an irreparable blow to American commerce to South and Central American countries if the tax ever goes into effect. Business bodies in all other manufacturing cities are doing the same thing. Here is a business which has been quadrupled in only a decade, a business which is making markets for more American goods than were ever before sold in that part of this hemisphere by four times its former proportions, to be sacrificed by a tax which will increase the cost of living to practically every workingman's family in this country. It hits both ways.

Mr. President, it does seem incredible to me that our Democratic friends, even for the purpose of raising revenue, should put a tax on a food such as bananas, which we do not produce in this country—and not a single one of them is produced in our own country—but it seems to be the policy of this bill to place on the free list every food product of our farms, and those that are not produced here on the protected list.

Mr. CLAPP. Mr. President, interlocking with that suggestion, it is a matter of surprise also that they will tax bananas and then let Philippine cigars come in here free against our cigar makers in this country.

Mr. GALLINGER. I think the suggestion is a very appropriate and convincing one—or it ought to be a convincing one. The importation of cigars from the Philippine Islands free of duty is a blow to the cigar industry in this country which ought not to be inflicted upon the men who are engaged in that great industry. On the other hand, the taxing of this food, six billions of which are imported into the the United States—a food which is on the table of almost every poor man in this country—is something that ought not to be done, whatever the exigency of the case might be.

I hope the Senator will ask for a roll call on this item.

Mr. BRISTOW obtained the floor.

Mr. GORE. Mr. President—

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Oklahoma?

Mr. BRISTOW. I was just going to make a suggestion, and then I will yield the floor. I was going to suggest to the Senator from New Hampshire that if the Senator from North Carolina thinks we need the revenue he might follow the suggestion of the Senator from Nebraska [Mr. HITCHCOCK], and impose a slight tax, at least, on the products of the Tobacco Trust, so as to raise the revenue in that way, instead of putting it on the bananas consumed in our country.

Mr. SIMMONS. I think this is a tax upon the Banana Trust.

Mr. BRISTOW. Mr. President, according to the theory of the Senator from North Carolina, I suppose a duty on an article which we do not produce here certainly will be added to the price of the article, will it not?

Mr. SIMMONS. If the Senator asks me the question of course I will answer it. I had not desired to enter into any discussion of this question because we thrashed it out very thoroughly in the Committee of the Whole.

I remember having quite a little controversy with some Senator—I do not recall exactly which one now—with reference to that matter. I think it was demonstrated in the argument that this would be a tax which would not be passed on to the consumer and which could not be passed on to the consumer. It would be a tax paid by the United Fruit Co., which now absolutely controls the banana trade of this country.

The United Fruit Co. has a monopoly of the banana trade of every country, I think, from which we buy bananas, except Jamaica. It not only has a monopoly of the transportation of bananas to this country, but it owns a number of the banana plantations in the countries in which bananas are produced.

The tax we have imposed upon bananas is only one-tenth of 1 cent per pound. I think it has been shown that bananas are sold in this country generally in bunches of five, weighing a

pound, at 5 cents. So the tax upon this unit in which they are sold will be one-tenth of 1 cent. It will be very hard for the middlemen to pass on that one-tenth of 1 cent, unless, as suggested, I think by the Senator from Illinois [Mr. SHERMAN], they should add 1 cent to the price. If they should add 1 cent to the price we would have a very fine tariff object lesson in this country. We would find that the producer and the dealer in this article would be adding to the price of the article nine times the amount of the tariff imposed upon the article. If that is the way protection works in this country, we have reached a conclusion about the matter which should satisfy the people of the country that the protective-tariff system ought to be abolished.

Mr. BRISTOW. According to the Senator's mode of reasoning, therefore, a tax on bananas can not be passed on to the consumer, but a tax of 10 cents on a bushel of wheat can be passed on to the consumer of the loaf of bread. If the Senator can harmonize those two theories, I think he ought to have the rest of the day in which to do it.

Mr. WEEKS. Mr. President, I am surprised to hear the Senator from North Carolina say that the United Fruit Co. has a monopoly of the banana business in this country. As I recall the figures—they are substantially correct—when the United Fruit Co. was formed in 1900 it brought into this country about 16,000,000 bunches of bananas per annum, and other companies brought in about 5,000,000. Since that time the business of the other companies has increased more than 200 per cent, so that last year they brought in 17,000,000 bunches, while the United Fruit Co. brought in about 25,000,000.

In other words, the business of the United Fruit Co. in the 13 years has increased but 50 per cent, while the business of the opposition to the United Fruit Co. has increased over 200 per cent. If the same rate is maintained for two or three years longer, the United Fruit Co. will not be bringing into this country even one-half of the bananas that are imported.

Furthermore, the statement that the United Fruit Co. controls the production of bananas in any of the countries where they are produced is very far from correct.

Mr. SIMMONS. The Senator misunderstood me if he understood me to say that they controlled the production of bananas. I said my information was—and that was the information the committee had—that the United Fruit Co. does practically control the banana trade of the United States. I have no figures here with me at this time, because I did not expect this question to come up again. But I did not say that the United Fruit Co. controlled the production of bananas in other countries. I said that in certain countries where bananas are produced they do own large banana plantations.

Mr. WEEKS. If the majority has decided to put a duty on bananas because of the control of the banana trade by the United Fruit Co., it has acted upon information which is not trustworthy, because the figures I have just given the chairman of the committee are substantially correct.

Mr. SIMMONS. The Senator did not understand me to say that we had put on the duty altogether for that reason. I was simply stating that as a subsidiary reason, rather by way of reply to the suggestion of the Senator from Kansas that we have not taxed tobacco, which is controlled by a trust, but we are taxing bananas. I answered that bananas are also controlled by a trust, and I thought that trust would have to pay this little tax, because in the nature of things, being so small, it can not be passed on to the consumer.

I have not stated, and I do not wish the Senator to understand me to mean, that that is the only reason why we imposed a tax upon bananas. We imposed a tax upon bananas, as I stated before, partly because we needed revenue, and partly because we think bananas are a proper and legitimate subject of taxation.

Mr. WEEKS. I do not care to discuss the question again. I discussed it at some length when it was under consideration in the Committee of the Whole. The reasons assigned, as far as reasons have been assigned, by the chairman of the Finance Committee for imposing this duty are, I think, entirely without justification.

Mr. NORRIS. Mr. President, it seems to me that in absolute fairness there ought to be just a word or two more said on this proposition.

In the first place, I think those who are opposed to this tax—and I am one of them—ought to concede to the other side, who have placed this tax on bananas, the fairness of their proposition if it works out as they think it will.

It is claimed, as I understand, that this tax of one-tenth of a cent a pound will not be paid by the consumer of bananas. I am willing to concede that when you put this tax of one-tenth of 1 cent a pound on bananas in the bill you are acting honestly,

in the honest belief that it will not be passed on, and therefore that there will be just that much revenue gained without anybody being injured, excepting that the dealers in bananas who bring them into this country will make that much less profit, and what they lack in profit will go into the Treasury of the United States.

It may be that it will work out in that way. Of course the theory of a tariff for revenue would allow you to put a tax on bananas and other articles that we can not produce in this country; but the same theory always admits, I think, that the tax, whatever it is, that you do put on such articles, is always added to the price of the article and is paid by the consumer. The reason you think it will not be done in this instance is because of the impossibility of the banana raiser or importer dividing or passing on this tax, which is so small that it could not be passed on to a single banana or a half dozen bananas without breaking even a cent to do it, and therefore you think he will bear the burden and not try to pass it on.

With regard to the claim of the Senator from North Carolina that even if the tax is passed on it will be an illustration of the hardship of the theory of protection, he ought to be fair enough to admit that no protectionist has ever advocated a tariff on bananas or things of that kind which can not be produced in this country. It is contrary to the theory of protection. It seems to me that in passing on this matter we ought at least to be fair with each other.

I think it ought to be said, too, that the duty of one-tenth of 1 cent a pound, as I understand the provision, will be levied not only on the banana but on the large stem to which the banana is attached. I presume the bananas will be weighed in bunches, so that the number of bananas in a pound that would have to pay the tax would perhaps be less than the number suggested by the Senator from North Carolina.

There is not any doubt but that the dealer, the importer of bananas, will pass on this tax to the consumer if he can. I do not care to take any part in the controversy as to whether or not there is a banana trust. I have heard the argument here, but for the sake of this argument I am going to assume that there is such a trust. If there is a banana trust, as suggested by the Senator from North Carolina, it would be much easier for that trust, having a monopoly, to pass on the duty to the consumer than if there were no trust. I think that will be conceded by every man who wants to be fair.

I concede that it is clearly within the theory of a tariff for revenue to levy a tax on bananas. I believe that theory is wrong. These banana importers will pass it on to the consumer if they can, even though they increase it nine times; and if they are a trust, as is alleged, they will be much more able to pass it on than though there were real competition in bananas.

Mr. McCUMBER. Mr. President, I rather like the new tack adopted by the Democratic mind in meeting these questions. The Senator from North Carolina says that this will be such a mere bagatelle, one-tenth of 1 cent a pound, that in all probability it will not be carried against the consumer, and yet the Senator at the same time advocates free wheat when the 10 cents a bushel benefit that we have been giving will be only one thirty-second of 1 cent upon a loaf of bread; and he assumes that he is going to save the American ultimate consumer a very heavy burden because he will save him that one thirty-second of 1 cent on a loaf of bread.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole.

Mr. GALLINGER. I ask for the yeas and nays on concurring in the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I transfer my pair with the Senator from Michigan [Mr. TOWNSEND] to the Senator from Mississippi [Mr. VARDAMAN] and vote "yea."

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced and vote "yea."

Mr. WILLIAMS (when his name was called). I make the same announcement that I made upon the last roll call and withhold my vote.

The roll call was concluded.

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from South Carolina [Mr. SMITH] and vote "yea."

Mr. CHAMBERLAIN. I transfer my general pair with the junior Senator from Pennsylvania [Mr. OLIVER] to the Senator from Maine [Mr. JOHNSON] and vote "yea."

Mr. LEWIS. I desire to announce my pair with the junior Senator from North Dakota [Mr. GRONNA].

Mr. REED (after having voted in the affirmative). The Senator from South Carolina [Mr. SMITH] has come into the Chamber, and I withdraw my vote.

Mr. LEA. I again announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If at liberty to vote, I would vote "yea."

The result was announced—yeas 38, nays 32, as follows:

YEAS—38.

Ashurst	James	Pomerene	Smith, Md.
Bacon	Kern	Robinson	Smith, S. C.
Bryan	Lane	Saulsbury	Stone
Chamberlain	Martin, Va.	Shafroth	Swanson
Chilton	Martine, N. J.	Sheppard	Thomas
Clarke, Ark.	Myers	Shields	Thompson
Fletcher	O'Gorman	Shively	Tillman
Hitchcock	Overman	Simmons	Walsh
Hollis	Owen	Smith, Ariz.	
Hughes	Pittman	Smith, Ga.	

NAYS—32.

Borah	Colt	McCumber	Sherman
Bradley	Cummins	Nelson	Smoot
Brady	Dillingham	Norris	Sterling
Brandeggee	Gallinger	Page	Sutherland
Bristow	Jackson	Perkins	Thornton
Catron	Jones	Poin Dexter	Warren
Clapp	Kenyon	Ransdell	Weeks
Clark, Wyo.	Lodge	Root	Works

NOT VOTING—25.

Bankhead	Goff	Lippitt	Stephenson
Burleigh	Gore	McLean	Townsend
Burton	Gronna	Newlands	Vardaman
Crawford	Johnson	Oliver	Williams
Culberson	La Follette	Penrose	
du Pont	Lea	Reed	
Fall	Lewis	Smith, Mich.	

So the amendment was concurred in.

The VICE PRESIDENT. The paragraph as amended is agreed to.

Mr. McCUMBER. I desire to ask as a matter of information what has been done with paragraph 196. I understood that that paragraph was passed over at the request of the Senator from Kansas [Mr. Bristow] with all the other paragraphs in the agriculture schedule to which amendments had been made.

The VICE PRESIDENT. Paragraph 196 was not reserved by anyone. The Senator from North Dakota can offer an amendment to it if he wishes to do so.

Mr. McCUMBER. Then I wish to offer an amendment to that paragraph. In line 8, I move to strike out the entire line and insert in lieu thereof:

196. Oats, 15 cents per bushel of 32 pounds.

Mr. SIMMONS. That amendment has been voted on. The Senate as in Committee of the Whole has agreed to a rate of 6 cents per bushel. In order to move his amendment, would not the Senator have to move to strike out and insert?

Mr. McCUMBER. It amounts to the same thing in effect as striking out and inserting. I thought this would be the better way. It would not change the parliamentary status at all.

Mr. JAMES. I understand that the amendment made as in Committee of the Whole has been concurred in in the Senate.

The VICE PRESIDENT. It has.

Mr. SIMMONS. I did not know it had been concurred in.

Mr. McCUMBER. I do not understand that it has been concurred in in the Senate.

Mr. SIMMONS. If it has been concurred in, it could not be reached except upon a motion to reconsider.

The VICE PRESIDENT. It has been concurred in.

Mr. JAMES. The Senator did not reserve it before the bill came into the Senate. Of course, it has been concurred in, and now it is too late to offer an amendment in that form.

Mr. McCUMBER. I was perhaps in error, but I did not understand that all the amendments which were not specially reserved had been concurred in. If that is the case, I assume it would not, perhaps, be open to amendment, and I would have to prepare a different amendment, which I will do.

The SECRETARY. On page 142, paragraph 548, relative to meats, was reserved by the Senator from Kansas [Mr. Bristow]. In that paragraph the committee reported a substitute for the proviso printed in italics in the bill and that substitute was agreed to as in Committee of the Whole.

Mr. BRISTOW. That is paragraph 548, relating to meat.

Mr. President, I move that a new paragraph be added to the dutiable list, to be numbered 183½ and to read as follows:

Meats: Fresh beef, veal, mutton, lamb, and pork; bacon and ham; meats of all kinds, 15 per cent ad valorem.

It is my purpose to place a duty on meats, the product of the farm. Free meats give the great packing houses of the country an opportunity to use the cattle products of the Argentine in competition with the products of our own farms. The American

packers own and control the packing business in the Argentine as completely or more completely than they own and control the markets in this country.

Free meat is against the interest of the cattle producer and in the interest of the packing house. There is not an intelligent farmer in the United States who does not realize that fact.

This bill discourages in every way the production of cattle and sheep upon the American farm. It seeks to force the farmer to abandon his pasture and his herd and grow tobacco in that section of the country where tobacco is produced. It will induce him to plow up the blue-grass pastures of Kentucky and waste their fertile soil by the growing of tobacco. Those blue-grass fields, which in years past were the pride of the Nation, this bill would penalize. It seeks to induce the farmer not to feed his corn to the fattening of his steer, as he has done in former days, but to haul that corn to distilleries, there to be made into whisky to poison the youth of the land. It places a protective duty of \$1.50 a gallon on whisky and meat on the free list. It encourages the distiller by protecting him from foreign competition, but it discourages the farmer in growing live stock by placing them on the free list.

That is the tendency of this bill. If the corn is used to produce whisky there is a protective duty, approximately, of 40 cents a bushel on that which is produced from that corn, while if it is used to produce a fat steer it is put on the free list.

Now, that is what this bill does, and I think it is an iniquity.

Mr. President, I call for the yeas and nays on agreeing to my amendment.

The VICE PRESIDENT. The Senator from Kansas requests the yeas and nays on agreeing to his amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair and withhold my vote.

Mr. STERLING (when Mr. CRAWFORD's name was called). I make the same announcement as before with regard to the necessary absence of my colleague and his pair with the Senator from Tennessee [Mr. LEA]. I will also state that if my colleague were present, he would vote "yea."

Mr. LEA (when his name was called). I again announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If at liberty to vote, I would vote "nay."

Mr. PERKINS (when his name was called). I have a general pair with the junior Senator from North Carolina [Mr. OVERMAN], who is absent on account of official business. I therefore withhold my vote.

Mr. REED (when his name was called). I again announce my pair with the Senator from Michigan [Mr. SMITH] and withhold my vote.

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced and vote "nay."

Mr. WILLIAMS (when his name was called). I again announce my pair with the senior Senator from Pennsylvania [Mr. PENROSE]. If he were present, I would vote "nay."

Mr. JACKSON. I have a general pair with the senior Senator from West Virginia [Mr. CHILTON]. I understand that he has not voted. I transfer my pair to the Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. WARREN. I am paired with the Senator from Florida [Mr. FLETCHER]. I transfer my pair so that he will stand paired with the Senator from New Mexico [Mr. FALL]. I vote "yea."

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from South Carolina [Mr. SMITH] and vote "nay."

Mr. WILLIAMS. I desire to transfer my pair to the senior Senator from South Carolina [Mr. TILLMAN] and vote "nay."

The result was announced—yeas 32, nays 38, as follows:

YEAS—32.

Borah	Cummins	McCumber	Sherman
Bradley	Dillingham	Nelson	Smoot
Brady	Gallinger	Norris	Stephenson
Brandeggee	Jackson	Oliver	Sterling
Bristow	Jones	Page	Sutherland
Cañon	Kenyon	Poindeexter	Thornton
Clark, Wyo.	Lippitt	Randell	Warren
Coit	Lodge	Root	Weeks

NAYS—38.

Ashurst	Kern	Robinson	Stone
Bacon	Lane	Saulsbury	Swanson
Chamberlain	Martin, Va.	Shafroth	Thomas
Clarke, Ark.	Martine, N. J.	Sheppard	Thompson
Cole	Myers	Shields	Vardaman
Hitchcock	O'Gorman	Shively	Walsh
Hollis	Owen	Simmons	Williams
Hughes	Pittman	Smith, Ariz.	Works
James	Pomerene	Smith, Ga.	
Johnson	Reed	Smith, Md.	

NOT VOTING—25.

Bankhead	Culberson	Lea	Smith, Mich.
Bryan	du Pont	Lewis	Smith, S. C.
Burleigh	Fall	McLean	Tillman
Burton	Fletcher	Newlands	Townsend
Chilton	Goff	Overman	
Clapp	Gronna	Penrose	
Crawford	La Follette	Perkins	

So Mr. Bristow's amendment was rejected.

The VICE PRESIDENT. The question recurs upon concurring in the amendment made as in Committee of the Whole to paragraph 548.

The amendment was concurred in.

The VICE PRESIDENT. The paragraph as amended will be agreed to.

Mr. STONE. I desire to offer an amendment to paragraph 254½. In line 14, page 71, I move to strike out the word "sweet"; in line 16, between the words "before" and "during," to strike out the word "or" and insert a comma, and after the word "during," in line 16, to insert "or after," so as to make the proviso read:

Provided, That the tax herein imposed shall not be held to apply to pure wine made exclusively from fresh grapes, berries, or other fruits to which has been added, before, during, or after fermentation sugar, pure boiled or condensed grape must, or water not exceeding in either case 20 per cent of the weight of such wine.

The VICE PRESIDENT. The Senator from Missouri moves to reconsider the vote whereby paragraph 254½ was inserted in the bill.

The motion to reconsider was agreed to.

The VICE PRESIDENT. The amendments submitted by the Senator from Missouri will be stated in their order.

The SECRETARY. On page 71, line 14, before the word "wine," strike out the word "sweet."

The amendment to the amendment was agreed to.

The SECRETARY. In line 16, after the word "before," strike out the word "or" and insert a comma.

The amendment to the amendment was agreed to.

The SECRETARY. In the same line, after the word "during," insert the words "or after."

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The question is on concurring in the amendment of the committee as amended.

The amendment as amended was concurred in.

Mr. CUMMINS. I offer an amendment to the bill, to be inserted immediately after paragraph 659.

The VICE PRESIDENT. The amendment will be stated.

The Secretary proceeded to read the amendment of Mr. CUMMINS, and read to the end of line 15, on page 3, the entire amendment being to add to section 1 of the bill the following:

Provided, That if, with respect to any article or commodity upon which an import duty is laid under the provisions of this act, substantial, effective, and actual competition as to extent of production, price for sale, or manner of distribution has ceased, or shall in the future cease, to exist among domestic producers or sellers, or both, generally throughout the United States, or if the buyers, users, or consumers of any such article or commodity are now or shall hereafter be deprived, and without regard to the cause or causes of such deprivation, generally throughout the United States, of the benefits and advantages of substantial, effective, and actual competition with respect thereto, then and so long as such conditions, or either of them, shall exist all imports of such articles or commodities shall be admitted free of duty into all the ports of the United States.

The existence of such conditions or either of them shall be determined as follows, to wit: Any citizen of the United States may bring a suit in equity for injunction in the circuit court of the United States against the collector of customs of any port of entry in the district in which the port is situated. The bill in any such suit shall contain the requisite allegations showing the existence of such conditions, or one of them, and shall pray for an injunction to restrain the collector from levying or collecting a duty or duties upon such article or commodity. The procedure in any such suit shall be as now established for ordinary suits in equity. Immediately after the service of the subpoena the defending collector shall publish for three successive days a notice of the bringing of the suit, stating in general terms the allegations of the bill, and setting forth the day upon which the defendant is required to appear, in at least five daily newspapers published in the United States of general circulation, no two of which are published in the same State, and the cost of such publication shall be allowed to the collector as a part of his expenses. Upon the day on which the defendant is required to appear, or at such later date as the court may fix, any person, copartnership, association, or corporation interested in the manufacture or sale of such article or commodity may appear and be made a defendant to said suit with all the rights, privileges, and obligations of a party thereto. If no such person, copartnership, association, or corporation shall appear, the United States district attorney for the district may, if he is so advised by the Attorney General, appear for the collector and make such defense as the case may warrant. If upon the final hearing of any such suit an injunction shall issue, the clerk of the circuit court shall at once certify a copy of the decree to the Secretary of the Treasury, and then and thereafter all imports of such articles or commodities from all foreign countries shall be admitted free of duty into all the ports of entry in the United States.

Provided further, That if the President of the United States shall at any time be of the opinion that such conditions, or either of them, exist, it shall be his duty to direct the Attorney General to give notice to the person or persons, copartnership or copartnerships, association

or associations, corporation or corporations responsible therefor that at the end of 30 days from and after the service of such notice the said article or articles, commodity or commodities will be admitted free of duty in all the ports of the United States unless a bill in equity is brought in the circuit court of the United States against a collector by such persons, copartnerships, associations, or corporations, or some or one of them, to restrain such free admission of imports. If there is a collector in the district of the residence of any such person, copartnership, association, or corporation, or in the district of the residence of one of them, the suit shall be brought in that district, otherwise in the district in which any collector has his principal office. If no such suit is brought within the 30 days hereinbefore specified, the President of the United States shall, by proclamation, suspend the duties imposed by this act upon any such article or articles, commodity or commodities, and they shall thereafter be admitted free of duty. If, however, a suit is brought as hereinbefore last provided, the bill shall show by its allegations that no such condition or conditions exist, and shall pray an injunction to restrain the collector from admitting such imports free of duty. The Attorney General, or by his direction the United States district attorney for the district in which the suit is brought, shall appear for the collector and defend the suit, and the procedure shall be as now established for ordinary suits in equity. If upon final hearing the court shall refuse to issue the injunction and shall find in its decree that such conditions, or either of them, exist, the clerk of the court shall immediately certify the decree to the Secretary of the Treasury, and then and thereafter such article or articles, commodity or commodities shall be admitted from all foreign countries into the ports of the United States free of duty.

Provided further, That if, following a decree in either of the cases hereinbefore mentioned, any article or articles, commodity or commodities are admitted free of duty, then, after the period of one year of such free admission of any such article or articles, commodity or commodities, any citizen of the United States may file a supplemental bill in any such suit, showing that after the entry of the decree the condition or conditions found by the decree had disappeared, and that substantial, effective, and actual competition existed; whereupon such notice as the court may direct shall be given to the parties to said suit, and the supplemental bill with the issues made therein shall proceed to final hearing, the Attorney General or, by his direction, the district attorney, appearing for the collector. No testimony shall be introduced upon any such supplemental bill to impeach the original decree, but all testimony shall be confined to a change in conditions occurring after the original decree was entered. If upon any such supplemental bill the court shall enter a decree finding that the conditions found to exist by the original decree had changed, and that substantial, effective, and actual competition existed, the clerk of the court shall at once certify the decree upon the supplemental bill to the Secretary of the Treasury, and then and thereafter, and until affected by a subsequent proceeding taken in accordance with the provisions hereof, the import duties specified in this act shall be levied and collected upon such imports.

Mr. CUMMINS. Mr. President, if the Senate will consent, I shall be glad to state the substance of the remainder of the amendment. I think I can save time by so doing. I wanted the first portion read in order that the full import of the amendment might be clearly understood.

The VICE PRESIDENT. If there be no objection, by unanimous consent the further reading of the amendment is dispensed with. The Chair hears none, and it is so ordered.

Mr. CUMMINS. Mr. President, it will be observed that the first paragraph of the amendment provides that with respect to any commodity upon which a duty is levied by this bill there shall cease to be in the United States actual effective competition, thereupon the commodity shall be removed from the dutiable list and put upon the free list. The method which I have suggested for determining whether or not actual and substantial competition has ceased in this country is the bringing of a suit in one of the courts of the United States by any citizen who is interested in the matter, and thereafter the suit proceeds to trial upon the issue of competition in our own country. If the decree is to the effect that competition has ceased in our country, it is certified to the Secretary of the Treasury, and thereafter the commodity, whatever it may be, is imported into the United States without duty.

That part of the amendment which has not been read provides that if after the rendition of the decree, after the commodity has been put upon the free list, competition shall appear with respect to the commodity, so that the people of the country may be protected through the natural forces of business and of trade, the President is given power to act, and anyone interested in the subject may secure a retrial. If the trial discloses that there is then substantial and effective competition, it is so certified to the Secretary of the Treasury, and thereupon the commodity takes its place upon the dutiable list with the duty provided for in the existing law. In using the words "existing law" I am referring, of course, to the law as it exists at the time the decision is made.

I have assumed that my Democratic friends do not want to protect commodities that are so completely monopolized that actual competition has ceased among our own people. I can understand why they hesitate about putting such a commodity on the free list without any opportunity to remove it from the free list in the event that competition shall appear. But I find it very difficult to understand why they can not and why they do not favor some such proposal as is contained in my amendment if they are in earnest with regard to monopolies and if

they sincerely believe that the people of this country have a right to the competitive force in commerce.

Mr. HITCHCOCK. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. CUMMINS. I do.

Mr. HITCHCOCK. From the reading of that portion of the amendment which was read from the Secretary's desk I was unable to determine whether the Senator from Iowa designs to put an article on the free list only in cases where competition has entirely ceased or whether he designs to place it upon the free list when it is found that the article is largely under the control of a few great concerns. I should like to know by what degree he proposes to measure competition.

Mr. CUMMINS. Mr. President, in answer to the Senator from Nebraska, I will ask the Secretary to again read the first few lines of the amendment, for it states the matter quite as clearly as I could possibly state it.

The VICE PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

Provided, That if, with respect to any article or commodity upon which an import duty is laid under the provisions of this act, substantial, effective, and actual competition as to extent of production, price for sale, or manner of distribution has ceased, or shall in the future cease, to exist among domestic producers or sellers, or both, generally throughout the United States, or if the buyers, users, or consumers of any such article or commodity are now or shall hereafter be deprived, and without regard to the cause or causes of such deprivation, generally throughout the United States, of the benefits and advantages of substantial, effective, and actual competition with respect thereto, then and so long as such conditions or either of them, shall exist all imports of such articles or commodities shall be admitted free of duty into all the ports of the United States.

Mr. HITCHCOCK. Then, for instance, if it should be found that one concern controlled, say, 85 per cent of a single line of production or sale, it would be for the court to say whether that control of 85 per cent substantially obliterated competition?

Mr. CUMMINS. Mr. President, that is the very question to be tried. The idea of the amendment is that in this country the price of a commodity ought to be fixed by the rivalry of business through the natural forces of trade. We call that rivalry and those natural forces competition. Whenever competition so far exists as to perform its real function and fix prices, then we have competition; whenever competition so far disappears that it is inadequate or incapable of fixing prices, then we have no competition.

I have not endeavored, of course, to specify the various phases which monopolistic power may assume. I have gone straight to the central and essential idea of competition, because it is that force which really protects the American people from the exactions of monopoly whenever they are so protected.

Mr. McCUMBER. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from North Dakota?

Mr. CUMMINS. I yield to the Senator from North Dakota.

Mr. McCUMBER. The Senator from Iowa has explained one provision of his amendment. Will he now explain the operation of the amendment relative to cases where only one concern manufactures a product? We had a case, for instance, before us the other day in which it was claimed that the manufactures of aluminum were produced simply by one concern; that there was no combination with any other concern—at least that was the claim—and that it required an investment of some \$5,000,000 in order to establish the necessary plant and machinery for its manufacture. In that case there could be no competition. Would the amendment, as the Senator from Iowa has drawn it, compel the free importation of that product?

Mr. CUMMINS. Mr. President, in answer to the Senator from North Dakota, I will say that if it be true, as has been asserted, that the aluminum company has a complete monopoly, then, of course, competition in this country has ceased with respect to that article, and upon a finding to that effect by the court to which the cause may be submitted the duty upon aluminum would be removed and it would be admitted free of duty until some competitor arose in the United States ready to challenge the supremacy of the aluminum company; ready to do business with the people of the United States. Then, upon a certificate that competition had so reappeared, or so appeared if it had never existed, that product would be again placed upon the dutiable list.

What I am seeking is the protection of the people against a condition in which there is no competition in the United States. I stated the other day I have not favored putting aluminum on the free list in this bill, because if aluminum were put on the free list and competition did appear, or was ready to appear,

and there is a difference in the cost of making it as between this country and France or any other foreign country, the competitor could not make headway; he could not appear. I want a condition in which, when competition does come, the commodity can have the protection which the circumstances require in the general business of the country.

Mr. SUTHERLAND. Mr. President—

Mr. CUMMINS. I yield to the Senator from Utah.

Mr. SUTHERLAND. If I understand the Senator's amendment, the article which would be put upon the free list in pursuance of the decree of the court would be restored to the dutiable list when the court afterwards found that competition had been resumed. Now, I want to ask the Senator whether or not, in his opinion, the fact that the article had been put upon the free list—there being no protection whatever—would discourage independent manufacturers or persons who desired to engage in manufacturing from beginning operations at all?

Mr. CUMMINS. Mr. President, I do not think it would. I think if the business was one which afforded reasonable profit and the competitor knew that the moment he established his business and was ready to meet the monopoly which had theretofore existed, the fact that the commodity was at that moment on the free list would not discourage—it ought not, to discourage—the appearance of the rival.

Mr. SUTHERLAND. One other suggestion I desire to make to the Senator. The Senator's amendment is to the effect that, if competition has ceased, no matter from what cause, the article shall go upon the free list. Does the Senator not think that it would make his amendment stronger if he would introduce into it the element of competition having ceased by reason of some combination or conspiracy or agreement which resulted in that condition?

Mr. CUMMINS. I hope, Mr. President, that the Senator from Utah will wait just a moment until I come to that phase of the subject. I do not agree with the evident conclusion of the Senator from Utah, and will state why in a moment. I think I have clearly enough given to the Senate the substance of this amendment.

Now, Mr. President, I want just a very few moments in which to state my reasons for bringing this matter forward at this time. I am a profound believer in the doctrine of protection. I believe sincerely that when it is properly applied it is helpful alike to the producer and the consumer. When fairly in operation it distributes its benefits and advantages among all the people. The bill we are now considering is not a protective bill. I shall not recite the victories of protection in the years that have gone by. The people of this country believe in protection. They believed in it last fall; they believe in it now; and there is no better evidence of their continued faith in the system of protection than the result of the election in Maine yesterday.

I do not think that the Democrats of this country can persuade a majority of the people that our commerce ought to be exposed to the unlimited competition of the world. I had very much hoped—and I say so frankly—that the Democrats in assuming power would take the Payne-Aldrich tariff law, which is almost uniformly too high—its duties are from 25 to 40 per cent higher than they ought to be—maintaining its uniformity, and reduce its duties from 25 to 40 per cent. Had they done so I believe they would have commanded the general approval of the people of the country, as I know they would have commanded the support of many Senators upon this side of the Chamber. I have been disappointed in that. I find a bill which is neither protective nor competitive, for a protective tariff bill is in its highest and best sense a competitive tariff bill.

Some of us on this side of the Chamber have been struggling for years to secure such rates of duty as would prevent the domestic manufacturer from lifting his price above a fair American level without inviting competition from all the countries of the earth. That has been our end; this has been our view of the adjustment of this very difficult subject, but our Democratic friends have chosen not only to reduce duties in every instance—and I agree that in a great many instances they ought to have been reduced—but they have rendered their bill partial and sectional and unequal by removing all protection from a very large part of the products of the country. I can not think that in the end the experience of the United States will justify such gross discrimination. But, however that may be, our Democratic friends have prescribed duties upon some things. Upon some things I think the duties they have fixed are too high; upon some things I think the duties of the bill are altogether too low; upon many things from which they have removed all protection they have made a serious and fatal mistake, but it is not for me to criticize them at this time. We are now in the last hours of the debate, and I have no disposition

to trespass upon the patience of Senators in making an argument against the general framework of the bill. I have done that before, and I am content with what I have said. I rest upon the conclusions that I have heretofore announced; but there are duties upon a great many articles; there are very high duties upon some articles—I do not care to particularize at this time; it would take altogether too much time—but, now that we are nearing the end of the tariff struggle, why will you not join in some effort to put upon the free list those things concerning which competition has ceased to exist in this country? That brings me to a further declaration of faith, and then I will attempt to answer the Senator from Utah [Mr. SUTHERLAND].

Mr. CLAPP. Mr. President—

The PRESIDING OFFICER (Mr. POMERENE in the chair). Does the Senator from Iowa yield to the Senator from Minnesota?

Mr. CUMMINS. I yield to the Senator from Minnesota.

Mr. CLAPP. I certainly have a very profound regard for the judgment of the Senator from Iowa as a lawyer, and while I shall vote for his amendment I question if he is not seeking to confer or to impose a duty upon the courts which the courts would not be obliged to take upon themselves. First, you file a bill—

Mr. REED. We are unable to hear the Senator from Minnesota on this side.

Mr. CLAPP. I say I want to suggest to the Senator from Iowa a doubt in my mind whether his amendment does not seek to impose a duty upon the courts that is in no sense a judicial duty. A suit is to be brought to determine the question whether or not there exists a condition where competition has been eliminated. That suit is not brought against the defendant to dissolve an association which has brought about the elimination, but simply for a tariff purpose, and it does seem to me that it is a duty that is not judicial. The court having found that, then the Senator's amendment provides for a supplemental suit to ascertain whether or not that condition has ceased to exist and competition has been resumed. It seems to me beyond any question that that is the imposition of a duty that is not judicial.

Mr. CUMMINS. Mr. President, I have reflected very carefully upon and have studied diligently the question now suggested by the Senator from Minnesota. I have no doubt whatever about the jurisdiction of the court conferred in my amendment. The Senator from Minnesota possibly has not noticed that the amendment provides that any citizen of the United States may bring a suit against the collector of the port in his district, charging that competition has ceased with regard to the particular commodity that may be described. Whether competition has ceased or not is purely a question of fact. I do not care what destroys the competition; it matters not to me under what conditions it has disappeared; my position is that the American people have a higher right to competition than has any man or any interest to protection.

But, returning to the legal point, the citizen upon whom is laid the burden of the duty imposed upon that particular commodity appeals to the court for the removal of that burden, and it is to be removed if he establishes, as a matter of fact, that the competition to which the citizen is entitled has disappeared. Therefore I can not imagine a question that is more completely judicial than the one I have named as the issue in the proceeding in court that is here established.

Mr. CLAPP. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa further yield to the Senator from Minnesota?

Mr. CUMMINS. I do.

Mr. CLAPP. What would the Senator say as to the supplemental suit? The most that could be claimed there would be a restoration of competition, as the result of the finding that competition had been restored.

Mr. CUMMINS. Precisely. Every court has a right, within certain limitations provided by the law, to set aside or to modify a decree that it has entered. There are certain rules, of course, which surround that right, and it must be exercised in accordance with them. The rules and regulations under which the court may modify its decree must be a matter of legislation. Certainly it is not beyond our power to declare under what conditions the court may modify its decree.

Mr. WALSH. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Montana?

Mr. CUMMINS. I yield.

Mr. WALSH. Before the Senator passes from that interesting feature of the question, let me make an inquiry. If such a citizen who might be moved thus to appeal to the courts for the redress that he desired felt the pressure upon him, he could,

of course, without such a law appeal to the Congress. He could assert that that condition of affairs existed. The Congress would then inquire into the nature of his complaint—the evidence to sustain it on the one side and the evidence to overcome it on the other. The Congress, reaching the conclusion that the conditions contemplated by the amendment did exist, and being impressed with the wisdom of the policy that is the foundation of the amendment, would accordingly pass a law by which the commodity would go to the free list.

Of course, that would be no judicial proceeding. It would be a legislative act. How, then, can it be, under the other procedure, anything but a legislative act?

Mr. WORKS. Mr. President—

Mr. CUMMINS. Allow me to answer the Senator from Montana for just a moment, because I must not prolong this discussion.

This amendment declares as a matter of law, of legislation, that articles concerning which there is no competition in the United States shall be on the free list. That is the legislative declaration. The next step is to devise a method of procedure through which it can be ascertained whether the particular article or commodity is subject to competition. If it is not, then the law itself places the article upon the free list. If it is under competition, the law continues the commodity on the dutiable list, where it is placed by the statute we are about to pass.

I now yield to the Senator from California.

Mr. WORKS. Mr. President, as I understand the effect of the proposed amendment, it provides that under certain conditions the collection of the duty shall be illegal. It then provides that the court may, under conditions provided for, determine whether that fact exists or not; and if it so finds, the court is then authorized to issue its decree and its injunction accordingly.

I do not see why that is not a judicial question and a legitimate trial of the question of fact in the first instance by the court, followed by its decree founded upon that fact.

Mr. CUMMINS. It so seems to me; and I think upon further reflection the lawyers of the Senate will agree that there is no difficulty about pursuing this plan so far as the constitutional power of the courts is concerned.

But I now return to the real question.

Mr. STERLING. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from South Dakota?

Mr. CUMMINS. I yield.

Mr. STERLING. Before the Senator proceeds I should like to ask him as to a question of policy. It is whether under the plan proposed by the Senator in this amendment he does not bring the judiciary into the administration of the tariff law? Does he not impose upon the judiciary such administration in the last analysis, and would that be a wise policy?

Mr. CUMMINS. Mr. President, I think that is not the case. The courts have nothing to do with the policy of this law. Congress is declaring, if the amendment should be adopted, that articles concerning which there is no competition shall come into the United States without the payment of duty. The only thing the court has to do with respect to the matter is to determine whether there is or is not actual and substantial and effective competition in the business of the United States. It is not nearly so close an approach to the legislative function as is the antitrust law, because here is a plain, simple matter of fact to be determined.

Mr. STERLING. But, Mr. President, the court in such a case, in hearing the evidence and in rendering its decision, must have before it all the while the ultimate effects of that decision—the ultimate effects in determining the policy of the Government with reference, perhaps, to some great industry in this country. I question whether that is a wise policy.

Mr. CUMMINS. Mr. President, the court must have in view the consequences of every decision it renders. If the view just suggested by the Senator from South Dakota is sound, then we ought at once to repeal the antitrust law, because I can conceive of no vaster or more serious consequences than follow the inquiry as to whether some great corporation has combined trade and commerce so as to restrain it in its operation among the States or with foreign nations.

Mr. STERLING. But, Mr. President, under the antitrust law the decision is necessarily confined to the case against the particular corporation.

Mr. CUMMINS. And so it is here. If the subject matter be toothpicks, the decree is confined to toothpicks. If it be meat, it is confined to meat. It has no relation to the wide scope of the tariff law. It must be confined to the very commodity or commodities upon which the suit is based.

I return, however, to the question propounded by the Senator from Utah [Mr. SUTHERLAND], for I regard that as the vital, the important inquiry in this matter. I reassert my belief in the advantages and in the wisdom of the doctrine of protection. I think that in the years to come it will be crystallized permanently in the law and policies of the United States, so that attacks on it will cease. But I think there is one right that the American people have and that every American citizen has that is higher, more sacred, more vital to the perpetuation of free institutions and independence among them than the policy of protection.

I am not a socialist. I do not believe in community of property. I do not believe in the assumption on the part of the Government of the task of fixing prices for the people. I foresee consequences that will flow from the assumption of that gigantic labor on the part of the Government that are perilous to a Republic like ours.

There are but two forces that will fix prices and that will distribute wealth. There are but two that are tolerable. There is another of which I may speak first, namely, monopoly—private monopoly. There is no man who defends it. No man is willing to say that the wealth of this country shall be distributed through the medium of monopoly, which means the arbitrary will of one man or a concert of men.

Passing that condition, there are but two forces upon which we can rely; there are but two we can summon to this vast work. The first is the natural law of commerce and trade and business, the rivalry which exists between men engaged in like occupations or engaged in carrying on like enterprises—honorable rivalry, with equal competition. Hitherto the world has been governed by competition. It is not confined to trade. It exists in every phase of social and public life. We are all creatures of competition. All the victories of the world have come as the reward of competition, and they have come in the main to those who were entitled to enjoy them.

I wish to preserve competition in American life. I wish to see the man who is worthy of it succeed above his fellowmen. I wish to see every person take and carry away the thing which he fairly and justly wins in the battle, in the struggle for existence. I am not willing to see the law of competition impaired at any point. I am not willing to see its force weakened anywhere; and I intend to do all I can to aid it as a living and a real force in American life.

The other alternative is, of course, the assumption by the Government of the duty to fix prices. I know that if we are not able to preserve competition we must then accept this governmental duty. There is no escape from it. If we do not maintain the force of competition as the real regulating power in American business and American life, there is but one other thing to do, and that is to demand that organized society shall protect the weak as against the strong. That will come, just so surely as the days dawn upon us, if we are not alert and vigilant in the preservation of the fundamental law, or what has hitherto been the fundamental law, of the world. It is the law of nations; it is the law of society; it is the law of the individual; and it will be a sad day for the progress of humanity when it disappears from our lives.

Therefore I say, in answer to the Senator from Utah, that if I must select, if I must choose, between protection of any kind and competition, my voice is for competition. It will be better for this country to invite the competition of the world if we have been driven to the point at which we must rely upon a single man or upon a single combination of men for anything which civilization demands.

Mr. OLIVER. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Pennsylvania?

Mr. CUMMINS. I yield to the Senator.

Mr. OLIVER. I should like to have the Senator from Iowa let us know what would be the effect of this amendment upon an industry in which there happened to be only one producer in this country but in which there was strong and substantial competition from abroad, notwithstanding there was a reasonably protective duty on the article.

Mr. CUMMINS. Mr. President, with regard to the instance just put by the Senator from Pennsylvania, there is no way by or through any general law to accommodate ourselves to so great a variety of conditions as exist in the United States. When we pass any general law we will in its application do an injustice here and there. It is the unhappy result of the generality of the law. We all know that courts of equity sprang into existence for no other reason than to relieve men from injustice and hardship in the application of a general law.

I agree that in the case put by the Senator from Pennsylvania my amendment might work a hardship; it might not

result in any benefit to the people of this country. But my answer to him is that in the great majority of instances the amendment I have proposed will serve the welfare of the people, and we must be content now and then to witness an apparent injustice in order to serve the public good.

Mr. President, I have been looking in vain for some favorable response from the other side of the Chamber. My eyes have been fastened upon the Senators who are sitting there—there are not very many of them, but more than there usually are—and I have hoped that with regard to a subject like this, so plainly for the benefit of the people, so plainly putting into execution a principle that must commend itself to every lover of justice, I might see, at least, a shade of approval pass over the countenances of my esteemed friends over there. I can not understand their indifference.

Are you not in favor of putting on the free list those things in the sale of which or in the production of which competition has ceased in our country? As I remember, you did not in so many words declare for my amendment in the platform adopted at Baltimore, although you might well have done so, but did declare against duties on articles controlled by monopolies. I offered this amendment four years ago, when I appealed to my friends upon this side of the Chamber, when I challenged the attention of that Nestor of the Senate who since that time has passed to the rewards of private life. I challenged his attention then. I urged him, as I am now urging you, to do something for the people of this country in a substantial way.

It is said over there—I have heard it said many times—that the distinguished Senator to whom I have just referred was, in fact, the caucus on the Republican side. I will not say whether he was or was not. I quite agree that his voice was very potential. I appealed to him, but I did not elicit from that immobile and passive countenance a single indication of sympathy or concurrence. I am now appealing to Democratic Senators who have come into power upon the promise that they would do something for the people of this country; that they would do something that would relieve them, so far as the tariff is concerned, of the burden of monopoly; that they would do something to destroy conditions in which one man or one combination of men could effect whatever price cupidity and avarice might suggest as to a commodity which all the people demanded and which all the people must use.

Tell me why you are not willing to submit to the courts of the country the mere question of fact, "Is there competition?" That question being answered in the negative, then the Democratic theory that relief from import duties will lessen price will find opportunity for operation.

Mr. President, some time we shall have to choose between the monopoly of the Government and the monopoly of the private individual, unless you will energetically aid in the maintenance of competition. You have done nothing for competition in this bill so far. The only thing you have done is to put the American producer, where there is already abundant and complete and perfect competition, into rivalry upon unequal terms with the people across the sea. Why do you not provide for a case in which there is no competition at home and give the people some chance to invite that competition from abroad?

Mr. LANE. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Oregon?

Mr. CUMMINS. I yield to the Senator.

Mr. LANE. I would like to say that there are many things in this bill which do not appeal to me, for the same reason perhaps that they do not appeal to the Senator from Iowa. The Democratic Party and the Senators on this side are entering upon new fields. They are opening up entirely new propositions and changing old ones. They are trying and endeavoring, to the best of their ability, to open the resources and the opportunities of this country to the people thereof, and in doing so are going against a fixed condition of affairs which has existed for many years.

The bill which they present to the people, and which they will pass, is an imperfect one. They are willing to concede that. I am. In many ways I am not in sympathy with it. It is a step in advance, however.

The Democratic Party can not do all things at once. They can not accomplish at once the ideals to which they wish to attain. It takes time to do that. Step by step they must undo the work of the past—the work which has been done, not by the Democratic Party, but by the Republican Party. They are using their best efforts to attain a condition wherein the mass of the people, the great majority of the people, may have the necessities of life at a just cost to them—the least just cost, if you please.

The Senator from Wisconsin [Mr. LA FOLLETTE], a statesman able and experienced, and for whom we have the greatest

respect, whose opinion goes far with us, yesterday came in at the last moment—not early, in the stage when his advice and his sage wisdom would have been of advantage to us—and suggested a remedy which we would have been glad to have investigated had we received it earlier. We can not do everything at this time. We are going before the people with radical changes in this bill, many of which, no doubt, are mistakes on our part. They will not accomplish the good which we hope, nor yet do the harm which is prophesied by the men of the opposition, by you who oppose it. But in the main it will be for the betterment and for the good of the people of this country.

We are doing all that we think we legitimately can, all that we can safely venture upon at this time. We are willing and we wish to follow up this bill with other measures making it more beneficial. If you will suggest them at a time when we can take them up, we will go with you down the line to the last ultimate object of the good of the common people of this country; but we can not burden the bill by tacking onto it the theory of every man who wishes to put a new proposition of his own into this bill at this time. It is hard enough to carry it now.

There are prophecies from all over the other side of the Chamber that the bill is going to fail in every respect; that it is wrong in every principle. We are doing the best we can, and we would like your patience to carry it through at this time, with the assurance on our part that after we have put it into effect we will remedy the defects in it which prove to be defects and then go further and make it a better administrative measure, a better law for the people of this country—just as far, my friend the Senator from Iowa, as you dare travel down that road. But do not overload and overburden us at this time. Your advice will come better after we have carried this bill into effect and have tried to see what we can accomplish with it. We ask of you that patience, and not the rebuke that we have not gone to the full limit, when you have lain back for 50 years and have ground the iron into the heart and the soul of every poor man in this country—you of that party.

Mr. CUMMINS. Mr. President, of course I recognize the pathos of the appeal just made by the Senator from Oregon. I do not doubt his good intent. I beg, however, to remind him that three months ago, nearly—or two months ago, at any rate—I proposed this amendment. It was printed. It was referred to the Committee on Finance. I suppose it passed into the caucus of the Democratic Senators. Now, my complaint is that if the Democratic side did not intend to consider anything or any argument save something that was presented to the caucus and the arguments that were made there, you ought to have invited me to address the Democratic caucus and give my reasons then, as I have given them now, for this legislation. Then I might have been in contact with plastic minds. Now I collide with minds so hardened that I have no hope whatever of making an impression upon them.

Mr. LANE. Mr. President—

Mr. CUMMINS. That is what ought to have been done. You had an opportunity to consider this amendment. It is just as pertinent to the tariff bill as the percentage of duty upon a commodity to be imported from a foreign country to our shores.

I did not intend to drift away upon this complaint, but I simply repeat what I have already said, that the effort to legislate for the United States in a caucus of one part of Congress or of the Senate, while I have no doubt that it has been prompted by practical motives if not highly commendable motives, in the end will bring your party to complete disaster and to the people of the United States nothing but disappointment.

We can not legislate in that way. We have a right to be heard. It is our privilege to make an argument upon legislation before the minds of Senators are foreclosed. That is my complaint with regard to the matter.

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Oregon?

Mr. CUMMINS. I yield to the Senator.

Mr. LANE. I am willing to concede that the caucus method does not appeal to the American people, and it does not appeal to me. Our party, however, is but a narrow majority of this body. It has within its ranks men who are not in sympathy with its plans and who will not vote for the bill. It necessarily had to present a solid front as near as it could do so in order to pass the measure. It has failed in incorporating many things which are ideal, and in other places unwittingly perhaps it has made discriminations in favor of one class and against another. I regret this condition as much as anyone.

I fear, however, that had the Senator from Iowa been present at the conferences that we would have been unable to have met his wishes. We would have been compelled to adopt his tariff bill and not ours in order to have pleased him. We have done the best we could under the circumstances, and indulge

in the hope that we will be able to relieve conditions in this country. If we fail, it will have been a failure due to fault of judgment on our part and not of deliberate intent.

The people of this country have but little confidence, if the Senator will just allow me to say so, in this body of their representatives, but the people of the country will forgive mistakes. They will overlook errors if they believe their servants are trying to better conditions. They will not forgive deliberate treachery on the part of their servants, and should not be asked or expected to do so.

Mr. CUMMINS. Mr. President, I am sure that the Senator from Oregon has not read a most instructive and delightful passage from a recent work known as *The New Freedom*. Its author is now the most powerful man in the world. His word is law to more Members of Congress than ever before listened to the word of an Executive. I have already commented upon that. I look upon the fact as one of the surest signs of national decadence. It is one of the indications that the Congress of the United States has lost its place in the affection and confidence of the people, and that they have substituted—or, at least, he believes they have substituted—a single will. We are drifting in that direction as rapidly as subservience can drift us.

I want to read, however, from this author, for whom I have personally the highest esteem and of whom, as much as I criticize what he is doing and his interference with the legislative branch of the Government, I am glad to be able to say that I believe he is, from his point of view, trying to serve the American people. His name is Woodrow Wilson. He says:

In the first place—

I will read a word or two before. It is in a chapter of which the heading is "Let there be light." It begins:

The concern of patriotic men is to put our Government again on its right basis by substituting the popular will for the rule of guardians—

This must have been written before the guardian was appointed for the American Congress—

In the first place, it is necessary to open up all the processes of our politics. They have been too secret, too complicated, too roundabout; they have consisted too much of private conferences and secret understandings.

I commend the wisdom of this distinguished author, uttered to the American people before the vast power which he now enjoys was conferred upon him.

Mr. LANE. Mr. President, just a word more and I will quit the controversy.

I wish to say that the new bill, the bill which we are presenting, is far and away a better measure and a preferable one to the old law. I believe not all of you, but nearly all of you, will concede that.

There does not seem to be anything in the bill which appeals to the gentlemen on the other side, whether he be a stand-pat Republican or a Progressive. All we can do is to pursue our own course and be held responsible for it before the people. If you will allow us to do that and accept the responsibility, we will thank you.

Mr. CUMMINS. Mr. President, it matters little whether the Senator from Oregon pleases this side of the Chamber, whether he pleases stand-pat Republicans or progressive Republicans. It is, however, of immense concern that he shall do right, for in doing right, even if he dissatisfies this side of the Chamber, he will satisfy the American people. This bill does not seem to have been considered from that standpoint.

Mr. STONE. Mr. President—

Mr. CUMMINS. I yield to the Senator from Missouri.

Mr. STONE. I have no disposition—

Mr. CUMMINS. I will yield the floor. If the Senator from Missouri will permit me to ask for the yeas and nays upon my amendment, then I will yield the floor.

Mr. STONE. Just a moment. The Senator from Iowa has read an extract from a book written by the President. He read it as a criticism or a rebuke to Senators on this side because we deemed it advisable to go into a party conference to discuss this bill and settle in conference individual differences that might exist with a view to reaching a common ground upon which we might act. The margin of party strength in this Chamber, as we know, is exceedingly slight. We could well anticipate that whatever we might do with respect to the bill would be vigorously and adroitly assailed by the other side. Having the responsibility of this legislation, it was important that we should discuss it among ourselves and agree as far as possible. It was not only important but necessary, as we thought, that we should take this course with a view to unifying our strength instead of weakening our position by a lack of agreement, when an agreement might be reached by a full and free conference. Now, because we did that, the Senator from Iowa and others criticize us and the Senator reads this extract from one of the President's books to support his criticism. This

same quotation has been read over and over again during this debate.

Mr. MARTINE of New Jersey. It is a thrice-told tale.

Mr. STONE. Yes; I think more than a thrice-told tale. The Senator reads it as a rebuke to us coming from the President. Whenever we follow the advice of the President we are accused of a lack of independence and of being subservient to the Executive. Whenever the President makes a recommendation to Congress and we attempt to carry it out the honorable Senator or some of his associates says we are subservient to Executive influence. But if we do not follow the advice or a suggestion of the President, then the President is quoted to show that we are wrong. The idea seems to be to attack us, whether we are coming or going. At this moment the Senator from Iowa is criticizing us because we do not follow the President, as he says. In the name of heaven, how can we please the Senator from Iowa? If we follow the President, he accuses us of subservience, and if we do not follow him, he accuses us of doing a wrong thing by not following him. It seems to be impossible to please the Senator, no matter what we do.

Mr. CUMMINS. Mr. President, I have the most amiable disposition in this Chamber. I suppose the Senator from Missouri can please me more easily than he can please any other Senator in the Chamber. He has entirely mistaken my attitude. I am opposed to the caucus that you held. I think it is wrong. I do not speak of it lightly. I think it is wrong. It is wrong because your Members come out of it—and it matters not whether you call it a caucus or a conference; the name makes no difference—but you come out of it with your minds closed against argument upon the floor of the Senate. You come out of it either actually or impliedly pledged to do a particular thing before you have tried the case.

Mr. STONE. But, Mr. President—

Mr. CUMMINS. You have not listened to a single argument on this side of the Chamber.

Mr. STONE. The Senator should not say that. Frequently amendments have been suggested from the other side of this Chamber during the consideration of this bill, some by the Senator himself, and they have been taken up by the committee of the Senate charged with this business, and amendments have been made to conform to suggestions so made from the other side when we were convinced by the argument presented that they should be made. The Senator seems to be annoyed that he was not invited into this Democratic caucus.

Mr. CUMMINS. I have not expressed any annoyance.

Mr. STONE. But the Senator said to the Senator from Oregon [Mr. LANE] that he ought to have been invited.

Mr. CUMMINS. Not in the caucus, but I should like to have made an argument before that illustrious body on some of the questions involved in this bill. I should like to have been heard before judgment was rendered.

Mr. STONE. There is only one way—

Mr. CUMMINS. All I know about the caucus and the history of it is the description of it given by the Senator from Nebraska [Mr. HITCHCOCK]. I should like to ask the Senator from Missouri whether the Senator from Nebraska correctly described what occurred in the caucus.

Mr. STONE. I did not hear the Senator from Nebraska say anything on the subject.

Mr. CUMMINS. Then the Senator from Missouri missed one of the most entertaining performances that has occurred during the progress of the debate. He gave us the other day a very full account of what happened in the caucus and the way it happened and the reasons that were advanced for what happened. Now, if the Senator from Missouri was here—

Mr. STONE. The Senator speaks of the occurrence several days ago. I thought he was speaking of what occurred to-day.

Mr. CUMMINS. Yes; but it occurred in the memory of man.

Mr. STONE. I heard the speech of the Senator from Nebraska some days ago. I misunderstood the Senator from Iowa. I thought he was referring to his colloquy to-day with the Senator from Oregon [Mr. LANE].

Mr. CUMMINS. Oh, no; I was referring to the Senator from Nebraska, who told us the fate of his tax bill and how it met its death.

Mr. STONE. I heard that.

Mr. CUMMINS. I am not suggesting anything but asking whether the Senator from Nebraska did relate the transaction as it happened?

Mr. STONE. Not as I understood it.

Mr. CUMMINS. That is a question of veracity.

Mr. STONE. It is not a question of veracity.

Mr. HITCHCOCK. I would like to ask the Senator from Missouri—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. STONE. It is not a question of veracity, and I am not going to be drawn into a controversy of that kind. Here is what happened. Here is what influenced my action, and I think influenced the action of Senators generally. It was not because of any opposition, as far as I know, to the substantial features of the amendment proposed by the Senator from Nebraska, but a majority of those present believed that it was not a fit subject or proper subject to be put into a tariff bill, but that it should be treated separately. The Senator from Nebraska took a different view of that, as he had a right to do, and there were Senators in the conference, I am sure, who agreed with him as to that; but the majority took the opposite view.

Mr. CUMMINS. I am not entering upon the merits of the proposition made by the Senator from Nebraska. I only asked whether his account of its untimely death was a correct account.

Mr. STONE. I decline to go into a matter of that sort. The Senator from Nebraska can go into it if he wishes.

Mr. CUMMINS. If the Senator from Nebraska desires to be heard, I will yield to him.

Mr. HITCHCOCK. I understood when the colloquy began that the Senator from Missouri questioned the accuracy of my description of the caucus proceeding.

Mr. STONE. I decline to go into that. I am not in the habit of discussing on the outside what occurs in executive party conferences, and I decline to do it now.

Mr. HITCHCOCK. The Senator does not question the accuracy of my statement?

Mr. STONE. I make no statement respecting it.

Mr. HITCHCOCK. If the Senator does not question my statement, I have nothing further to say.

Mr. STONE. I decline to discuss it.

Mr. HITCHCOCK. I think that is a wise course, I will say to the Senator.

Mr. STONE. I think it is, too.

Mr. BORAH. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Idaho?

Mr. CUMMINS. I do.

Mr. BORAH. I understand the Senator from Missouri refuses to commit himself.

Mr. STONE. I can not consent, Mr. President, when I go into a conference with gentlemen on anything to go out and publicly exploit what occurred, and I decline to do it now.

Mr. CUMMINS. Of course, the Senator from Nebraska related the history of the matter to the Senate a few days ago—

Mr. STONE. I am willing to let it rest there.

Mr. CUMMINS. What happened there and the character of the proceedings generally, largely from his statements—

Mr. STONE. Very well; let it rest there.

Mr. CUMMINS. It is the Senator from Nebraska who is challenged now by the Senator from Missouri.

Mr. STONE. I have not challenged the Senator from Nebraska. I decline to challenge him or to have any controversy with him on that subject.

Mr. CUMMINS. I applaud the discretion of the Senator.

Mr. STONE. It is not a question of discretion. It is my judgment on a question of propriety.

Mr. CUMMINS. But the Senator from Nebraska has already made it public. The Senator from Missouri would not be violating the secrecy of the occasion.

Mr. STONE. The Senator thinks he is very smart in trying to force me into a controversy over what occurred in the Democratic caucus, but he is not smart enough for that. [Laughter.]

Mr. CUMMINS. If I had any such purpose, Mr. President, I forego it. I see how unavailing it would be.

Mr. STONE. The Senator from Iowa has expressed rather a disappointment that he could not get into a Democratic caucus.

Mr. CUMMINS. Oh, no. Now, let me correct the Senator.

Mr. STONE. That is what you said.

Mr. CUMMINS. I said I would have liked to appear before the court and to have argued my case before judgment was rendered.

Mr. STONE. Yes; but—

Mr. CUMMINS. And if I had had an opportunity to make the argument I made this morning before the Democratic caucus I might have impressed the Democratic caucus, but judgment was rendered against me without a hearing.

Mr. STONE. But there is not a thing the Senator has discussed here this morning that was not gone over in the caucus or the conference. All questions relating to this bill were discussed, considered, and numerous amendments offered, and the views of individual members were freely expressed—expressed

personally, if they desired so to do, or expressed by their votes—upon every question raised.

The Senator from Iowa seems to be chagrined or aggrieved because he was not admitted into this Democratic caucus.

Mr. CUMMINS. No; but the Democratic caucus, as I understand it, was a court trying certain questions.

Mr. STONE. Yes; we tried them, and tried them well, and determined them, we think, rightly.

Mr. CUMMINS. I think it ought to have had the advocates upon both sides before it, so that its judgment might have been intelligent and uniform.

Mr. STONE. Oh, we had—

Mr. CUMMINS. Now, before we have had any opportunity to be heard the judgment is rendered, and we appeal to deaf ears. We have no opportunity of presenting the case. My amendment does not involve duties upon imports—that is, the amount of duties upon imports—but it involves a general legislative policy toward monopolies, and it ought not to have been discarded and rejected before the argument upon it was made.

Mr. STONE. Mr. President, the Senator from Iowa has been edging in and in toward the Democratic Party for a good while. He has got in sight of the promised land and is looking on with longing eyes; but he can only get into a Democratic caucus or conference when he passes over the mountain top and comes down into the land of milk and honey. [Laughter.]

Mr. CUMMINS. It may be, Mr. President, that for a time I struggled toward that mountain top very much dissatisfied with some things that were being done by my own party. However, when I reached the mountain top and looked over into what was said to be the promised land it had no fascination for me.

Mr. STONE. And the Senator passes back into the dominion of that old organization he has denounced and repudiated.

Mr. CUMMINS. On the contrary—

Mr. STONE. Where does the Senator stand?

Mr. CUMMINS. I stand upon the mountain top, in the clear sunlight, insisting that both parties—

Mr. STONE. And condemning both. Do I understand that the Senator is standing on the mountain top looking both ways and condemning both parties?

Mr. CUMMINS. I condemn some things that both parties have done, and inasmuch as the Democratic Party is now in action my condemnation falls immediately upon the Democratic Party.

Mr. STONE. Mr. President, the Senator can not long stand on the peak of the mountain and look down upon one party and upon the other. If he stays there on the peak he can not survive. He must either go down into the Democratic Party or back into the bosom of the Republican Party, from which he has sought to escape.

Mr. CUMMINS. The Senator from Missouri, Mr. President, mistakes the aspect of the mountain top; he has never been there, and he can not describe it accurately. It is a broad plateau upon which all justice-loving people can live.

Mr. STONE. I have not been on that mountain top; I have been content to reside in the "Land of Promise." [Laughter.]

Mr. FALL. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from New Mexico?

Mr. CUMMINS. I yield with pleasure.

Mr. FALL. I should like to ask the Senator from Missouri a question before he leaves the Chamber.

Mr. STONE. I shall be delighted to hear the Senator.

Mr. FALL. There are others who have been in sight of Democratic "Holy Land," and I should like to know of the Senator from Missouri, just for my own information, if the only way now to get into the Democratic Party is to swear allegiance to the Senate Democratic caucus?

Mr. STONE. The Senator from New Mexico is trying to be facetious.

Mr. FALL. No; the Senator from New Mexico is asking for information.

Mr. STONE. Has the Senator from New Mexico some idea of desiring to enter into the fold of the Democratic Party?

Mr. FALL. The Senator from New Mexico was once a Democrat, but when he had to be bound by a Democratic caucus he left the Democratic Party. Now, I want to know if the only way to join the Democratic Party is to abide by the decision of the Democratic caucus?

Mr. STONE. Oh, if the Senator from New Mexico really desires to come back to his original faith, we will excuse him from being bound by a caucus [laughter] and give him full liberty.

Mr. CUMMINS. I ask for the yeas and nays on my amendment, Mr. President.

The yeas and nays were ordered.

Mr. ROOT. Mr. President, before we vote on the amendment I wish to say to the Senator from Iowa [Mr. CUMMINS] that I find a radical difference between the two parts of his amendment. One appears to impose upon the courts the duty of ascertaining a fact upon the ascertainment of which certain consequences shall follow, to wit, the placing of the articles upon the free list; the other imposes upon the Executive, the President, the duty of ascertaining the fact, upon his determination of which certain consequences follow unless prevented by the courts. In my opinion—I express it with diffidence, for I share with the Senator from Iowa in regret that this subject should not have had the kind of discussion which takes place when there is a possibility of the discussion affecting the conclusion—in my opinion the first branch of the amendment does not provide for a case or controversy which, under the Constitution of the United States, we are at liberty to impose upon the courts. The second branch of the amendment does, I think, provide for such a case or controversy; it does provide a constitutional exercise of power both by the Executive and by the courts. If that stood alone, while I should want certain adjustments of phraseology to guard against incidental and minor difficulties, I should vote for the amendment, but with the first provision in the amendment I can not vote for it.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Iowa [Mr. CUMMINS], on which the yeas and nays have been ordered.

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], and I therefore withhold my vote.

Mr. LEWIS (when his name was called). I again announce my pair with the junior Senator from North Dakota [Mr. GRONNA].

Mr. THOMAS (when his name was called). I make the same transfer of my pair as heretofore announced and vote "nay."

Mr. WILLIAMS (when his name was called). I repeat the announcement as to my pair which I made upon the last roll call and withhold my vote.

The roll call was concluded.

Mr. BACON. I note that the Senator from Minnesota [Mr. NELSON] has not voted. I therefore withhold my vote, having a general pair with that Senator.

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER], and in his absence withhold my vote.

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from South Carolina [Mr. SMITH] and vote "nay."

Mr. LEA. I again announce my pair with the Senator from South Dakota [Mr. CRAWFORD]. If I were at liberty to vote, I should vote "nay."

Mr. SAULSBURY. I transfer my pair with the junior Senator from Rhode Island [Mr. COIT] to the junior Senator from Nevada [Mr. PITTMAN] and vote "nay."

Mr. BRADLEY (after having voted in the affirmative). I understand that the Senator from Indiana [Mr. KERN] has not voted.

The PRESIDING OFFICER. The Chair is informed that he has not voted.

Mr. BRADLEY. Then I withdraw my vote, as I have a pair with that Senator.

Mr. SAULSBURY (after having voted in the negative). The junior Senator from Nevada [Mr. PITTMAN] having returned and voted, I now withdraw my vote because of my pair.

The result was announced—yeas 20, nays 43, as follows:

YEAS—20.

Brady	Cummins	McCumber	Smoot
Brandeggee	Fall	Norris	Stephenson
Bristow	Jackson	Page	Sterling
Catron	Jones	Perkins	Warren
Clapp	Kenyon	Polindexter	Weeks

NAYS—43.

Ashurst	Johnson	Ransdell	Smith, Md.
Chilton	La Follette	Reed	Stone
Clark, Wyo.	Lane	Robinson	Sutherland
Clarke, Ark.	Lodge	Root	Swanson
Dillingham	Martin, Va.	Shafroth	Thomas
Fletcher	Martine, N. J.	Sheppard	Thompson
Gallinger	Myers	Shields	Thornton
Gore	Overman	Shively	Tillman
Hollis	Owen	Simmons	Vardaman
Hughes	Pittman	Smith, Ariz.	Walsh
James	Pomerene	Smith, Ga.	

NOT VOTING—32.

Bacon	Coit	Lea	Penrose
Bankhead	Crawford	Lewis	Saulsbury
Borah	Culberson	Lippitt	Sherman
Bradley	du Pont	McLean	Smith, Mich.
Bryan	Goff	Nelson	Smith, S. C.
Burleigh	Gronna	Newlands	Townsend
Burton	Hitchcock	O'Gorman	Williams
Chamberlain	Kern	Oliver	Works

So the amendment of Mr. CUMMINS was rejected.

Mr. NORRIS. Mr. President, I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 250, after line 13, it is proposed to insert:

That whenever the President shall ascertain as a fact that any country, dependency, state, colony, province, or other political subdivision of government is a party to any conspiracy or combination to monopolize and control the trade or commerce between the United States and such foreign country, dependency, state, colony, province, or other political subdivision of government of any of the products of such country, whereby the prices of such products are increased to the consumers of the United States, or has any law, rule, or regulation legalizing any such combination or conspiracy, or has any law, rule, or regulation valorizing any of the products of such foreign country by purchasing any part of the same and holding the same out of the markets of the world, whereby the price of the same is increased to the consumers of the United States, he shall have the power, and it shall be his duty, to suspend, by proclamation, the operation of the provisions of this act relative to the rates of duty to be assessed upon the products of such country, dependency, state, colony, province, or other political subdivision of government when imported into the United States; and thereafter, in addition to whatever rate of duty is assessed against the products of such country by this act, all the products of such country, dependency, state, colony, province, or other political subdivision of government shall, when imported into the United States, pay a duty of 25 per cent ad valorem.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Nebraska [Mr. NORRIS].

Mr. NORRIS. Mr. President, I feel very much discouraged in presenting this amendment to the Senate by the parliamentary condition in which we are now placed. To begin with, I know that the amendment will not be adopted, not because of any infirmity in the amendment, not because the Senators on the other side of the aisle do not believe in the proposition that I have brought before the Senate, but because their hands are tied in such a way that they will not be able, without a violation of what they believe to be their duty to their caucus, to vote for the amendment.

I regret, Mr. President, that the time now intervening will make it impossible for me to pursue the course that I had intended to pursue in presenting this amendment. I know there are many other Senators having very important propositions to bring forth who desire to be heard. Therefore I am not now able, without intruding upon them, to discuss this question as fully as I had intended to do or as I should like to do; but inasmuch as my amendment can not be adopted anyway, on account of it being prejudged by the caucus—or, rather, because perhaps it has not been considered by the caucus—it will not, perhaps, make so very much difference.

There are questions involved in this amendment in which every patriotic American who loves his country is deeply interested, and I wanted to lay them fully before the Senate and the country at this time, so that, even though you would refuse to take any steps toward bringing relief, you could at least offer no excuse which, in my judgment, would be good; but I have decided, Mr. President, that it would perhaps be better for me later on to introduce a resolution asking a committee of the Senate to make a proper investigation of the facts which I have several times laid before the country and, at least on one occasion, at some length laid before the Senate.

I want to say, Mr. President, that this amendment, while couched in general terms, is intended to reach such schemes as that known as the Brazilian valorization of coffee. The language is general, and if there are any other international trusts of that kind it would, of course, reach them. It is not a question of tariff; it does not involve the question whether or not we should have a tariff for revenue or free trade or protection, but it does involve the same things, only perhaps in a different degree, that you have already considered in this bill. It is an amendment to some of the provisions of the bill wherein you have undertaken to legislate—and I think properly—to prohibit discrimination against the products of the United States. I have only asked that similar action be taken where the discrimination is leveled against the entire world, but has the effect of producing by such illegal combination a condition wherein our people must contribute from their incomes to the support of this gigantic international trust.

I wanted to take the time of the Senate to explain why, in my judgment, this proposed legislation was necessary in addition to the legislation which we have already adopted and which is on the statute books, but to do so would involve some time.

It would involve, too, a criticism, in a friendly spirit, however, of some of the departments of our Government, and, for the reasons already stated, I am not going to take the time of the Senate to go into that.

The method by which I undertake to control the matter in this amendment is one that can be very properly subject to debate; it is one upon which men, striving to gain the same end, may disagree. It provides when a condition exists like that which has been practically proven to exist, and which, as I understand, before the world absolutely is undisputed and unparalleled in regard to the coffee situation, that thereupon all the products of the country that is offending shall become subject, in addition to the tariff provided by this bill, to an ad valorem duty of 25 per cent. That is intended to be a discrimination against the products of that country. Whether that is too severe, whether it is severe enough, whether it is not severe enough, whether it is the proper method to pursue is something which I concede ought to be debated, ought to be considered. That is a question upon which honest minds may honestly differ; but that we ought to meet this question and that we ought to legislate so as to give relief to the American people from this intolerable condition there is only one side to the question.

On that question I have talked privately with Senators on the other side of the Chamber, who have commended the work which I have been trying to do, and several of them have stated to me that, from the study they have made of the question, they thought we ought to do something. I remember one Senator, at least, told me that he had taken the revelations which I gave on this question in the House of Representatives and had used those facts in every speech he made in his campaign for election to this body.

Yesterday we had an opportunity to vote on an inheritance-tax provision. I have talked with Senators on the other side, who have agreed fully with me that the kind of provision that was offered yesterday ought to become the law of this land; they just as honestly believe in it as I do; and yet yesterday every Senator on the other side voted against it. I said then, and I say now, in regard to this amendment, that, so far as this particular kind of legislation is concerned, until there is another revision of the tariff you will perhaps not have another opportunity to vote for this relief that you will have now when the roll is called and that you had yesterday on the inheritance tax. I have had Senators on that side tell me that a tax like I proposed yesterday was much more important than the tariff bill itself and that the enactment of such an inheritance tax would do more good for the people than any other legislation. Many other Democrats feel the same way, and yet every one of them voted against it yesterday. You will do the same with this amendment, and all because your votes in this Chamber are arbitrarily controlled by secret caucus.

I am not criticizing any man's patriotism or honesty; but it does seem to me, when Senators absolutely agree that the propositions presented are right, and where some of them have advocated them on the stump during their entire campaigns for election to this body, that there should be an opportunity for them to vote their honest convictions. When you were arguing those questions with your people, did you tell them that when you got here if a caucus decided that you should vote against those things you said you favored you would obey the mandate of the caucus? As was well said the other day by my colleague [Mr. HITCHCOCK], over on the other side, we are all elected to the Senate and not to a caucus.

It is in the Senate where the Constitution provides that a record shall be kept, where the constituents of all of us can look down from the galleries and can hear what we say and can see what we do; it is there that our action ought to be untrammelled; it is here that we ought to be uncoerced; it is here that we ought to follow the dictates of our conscientious convictions and not surrender them to a body that has met in secret, with only a portion of the membership present, and decreed what our official action shall be. When we take that course and submit to a caucus, we are permitting an unofficial organization, composed of only a part of the official organization, to control the action of the official organization; there is not anything else to it.

The Senator from Missouri [Mr. STONE] a while ago said, speaking of the Democratic caucus, "We were a court." What would we think of the Supreme Court of the United States if, when a case came before them, five of the judges should go off in secret, before the case was argued, before the evidence was introduced, before a hearing was had, and in a secret caucus determine what the judgment should be when it was rendered, and then come back into the court, become a part of the official organization, listen to the evidence, listen to the arguments,

listen to the attorneys as they presented the two sides of the case, and then ignore it all and render a decision in accordance with the decree that was agreed on in secret? Senators on this side are Members of the Senate as well as those on the other side. We are conscientious in trying to perform our duties. I know that I came here with a firm hope that this bill would be brought out in the open and that in the end I would be able to cast my vote for it. But what is the result? I know that this does not appeal to many, at least on the other side, because I have had it often brought to me that those who were the most influential in the framing of this bill wanted to put it in such shape, wanted to make it so obnoxious that no one on this side could vote for it, and thus make it entirely a partisan proposition. I know that I would be just as willing to vote with you, and I have shown my willingness to do so during this entire debate. On every amendment that has been offered where I have thought I understood it, if I believed you gentlemen were right, I have voted with you, and many other Senators on this side have done the same thing. I would like to have seen you do the same thing. I would like to see you throw off the shackles of a parliamentary caucus slavery and be free to give your consciences an opportunity to act.

Mr. BRYAN. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Florida?

Mr. NORRIS. I yield to the Senator from Florida.

Mr. BRYAN. The Senator from Nebraska believes that his colleague is untrammelled by any caucus rules, does he not?

Mr. NORRIS. I did not understand the Senator's question.

Mr. BRYAN. Does the Senator contend that his colleague from Nebraska [Mr. HITCHCOCK] is under obligation to abide by the decision of the Democratic caucus?

Mr. NORRIS. Of course that is a matter for him to determine. I think from his course here that he has abided by the caucus with the exception of one vote, and, so far as I know, that is the only time he has voted contrary to the caucus.

Mr. BRYAN. Has he not said that he was not under any obligation to abide by the decision of the caucus?

Mr. NORRIS. I want to say to the Senator from Florida that that remark, if my colleague made it—and if the Senator says he did I will assume that to be true and believe it to be true in fact, though I do not remember his saying that—but that is true of every caucus that has ever been held. Everybody knows that you are not legally bound; everybody knows that, but everybody knows that you will become a political outcast if you do not obey its behests. I have been through it all; I know what it is, not perhaps in the shape of a caucus, but from a political machine, and I know the feeling of the Member when he has asserted his independence and has refused to obey the dictates of a boss. It is the same with the caucus. The man who cuts himself loose and says he will not be bound by it becomes to a great degree a political outcast. I will say if he goes into a caucus with the idea of agreeing to what is done there, though he does not get his way, he ought to abide by its decision.

Mr. BRYAN. And yet the Senator from Nebraska and other Senators on the other side of the aisle commended the Senator's colleague for the stand he took.

Mr. NORRIS. Let me say—

Mr. BRYAN. I will ask the Senator—

Mr. NORRIS. I hope the Senator will be brief, because I want to get through, in order to allow other Senators to speak.

Mr. BRYAN. I will ask the Senator to examine the ye-and-nay calls and point out to the Senate a particular instance in which his colleague did not vote as the other Democrats voted.

Mr. NORRIS. Does the Senator want me to point them out?

Mr. BRYAN. Except on one amendment.

Mr. NORRIS. I have not looked over the RECORD with that in view; but I think I can tell the Senator offhand that it was only in one instance that my colleague voted differently from his Democratic colleagues.

Mr. BRYAN. And that was on his own amendment?

Mr. NORRIS. That was on his own amendment.

Mr. BRYAN. And yet he was not bound.

Mr. NORRIS. I think he was bound.

Mr. BRYAN. He says not.

Mr. NORRIS. Certainly he could not be otherwise. A Senator would not go into a caucus—and my colleague is a perfect gentleman—and stay through it—

Mr. BRYAN. But he did not stay through it.

Mr. NORRIS. And not be influenced or bound by the result.

Mr. HUGHES. Mr. President, the Senator knows—

Mr. NORRIS. Let me get through with one Senator at a time. I said at the time my colleague spoke that, in my judgment, he was entitled to a great deal of credit. I think it took

a great deal of courage to do what he did here on the floor of the Senate; but I added that he had only taken one step. I said then that he had not gone very far, that he was still voting according to the caucus dictation in every instance that I noticed, except the one where his own amendment was involved.

Mr. REED. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Missouri?

Mr. NORRIS. I want to say to the Senator from Missouri that I have agreed not to speak more than 15 minutes, and I have already spoken that long. I would be very glad to pursue this for another hour, but I want to quit.

Mr. REED. I do not think the question I was about to propound would have the effect in any manner of prolonging the time, but I will not ask it.

Mr. NORRIS. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. NEWLANDS. Mr. President, whilst the pending bill makes material reductions in existing duties, it does not, in my judgment, go far enough. I have always believed in radical accomplishment by progressive methods; and whilst I have thought that in some of the reductions made we were going too fast, I have been in sympathy with my party as to the goal ultimately to be reached.

Regarding many of these reductions as desirable reductions, I have been desirous that they should be made in such a way as not to injure any existing industry, or displace labor. I can not imagine how a material reduction can be forced by law in the price of any product of labor without some readjustment prejudicial either to the capital or to the labor employed; and I have been desirous of graduating the force of that readjustment by distributing it over a longer period.

With this view I have urged in the party conference that the reductions called for by this measure should be distributed and apportioned over a period of three years, and that provision should be made for further reductions than those contemplated by the bill through the action of a tariff board, acting under a rule prescribed by Congress, such board acting in the discharge of its duty under this rule as the servant of Congress. My views, therefore, whilst counseling moderation in the preliminary stages of tariff reform, would result in a much more radical reduction of the tariff than that contemplated by the pending bill.

In these views I have been overruled by my party associates in the conference of the party. The only question that remains, therefore, is whether or not the pending bill is an improvement upon the existing tariff. That it is I have no doubt; and I shall therefore vote for the bill.

I may add, in this connection, without violating, I imagine, the confidence of the conference, for it has become a public matter, that the discussion in the last conference regarding a tariff board disclosed the fact that a very large number of the Democrats—in my judgment, a majority—favor the creation of a tariff board or commission, though they differ as to the powers that should be intrusted to it. I think the only reason why there was no action taken in this bill regarding a tariff board was that it was deemed best to make such legislation the subject of a separate bill, and thus secure mature deliberation in party conference and general concurrence as to the methods to be used and the powers to be given.

Regarding my contentions as to sugar and wool, two prominent western industries, I have been of the opinion that the same moderate action should be taken regarding the reduction of the duties on them that has been taken with reference to manufactured products. I could not see why the same consideration should not be given to the labor employed on the sheep ranch as to that employed in the woolen factories of Lowell, or in the sweatshops of New York. Inasmuch as the Democratic Party, true to its platform that reductions should be made in such a way as not to injure or destroy any legitimate industry, had applied that principle to the manufacture of woolen goods and to the manufacture of woolen clothing, I saw no reason why it should not be also applied to the production of wool itself, which is the first stage in the ultimate production of the finished product.

So far as wool is concerned, I believe the injury to the wool-grower will not be a serious one, for the increased value of mutton will probably compensate the wool-grower for the diminished price of his wool; but I should have preferred a slower readjustment of this industry. I should not like to see the sheep grower put his sheep on the market for mutton when it is desirable that they should be held for wool, for I think it of the highest importance in a great country like this that a large proportion of the wool used in its manufactures should be raised

upon domestic soil. I believe in every nation, as far it can, doing its own work and producing the things which it consumes; and I should regard it as a misfortune if the wool-growers, instead of raising wool as heretofore, should kill their sheep and their lambs and turn them into meat.

Mr. WARREN. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Wyoming?

Mr. NEWLANDS. I have promised that I would take only a few moments, and there are several speeches yet to be made.

Mr. WARREN. I did not wish to interrupt the Senator, but only to make one observation. I will not do that if the Senator prefers that I shall not.

Mr. NEWLANDS. I prefer not to be interrupted, as I have promised to be brief in my remarks. There are several Senators who propose to make extended remarks, and I have assured them that mine would not be lengthy.

As to sugar, Mr. President, my views are unchanged. None of our insular possessions, in my judgment, can compete with Cuba in the production of sugar. I believe the effect of its going immediately to the free list will be to bring about an injurious readjustment of the sugar industry in our insular possessions. As to the production of beet sugar, a very modern industry in this country, whose development has extended over a period of not more than 15 or 20 years, I am firm in the conviction that if no radical readjustment is made in the tariff duties that industry will greatly thrive and that it will be one of the most prominent methods of advancing the prosperity of the West.

I believe that alfalfa and sugar beets will be the chief products of the irrigated regions of the West, and that if the sugar industry is not seriously disturbed the production of sugar in that region will be more valuable than our entire mining product. I believe the production of beets tends to intensive cultivation, so essential to this country, and tends to that careful husbandry which has been so neglected here, as the result of which neglect the yield per acre in this country is only one-half the yield of what we are accustomed to regard as the old, worn-out soils of European countries.

As to this industry, I have asked nothing more than a moderate revenue duty. The present duty is excessive. I think it should be gradually reduced from 1½ cents a pound to half a cent a pound. Later on, if the industry can stand it without injury, and if the money is not needed for revenue, this product can be shifted to the free list.

I have made no contention for a protective duty. The ultimate duty, as I have stated, should not exceed one-half cent a pound. This is the duty that prevails in France, Germany, and England. It would be productive of needed revenue, and at the same time would save an important western industry from injury and our insular possessions from prostration. Such a duty is entirely consistent with the traditions of the party which has throughout its history imposed a revenue duty on sugar and wool.

Mr. President, I have fully presented these views in the party conference, and they have been overruled. The question is, What action shall I now take regarding this bill?

I believe in party responsibility. I believe that as a party we have pledged the country to definite action in the line of material reductions in the tariff. Necessarily it would be difficult for all of us to agree as to the exact amount of reduction that should be made upon each article and as to the articles upon which reductions should be made. There must be in the party conference, as there were in this case, great differences of opinion upon these subjects; and necessarily party action must mean a composition of party differences, or else the party would never be able to act and to respond to the pledges given to the people.

I have kept my vote free and untrammelled by express declaration in the party conferences up to this time. It is still free. I do not recognize the binding obligation of a party conference or of a party caucus. In fact, the party has not sought to impose that obligation upon its members, for the resolution passed by the party conference simply declared this to be a party measure without imposing any obligation upon the members of the party. So I am free by virtue of my declaration, and I am free because the party itself has never decided in favor of obligatory support of the party action.

But regarding, as I do, party solidarity of the highest importance, I should feel guilty of a breach of trust to that party were I unwilling without the gravest reasons to make its will effective. For this reason, as the party action differs materially from my views upon only two items out of about 4,000 items in the tariff bill, I propose to yield my views upon that question, and to stand with my party.

I hope that hereafter the Democratic Party will take up the question of still further reductions in the tariff through the action of a tariff board created by Congress, and acting as its servant; and I trust that when that action is taken, wherever it may appear through subsequent proof that the action already taken by the party is injurious to any legitimate industry, that matter will be considered by this board, and that its recommendations will be made to Congress and considered by Congress as the findings of fact of experienced and expert men.

I do not regard tariff making as finished, as many do. We are told that tariff tinkering should be at an end; that the country should have industrial peace. I believe that tariff tinkering should be at an end; but I believe in a steady and progressive movement in the line of tariff reform—a movement which should go on through accomplished experts every day in the year, until a just, an impartial, and an equitable tariff is established.

Mr. President, I desire to insert in the RECORD, as an appendix to my speech, certain extracts from a press dispatch published September 6 and containing an account of the action of the last conference of Democratic Senators regarding the tariff.

The PRESIDING OFFICER. Without objection, permission to do so is granted.

The matter referred to is as follows:

[Press dispatch.]

NEWLANDS IN LINE FOR PARTY'S TARIFF—VIEWS REGARDING SUGAR AND WOOL UNCHANGED, BUT WILL SUPPORT BILL AS IMPROVEMENT ON EXISTING LAW—ANALYZES CURRENCY LEGISLATION.

WASHINGTON, September 6, 1913.

Senator NEWLANDS, after six weeks' absence in the West, during which time he visited his home State of Nevada and spent some time on the Pacific coast, returned to Washington yesterday. Immediately upon his return Senator NEWLANDS made it plain that he intended to support the tariff bill, although he did not say so in specific words. To the newspaper men he said: "I have never at any time contemplated making a fight outside the party councils." Later on Mr. NEWLANDS issued a carefully prepared statement, in which he discussed conditions as he found them throughout the West, and the tariff action he thought ought to be taken by his Democratic colleagues. Mr. NEWLANDS said:

"I found a general tightening of the money market, caused by what I regard as unfounded apprehension regarding pending tariff and financial legislation. I do not believe this to be due to any propaganda by the large banks with a view to forcing amendments which they desire to the pending currency bill, but rather to the natural conservatism of bankers.

BANKS CONTRACTING LOANS, HE SAYS.

"The country has pronounced its verdict in favor of material reductions in the tariff, which will, of course, affect the protected industries, whose custom it has been to add in our local market the duty to the normal or international price. The average duty of the existing tariff is 43 per cent, and the normal price of a protected product being \$1, our domestic producer adds 43 cents, making the price \$1.43. It is proposed to cut this duty down to an average of 25 per cent, which means that such products will hereafter sell on an average for \$1.25 instead of \$1.43. This means ultimately, if the Democratic contention that the duty is added to the price is correct, a large reduction in the prices received by the protected industries.

"These industries are dependent upon credits from the banks, and it is natural, therefore, that the banks should be overlooking and revising their loans, with a view to securing the safety of their deposits, largely loaned to protected industries. I find that such loans are being everywhere closely scrutinized, and that contraction is the rule of the hour. This is true of western industries, such as sugar and wool, as well as of eastern manufacturing industries.

MR. NEWLANDS'S CURRENCY VIEWS.

"The administration, realizing that this would be the result of tariff reduction, decided to enter upon financial legislation which would insure a better banking system, responsive to the legitimate demands of our industries for the credits necessary to the maintenance and extension of business.

"It very wisely concluded to enter upon financial legislation that would unionize the various banks in different regions of the country into credit reserve associations which would so handle the reserves under Government supervision as to bring them to the rescue wherever needed to prevent monetary stringency or panic.

"In doing this it has sought to make all issues of notes, even those formerly issued by the banks, Government issues, and to place the capital and operations of the reserve banks under the control of a board composed entirely of Government officials.

"It is perhaps natural that the banks should fear the effect of placing so large a proportion of their capital under the control of what they call a political board, and I think their fears have led them to exercise additional caution in loaning their depositors' money. The country banks have been calling upon the city banks for their deposits, and this limits the capacity of the city banks to make loans.

"This caution is natural, due, as I believe, to an exaggerated alarm, but not prompted by a desire to injure the country or to intimidate legislators. The contemplated reserve board will be neither partisan nor political in character, but will be as free from partisan or political control as is the Interstate Commerce Commission. The fears of the railroad managers regarding railroad legislation were not realized, though their outcry caused the depression of 1907, and the bankers will have a similar experience.

"The administration has handled the banking situation admirably; its deposits of public moneys to make the crops have been most beneficial.

BELIEVES IN UNIONIZING BANKS.

"Individually I do not believe in either a central bank or the so-called regional banks. I believe in unionizing all banks, both Federal and State, within the boundaries of each State, in a reserve association, acting for that State alone, and then federating these reserve associations through a Federal reserve board consisting of officials selected by these reserve associations from each section of the country, and then organizing a national banking commission, with powers of supervision,

veto, correction, and examination over all these reserve associations and their constituent banks in everything that relates to interstate exchange.

"We would thus harmonize our financial legislation with our dual scheme of government, leaving to the States their control over purely State commerce, including banking and exchange, and to the National Government full control over interstate commerce, including interstate exchange.

DEFINES FEDERAL POWERS.

"I do not believe in weakening the functions of the States over matters clearly within their jurisdiction any more than I believe in the disuse of the functions of the Federal Government.

"I do not believe in the new doctrine that the Federal Government is lord paramount over the State governments wherever the regulation of State commerce lacks harmony with the regulation of interstate commerce. They are equal sovereigns, operating on the same soil, each in the exercise of an exclusive jurisdiction, and wherever they disagree they must come together through the exercise of comity rather than of force. It seems to me that in all our legislation we should seek not to merge State and national functions but to preserve the functions of both; otherwise our Central Government will become unsatisfactory and burdensome. Our dual system has some inconveniences, but it is the only method through which local self-government can be maintained.

"I do not believe that the reduction of the average tariff duty from 43 per cent to 25 per cent is sufficient. I think tariff duties should ultimately not exceed an average of 15 per cent, but I would make the reduction gradually over a period of 3 years, and provide for a further reduction over a period of 5 or 10 years to not exceeding 15 per cent through a tariff board acting under a rule fixed by Congress.

"I do not believe that sugar and wool should be so suddenly drifted to free trade. We are engaged not in making a perfect tariff system based upon Democratic principles of tariff for revenue only but in making material reductions of excessive duties in such a way as not to injure or destroy any legitimate industry, according to the requirements of our party platform. I believe that if we go to free trade on wool we should go slowly, meanwhile leaving a moderate revenue duty, but not a protective duty.

VIEWS ON SUGAR UNCHANGED.

"As to sugar, my views are unchanged. None of our insular possessions can compete with Cuba in sugar production. We should, therefore, short of such a reduction as will bring disaster in Hawaii, Porto Rico, and the Philippines. We can accomplish this by maintaining a moderate revenue duty. So, also, with the beet-sugar industry of the West. The production of alfalfa and beets will be the main industries of our irrigated regions, where the success of the Government irrigation projects depends largely upon beet growing as a form of intensive cultivation necessary to the development of the soil by rotation of crops. No contention is made for any high protective duty; the ultimate duty should not exceed one-half cent a pound—the duty which prevails in England, France, and Germany. It will be productive of revenue and at the same time save an important western industry from injury and our insular possessions from prostration.

"I can not see why we should fix a duty of one-half cent a pound on rice and deny it on sugar, nor why we should impose a duty upon wheat, rice, barley, oats, eggs, and chickens, and refuse a moderate revenue duty on sugar. Sugar is to be placed on the sacrificial altar because of the crimes of the sugar refiners, known as the Sugar Trust. Their operations have disgusted the country and made the very name of sugar detested; but the beet growers of the West and the cane growers of Louisiana and our insular possessions had nothing to do with these iniquities.

"It is the irony of fate that the innocent sugar grower should suffer while the guilty refiners should be the beneficiaries of our legislation, for it will weaken the only antagonists of the sugar refiners and tend to give the latter a monopoly under which they will seek to collect toll upon every pound of sugar consumed in this country.

WILL VOTE WITH PARTY.

"I believe that this injustice should be remedied before final action, and that instead of putting sugar and wool upon the free list, a moderate revenue duty should be imposed, which will give the country needed revenue and at the same time save legitimate industry from injury or destruction.

"Though I have kept my vote free, I have never contemplated attempting to defeat a party measure by alliance with our political antagonists. I shall still urge in the party conference a distribution of the reduction contemplated by the pending bill over a period of three years in order that its effect may be gradual and providing for still further reductions after the termination of the three years, through a tariff board acting under a rule fixed by Congress. These contentions will be made in the party conference.

In caucus last night Mr. NEWLANDS made a last stand in favor of a gradual reduction of the tariff duties over a period of 10 years and in favor of a tariff on sugar and raw wool. But he was defeated, and at the close of a long debate told his colleagues he would support the bill.

THE NEWLANDS RESOLUTION.

The resolution offered in the caucus by Senator NEWLANDS, and which was defeated, was as follows:

"That the reductions in tariff duties called for by the pending bill should be distributed and apportioned over a period of three years, and that an amendment to this effect be prepared by the Finance Committee.

"That at the end of three years further reductions should be made of all excessive duties through a tariff board organized by Congress and acting under a rule fixed by Congress; and that the Committee on Finance prepare an amendment to the pending tariff bill to this effect.

"That a tariff duty of 15 per cent be placed upon wool for a period of three years, and that thereafter the duty be reduced to 10 per cent.

"That at the end of three years the tariff duty on sugar be fixed at one-half cent per pound for a period of two years, and thereafter at 10 per cent ad valorem."

Mr. GORE. Mr. President, no man of feeling can witness without emotion the pathetic partings, the affectionate farewells, now taking place between Senators on the other side and the expiring system of protection. Their tears are at once a tribute to the tenderness of their hearts and the fidelity of their friendship. These farewells, I trust, are not only affectionate but final.

I believe the temple of protection is falling. Some one has said that Schedule K is the very keystone in the arch of protection. I assume that the topmost point in that keystone is the duty on scoured and sorted alpaca. Based upon the imports of 1910, the ad valorem equivalent on imported alpaca mounted up to 333 per cent. That ought to satisfy the cravings of the most voracious protectionist.

This lofty temple of protection is fallen. I do not believe protection will ever be able to "roll from its grave the stone away." And yet, sir, with a devotion that disarms all criticism, the Republican Party still says to the spirit of protection, "Even though thou slay me, yet will I trust in thee."

Mr. President, I do not intend to discuss the details of the pending bill. That has already been done with equal skill and ability. I desire to address a few remarks to the general character, principles, and purpose of this legislation.

This measure must be judged not merely by its character as a revenue measure, not only by its character as a whole, but as a part of a general program of legislation. The passage of this measure, in my judgment, marks the sunrise of a new day upon the fiscal and legislative history of this country. It marks the passing of privilege in taxation and the coming of justice and equality.

This, sir, is the spirit of the new freedom and the new emancipation. I wish to digress here long enough to say that the present year has already witnessed the placing of several conspicuous milestones upon the highway of human progress. This year has witnessed the ushering in of a Democratic administration, the inauguration of a Democratic President. The mere fact that the President bears the label of Democracy is not in itself significant. It is the fact that he embodies the living spirit, the vital principle, of true Democracy. It is the fact that he is devoted to the rule of the people; that he is devoted to the rights of the people; that he places right above might, and even above riches.

This, sir, is not an old thing under the sun. With the President ancient wrongs plead in vain their prescriptive claim to fitness and survival. The President is devoted to the establishment and to the maintenance of justice—not merely social and industrial justice, but individual and international justice; in other words, sir, just justice. The President is devoted to the general welfare—not that glittering general welfare that sometimes dazzles and deceives, but that welfare which means that the individuals who make up the mass fare well. He concerns himself to know how fares it with the common man. That is the true test of prosperity, and that must come to be the ultimate standard of our civilization.

The average man is in sympathy with this administration. He is upholding the hands of the President in his struggle to see that the blessings of industrial, commercial, and civil liberty are enjoyed by the living and not merely embalmed and placed in cold storage for unborn posterity.

This year has witnessed the coming into power of a Congress which has so far proven itself to be in sympathy with the spirit of the times; which has shown itself willing not to mark time but to keep step with the mighty march of events; a Congress which is not ignorant of what Galileo discovered three centuries ago, that the world moves; a Congress which is willing to bring our legislation up to date, willing to accept what is good in the new and to reject what is bad in the old, yet which worships at the shrine neither of novelty nor antiquity.

This Congress has not lost the common touch. It is willing to lay its hand to the task of practical reform, to redeem the pledges of its platform, and to execute the will of its master and its maker—the American people.

Mr. President, the present year has witnessed the final adoption of a constitutional amendment ordaining the direct election of United States Senators. Gradually fear of the people is giving place to faith in the people. Gradually the governed are gathering into their own hands the sinews of government. Gradually the facts of our political history are squaring themselves more and more with the theory of our political institutions.

Sir, it is a source of some satisfaction to me that my first official act upon entering the Senate was the introduction of an amendment looking to the direct election of Senators. Few there were then who seemed disposed to do it reverence. Public opinion gathered volume and velocity, it thundered at the gates of the Capitol. The House harkened. The House hastened. The Senate lingered, but obeyed. To-day the people have the sovereign right and power to choose their own representatives, to select their own servants in this high legislative body. Why should not the master choose the servant? Why should not the represented select their representatives? Why should not the governed govern? The people will abundantly approve their fitness for this added trust and responsibility.

The present year has witnessed the final adoption of the constitutional amendment authorizing Congress to impose a tax upon incomes. For more than a century this power was supposed to reside in Congress. In 1815 Congress considered the imposition of an income tax. In 1862 Congress actually levied and collected a tax upon incomes. That measure remained in full force and effect until January 1, 1872. During that period it brought nearly four hundred millions of revenue into a famished Treasury. It helped to preserve and to perpetuate the Union. It helped to save the grandest Republic the eyes of time have yet beheld.

In 1894 the Democratic Party, anxious that wealth should share with want the burdens as well as the blessings of government, levied a tax of 2 per cent on incomes exceeding \$4,000. In 1895 the Supreme Court annulled that law. The court stripped Congress of the power, or the supposed power, to levy a tax upon incomes.

Congress could no longer compel Dives to share with the beggar at his gate the expense of their mutual protection. The "favorites of fate in fortune's lap caressed" were exempted from taxation, while the weary laden were vouchsafed their indefeasible right to mourn and to pay tribute.

The decision in the Income Tax case was another Dred Scott decision. When the decision in the Dred Scott case was handed down it seemed the ultimate triumph of the "slave power." It seemed then to be crowned and sceptered. Its dominion promised to be perpetual if not universal. That was the high noon of slavery. It was the low noon of liberty. It was freedom's darkest hour. But, sir, it was that ominous darkness which precedes and which presages the splendors of the dawn.

Prior to the French Revolution and its terrors the nobility of France had succeeded in exempting from taxation both their fortunes and their incomes. The exemption of their incomes foreran and foreordained the confiscation of their fortunes. Avarice, like ambition, oftentimes overleaps itself.

The income-tax decision seemed to be the final triumph of the undertaxed rich and the final defeat of the overtaxed poor. But, sir, under the ordinances of nature and of God, the triumphs of injustice are of few days and full of trouble. That decision raised an impossible and intolerable situation. Every nation of the earth—kingdom, empire, despotism—could compel the incomes of the wealthy to share, if not to bear, the expense of their own protection. In this free Government, in this self-governing Republic alone, did the incomes of the rich enjoy a sanctuary which the Government could not enter, even though upon the verge of bankruptcy and dissolution.

This situation was unjust. It could not endure. Such a condition could not long confront a free people without either reform or revolution. The people had recourse to reform. They did not resort to revolution. Their behavior on that occasion is at once a striking testimonial and tribute to their patience, their prudence, their self-restraint, their good sense, and to their fitness and capacity for self-government. In peace and in order they amended their own Constitution in the appointed way. The supreme court of public opinion rendered null and void the decision of the lower court. The people have written their will into the fundamental law of the land. God still reigns and the Government still stands.

Mr. President, this year will witness the enactment of the first revenue measure since the income-tax amendment became a part of the Constitution. The pending measure will supersede the Payne-Aldrich law. I believe that the Payne-Aldrich law had fewer friends at its birth and will have fewer mourners at its funeral than any other tariff act which ever passed the American Congress.

It broke the pledges of the party; it disappointed the hopes of the country. On the day of its passage I predicted that it would prove a disappointment to the President and a disappointment to the people. It retired the former and it aroused the latter. On the day of its passage I advised the people to withhold their judgment until they could determine the character and effect of that measure by its actual operation. The country has returned a verdict of guilty.

The people have commissioned this Congress to repeal the Payne-Aldrich law and to enact in its stead a revenue measure based upon different principles and directed to different and to better objects. We are now proceeding to execute that commission.

If you inquire whether the pending bill be a perfect tariff bill or not, I shall answer in the negative. I believe that no tariff measure ever deserved that description. The question which confronts us, the question which demands an answer here and now, is not whether the pending bill is a perfect bill, but whether it is better than the existing law; whether it is better than the confessed and convicted failure—the Payne-Aldrich

law. That is the issue, that is the only issue. Between these two alternatives Senators must this day make their choice. The majority has found itself handicapped by existing facts and conditions, and handicapped by ancient and established evils based upon a system of protection. The present measure is the very best which circumstances have rendered possible. It embodies the best, the collective wisdom and patriotism of the majority now charged with the responsibility of legislation.

Possibly some of the duties are too high, certainly in the abstract, but they will be revised and reduced in the light of experience and as time and occasion may give consent. I do not believe that any of the duties are too low, certainly not in the abstract, although we appreciate the feelings of those Senators who have insisted that longer time should be allowed for adjustment and for readjustment.

But, Mr. President, the disadvantages, if any, will be but temporary, while the advantages will be permanent and enduring.

If you inquire whether this measure will raise sufficient revenue to defray the expenses of the Government, I answer that I do not know. No man can tell. The judgment of the most experienced experts is that the revenues will be ample to meet the legitimate requirements of the Government. But, sir, there is an element of uncertainty in the future operation of all fiscal measures which human foresight can neither eliminate nor determine.

I make this reference to revenue in order to say that if this measure produces a surplus the majority will proceed to revise and reduce the duties in order to obviate the accumulation of needless moneys in the Treasury. If, on the other hand, this measure should result in a deficit, the majority, if continued in power, will proceed without hesitation and without embarrassment to revise these and other rates so as to insure ample revenues to meet all the legitimate needs of the Government.

The citizen does not object to the payment of just, equal, and necessary taxes. He protests only against the payment of unjust, unequal, and unnecessary taxes.

In its essential character the pending bill proposes a tariff for revenue only. Revenue is the only legitimate object of taxation. The sovereign power to tax the people should never be used, should never be abused, to protect hoary-headed infant industries, to protect a monopolized home market, or to protect the imported paupers of one country against the unimported paupers of another. I quote the phrase "pauper labor" from our Republican friends. The power of taxation ought never to be used to guarantee or underwrite either reasonable or unreasonable profits. It should be used to raise public revenue for public purposes alone and never abused to insure private profit, either to private individuals or private monopoly.

On the other hand, the power of taxation should never be abused for purposes of revenge or retaliation or even for retribution. A system of taxation limited to revenue alone is founded upon justice and bounded by security. Whenever you depart from that principle or depart from that purpose you have passed the danger signal and are liable to wreck and disaster. It is as true in politics as in physics that reaction is equal to action in a contrary direction.

Mr. President, the theory that protective duties should be graduated to cover the difference between the cost of production here and abroad, in my judgment, is undesirable even if possible, and is impossible even if desirable. It is neither desirable nor possible. A tax is a fixed charge. The cost of production is a variable quantity. The cost of production varies in all the mills of all the countries of the earth. The cost of production varies in all the mills in any given country. The cost of production varies from time to time in the same mills in the same country. Which factory would be selected as the standard, the most efficient or the least efficient? How can you adjust a fixed tax to a variable quantity like the cost of production?

Mr. President, the impossibility of applying this principle is clearly illustrated in the instance of wool. According to the report of the Tariff Board, the inspired Tariff Board, wool in New Zealand is a by-product. Mutton pays the way and wool is produced without cost. In adjusting our duties upon wool it would be necessary in that case to make the duty as high as the desired price of wool in the United States.

Not only that, sir, the course of international trade is determined not by the absolute cost of production, but by the comparative costs of production in the two exchanging countries.

This theory is based upon the same error as the doctrine of downright protection. It proceeds upon the fallacy that trade is a curse and not a blessing. It avows a willingness to trade with all the countries of the earth on one condition alone—that we shall trade with no country at a bargain.

This measure makes a general reduction of the average duties under the Payne-Aldrich law from a little less than 37 per cent to a little less than 27 per cent.

I believe that John Sherman once remarked that no protective duty should exceed 25 per cent. Erasmus Bigelow is credited with the statement that no industry which can not live and thrive with 25 per cent protection is suited to the country or ought to survive. Mere averages mean but little to the average man. We must examine particular rates and particular reduction.

In framing a measure of this kind there are certain classes of goods which ought to bear less taxes than other classes. There are also certain classes of taxpayers who ought to pay less taxes than others ought to pay. This bill has observed those distinctions. It has placed upon the free list certain articles of prime utility and prime necessity. Perhaps sugar is the most conspicuous example. This measure has free listed the raw material of a number of great industries. This proves the good will of the party in power toward the manufacturing interests of this country.

We are willing not to confer favors and privileges upon our own manufacturers by levying unjust taxes upon the consuming public, but we are willing to befriend them. We are willing to mete out equal justice to them by the remission of unjust and unreasonable taxes.

This measure has free listed other articles of first importance to the people—the tools of the mechanic, the implements of the farmer, the manufacturer's machinery of certain kinds, when made and controlled by a monopoly. It has always seemed to me that a tax upon tools was the most indefensible of all taxes. Even from the standpoint of the protectionist it seems to me to be a high crime and misdemeanor.

They profess a friendship, they profess a solicitude, for the welfare of the poor. If any man is willing to toil, if any man is obliged to toil, in Heaven's name let him toil untaxed. Do not make his burden too grievous to be borne.

There ought to be a distinction in a measure of this kind between the duties levied on luxuries and those levied upon necessities. This distinction has been observed. This bill will bring a measure of relief to every class of American consumers. It has effected a general reduction in practically all the duties. Reductions have been made in all, and the reductions upon necessities have been, as they ought to be, more substantial and more material than upon the luxuries.

Mr. President, there are certain classes of taxpayers who ought to be required to contribute more to the expense of the Government than others. Taxation ought to be based upon the ability to pay and not upon the inability to escape payment. Those who have most ought to pay most; those who have least ought to pay least. These principles are self-evident, but they have never yet prevailed in practice.

There are classes in this country who have been subjected to undue burdens of taxation alike in the Nation, in the State, in the county. I refer to the farmer and to the wage earner. Let me illustrate what I mean. The farmer's land is tangible; it is therefore taxable; it can not be hidden away in a strong box or in a safety vault. His stock, his live stock, is visible. He has no invisible stocks and bonds; he has no so-called intangible wealth, which seems to have an equal facility to contribute to the income of its owner and to escape any contribution to the income of the Government.

The statistics are appalling which show the undue burdens borne by those who pay upon land and live stock and other visible property as contrasted with those whose holdings are intangible or consist in different forms of securities.

Mr. President, this discrimination is not limited to local taxation; it is not limited to State and county taxes. So far as the farmer and the laborer are concerned, they have always borne an undue share of our national taxation. That is due to the fact that tariff taxes are levied upon want and not upon wealth; are levied upon necessities and not upon property in the form of capital or investments; are levied upon what a man consumes and not upon what he produces or upon what he possesses.

Let me illustrate how tariff duties discriminate against the less fortunate members of society. Perhaps the best illustration will be found in Schedule K. Based upon the importations of 1910, if a farmer, if a wage earner, and a president of a trust desire to buy woolen or worsted goods made of the hair of the camel, of the alpaca, of the angora goat, if the goods were worth less than 40 cents a pound they would be obliged to pay a tariff tax of 252 per cent. That would be the duty if purchased in the United States, but if purchased in Canada, on the same character of goods, the tax would be not less than 15 per cent and not more than 17½ per cent. If the farmer, the wage earner, and the magnate desired to purchase the same

character of goods, costing not less than 40 and not more than 70 cents a pound, they would be allowed to escape with a tariff tax of only 112 per cent if purchased in the United States, but if purchased in Canada not less than 15 nor more than 17½ per cent. If the farmer, if the toiler, desired to emulate the fashions of his more wealthy compatriot and purchased goods costing more than 70 cents a pound, he was let off with a tax, of only 77 per cent—only 77 per cent.

This shows how this kind of tax operates; how it discriminates. It also illustrates how a laboring man, with a family of a dozen children, might be called upon under a system of indirect taxation to contribute as much and more to the revenues of the Government than, I may say, a millionaire bachelor who neither toils nor spins nor spends.

The pending measure, Mr. President, is intended to rectify these wrongs and to correct these abuses. It will shift a portion of the burden of taxation from the earnings of the poor to the incomes of the rich; it will afford our wealthy fellow citizens an opportunity to perform the patriotic duty of contributing to the expenditures of the Government. This bill imposes a tax of 1 per cent on incomes ranging from \$3,000 to \$20,000, and the rate is graduated up to 7 per cent on incomes of one-half million or more. I wish that every one of my constituents might be subjected to this form and rate of taxation. I believe they would rejoice in its payment. This tax will raise approximately \$100,000,000 of revenue, about one-third as much as all our tariff duties. This will enable us to lift or lighten the burdens of those who are least able to bear burdens. The power to tax incomes should be used and tempered with justice, for they who abuse power lose power.

Mr. President, I must hasten. This measure in the larger vision will accomplish several most important, most desirable results. It will strike the fetters from the limbs of trade; it will remove the brakes from the wheels of commerce; it will place this Republic where it is entitled to be, in the very vanguard of modern industrial, commercial, and financial progress. This Nation has a right to be the primate in the parliament of man, in the federation of the world.

Mr. President, this measure will contribute not alone to national prosperity and to national grandeur, but it pays heed to the humble citizen. It brings a new time upon our legislation. We must devote more and more attention to the individual man, more and more attention to social betterment. Time was when the sole and supreme function of government was thought to be to repel invasion, to suppress insurrection, to adjudicate private suits, and to punish robbery, murder, and like crimes. That theory has gone. When the factory laws were enacted they shocked the sensibilities of the conservatives; when the hours of labor were limited, when the conditions of labor were regulated, these were thought to be unwarranted invasions of personal liberty, of the right of contract, yea, even of the rights of man. Those measures have vindicated themselves in the improved condition of the man who eats bread in the sweat of his own face. The Government must more and more afford protection to those who are unable to protect themselves. Not that sort of protection which begins with a kiss and which ends with a crucifixion.

Some one has said that this age has hailed the coronation of the common man. Let us hope that it will at least witness the emancipation of the common man.

There have been those among us who were despairing of the fate of the Republic, who doubted alike the virtue of the Constitution and the value of our institutions, who feared or fancied that the Constitution had petrified, that our institutions had lost their capacity for growth and could not respond to the new demands of modern civilization. Mr. President, I say to the doubting, have faith; I say to the despairing, take hope; and to the desponding, be of good cheer, the morrow cometh and the lips of the morning are reddening.

Mr. LA FOLLETTE. Mr. President, progressive Republicans contend for protective duties high enough to measure the difference in the cost of production at home and abroad. They are opposed to a tariff that is above that point.

Every argument made for a protective tariff, whether limited strictly to the difference in the cost of production, which the Progressive Republican advocates, or raised so high as to be practically prohibitory, which is always the end and aim of the standpoint Republican—every argument for a protective tariff, moderate or excessive, is based upon the higher wages paid in this country as compared with the lower wages paid in the competing country.

The attempt to secure and maintain tariff rates for the protection of our capitalists would have failed utterly. But to "protect the American wage earner against open competition with the poorly paid workman of foreign countries" introduced

the human element, which has made "protection to American labor" a vital, living, successful issue.

The people of this country will consent to tax imports to preserve a high standard of living for the men and women employed in our factories and shops, even though it adds something to the prices paid for the manufactured products turned out by our own labor. Eliminate the human element from the protective tariff and the policy would soon be swept aside.

But capital protected by the tariff has combined to destroy competition and exact unreasonable prices from the consumers of their products. This has been done in violation of the Sherman antitrust law. That law, if enforced, is ample in its provisions to prohibit the practice.

Because that statute is not enforced and these unlawful combinations are permitted to operate in the face of it, an amendment is proposed to this tariff bill by the senior Senator from Iowa [Mr. CUMMINS], which provides in effect that when competition in the production and sale of any article is destroyed by combination the tariff shall be removed from that article, and it shall be placed upon the free list.

But, Mr. President, the tariff is laid upon the article to protect the labor employed in its production. Because those who employ that labor have wrongfully entered into a combination and have destroyed competition in the sale of that article, the amendment offered by the senior Senator from Iowa [Mr. CUMMINS] proposes to take away the protection to that labor and subject it to free competition with the underpaid foreign labor.

The wage earners employed in the factories of these great combinations are in no wise responsible for the unlawful acts of their employers, and it is unjust to punish them for the wrongdoing of their masters.

We have an antitrust law—the Sherman Act. It lodges with the Executive all the power to destroy trusts which legislation can confer. Under its ample provisions the guilty can be punished. Our markets can be made free. The people can be protected.

I stand for the enforcement of the antitrust law against the violators of that law. There has never yet been a sincere, determined effort to execute the law. From its enactment in 1890 down to this hour no President has ever seriously attempted to compel obedience to its mandates. We have had a few prosecutions under each administration; the largest number under any one President was an average of seven cases annually. During that same period the trusts were organizing by the hundreds every month. They well understood that the prosecutions were little more than a sham, and they were not afraid to advertise their wrongdoing and unload their spurious securities upon gullible investors. They knew that just enough cases were being brought to deceive the public into the belief that the trusts were being prosecuted. But no one was seriously hurt. No trust magnate, however guilty, was ever sent to jail. The law was ample. The power of the Executive was ample.

The law is still on the statute books. The authority of the Executive to direct its enforcement is unlimited. Instead of so amending this tariff bill that the innocent laborers in the factories will be deprived of the benefits of protection and punished for the guilty acts of their employers, let us rather appeal to the President to direct his Attorney General to prosecute criminally all violations of the Sherman law in every State in this Union.

I can not give my support to legislation such as that proposed by the senior Senator from Iowa [Mr. CUMMINS].

Mr. President, I will at this time present what seems to me some important material in connection with Schedule B. I have prepared amendments to some of the important paragraphs of this schedule, and at the proper time shall offer these to be acted upon. This schedule covers earthenware, fire brick, cement, tile, earthenware, glass, and glassware.

On fire brick and bricks not glazed, enameled, painted, vitrified, ornamented, or decorated in any manner the Payne-Aldrich law imposed a duty of 25 per cent. The pending bill imposes a duty of 10 per cent. On bricks glazed, enameled, painted, vitrified, ornamented, or decorated in any manner the Payne-Aldrich law imposed a duty of 35 per cent. The present bill imposes a duty of 15 per cent. There is no available data on the cost of production, but the present duties are so high that domestic production and exports are rapidly increasing. Imports have so diminished that they amount to only one-tenth of 1 per cent of the domestic production.

Tiles, plain and unglazed, bore a duty under the Payne-Aldrich tariff law equivalent to 69.83 per cent. The pending bill reduces the duty to 25 per cent. On tiles glazed, ornamented, and so forth, the Payne-Aldrich duty was 46.95 per cent. The pending bill reduces that duty to 26.92 per cent.

On mantels, friezes, and so forth, the Payne-Aldrich duty is 60 per cent. The pending bill reduces that duty to 30 per cent. The Aldrich rates on these products were plainly excessive. The total value of the importation on all classes and kinds in 1912 amounted to \$138,403, while the total value of the production for this country amounted to \$5,291,963.

The production cost was not presented to the committee of either House, but it was charged before the Ways and Means Committee and not denied that within the last year a combination has been formed among the tile manufacturers of the United States. This was not a general charge, but the names and location of all of the tile companies embraced in the combination were given specifically. The effect of this combination upon prices was also specifically alleged, showing an advance in prices after the combination was formed ranging from 20 to 40 per cent, there having been in the meantime no advance in the cost of material or wages paid by the American manufacturers.

It is further to be borne in mind that there is a heavy breakage in shipping tile, which, together with the ocean freight on the foreign products, furnishes in itself a considerable margin of protection to the American manufacturer.

The reductions on tile reported in the pending bill on the whole seem to be reasonable.

CEMENT NEEDS NO DUTY.

The present law imposes a duty of 21 per cent on cement. The House bill made it 5 per cent. The Senate bill puts it on the free list, excepting as to Keene cement, on which a duty of 10 per cent is imposed. The principal factor in the manufacture of Keene cement in this country is the chemicals that enter into it, which are imported from England. The great bulk of the cement is Roman, Portland, and other hydraulic cements.

In 1912 we produced 82,438,006 barrels; we exported 3,423,747 barrels; we imported the negligible amount of 60,703 barrels.

During the construction of the Panama Canal the Government advertised for bids on large quantities of cement. Bids were invited from all the world, and in this open competition the lowest bidder was the Atlas Portland Cement Co., of Northampton, Pa., and this company received the contract for furnishing 4,500,000 barrels. When an additional million barrels were required, further bids were called for, and only two other American firms submitted them. The Atlas Co. was awarded the second contract, as its bid was lower than either of the competing bids submitted. The foreign bids being higher than the American bids, were not considered at all, and therefore the duty did not enter as a factor in the award.

Furthermore, each of the principal cement-producing countries at the present time require the bulk of its production for domestic consumption, and consequently only a very small percentage is available for export under the circumstances. And ocean freight rates afford a protection amounting to \$1.95 per ton.

There is no specific information regarding costs of production.

On the whole, it would seem that transfer to the free list is warranted. Taking into account European production alone, the transfer to the free list is justifiable. With cement free, however, Canada, where the costs of production can not be materially different from ours, can reach cities on or contiguous to the border at a lower freight rate than our own producers, and in that limited area a protective duty would be required.

DUTIES ON LIME AND GYPSUM.

On lime the duty fixed by the Payne-Aldrich law is 9.17 per cent. The pending bill reduces this to 5 per cent. The present rate is practically prohibitory. In 1912 our importation of lime amounted to \$54,459, as against a total production in this country of the value of \$13,763,604. Besides, we exported twice as much as we imported. There could not possibly be any foreign competition, excepting at possibly a few local points on the Canadian border.

On plaster rock, or gypsum, the Payne-Aldrich duty is 25.42 per cent. The present bill reduces that duty to 10 per cent. No information upon the costs of production was presented. The duty on this product was subjected to a sharp cut of about 40 per cent in the Payne-Aldrich bill. It is again reduced by 40 per cent in this bill. It would have been safer, it seems to me, and fairer to the industry to have left a duty of at least 15 per cent upon the product at this time.

The value of this product imported in 1912 was \$437,155, against a domestic production of \$12,803,758.

The reductions in the duties on clays seem to be reasonable and to afford no ground for criticism. Indeed, as to two of the products embraced in this paragraph, china clay or kaolin and fluorspar, the rates assigned can not be justified.

TARIFF ON FLUORSPAR.

There were imported in 1912, 22,664 tons of fluorspar. The production of fluorspar in this country in 1895 was 4,000 tons. Prior to 1909 this product was brought in free of duty. Fluorspar is used in the manufacture of glass and enameled and sanitary ware, in the electrolytic refining of antimony and lead, the production of aluminum, and manufacture of hydrofluoric acid, and in the wire and steel industries. It is used as a flux in glass furnaces and in basic open-hearth steel furnaces. About 80 per cent of the home production of grained spar is consumed in the manufacture of basic open-hearth steel. The production of fluorspar in this country received its greatest impetus with the introduction of the open-hearth process, and it is interesting to note from the figures of our home production what growth this industry made without the aid of a tariff.

The following table, taken from the report of the Department of the Interior, 1911, shows the annual production of fluorspar since 1905:

	Tons.
1895	4,000
1896	6,500
1897	5,032
1898	7,675
1899	15,900
1900	18,450
1901	19,586
1902	48,018
1903	42,523
1904	36,452
1905	57,385
1906	40,796
1907	49,486
1908	38,785
1909	50,742
1910	69,427
1911	87,048

The open-hearth process was introduced in 1901-1903; immediately the American production of fluorspar increased from 19,586 tons in 1901 to 48,018 tons in 1902. There was a falling off again in 1903-4, but in 1905 it reached a production of 57,385 tons. Then there was a falling off for the three years 1906-1908; in 1908 the production was 38,785 tons. The low production of the year 1908 was practically 100 per cent greater than that of 1901.

The Payne-Aldrich bill levied a duty of \$3 per ton upon this product. Immediately there was an increase of 12,000 tons in the production of 1909 over 1908, but the Payne-Aldrich Act did not go into effect until August 5, 1909, so that all of the increased production of that year should not be attributed to the effect of that tariff act. Without the tariff in 1905 the production was 57,385 tons. The production of 1910 was 69,000 tons, and the production of 87,000 tons in 1911 shows the effect of the tariff. To the more extended use of the open-hearth system of making Bessemer steel creating a larger demand for fluorspar as a flux rather than to the effect of the tariff must be attributed the increased production.

The substantial and continuous growth which marked the period from 1895 to 1908 without tariff aid demonstrates that this industry could make substantial progress upon a sound basis in a fair, competitive field without a protective tariff.

There are no reliable data upon the difference in the cost of production between this and the competing foreign country. As fluorspar was free of duty and largely brought in as ballast, there are no reliable data as to the amount of the importation prior to 1910. In that year there was imported 16,561 tons. In the year 1912 the importation was 22,664 tons. The domestic production in the year 1910 was 50,742 tons and for the year 1912 87,048 tons. While there was an increase in the importations in 1912 of 6,103 tons over 1910, there was also an increase in domestic production of 26,306 tons.

The action of the committee in reducing the Payne-Aldrich duty from \$3 to \$1.50 I believe to be justified by the showing of the conditions of the industry.

CHINA CLAY OR KAOLIN SHOULD BE FREE.

In connection with the consideration of the earthenware paragraphs some attention should be given to china clay or kaolin, the principal raw material of the finer grades of tableware and the pottery industry generally. It is also extensively used as a filter in news print and other paper making.

The value of the china clay or kaolin produced in this country in 1912 is given as \$221,045.

Our import of china clay amounted to 234,428 tons, valued at \$1,528,257. Nearly all of this came from England—indeed, all excepting a negligible quantity.

It appears that china clay or kaolin is divided into two classes—(1) residual and (2) sedimentary.

Beds of china clay occurring in or close to their place of origin are known as residual clays.

In the erosion of the earth's surface residual clay is washed into the lakes and seas, where it is deposited in the form of

sediment, with the addition of many impurities, and this is known as sedimentary clay.

All English clays are residual.

The residual clays in the United States would not be affected by the removal of the duty. Our china-clay industries are located principally in Pennsylvania, New Jersey, Maryland, North Carolina, South Carolina, Georgia, and Florida.

With the exception of deposits in North Carolina, as I understand it, these are all sedimentary clays; and, according to the statement of John Richardson, representing the John Richardson Co., of Boston, made before the House committee, page 524, 1913 hearings, this North Carolina kaolin—the name kaolin has always been applied to the clay in that State—which is of an average value of \$7.72 per short ton at the mine, is used almost wholly in potting and is far superior to the average paper clay, which sells for only \$4.74 a short ton at mine. This kaolin, owing to its ability to stand being fired by intense heat, has no equal for potting. English clays have to be fired much more slowly. To show that there is no competition between the kaolin and English clays in pottery we have the added fact that it is advantageous to use the two different kinds of clay. In other words, the English clay is combined with the North Carolina kaolin to make the proper mixture.

Mr. Richardson inserts the following table in his statement with the idea of ascertaining to what extent English clays are in competition with domestic clays:

[Estimated, 1909.]

	English clay.	American paper clay.
	Short tons.	Short tons.
Book and coating.....	184,785
Pottery.....	29,566
Bleacheries.....	17,247
News paper.....	12,319
Ultramarine.....	2,464
News, wall, and low-grade book paper.....	81,586

There is no substitute for English clay in the better classes of paper. The fact that American paper manufacturers have paid the duty to use English clay to such a large extent is proof of this.

From 1905 to 1910, in spite of the duty, the increase of English clay imported over the increase of domestic clay produced was 938 per cent.

Since 1907 the world-wide demand for English clay has exceeded the supply. Makers of fine paper can not get enough now.

In 1912 we imported from England 233,322 tons of china clay, or kaolin, valued at \$1,512,038.

TRANSPORTATION RATES.

The element of transportation is an important one to be taken into account. The best freight rate obtainable by the Georgia clay producers, according to the statement presented by the American Clay Co., in 1909, from their shipping point to Chicago was \$4.60 per ton. (House hearings, 1909, vol. 2, p. 733.)

The freight rate from the English mines is given on page 738, volume 2, House hearings, 1909, as follows:

From the mines in Cornwall to Fowey, 3½ cents per hundred; from Fowey to Liverpool, 4½ cents per hundred; from Liverpool to Atlantic ports, 5 cents per hundred; total from Cornwall to Atlantic ports, \$2.81 per ton. There is a combination freight rate given to the foreign shipper of china clay from Atlantic seaports to Chicago of 16 cents per hundred, as against the domestic rate of 20 cents per hundred. Adding to the amount which it costs the foreign producer of clay to reach the American seaport, the rate from New York to Chicago, at 16 cents per hundred, makes an additional freight charge of \$3.58 per ton, or a total freight charge from the mines in Cornwall to Chicago of \$6.39 per ton.

As I stated yesterday, I have had put into my hands information the result of hundreds of thousands of dollars of expenditure of the public money. By employing the same people who were engaged by the Tariff Board in conducting an investigation of the glass and earthenware industry, I have carried it on further. It has a value. That value I feel ought to be preserved. If this information is not to be applied in this tariff legislation, it may be helpful in future tariff legislation. I hope it may have some consideration from the conference committee if it can not get consideration of the Senate at this time.

I feel that this material ought to be preserved for the future. So I am going to ask, in the brief time left, the privilege of presenting a number of amendments, which, judging by the fate of all amendments comprehensive in character offered heretofore, can only come to defeat.

I offer the amendments which I send to the Secretary's desk.

The VICE PRESIDENT. The Secretary will read the amendments.

The SECRETARY. On page 19, lines 20 and 21, it is proposed to strike out the words:

China clay or kaolin, \$1.25 per ton.

Mr. LA FOLLETTE. Mr. President, I am not going to ask for a roll call on any one of these amendments, but I just ask to have the formal vote submitted. As fast as they are read I shall be glad if the presiding officer will put the question on them.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

The SECRETARY. The second amendment is, on page 133, to insert after line 24 a new paragraph, as follows:

4332. China clay or kaolin.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin.

The amendment was rejected.

Mr. LA FOLLETTE. I submit herewith a table showing the range of rates provided in paragraphs 80, 81, and 82 of the Senate bill, as compared with the range of rates provided in the amendment which I suggest. It will be observed that for the greater part, and with the exception of a very few items included within these paragraphs, the rates in the amendment which I suggest are lower than those provided in the Senate bill.

It is not possible with the data at hand, either in the hearings or from any investigation which has been made, to take the whole range of material covered by these three paragraphs and compute the difference in the cost of production upon each separate class. The base of the earthenware industry, upon which is computed the wages of those who are employed in the industry, is the 7-inch white granite plate, which is covered in paragraph 81. Upon this article an investigation was made and a report was submitted to the Tariff Board upon the cost of production in this and in competing foreign countries which demonstrates conclusively that the rate provided in my amendment and covering this ware is sufficiently high to measure the difference in the cost of production. The rate provided in my amendment covering white granite ware is slightly in excess of the rate that is provided in the Senate bill, but taking that as the base, and taking into consideration all of the known elements surrounding the industry, I have graded the rates provided in these three paragraphs up and down from that base.

The net result of this work is a general average of reduction, not only below the present law, but below the rates provided in the Senate bill, and I am certain that the rates provided in my amendment are sufficiently high to cover any difference in the cost of production between this country and competing foreign countries.

Article.	Rates of the Senate bill.	Rates of the La Follette amendment.
Paragraph 80:	Per cent.	Per cent.
Common yellow ware, plain.....	15	10
Common yellow ware, ornamented.....	20	15
Common stoneware, plain.....	20	10
Common stoneware, decorated.....	20	12
Rockingham ware.....	30	25
Samian ware, plain ¹	35	35
Samian ware, decorated.....	40	35
Paragraph 81:		
Cream-colored ware, plain.....	35	35
Cream-colored ware, decorated.....	40	40
White granite, plain ²	35	45
White granite, decorated.....	40	50
Paragraph 82:		
China and porcelain, plain.....	50	50
Bisque and parian wares, plain.....	50	50
China and porcelain, decorated.....	55	55
Bisque and parian wares, decorated.....	55	55
Paragraph 83:		
Earthy or mineral manufactures, if not decorated.....	20	20
Earthy or mineral manufactures, decorated.....	25	25
Sanitary ware, plain ³	20	Free.

¹ Jet ware and Samian ware are not specified in any of the paragraphs of the bill as prepared by the Senate committee, although they are well-recognized trade names, the use of which is rapidly growing under the Senate bill these wares would fall under paragraph 81.

² White granite ware is the base upon which the difference in the cost of production has been ascertained.

³ Sanitary pottery is not specially mentioned anywhere in the Senate bill, and falls under the general clause, paragraph 83. There is no reason for a duty upon this pottery, as Europe makes no pottery of this character that can be sold in the United States, as the designs and shapes and the character of the work of this class that they turn out would not be acceptable to the American people. All of the American product is controlled by agreement among the manufacturers, the plumbing supply houses, the retail plumbers, and reaches down to the plumbers' union.

Article.	Rates of the Senate bill.	Rates of the La Follette amendment.
Paragraph 83—Continued.	Per cent.	Per cent.
Sanitary ware, decorated.....	25	Free.
Carbon, unmanufactured.....	15	15
Electrodes, dynamos, generators, etc., of which carbon is the material of chief value.....	25	20
Carbon for electric lighting, made from petroleum coke ¹	(2)	(2)
Carbon, if composed chiefly of lampblack or retort carbon ⁴	(2)	(2)
Carbon, for flaming arc lamps, not specially provided for, and filter tubes ⁵	30	2
Porous carbon pots.....	15	15

¹ Carbon for electric lighting in the La Follette amendment is transferred from paragraph 84 and placed in paragraph 83, so as to combine it with the other carbons that are covered in the Senate bill in paragraph 83.

² 15 cents per hundred feet.

³ 25 cents per hundred feet.

⁴ Petroleum-coke carbons are not imported, and will not be imported, no matter what the rate of duty. They are practically obsolete in electric lighting, and only carry duty under the La Follette amendment because they would fall under the general provision.

⁵ 40 cents per hundred feet.

⁶ Flaming arc-light carbons are the only carbons that are specially desirable to import, and the manufacture of these in this country is entirely controlled by the National Carbon Co. In the testimony before the Ways and Means Committee it was asserted that the change from a duty per 100 feet to an ad valorem rate was a trick to get a high rate of duty upon this article. On the class of carbons of this character, which furnishes the large part of the importations, the 30 per cent rate would amount to a duty the equivalent of \$1.10 per 100 feet.

REASONS FOR CHANGES PROPOSED IN PARAGRAPHS 80, 81, AND 82.

In the amendments I have prepared these paragraphs have been entirely rearranged and made to conform to the conditions in the trade to-day rather than to follow the form and verbiage of this and former tariff bills. The term earthenware embraces all classes of opaque and nonvitreous pottery, from the crudest to wares bordering on china or porcelain, and the classes of such goods are technically known in the trade to-day as follows:

Yellow ware, used largely for kitchen and culinary purposes. This ware is composed of a crude yellow clay without any other ingredient. It is simply mixed with water to about the consistency of fresh putty. After being shaped it is first air dried and is then coated with a cheap lead glaze, known as raw glaze, and is fired but once. As a matter of fact it is too cheap and too bulky to pay for transportation, and the 10 per cent given it in this section is a Canadian border-line proposition.

Rockingham ware: This is a specific line of goods made largely in teapots. The body is composed of a cheap buff or red clay, while the glazing material is a rich brown, produced largely by the use of oxide of manganese. Up to recently these goods were made in a limited variety of shapes and without serious attempts at decoration. Now, however, Rockingham ware comes in a great variety of forms, is of much better quality than formerly, and in many cases is quite elaborately decorated. The rate given in this amended section is based upon the relation of this better quality to the standard white granite-ware pottery which it tends to displace.

Jet ware: This class of goods is made chiefly in teapots, coffeepots, sugar bowls, and so forth, and is usually of a good quality of red clay glazed with a jet-black glaze, this color being produced by the use of cobalt or nickel. Owing to the more expensive material used and the greater care required in potting these goods are more expensive to produce than Rockingham ware.

Samian ware: Usually made in teapots, sugar and cream sets, and so forth; the body is of red or brown clay and glazed with a transparent glaze which shows the natural color of the clay. The cost of production here is largely in the care necessary to properly fire the ware, and the ornamentations, which are usually embossed work upon the clay.

Stoneware: This term is applied to crocks, butter pots, vinegar and molasses jugs, and all those articles of common stoneware clay glazed by the salt-glaze process. Recently, however, this class of goods has been divided into what is known as common stoneware and stoneware, the latter generally having the name of the maker prefixed, such as "Doulton stoneware," produced by Doulton & Co., in England, famous for their ornamental stoneware. It is exceedingly doubtful if any common stoneware would be imported into this country, with or without the tariff.

C. C. ware: This is the cheapest quality of white pottery. It is an abbreviation of the words "cream-colored ware," and originally it was of a creamy tint, but has in recent years improved in grade until it is now the equal of what was formerly the next better grade of white earthenware.

White granite ware: This is the ordinary standard white earthenware goods of the world, known indiscriminately by the

names "queensware," "ironstone china," and "white granite ware." As a matter of fact, all earthenwares grade up or down from this standard. All prices that are not based upon passing fads grade up and down with the relation of the article to similar articles made of this ware. Manifestly it would be impossible to go into cost of production of a very large variety of things made of this material. Fortunately the 7-inch plate is to white granite ware what white granite ware is to the other pottery products. It is the criterion of cost and of price. It is the pig iron of the trade—the base. This being true, I have to submit herewith a statement showing the cost of production of 7-inch plain white granite ware plates per dozen in the United States, England, Germany, and Holland. The table also shows the jiggerman's piece rates in the countries named in the table. The jiggerman is the principal skilled workman in this case. His rate in the United States is 4½ cents per dozen; in England it is 2.6 cents; in Germany, 2.54 cents; in Holland, 1.44 cents. It is well to note that the so-called 7-inch plate now measures 9 inches across instead of 7, this size having been increased by competition since the original standards were made. That is to say, while the old designation of 7-inch plate is still maintained in the wage scales of the workmen and in the commercial price lists, nevertheless the actual measurement is now everywhere 9 inches for this plate. The difference in cost between the United States and England on this plate is 16 cents per dozen; between the United States and Germany it is 17 cents per dozen. The duty under the present law yields at the present wholesale prices 19.8 cents per dozen. House bill 3321 would yield 12.6 cents per dozen. My amendment will yield 16.2 cents per dozen. The table also gives the wholesale price of this plate in the United States, England, Germany, France, Belgium, and Holland. These prices are f. o. b. factory. I may say frankly that the rate proposed in this amendment is adjusted so as to protect the difference in the cost of production at home and abroad upon this basic article in the trade, the 7-inch plate, that any rate which fairly protects this plate will be ample for any article of this ware, and may be slightly overprotective when it reaches covered tureens and articles of that sort. It has seemed to me, however, that the theory required a duty that would protect the base line. After all, the excess of actual requirements upon any article is very slight.

DUTIES ON CHINA AND PORCELAIN.

The rates in paragraph 82 follow the necessary gradation from the rate on white granite ware taken as a base. The principal difficulty in the manufacture of pure chinaware in the United States is that such of the Americans as buy this ware insist for the most part upon buying imported goods. It is a matter of record that the china set which took the first premium at the World's Fair in Chicago, in open competition with the world, was made in East Liverpool, Ohio; was made for that exhibit by a firm never before having made chinaware; that this firm undertook to sell the set that had the distinction of having won the first premium at this fair, and they were unable to get even an offer, and finally gave the set to one of our American battleships. This firm has never since made any chinaware. The fact of the matter is that the American manufacturers can make, and are perfectly willing to make, the best chinaware in the world, but in the face of such experiences it is useless to attempt to reach a trade which is impregnable through prejudice or pride. If the American people simply will not buy any other than imported pure chinaware, it is not a matter of great concern how much they have to pay for it.

I herewith submit and attach the wage scales and agreements between the organized manufacturers and the organized workmen in the United States in this industry. These I submit to be printed as an appendix.

SANITARY POTTERY SHOULD BE FREE.

Two radical changes are made in paragraph 83: First, sanitary pottery for building purposes is specifically excepted from its provisions and put upon the free list. The reason for this is twofold—first, the sanitary-pottery business of the United States is so far in advance of any other country in the world in the matter of style, shapes, and finish that the output of no other country could get a foothold in a market used to our products under anything like legitimate conditions; second, the fact that the conditions are not legitimate here is due entirely to the combination of sanitary-pottery manufacturers with other allied plumbing-supply concerns, even reaching down to and taking in the plumbers' union, for which reason a free access to even the less desirable plumbing pottery of other countries may operate at least as a check upon an illegitimate combination so long in operation here.

My amendment provides that sanitary pottery shall be admitted free, except for the statistical tax to be hereinafter provided for. This brings up the question of an amendment to the free list providing that all articles otherwise free shall pay a statistical tax of one-half of 1 per cent ad valorem merely as an entry fee, which sum shall be set aside to maintain a statistical division that shall give us actual and detailed statistics of all the imports and exports. I have prepared an amendment to provide for this statistical tax and for the collection of statistics in such form as to be of value in consideration of a tariff measure.

DUTIES ON CARBON.

In the Senate bill certain manufacturers of carbon are provided for in paragraph 83, while others are dutiable under paragraph 84. In the amendment which I offer all of these carbons are brought together in paragraph 83.

The rate on carbon and carbon manufactures has been fixed at 20 per cent ad valorem. In the case of electric-light carbons all the juggling about various kinds of these carbons, and including the almost obsolete petroleum-coke carbons, has been stricken out in my amendment and a safe and competitive rate of 25 cents per hundred feet has been provided. This to apply to all carbons of whatever material composed or by whatever process manufactured.

In the Senate bill, after providing a rate of 15 cents per hundred feet for petroleum-coke carbons and 40 cents per hundred feet for lampblack or retort carbons, a change is made to an ad valorem rate of 30 per cent for flaming arc lamps and filter tubes. This change in the rate was characterized in the hearings before the Ways and Means Committee of the House as a trick to exclude from our markets the only foreign electric-light carbons salable in this country. Some of these carbons are high in price, and this duty would work to the special advantage of the National Carbon Co., which controls practically all of the electric-light carbon output in this country. In the amendment which I have introduced I have provided a flat rate of 25 cents per hundred feet, which is ample to take care of the manufacturers of these articles.

The rates on gas retorts and lava tips as given in H. R. 3321, while in all probability too high, have not been changed because no reliable data are at hand to show what the rates ought to be. I submit the following amendments.

The SECRETARY. It is proposed to strike out paragraphs 80, 81, and 82, from page 20, line 14, to page 22, line 5, and insert in lieu thereof the following:

80. Common yellow earthenware and common crockery ware made of natural unglazed, unglazed clay, raw glazed and not ornamented or decorated otherwise than by designs or incisions made in the presses or molds, 10 per cent ad valorem; if decorated, or ornamented in any manner other than by impressions made in the green clay by presses or molds, 15 per cent ad valorem. Common stoneware, salt glazed, not ornamented, decorated, or embossed, and earthenware crucibles, 10 per cent ad valorem; if ornamented or decorated by stamps, transfer, or other cheap colored designs, 12 per cent ad valorem. Ornamental stoneware, such as Doulton's stoneware, Fulper stoneware, or other similar wares, whether intended for use or only ornamental shapes, bric-a-brac and all toys made of such material, 25 per cent ad valorem. Rockingham earthenware, 25 per cent ad valorem. Jet ware, Samian ware, and all other similar wares, whether made of red, brown, or gray clays as a base, and whether colored in or by the glaze or glazed to preserve the natural color of the clay, whether or not embossed, decorated, or otherwise ornamented, 35 per cent ad valorem.

81. Cream-colored earthenware, commonly known as C. C. ware, and all articles made of such material, whether for use, ornament, bric-a-brac, or toys, plain white, not ornamented or decorated in any way other than by designs raised or impressed in the green clay by molds or presses, 35 per cent ad valorem; painted, stained, decorated, or ornamented in any way other than by impressions made in the molds or presses, 40 per cent ad valorem. White granite earthenware, known as W. G. ware, and all articles made of such, whether for use, ornament, bric-a-brac, or toys, plain white, not ornamented or decorated in any way except by impressions or designs in the green clay by means of molds or presses, 45 per cent ad valorem; painted, gilded, stained, or decorated in any manner other than by impressions made in molds or presses, 50 per cent ad valorem.

82. China, porcelain, and semiporcelain wares, bisque, parian wares, and all articles of which such material is the component of chief value, whether for use, ornament, bric-a-brac, or toys, plain white, without

ornamentation other than designs impressed upon the green clay in molds or presses, 50 per cent ad valorem; the same if painted, decorated or ornamented in any way other than by impressions made in molds or presses, 55 per cent ad valorem.

Also, it is proposed to strike out all of paragraph 83 and insert in lieu thereof the following:

83. Earthy or mineral substances, wholly or partly manufactured, and articles or ware composed wholly or in chief value of earthy or mineral substances, not specifically provided for in this section, whether susceptible of decoration or not, if not decorated in any manner, 20 per cent ad valorem; if decorated, 25 per cent ad valorem: *Provided*, That all sanitary pottery, for building purposes, bathtubs, urinals, washouts, stationary wash bowls, all plumbing supplies of which the chief material of value is clay of any character shall be admitted free of duty, except for the statistical tax to be hereafter provided for.

Carbon, unmanufactured, 15 per cent ad valorem; electrodes for electric batteries, dynamos, generators, motor contact and similar brushes, plates and disks, and all manufactures of which carbon is the component material of chief value, not otherwise specifically provided for, 20 per cent ad valorem; carbon for electric lighting, of whatever material composed, or by whatever process manufactured, whether wholly or partly finished, 25 cents per hundred feet; porous carbon pots for electrical batteries, 15 per cent ad valorem.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

The SECRETARY. The next amendment, in paragraph 84, line 19, page 22 of the printed bill, it is proposed to strike out all of the paragraph after the words "ad valorem."

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

DUTIES ON GLASS BOTTLES.

Mr. LA FOLLETTE. The duties provided in the Senate bill in paragraphs 85 and 86 are for the most part in excess of a rate sufficient to cover the difference in the cost of production between this and competing foreign countries as ascertained by investigation of the Bureau of Labor Statistics and by a comparison of the wage piece-rate scales paid in this industry in this and foreign countries.

The rates provided in the amendment which I suggest are sufficiently high to cover any difference in the cost of production.

The following table shows the rates of the Senate bill as compared with those in my suggested amendment:

Article.	Rates of the Senate bill.	Rates of the La Follette amendment.
	<i>Per cent.</i>	<i>Per cent.</i>
Paragraph 85:		
Green glass bottles.....	30	25
Covered demijohns.....	30	28
Uncovered demijohns.....	30	25
Pressed tableware.....	30	20
Pressed stemmed goblets.....	45	30
Lead and lime flint glass bottles.....	30	35
Lead and lime flint glass uncovered demijohns.....	30	35
Lead and lime flint glass covered demijohns.....	30	38
Paragraph 86:		
Cut glass, cut from smooth blanks.....	45	65
Cut glass, cut from pressed or blown blanks upon which the pattern has been indented.....	45	40
Mechanically engraved glassware.....	45	40
Glassware etched or engraved by acid.....	45	35

¹ Covered demijohns are not specially provided for or distinguished in the Senate bill from the uncovered ones.

² Pressed stemmed goblets in the Senate bill come under paragraph 86.

³ This cut glass is all labor.

In my amendments to these paragraphs glass is classified according to its natural properties as recognized both in manufacturing and in commercial circles. That is to say, there are three specific kinds of glass, namely, green glass; flint glass, more properly lime flint; and lead glass, more properly lead-flint glass. Green glass does not necessarily mean that the glass is green in color; it means a common glass, common because its ingredients are not selected nor purified. It is used in the making of most beer bottles, ink bottles, cheapest Mason fruit jars, window glass, plate glass, and so forth. It is crude, unclarified glass. It may be colored amber, or even black. The material cost is low and the labor cost is, generally speaking, much less than on flint work. Flint glass is made of the best selected materials. It may be fluxed with either lime or lead. If fluxed with lime, it is a lime-flint glass, such as the perfectly clear glass used in druggist prescription ware, cheap pressed tableware, and so forth. If fluxed with lead it is lead-flint glass, and is of course much better and more expensive. These flint glasses have been separated from green glass in the proposed amendment, though lead flint has not been given a different rate from lime flint. Any flat ad valorem, of course, gives lime flint the advantage and puts lead flint at a disadvantage. Nevertheless the higher price of lead glass will help it some. Forty per cent barely covers the actual labor cost difference in

this and such foreign countries as Germany, Belgium, and Italy, even after the severe reduction in the American wage scale of last year.

In these amendments for the first time covered demijohns, carboys, and so forth, have been given a higher rate than uncovered ware of the same kind. The cost of demijohn covering is almost entirely a labor cost and practically equals that of the skilled labor in producing the demijohn itself. For instance, take a 5-gallon demijohn—the blower gets 81 cents per dozen, and he is the skilled and the highest paid man employed in the manufacture of these demijohns. Follow the demijohn to the wicker room and you find that men are paid 6½ cents each for covering 5-gallon demijohns. This is 78 cents a dozen, or practically the wages paid the blower. In all former tariffs this additional cost has been ignored. In the proposed amendment here it has been given a higher rate to shield in a small and inadequate way this labor cost of covering.

I herewith submit tables showing the cost of production of flint-glass prescription bottles in the United States and the cost of production of pint beer bottles—green glass—per gross in the United States, Germany, France, Belgium and Italy.

Cost of production in United States, glass bottles, per gross.

Kind and size of bottle.	Cost of material.	Blower's rate.	Other labor cost.	Total cost per gross.
4-ounce prescription.....	\$0.234	\$0.54	\$0.402	\$1.176
8-ounce prescription.....	.41	.69	.505	1.605
16-ounce prescription.....	.602	.91	.848	2.36

Cost of production of pint beer bottles, per gross.

Country.	Cost of material.	Blower's rate.	Other labor cost.	Total cost per gross.	Difference between United States cost.
United States.....	\$0.144	\$0.85	\$0.45	\$1.444	
Germany.....	.10	.63	.27	1.00	\$0.444
France.....	.10	.595	.25	.945	.699
Belgium.....	.10	.5655	.25	.9155	.7285
Italy.....	.12	.522	.25	.892	.752

In paragraph 85 pressed or cast tableware, whether green or flint glass, is specially emphasized and given a duty of 20 per cent if not decorated and of 30 per cent if decorated. This includes a whole industry, and one in which American manufacturers excel. The superior quality of American pressed-glass tableware is, in fact, its own protection.

DUTIES ON CUT GLASS.

In this proposed paragraph cut glass is separated from other kinds of ornamentation and treated, as it should be, as a separate industry. The two kinds of cut glassware distinguished in the section—that is, cut from smooth blanks and cut from pressed blanks—are those now well established in the trade. A smooth blank is, as its name indicates, perfectly smooth upon its surface when it reaches the cutting room. The design must be marked upon and cut into the solid glass, and the depth of the fissure or cut renders this a slow task. It is an industry in which nine-tenths of the cost is labor. The pressed blank was introduced to shorten this labor. Here the blank, instead of being even and smooth upon the surface, has its pattern roughly molded into the glass at the original pressing of the article. All of the fissures of the pattern are thus already in the glass, and at practically the required depth. To convert such a piece into cut glass each fissure must only be further cut with a sharp grindstone. This gives the incision the peculiarly sharp sparkle, the possession of which is the beauty of cut glass. The preparation and cutting of a smooth blank is, however, very considerably more expensive and requires greater skill than that of the cheaper pressed blank. To simply mention cut glass, as is done in paragraph 86 of the pending bill, without distinguishing these kinds, is an absurdity which puts all the premium upon cheap work. I now present my amendments to these paragraphs.

The SECRETARY. It is also proposed to strike out paragraphs 85 and 86 and substitute the following:

85. Plain green, amber, or colored "green" glass bottles, vials, jars, uncovered demijohns and carboys, any article blown or partly blown and partly shaped by mold or press, the same being made of green glass, filled or unfilled, 25 per cent ad valorem, except that the contents of any such glass containers shall bear the duty appropriate to such contents. Covered demijohns made of crude or green glass, 28 per cent ad valorem; pressed or cast tableware, whether green or flint glass and not decorated beyond incisions or designs impressed in mold, press, or dye, 20 per cent ad valorem; if decorated, painted, stained, or otherwise ornamented, 30 per cent ad valorem. Flint-glass bottles, whether lime or lead flint, and all such flint-glass vials, jars, uncovered demijohns and carboys, any of the foregoing filled or unfilled, not

otherwise specifically provided for within this section, and whether their contents be dutiable and free (except that such contents shall be subject to the duty applicable thereto), and lead flint-glass stemmed goblets and lead flint barroom glassware, 35 per cent ad valorem. Covered demijohns, made of flint glass, covered with rattan, reed, or other wicker-woven jackets, 38 per cent ad valorem: *Provided*, That the terms "bottles, vials, jars, demijohns, and carboys," as used herein shall not apply to chemical implements or appliances.

86. Cut-glass articles made of lead flint glass and cut from smooth blanks, whether blown or pressed or either in part, 65 per cent ad valorem; cut from "pressed blanks" or blanks upon which the pattern has been indented by molds or presses, whether such blanks are blown or pressed or both in part, 40 per cent ad valorem; mechanically engraved glassware and glass etched by direct cutting and not by acid method or a sand-blasting process, 40 per cent ad valorem; if engraved, etched, or ornamented by acid methods or by sand blasting, 35 per cent ad valorem: *Provided*, That this section is not to apply to graduated glass tubes, vials, or any other glass implement or article used in chemical laboratories or for other scientific purposes.

THE VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

TARIFF RATES ON WINDOW AND PLATE GLASS.

Mr. LA FOLLETTE. I present herewith a comparative table showing the rates of duty provided in paragraphs 87, 88, 89, 90, 91, and 92, covering the common window and the plate glass industry.

The rates provided in my amendment are such as will cover the difference in the cost of production between this and competing foreign countries, as ascertained by the Bureau of Labor Statistics and by a comparison of recent wage scales which prevail in this industry in this and foreign countries.

Article.	Rates of the Senate bill.	Rates of the La Follette amendment.
	Duty per lb.	Duty per lb.
Common window glass, single thickness, 16 by 24 inches, not exceeding 384 square inches.	1 cent.....	$\frac{1}{2}$ of 1 cent.
Common window glass, 24 by 36, not exceeding 864 square inches:		
Up to 720 square inches.....	1½ cents.....	1 cent.
Above 720 square inches and not above 864 square inches.....	1½ cents.....	1 cent.
Not exceeding 1,200 square inches.....	1½ cents.....	1½ cents.
Not exceeding 2,400 square inches.....	1½ cents.....	1½ cents.
Above 2,400 square inches.....	2 cents.....	1½ cents.
Common window glass, double strength, 16 by 24 inches:		
Not exceeding 384 square inches.....	1 cent.....	$\frac{1}{2}$ of 1 cent.
Not exceeding 24 by 36 or 864 square inches—		
Up to 720 square inches.....	1½ cents.....	$\frac{1}{2}$ of 1 cent.
Above 720 square inches and not exceeding 864 square inches.....	1½ cents.....	$\frac{1}{2}$ of 1 cent.
Not exceeding 30 by 41 inches or 1,230 square inches—		
Up to 1,200 square inches.....	1½ cents.....	1 cent.
Above 1,200 and not above 1,230 square inches.....	1½ cents.....	1 cent.
Not exceeding 39 by 60 inches or 2,140 square inches.....	1½ cents.....	1½ cents.
Not exceeding 40 by 78 or 3,120 square inches—		
Up to 2,400 square inches.....	1½ cents.....	2½ cents.
Above 2,400 square inches.....	2 cents.....	2½ cents.
Above 3,120 square inches.....	2 cents.....	3½ cents.
Paragraph 88:	Per square foot.	Per square foot.
Polished window glass 1—		
Up to 384 square inches.....	3 cents.....	3 cents.
Up to 720 square inches.....	4 cents.....	3 cents.
Up to 1,440 square inches.....	7 cents.....	5 cents.
Above 1,440 square inches.....	10 cents.....	3 cents.
Paragraph 89:		
Plate glass, rough—		
Not exceeding 384 square inches.....	$\frac{1}{2}$ cent.....	1 cent a pound.
All above 384 square inches 2.....	1 cent.....	1 cent a pound.
Cast polished plate glass, finished or unfinished 3—		
Up to 384 square inches.....	6 cents.....	6 cents.
Up to 720 square inches.....	8 cents.....	6 cents.
Above 720 square inches.....	12 cents.....	6 cents.
Paragraph 91:		
Cast polished plate glass, silvered, not exceeding 144 inches 4.....	1 cent.....	2 cents.
Paragraph 92:		
Cast polished plate glass, bent, ground, obscured, frosted.....	4 per cent ad valorem.	$\frac{1}{2}$ cent a pound.

¹ The polishing of glass is all done by machinery. Once the glass is put on the table, it requires no more labor to polish 1,440 square inches than it does to polish 384 inches per foot.

² The rates of the Senate bill in this schedule are unnecessarily complicated by a clause which says, "And all fluted, rolled, ribbed, or rough plate glass, weighing over 100 pounds per 100 square feet, shall pay an additional duty on the excess at the same rates herein imposed." In other words, while ostensibly giving a rate per square foot, yet this rate is controlled by the weight of the glass per 100 square feet, and the weight varies with the thickness.

³ The polishing of glass is done by machinery and it costs no more to polish a piece containing 720 inches than it does to polish a piece of 384 inches. The rate in the Senate bill is based on a commercial distinction which does not exist in the factory.

⁴ The Senate bill contains an oversight. It is made to apply to glass exceeding 144 square inches, and provides no duty for glass of that size or under.

The La Follette amendment equals the rate of from one-fourth of a cent to 1 cent per square foot.

REASONS FOR CHANGES IN CLASSIFICATION.

Heretofore the classification of the window-glass schedule has ignored the conditions in the factory and the basic distinction between single and double thickness glass and the rates of wages paid. The costs of production are radically different between double and single thickness glass of the same size.

In my amendments it is the purpose to get away from commercial classifications which have no existence in the factory, and upon which, because of this fact, no specific cost of production could be secured and make a classification in the tariff bill which conforms to the facts of manufacture.

In this connection, and to further emphasize this distinction, the wage agreement between the National Window Glass Manufacturers' Association and the Window Glass Blowers' Union for the years 1912-13 is made a part of this record.

Provision is made in my amendment to cover dry glass and other glass less than single thickness which is imported for photographic, picture glass, and so forth. This character of glass weighs less than ordinary single-strength window glass. In fact, a box of this glass containing the same surface might weigh anywhere from 29 to 49 pounds per 100 feet, so that a box of 55 pounds of this glass might contain the same surface space as two boxes of the single-thickness glass of the same weight per box.

These conditions make it apparent that this glass should have a higher rate of duty than that which is given to the ordinary window glass, and even if this demand is supplied by rejected negatives, still, as a matter of fact, it does not take the place of our domestic single-strength glass, and because it would replace twice the amount of surface of single thickness in proportion to weight it ought to take a much higher rate of duty.

It is for this reason that I have given this character of glass a duty of twice that which is given to the single-thickness glass, or a duty of $1\frac{1}{2}$ cents per pound.

REASONS FOR SUBSTITUTE FOR PARAGRAPHS 87 AND 88.

In all tariff bills heretofore enacted the grading by size has been based upon commercial glass and not upon the sizes recognized in the manufacture of glass. In this amendment it is proposed to adjust the duties upon the same basis that the manufacturer pays for the work. In other words, manufacturing cost is taken as the base and not the commercial price.

The following extract from the National Window Glass Workers' wage scale, 1912 and 1913, gives the sizes recognized in the factories and the price per 100-foot box paid for this work:

This wage agreement shall be in full force and effect from October 15, 1912, to May 29, 1913, inclusive.

	A.	B.
Per 100-foot box, single:		
6 by 8 to 16 by 24.....	\$0.41	\$0.38
16 by 25 to 24 by 36.....	.54	.46
All above.....	.62	.54
Per 100-foot box, double:		
6 by 8 to 16 by 24.....	.52	.42
16 by 25 to 24 by 36.....	.72	.64
24 by 37 to 30 by 41.....	.79	.70
30 by 42 to 39 by 60.....	.84	.78
40 by 60 to 40 by 78.....	1.75	1.60
All above.....	3.22	3.00
Grinders.....		.46

1. On the price specified in the above brackets there shall be paid an advance of 15 per cent. It is also understood and agreed that future advances which may be secured under the provisions of this scale shall be added to the amount due as wages after 15 per cent has been applied.

2. Gatherers shall receive 80 per cent as much as blowers' wages for both single and double in all sizes.

Flatteners shall receive 27 per cent as much as blowers' wages.

3. Cutters shall be paid for cutting single strength 18 cents per box of 100 square feet plus 15 per cent; for double strength, 23 cents per box of 100 square feet plus 15 per cent.

4. All triple-strength, or 32-ounce, glass shall be paid for as follows: Blowers' wages, per 100-foot box, up to and including 16 by 24, \$1.90; all above 16 by 24, \$2.15.

All triple blown containing 110 or more united inches, \$4 per box.

Gatherers, 75 per cent as much as blowers' wages.

Flatteners, 27 per cent as much as blowers' wages.

Cutters, 50 cents per box of 100 square feet, with price and one-half for all fractional sizes booked, 16 by 16 and under.

5. When orders are given for 29-ounce glass averaging 7 lights to the inch, all trades to be paid at the rate of 25 per cent less than price specified for triple strength.

6. Fifteen per cent above price specified for triple strength shall be paid for 42-ounce or glass averaging 5 lights to the inch.

7. Thirty per cent advance above price specified for triple strength shall be paid for 52-ounce or glass averaging 4 lights to the inch.

In the following table the labor cost is shown on single and double strength glass, using the Belgian rates and the American rates figured on boxes containing 50 feet of glass. It will be noted that the Belgian skilled labor is precisely the same regard-

less of the size into which the glass is cut. The American, on the other hand, is paid according to the size of sheet into which his blown cylinder can be cut. The table shows the amount of duty needed per box of each size of glass, the present duty and the protection yield, the duty under H. R. 3321 and the protection it would yield, and the La Follette amendment with the duty that it would yield.

Common window glass.

In the matter of polished common window glass, as alleged to be covered by paragraph 88, it seems to have been drafted to cover thin plate glass rather than common window glass. A 2-cent per square foot net excess on unpolished window glass is an ample protection. The graduation of sizes in section 88, like that in paragraph 87, and the section covering plate glass is based purely upon commercial measurements; that is, it is intended to protect price and not cost, since it costs just as much to polish one square foot as another and the size of the sheet does not increase the cost of the polishing. I now submit amendments to these paragraphs.

The SECRETARY. It is also proposed to strike out paragraphs 87 and 88 and substitute the following:

87. Cylinder-blown and common window glass, blown, unpolished, single strength or thickness, neither stained nor colored, in melt or pot, in sizes not exceeding 16 by 24 inches, or 384 square inches, three-fourths of 1 cent per pound; above that, and not exceeding 24 by 36 inches, or 864 square inches, 1 cent per pound; above that, 1½ cents per pound: *Provided*, That single-strength glass shall be construed to mean glass weighing not less than 100 pounds per 100 square feet. Cylinder-blown glass weighing less than 100 pounds to the 100 square feet shall pay a duty of 1½ cents per pound. Cylinder and common window glass, blown, unpolished, double strength, unstained and uncolored in melt, in sizes not exceeding 16 by 24 inches, or 384 square inches, five-eighths of 1 cent per pound; above that and not exceeding 24 by 36 inches, or 864 square inches, seven-eighths of 1 cent per pound; above that and not exceeding 30 by 41 inches, or 1,230 square inches, 1 cent a pound; above that and not exceeding 39 by 60 inches, or 2,140 square inches, 1½ cents per pound; above that and not exceeding 40 by 78 inches, or 3,120 square inches, 2.4 cents per pound; above that, 3.4 cents per pound: *Provided*, That unpolished cylinder and common window glass, imported in boxes, shall contain 50 square feet, as nearly as the size will permit, single-strength glass 55 pounds or less to the box, and double strength 80 pounds to the box, and it shall be computed according to the actual weight of the glass. Cylinder-blown common window glass of triple or quadruple strength, known as 32-ounce or heavier glass, shall carry twice the duty of double-strength glass of the same size. Cylinder-blown and common window glass, blown, when polished, shall carry 3 cents per square foot in addition to the pound rates for single, double, or triple glass, whichever the blown glass may be: *Provided*, That no cast or polished plate glass shall be admitted under this paragraph, but only cylinder-blown glass.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

Mr. LA FOLLETTE. I submit herewith, to be published as an appendix to what I have to say, the wage scale of the National Window Glass Workers' Union made under agreement with the manufacturers' wage committees. While it is true that this wage scale expired May 29, 1913, that is a mere form and it will be reenacted probably without change in time for the starting of the fires this fall.

I also submit, to be inserted as an appendix to my remarks, the wage scale and working rules of the Glass Bottle Blowers' Association, which is also for the season of 1912 and 1913. All glass factories, at least all union glass factories, close during July and August and the window-glass factories during June, July, and August, and the wage scales are made from year to year, expiring at the date upon which it has been previously agreed that the factory shall close. During the vacation these wage committees get together and reenact the wage scale, which usually does not vary except in minor points from the preceding one.

CHANGES IN PLATE-GLASS RATES.

The reason for the change in paragraph 89 is that there is no essential difference in cost of rough plate glass per square foot or per pound as based upon different sizes, such as is contemplated in paragraph 87 of H. R. 3321.

Plate glass is made by pouring molten glass from the pots upon a large iron casting table and running a roller over it while in plastic condition to press it to the required thickness. Ribs or flutes would be in the surface of the table or in the roller and do not carry with them any increased expense. This is also true of wire netting in glass. It is simply forced into the plastic glass while it is being rolled, and the additional expense is practically nil. Plate glass is made of the cheapest material that will make glass.

No more striking example could be cited of the policy of placing the tariff on selling price rather than cost of production than is shown in the plate-glass schedules.

Rough plate glass when cast is placed upon a large disk, upon which revolve grinding wheels, which grind it down to the thickness required. The glass is usually cast twice as thick as the finished plate; that is to say, if it is the intention to make a sheet of plate glass one-half inch thick, it is cast 1 inch thick and ground one-fourth inch off each side. This work is all done by machinery and very little skilled labor is employed. It costs just as much to grind one foot as it does another, and the fact that the selling price is based upon the size of the glass, the small sizes being sold cheap and the large sizes bringing enormous prices, is due to the following facts:

First. They can get it.

Second. It is more expensive to pack and ship large sheets than small ones.

Third. Where large sheets break, the pieces can be cut into smaller sizes, and hence the commercial value is less; but as a matter of cost of production, there is absolutely no difference per square foot.

I offer the following amendment.

The SECRETARY. It is also proposed to strike out paragraphs 89 and 90 and insert in lieu thereof the following:

89. Fluted, rolled, ribbed or rough plate glass, cast and not blown, whether containing wire netting within itself or not, 1 cent a pound: *Provided*, That when ground, smoothed, or otherwise obscured or subjected to any manufacturing process beyond the casting table it shall be subject to the same duties as cast polished plate glass unsilvered.

90. Cast plate glass, polished and unsilvered, and whether or not containing a wire netting within itself, 6 cents per square foot.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

The SECRETARY. It is also proposed to strike out paragraphs 91 and 92 and insert the following:

91. Polished plate and cylinder blown or common window glass when silvered shall be subject to a duty of 2 cents per square foot in addition to the rates otherwise chargeable on such glass unsilvered: *Provided*, That no looking-glass plates or glass silvered when framed shall pay a less rate of duty than that imposed upon similar glass of like description unframed, but shall pay in addition thereto upon such frame the rate of duty that would be applicable thereto if imported separately.

92. Plate glass and cylinder blown or common window glass, polished or unpolished, silvered or unsilvered, when bent, ground, frosted, sanded, etched, embossed, stained, colored, painted, ornamented, or decorated shall be subject to a duty of one-half cent per pound in addition to the rates otherwise chargeable thereon; the above if having beveled edges and containing over 120 square inches, 2 cents per pound in addition to rates otherwise chargeable thereon; under 120 square inches, 4 per cent ad valorem additional. Glass colored by flashing and not in melt or pot, 4 per cent ad valorem additional.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

Mr. LA FOLLETTE. The Senate bill in paragraph 97 imposes a duty of 30 per cent upon incandescent electric-light bulbs and lamps. This duty is not warranted by the cost of manufacture of these articles. The Senate bill makes them dutiable in the same paragraph which covers stained-glass windows and certain mirrors. It is a mistake to make this grouping, as these incandescent electric-light bulbs bear no relation to the other articles included within the paragraph. A duty of 20 per cent will fully cover these articles.

The effect of my amendment is to take these electric-light bulbs out of the general provisions of the paragraph and give to them a separate rate of duty. I offer the following amendment.

The SECRETARY. It is also proposed to amend paragraph 97, by inserting after the word "cases," on page 27, line 16, "30 per centum ad valorem"; and after the word "filaments," in line 18, by inserting the words "20 per centum ad valorem."

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was rejected.

APPENDIX A.

WAGE SCALE AND AGREEMENTS BETWEEN THE UNITED STATES POTTERS' ASSOCIATION AND THE NATIONAL BROTHERHOOD OF OPERATIVE POTTERS.

WHITE GRANITE AND SEMIPORCELAIN.

Clay making: Iron chamber presses, 1 cent per leaf, including all pugging and delivery of clay on elevator.

Forty-two pounds shall be the average weight of a leaf of clay, give and take 2 pounds; that is, if a leaf of clay weighs 40 pounds the manufacturer shall pay 1 cent per leaf, and if a leaf weighs 44 pounds he shall also pay 1 cent per leaf. If it weighs less than 40 pounds the manufacturer shall pay on the basis of 1 cent for 42 pounds, and if it weighs over 44 pounds he shall do likewise.

These prices to apply only to presses installed since May 1, 1900. When clay filter sacks are dipped in a creosote preservative, the work of dipping shall be done at the expense of the firm.

Casting: The term of apprenticeship for casters and the discounts applying to the various periods shall be identical with those established for pressers.

In determining the ratio of apprentices to which any firm is entitled the total number of pressers and casters shall be taken together, and in this feature shall be regarded as one and the same trade.

In any firm where the number of apprentice casters now employed is such that the total number of apprentice pressers and casters is above the proportion to which that firm is entitled under this agreement it is agreed that no apprentice shall be discharged to create the proper proportion, but no additional apprentice presser or caster may be employed by that firm until the correct ratio shall become there established in the usual course of events.

At all times either as apprentice or journeyman the status of any individual shall be considered the same, both as a caster and as a presser, and he may be transferred at any time from the one trade to the other, if mutually agreeable to himself and employer without prejudice to his standing in either branch and at the same discount, if an apprentice, to which he is entitled in the other trade. In other words, anyone who has completed his term as a caster shall be considered as having completed his term as a presser, and vice versa.

Creams shall take the same price as jugs of the same size, both to be governed by the official size for fancy jugs as specified in the official size list, but it is understood that this does not in any way apply to the articles known as restaurant or individual creams upon which special prices are specified below. Should restaurant or individual creams in future be introduced for casting in shapes other than

those upon which prices have been fixed, the prices thereon shall be set upon merit.

The following list prices for casting staple articles are established to become effective on and after January 1, 1908, subject to the apprenticeship rules for casters adopted as above:

	Per dozen.
Restaurant creams:	
Block handle, net	\$0.10
Double lipped, net	.10
Tankard creams:	
Os, handled	.20
Os, unhandled	.14
1s, handled	.16
2s, handled	.16
Saxon creams:	
Handled	.20
Unhandled	.14
Plain oval individual creams	.16
Rocaille individual creams	.20
Rocaille jugs, 60s	.20
Rocaille jugs, 54s	.25
Jugs:	
48s	.28
42s	.30
36s	.36
30s	.42
24s	.45
12s	.55
Sugars:	
24s	.55
30s	.50
36s	.45
Brush vases	.27
Mugs, toilet	.25

Cast articles not enumerated on this list shall remain as paid for at present in the various potteries.

The same understanding as to special prices on articles extraordinarily difficult shall apply as on all other classes of work.

Dipping: Hooking ware, 65 cents per kiln man's day's work. Firm to furnish sponges and gatherer where ware has to be gathered. Ware to be delivered at tub and glaze to be delivered and sieved by firm.

Ware thrown out on grid and not sponged at tub, 45 cents per kiln man's day's work. The firm to furnish all help to the dipper.

For all pin ware placed in first ring the dipper shall count the same number of days extra as the kiln men do.

In the class of dipping for which 65 cents per kiln man's day is paid the employer shall have the option of requiring that not less than 84 minutes actual working time be given to dipping each kiln man's day, and that not more than 53 kiln man's days shall be allowed for a day's work of 8 hours actual working time.

In the class of dipping for which 45 cents per kiln man's day is paid the employer may require that not less than 58 minutes actual working time be given to dipping each kiln man's day, and that not more than 83 kiln man's days shall be allowed for a day's work of 8 hours actual working time.

All extra dipping to be settled by standing committee. An apprentice may be put on whenever it is not possible to secure a competent journeyman.

The term of apprenticeship for dippers shall be three years, during which the rates of wages shall be as follows:

First 6 months	\$1.50
Second 6 months	1.75
Second year	2.25
Third year	2.75

Eight hours actual work shall constitute a day.

During the entire term the wages of the apprentice shall be figured at \$3.50 per day, 10 per cent of which shall be retained by the firm, and the difference between the remainder and what the apprentice actually receives under the apprenticeship scale shall be divided between the journeymen dippers on the same crew in any manner they may stipulate.

At some period during the term of apprenticeship all apprentice dippers shall be required to do hollow-ware dipping until they become thoroughly skilled in that class of work, and they shall be required to begin that work not later than the beginning of the third year of apprenticeship.

Extra compensation for dipping underglaze.

E. M. Knowles, per decorating kiln tier	\$0.20
K. T. & K. Buckeye, per decorating kiln tier	.20
Laughlin No. 2, per decorating kiln tier	.20
Hall china, per decorating kiln tier	.20
Colonial pottery, each 100 dozen regular dinner ware	.40
D. E. McNicol pottery, each 100 dozen regular dinner ware	.40
Buffalo Pottery Co., each decorating kiln	1.00

It is recommended that the use in the glaze of materials of an unusual character which are injurious to the health of workmen is condemned, and where such are used they shall be discontinued.

Dish making.

	Per dozen.
Bakers, oval:	
2½-inch	\$0.09
3-inch	.09
4-inch	.10
5-inch	.11
6-inch	.12
7-inch	.13
8-inch	.15
9-inch	.16
10-inch	.18
Bakers, square:	
3-inch	.12
4-inch	.14
5-inch	.15
6-inch	.16½
7-inch	.17½
8-inch	.20
9-inch	.22½
10-inch	.25
Dishes, oval:	
2½-inch	.09
3-inch	.09

Dishes, oval—Continued.

	Per dozen.
4-inch	\$0.10
5-inch	.11
6-inch	.12
7-inch	.13
8-inch	.15
9-inch	.16
10-inch	.18
11-inch	.20
12-inch	.22
13-inch	.25
14-inch	.29
15-inch	.37
16-inch	.37
18-inch	.46
Dishes, square, plain:	
6-inch	.16½
7-inch	.17½
8-inch	.20
9-inch	.22½
10-inch	.25
11-inch	.27½
12-inch	.30
13-inch	.33½
14-inch	.40
16-inch	.52

The firm shall deliver clay to the floor on which dish maker works, free of charge.

All ware stamped in the clay state shall be paid for at the rate of one-fourth cent per dozen extra.

Fancy festooned and embossed dishes to be set by standing committee. Day wage on dish machine or for dish maker, \$3 per day.

Piecework on dish machine shall be paid for at cable prices.

The number of apprentices at the dish-making trade shall be one apprentice to every three journeymen or less, and shall serve five years, subject to the same discount as the apprentice presser.

The firm shall have the privilege of giving any article on the dish-making list to apprentice dish makers during the last two years of their service.

Handling.

	Per dozen.
Chamber covers, turned	\$0.12
Chambers:	
Handling	.08
Knobbing covers	.05
Turned-up handles	.06
Cups, chocolate, extra thin	.05
Cups, coffee:	
Block handle	.04
Open handle	.04
Extreme extra thin	.05
A. D., open handle	.04
A. D., block handle	.03½
Jumbo	.06
Hotel	.04½
Cups, tea:	
Block handle	.03½
Thin, open handle	.04
Extreme extra thin	.05
Hotel	.04½
Cups, toy:	
Open handle	.04
Block handle	.03½
Custards:	
Ordinary	.04
Thin	.04½
Egg cups, double	.05
Mugs:	
24s	.06
30s	.06
36s	.06
Beer	.08
Mustache cups, lip and handle	.20
Mustards:	
Handling	.04
Sticking on knobs	.04
Cutting covers	.04
Spoons	.05
Spitting cups:	
Turned-up handle	.06
Pressed handle	.08
Spoon holders:	
Turned, sticking on feet	.06
Two handles	.12
Sugars, hotel:	
Handling	.08
Sticking on ears	.06
Sugars, toy:	
Two handles	.08
Sticking on ears	.06
Teapots, toy, spouting and handling	.20

Where covering or ringing of cups exists same prices to be paid as heretofore.

One-half cent per dozen shall be paid for boxing cups with the use of starch or other adhesive material, and nothing shall be paid for this work where no cementing preparation is employed. The firm shall have the option of having boxing done by an employee independent of the handler; the employer may require that all handles be cut and stuck on, and all cups boxed by a journeyman or apprentice handler, and that all handles shall be properly finished and trimmed.

The firm furnishes the starch and the handler mixes it.

One apprentice shall be allowed for the first journeyman handler, and one additional apprentice for every three additional journeymen.

The apprentice handler shall serve three years at the following rates:

First year	20 per cent off.
Second year	15 per cent off.
Third year	10 per cent off.

No handler after having served his full term of apprenticeship shall be discharged to make room for an apprentice.

Jiggering.

Basins:	Per dozen.
Mouth inside	\$0.18
Outside	.35
Inside—	
6s	.30
9s	.25
12s	.20

No claim for extra price shall be demanded for lug or festoon on basin that does not protrude beyond the line of the basin more than three-eighths of an inch; if lug is larger or shape unusually difficult, price shall be determined upon merit. Measurement of lug shall be taken in glost state. It is understood that this provision shall not disturb any fixed or settled price for any basin now being made, it being conceded that prices now being paid in the West for fancy basins are sufficient and satisfactory, and no increase is to be asked during the life of this agreement for any new basin of similar style.

Bowls:	Per dozen.
Oyster—	
24s, with ball or bat, turned	\$0.03½
30s, with ball or bat, turned	.03½
36s, with ball or bat, turned	.03½
Where necessary to run up, all sizes	.04½

It is understood that where an advance of one-fourth cent per dozen on plain-edge plates embossed and of one-eighth cent per dozen on plain-edge saucers and fruits embossed have been previously paid, that same advance will apply over the above prices for plain-edge plates, fruits, and saucers.

The firm shall deliver clay to the jigger floor free of charge. Whenever a manufacturer desires that plates shall be sanded and settered, he shall deliver the sand and setters to the jiggerman without charge.

When a manufacturer requires that hotel plates be stamped in the green state one-quarter of a cent extra shall be allowed for that work. Jiggermen shall not be required to hold their crews longer than 30 minutes when an accident occurs that cuts off their power.

In the employment of finishers by jiggermen the firm shall not require any discrimination solely on account of sex.

It is recommended that manufacturers investigate the distance jiggermen are required to carry molds and make an effort to lessen the inconvenience in cases of extreme long carry.

It is recommended that where any hardship is imposed upon jiggermen by the firm insisting upon the use of a scraper or hook in making cups some fair remedy be applied.

It is recommended that any jiggerman required to make granite mixing bowls shall be given a part of his order in better paid work.

Where unusual conditions or inconveniences exist beyond the average the jiggerman shall receive a percentage extra, the same to be fixed by the standing committee.

Day wage: Ordinary jigger, \$3; jumbo jigger, \$3.50.

APPRENTICE JIGGERMEN.

Apprentice jiggermen may be employed in the following maximum ratio: One in a total of 5 jiggermen or less, 2 in 10, and 1 in each additional 5. The period of apprenticeship shall be two years, and the price a discount of 5 per cent throughout the entire period from the established prices for jigged work. In the selection of apprentices the employer shall give preference to competent jiggermen helpers who have been employed at his factory for not less than two years. Should a scarcity of competent jiggermen exist, employer shall have the privilege of putting on jigger at journeyman's wages any journeyman in the clay department of his factory. No journeyman shall be discharged to make room for an apprentice.

It is recommended that a journeyman presser be given preference when a vacancy occurs on a jumbo jigger, provided a competent jiggerman is not available.

Settlements made by eastern standing committee.

48 ounces	.15
64 ounces	.18
96 ounces	.25

Jars only, two-thirds above price. Covers only, one-third above price.

KILN DRAWING.

Four hundred and forty-three cubic feet shall be considered one day's drawing in bisque kilns, and where the measurements give 221 cubic feet or less—over the number of days called for—nothing shall be allowed, but where the measurements give 222 feet or more—over the number of days called for—one full day shall be paid.

One-half day extra shall be allowed for carrying ware up or down one or more full stories of stairs.

Kiln drawers shall not be required to start work before 6 o'clock a. m., unless there is a reasonable necessity for it.

Kiln drawers (men) shall receive 25 cents per hour for actual time employed in drawing kiln, with a maximum of \$1.75 for any one kiln. The drawing boss shall receive 25 cents extra per kiln. Lunch time shall be abolished in kiln drawing. Should the firm insist upon kilns being drawn in less than seven hours, the kiln drawers shall be paid the limit of \$1.75 each per kiln. A day's work for kiln drawers (women) shall be the time required for drawing one kiln.

The seven-hour clause shall not be enforced when the firm requires that two kilns be drawn by one crew in the same pottery on the same day.

It shall be optional with kiln drawers whether they shall empty a kiln when the temperature registers more than 130° F. within 2 feet from the crown at the second ring.

When kiln drawers are required to draw kilns between the hours of 8 o'clock p. m. and 5 o'clock a. m., or on Sundays, they shall be allowed time and one-half for such work, provided that the necessity for drawing at that time is not caused by the refusal of kiln men to go into the kiln at or about noon time.

Kiln drawers shall not be required to wheel, carry, or throw out sagger sherds.

It is recommended that all firms shall furnish sufficient baskets for the proper drawing of kilns.

It is recommended that the firms shall investigate the conditions surrounding the work of kiln drawing, and where there appears to be an unnecessary long carry of either sand or empty saggars that condition shall be remedied.

KILN WORK.

Placing bisque kilns, 212 cubic feet a day.

Placing glost kilns, 162 cubic feet a day.

Kiln men shall not be required to rub individual butters.

All footed ware to be sponged. Where the ware is not sponged, the kiln men shall receive 20 cents extra on each kiln man's day's work in the kiln for rubbing ware.

(This settlement was made at the time the uniform list was adopted in Trenton.)

Where there is an ascension of a half story to the green room or dipping room, there shall be one-half day added to kiln and one full day for full story. Where the distance from the door of the green

room or dipping room is between 60 and 75 feet to the kiln door an extra half day shall be allowed. Where the distance is between 75 and 100 feet 1 day extra shall be allowed. Where the distance is between 100 and 125 feet an extra 1½ days shall be allowed.

Every pin bung placed in the first ring shall count 2 ovals.

When the saggars are placed flat on in the first ring in glost kilns, the kiln men shall receive 1 day extra on 14-6 diameter kiln, 1½ days extra on a 15-6 diameter kiln, and 2 days extra on a 16-6 diameter kiln.

Journeyman kiln men, \$2 for each day's work in the kiln.

Bench boss, \$2.50 for each day's work in the kiln.

China placing bisque and glost to remain same as heretofore in each locality, East and West.

Kiln men required to place ware in flint shall be paid 25 cents extra per kiln men's day.

When it becomes necessary to put on an apprentice he shall serve three years. The first week he shall be paid out of the office, after which he shall receive a day out of the kiln until he has served 3 months at the trade. If it becomes necessary to work after 5 o'clock, he shall be paid extra. The first 6 months he shall receive \$1.25 per day; second 6 months, \$1.35 per day; second year, \$1.50 per day; last year, 15 per cent less than journeyman's wages and receive all extra time after 3 months. Not more than 1 apprentice to 8 journey is allowed. Apprentices shall finish their apprenticeship in the pottery in which they started to learn the trade, except in cases where the firm by which an apprentice is engaged shall shut down indefinitely, when he may complete his time with any other firm having a vacancy for an apprentice. Apprentice kiln men shall be required to serve 18 months at glost kiln placing and 18 months at bisque kiln placing whenever the change from one branch to the other can be made without the necessity of discharging a kilnman from the opposite crew. In shops where there are less than 8 journeymen in the crew they shall be entitled to an apprentice.

Where a scarcity of kiln men exists the manufacturer shall have the privilege of putting on an additional apprentice, who shall be paid at regular journeyman rates, the excess of his regular apprenticeship wages to be divided among the kiln men of the crew for the first year and go to the manufacturer thereafter. This concession is made to the kiln men in consideration of the time they give to teaching the apprentice, and it is understood that the kiln men are to be responsible for the workmanship of said apprentice.

It is understood that the provisions of the uniform scale requiring that the regular apprentice kiln man shall receive his first week's wages from the office, and that his time for said week shall not count in the kiln, shall not apply to the second apprentice; also that the second apprentice shall serve his full time under the terms and conditions provided specially for the second apprentice, and that he shall not under any circumstances revert to the status of the regular apprentice; it is further understood that the manufacturer shall at all times be permitted to employ one regular apprentice on each crew of kiln hands.

FLAT WARE IN FIRST RING OF BISQUE KILN.

Plates, dishes, coupe soups, oat meals, saucers, ice creams, and fruits when placed in sagger loads only shall be considered flat ware. All other ware shall be considered hollow or first ring ware.

The ordinary setting of a bisque kiln shall be as follows: Flat ware in the first ring four saggars high, and in all other rings of the kiln except in the ordinary topping of green saggars. Hollow ware in the first ring above the first four saggars and in the ordinary topping of green saggars.

Flat ware placed in excess of four saggars high in the first ring of kilns, so ordered by the firm or its representative, shall be paid for extra at the rate of one-fourth day on each day's work of such excess flat ware in first ring; but if no such orders shall have been given, or hollow ware is placed in any part of the balance of the kiln, except as specified in the next paragraph above, then no extra shall be paid on such excess flat ware placed in the first ring.

When kiln men are required to place saggars flat on in bisque kilns, the extra compensation for this work shall be as follows:

On bisque kiln:

14 feet 6 inches, ¾ day.

15 feet 6 inches, 1 day.

16 feet 6 inches, 1½ days.

Where there is a shortage of green saggars, the bisque kilns may be topped off with fired saggars, provided the same class of ware is placed in the fired saggars that would be placed in the topping of green saggars, such topping of fired saggars to pay nothing extra.

Six Jack saggars or the equivalent is considered an ordinary topping in the middle of kiln.

Kiln men shall not be required to wheel, carry, or throw out sagger shreds.

The firm shall bear the expense of removing all green ware scraps from the kiln men's benches.

All tile, door liners, bit stone, fritt, stain, and glost kiln props and bats shall be delivered without expense to kiln men at the door of the kiln in which they are to be used, and fritt, stain, and bit stone shall be placed in saggars at the expense of the firm.

All new kilns shall be measured, and all old kilns when repaired with new crown or bottom shall be remeasured after the third firing.

It is recommended that as far as practicable the time and methods employed for sweeping kiln-shed floors and punching kilns shall be so adjusted as to protect workmen about the kilns from the injurious effects of dust arising from that work.

It is recommended that manufacturers investigate distances bisque kiln men are required to carry green saggars, and endeavor to make some adjustment to afford relief in cases of extra long carry.

The employer may require that all glost and bisque kiln men shall put in not less than five hours actual working time for what is known as a kiln man's day, and should this time limit not prove effective in producing satisfactory workmanship, this question may be reopened and revised at the expiration of this agreement.

It is understood that whenever kiln men are unable to place kilns on time by working one and one-half kiln man's days each day, they shall be required to put on additional men.

SETTLEMENT BY THE WESTERN STANDING COMMITTEE.

A pin boy shall be put on at the request of either the firm or the kiln crew. The expense shall be borne equally between the firm and the crew.

Where a pin boy is employed he shall be paid not to exceed \$2 per kiln and 25 cents per hundred for all pin saggars cleaned for first ring.

Blocking and casing	per hour	.50	

The journeyman prices for mold making shall be a discount of 10 per cent from the established mold-making list. The work of each mold maker shall be counted separately, and each shall be paid separately from the office. Buckets, coddles, and soap shall be furnished without cost to the mold maker. The foregoing regulations covering mold-making prices shall not apply in shops making china exclusively.

The ratio of apprentices to journeymen mold makers in the entire general-ware trade shall not exceed 1 to 4. No shop shall be entitled to more than 50 per cent of its full force of mold makers in apprentices. No shop shall be entitled to an apprentice until it can provide reasonably steady work for at least one journeyman and one apprentice. No shop shall be entitled to a second apprentice until it employs at least four journeymen, nor to a third apprentice until it employs at least seven journeymen. The term of apprenticeship shall

be five years; the apprentice shall be given the opportunity to thoroughly learn blocking and casing during the last two years of his service as an apprentice; the apprentice shall receive his wages directly from the office at the following scale of discounts figures from the full list, not being subject to the extra 10 per cent:

First year, 33½ per cent discount from full list.

Second year, 25 per cent discount from full list.

Third year, 20 per cent discount from full list.

Fourth year, 15 per cent discount from full list.

Fifth year, 15 per cent discount from full list.

No journeyman mold maker shall be discharged to make room for an apprentice, and no apprentice at present employed shall be discharged for the purpose of establishing the foregoing ratio.

Pressing (day wage only) per day

In the combined pressing and casting trades the proportion of apprentices shall not exceed one apprentice to five journeymen in any one firm, it being understood that no apprentice or journeyman shall be discharged in order to establish this ratio.

It is also agreed that when the manufacturer with a full quota of apprentices desires an additional presser, and is unable to obtain a competent journeyman after application to the secretary of the National Brotherhood of Operative Potters, he is at liberty to put on an extra apprentice beyond the established ratio.

It is also understood that there shall be no limitation upon the class of work that either journeymen or apprentice pressers shall do in any pottery where the foregoing ratio is established.

The apprentice presser shall serve five years before becoming journeyman and shall be paid at the rate of 33½ per cent off first year, 25 per cent off second year, 20 per cent off third year, 15 per cent off fourth year, 10 per cent off fifth year, sixth year and thereafter journeyman; it being understood that apprentices shall receive their advances each year as they become due.

Specially difficult shapes, prices to be settled by standing committee. Clay to be delivered by the firm to floor on which it is used, free of charge.

One-third shall be deducted from price of a footed article when same is made without foot.

One-half of the price of an unfooted article shall be added when same is made with foot.

PRESSING SPECIALTIES.

Celery trays, jardinières, spice stands, umbrella stands, glove boxes, pedestals, berry dishes, cake plates, ewer slabs, salt cups, olive trays, slaw dishes, salonettes, fruits, water filters, orange bowls, ash trays, pin trays, mustards, taberettes, manicure sets and jellies—prices to be settled by standing committee if not otherwise agreed upon.

100-piece to 112-piece dinner sets in crates or boxes of any size.....	.10

All other crates and boxes at prices of barrels or casks of corresponding size.

The firm shall have the option of employing all packers at day wage, and of paying all packers either on day wage or on piecework, individually from office: journeymen packers shall be paid \$3 per day for all day work, and 9 hours shall constitute a day's work, with the exception of pay Saturday, which shall be 8 hours.

Apprentice packers shall work under the following terms:

First year, per day.....	\$1.50
Second year, per day.....	2.00
Third year, per day.....	2.50
Fourth year.....	Journeyman.

An apprentice may be put on whatever it is not possible to secure a competent journeyman.

Where a foreman packer is employed over a day-wage crew, the wages of such foreman shall be adjusted between him and his employer.

It is recommended that all firms provide comfortably heated packing sheds during the winter months, and that they provide a suitable shelter for protecting returned packages and their contents from the weather.

Prices for packing general ware, approved by Eastern General Ware Standing Committee.

Small crate boxes.....	.08
Small boxes.....	.05

Loose packing without strawing, that is loose bungs put in packages, two-thirds of regular packing price, per package.

Unpacking full packages, to be paid same as regular prices for packing, if done by a journeyman packer, but it is optional with the firm whether they have the packer, warehouseman, or others to do unpacking.

Packing cars, to be done day wage.

Day-wage packing, \$3 per day; nine hours to constitute a day's work. The "small crate boxes" on this list are understood to mean boxes that compare in size with the following sizes of "small crates," packed in the West at 8 cents each.

No. 1, 20½ inches long, 17 inches wide, 18 inches deep.
No. 2, 19½ inches long, 14½ inches wide, 14 inches deep.
No. 3, 18½ inches long, 12 inches wide, 10 inches deep.
All boxes smaller than the above sizes shall be known as small boxes, at 5 cents each.

PRINTING.

The price for printing regular dinner ware sprig patterns is to be based upon the following scale:

Copper or steel plates to be 14 by 16 inches as a basis.
14 by 16 plate, containing 18 to 24 sprigs, to be 4½ cents per print.
14 by 16 plate, containing 25 to 27 sprigs, to be 4½ cents per print.
14 by 16 plate, containing 28 to 30 sprigs, to be 5 cents per print.
14 by 16 plate, containing 31 to 33 sprigs, to be 5½ cents per print.
14 by 16 plate, containing 34 to 36 sprigs, to be 5½ cents per print.
14 by 16 plate, containing 37 or more sprigs, to be 6 cents per print.
No pattern with 3 sprigs on flat to be done for less than 5½ cents per dozen.

Or with 4 sprigs on flat not less than 6 cents per dozen.
Or with 5 sprigs on flat not less than 7 cents per dozen.
Or with 6 sprigs on flat not less than 7½ cents per dozen.
Or with 7 sprigs on flat not less than 8 cents per dozen.
Or with 8 sprigs on flat not less than 8½ cents per dozen.

The standard 100-piece dinner set is to be used for computing price per dozen, to be figured as follows:

Divide the number of sprigs on dinner sets by number of sprigs used from copper plate which gives number of prints required to do one set; then multiply by price per print as given in above scale, which gives you the price of printing 100-piece set, which divided by 8½ dozen gives you the price per dozen of the pattern, which price is to be paid for dinner sets or open stock, straight count, or 12 pieces to the dozen.

The price of printing scheme dinner ware is to be based on the following scale for three-sprig pattern, no piece to have more than 3 sprigs; size of plates, 14 by 16.

Plates containing 28 or 29 sprigs, 4½ cents per print.
Plates containing 30 or 31 sprigs, 4½ cents per print.
Plates containing 32 or 33 sprigs, 4½ cents per print.
Plates containing 34 or 35 sprigs, 5 cents per print.
Plates containing 36 or 37 sprigs, 5½ cents per print.
Plates containing 38 or 39 sprigs, 5½ cents per print.
Plates containing 40 or more sprigs, 5½ cents per print.
No scheme to be less than 4 cents per dozen.

Two-sprig scheme to be 4 cents per dozen for patterns having not less than 28 sprigs on plate. Any plate having less to be proportionately more. Amount of sprigs on 100-piece set not to exceed 228 on 3-sprig scheme, distributed as follows:

Plates, 5, 6, and 7 inch, dishes and bakers, 3 sprigs.
Cups, saucers, fruits, sauce boats, creams, bowls, and pickles, 2 sprigs.
Covered butters and cover dishes, 5 sprigs.
Sugars, 4 sprigs.
Individual butters, 1 sprig.
Scheme when stilted or spurred to be one-fourth cent per dozen more.
All sprigs on copper plate to be used on scheme ware.

TOILET WARE.

The price for sprig toilet sets to be 10 cents for 10 pieces and 15 cents for 12 pieces when done with three prints or less and not to exceed more than 36 sprigs on 12-piece set. And 12 cents for 10 piece sets and 18 cents for 12-piece sets when taking not more than four prints for 12 pieces and three prints for 10 pieces. Twelve-piece sets not to have over 50 sprigs and 10 pieces not over 37 sprigs on.

Scattered spray toilet sets to be 15 cents for 10-piece set and 21 cents for 12-piece set; not to exceed 80 sprigs on 12-piece set and 60 on 10 pieces.

Ewers and basins, 55 cents per dozen when done regular and 45 cents per dozen when all of print is used up. Six-piece toilet sets to be paid one-half the price of 12 pieces.

Scattered spray ewers and basins, 65 cents per dozen.
Sheet or all over patterns, 40 cents for 10 pieces and 60 cents for 12 pieces.

Remarks: All copper plates between and including 14 by 14 and 14 by 16 to be the same as 14 by 16; those larger than 14 by 16 now in use to be the same price as 14 by 16. Any new plates put into use hereafter larger than 14 by 16 shall be paid proportionately more per print. The price of day-wage printing shall be \$3 per day for printer.

Nine hours shall be considered a day's work for a printer.
Any plate smaller than 14 by 14 shall be settled for at a price agreed upon by the parties concerned.

This scale does not pertain to underglaze or border patterns.

No apprentice printer shall be put on the press so long as a competent journeyman can be secured.

All pin sagers shall be stripped outside punch holes when the firm so desires.

SAGGER CLAY.

First. Where present conditions are agreeable to both the sagger makers and the firm there shall be no change.

Second. Where the firm now prepares all clay and makes an established charge to the sagger maker for that work there shall be no change.

Third. Where the sagger maker now does any part of the actual work of preparing clay and either the firm or the sagger maker desires that the sagger maker shall be relieved of that actual work, then the firm and sagger maker shall calculate the present cost of doing the work at that particular plant, of putting up the soak and one pugging. Both parties must agree upon what that cost is, which should be set so as not to increase cost to firm nor decrease sagger maker's wages. When this cost is agreed upon the firm shall assume charge of preparing all clay, and shall deduct from sagger maker's pay the agreed cost of all such work except the second pugging. It is understood that the calculation of cost shall be for each firm separately, and shall not be modified by the cost established at any other plant.

Fourth. Before accepting the prepared clay the sagger maker must pass upon the work, after which he can make no complaint that the work or mixing and pugging was not properly done.

The firm to stand the expense of grinding the grog.

Thick, thin, and extra thin are defined and understood as follows: Extra thin to be specially thin, and general teacups for dinner sets ordinarily made do not come under this classification, but are considered thin.

Turning—Apprentices' scale.

	Per cent.
First six months	33½
Second six months	25
Third six months	20
Fourth six months	15
Third year	10

Any manufacturer who employs one or more journeymen turners may employ one apprentice turner; a second apprentice may be engaged where four journeymen are employed, and one additional apprentice may be put on for each three additional journeymen. When a manufacturer with the full quota of apprentices desires an additional turner, and is unable to obtain a competent journeyman after application to the secretary of the N. B. of O. P., he is at liberty to put on an extra apprentice beyond the established ratio.

Employer shall have the privilege of giving any article on the turning list to apprentice turner during the last year of his service.

No turner after having served his full term of apprenticeship shall be discharged to make room for an apprentice.

White granite prices apply to all articles not enumerated in this list.

WAREHOUSE WORK.

Journeyman warehousemen, \$2.50 per day.

It is understood that above price of \$2.50 per day shall be the minimum wage paid to any journeyman glost warehouseman competent to properly do all classes of warehouse work, and who can show a clear record of not less than four consecutive years of work in that trade, the firm to be the judge of competency. This is not intended to prevent the payment of higher wages in particular cases.

RULES.

NINE-HOUR CLAUSE.

Nine hours shall constitute a day for all day wage workers excepting engineers, engineers' helpers, kiln firemen, watchmen, oddmen, and such others as must from necessity work longer hours. Eight hours shall constitute a day's work on pay Saturday. Lunch time shall be abolished for all day wage workers. Since the time of dippers' helpers must be regulated by the time of the dippers, who, as a rule, work by the piece, the dippers' helpers shall not be treated as day wage workers under this clause.

RULES GOVERNING APPRENTICES.

[Agreed to by committees representing United States Potters' Association and the National Brotherhood of Operative Potters.]

RULE 1. Apprentices shall serve their apprenticeship under the wages and conditions specified in the wage agreements existing between the United States Potters' Association and the National Brotherhood of Operative Potters.

RULE 2. An apprentice shall complete his apprenticeship under the firm with whom he started unless excused by them for valid reasons, and any time lost by said apprentice on his own account, such as loss of time, shall be made up to the firm, providing it amounts to 30 days or more.

RULE 3. When an apprentice is leaving their employ for any reason the firm shall give him discharge papers and shall state on same the reasons of his discharge, together with the discount at which he was working.

RULE 4. Should any apprentice lose his position through no fault of his own, such, for instance, as a firm discontinuing business or having no further work for such apprentice, he shall be allowed to accept a position in any pottery where a vacancy might occur, even though the full ratio of apprentices is already employed. This section does not apply to kiln placing, as the matter is covered in rules under kiln placing. And he shall be permitted to work at such pottery until he can be located in a position as apprentice. Such time shall count on his apprenticeship, providing he has his discharge papers approved by firm discontinuing his services.

RULE 5. An apprentice discharged for neglect of work or other misbehavior shall not be permitted to work at the trade again until he finds a vacancy for an apprentice, and shall serve his full time, not counting the time he may be out of employment through the above discharge.

RULE 6. If an apprentice leaves the firm which employs him and attempts to pass off as journeyman or as an apprentice of less discount than his time calls for, he shall be compelled to return and finish his apprenticeship under the firm with whom he started, unless the standing committee orders otherwise.

RULE 7. In case of strike or lockout the provisions of this agreement shall stand suspended until the termination of such strike or lockout, and any time that may be lost by said apprentice shall be fully made up by him.

RULE 8. Any breach or violation of an apprentice's contract, either on the part of the firm or the apprentice, shall be a subject for action by the standing committee.

If at any time the adding of new apprentices in any branch of the trade works an apparent hardship, owing to the depressed business conditions, any petition from the National Brotherhood of Operative Potters to the United States Potters' Association setting forth this situation will be given proper consideration.

How to figure ratio of apprentices: In calculating the ration of apprentices in any branch of the trade all potteries under one management or ownership in any one city must be considered as one pottery; but where potteries under one management are located in different cities they shall be considered separately.

Excessive loss: Manufacturers shall use due diligence to prevent loss from green ware cracking on molds, and wherever excessive loss occurs and it appears that the manufacturer refuses to make necessary investigation and take immediate steps to correct such trouble, it shall be a proper matter for adjustment by the standing committee.

Standing committee: The standing committee, East and West, shall be appointed as heretofore, to adjust matters that can not be settled between the firm and employee. The standing committee shall meet at stated intervals of 30 days, and all work in dispute shall be continued pending and subject to the decision of the standing committee. A disinterested man shall be appointed in the East and in the West, to whom shall be referred for final decision all matters that result in tie vote of the standing committee.

Disputes referred to the standing committee and not settled within 90 days shall be referred back to the parties interested.

No settlement shall be regarded final or binding unless reported to the standing committee. Such report shall state the price and properly describe the article, together with the names of the firm and the individual making the settlement, and these particulars shall be recorded by the standing committee.

Time clock: The National Brotherhood of Operative Potters recognizes the right of the manufacturer to require that all day wage employees shall register time of beginning and quitting work on time clock, or other time recording device, and of paying according to this record.

The square-deal clause: In the interpretation and application of the wage agreement and uniform scale, both sides shall recognize the intent to establish a fair day's wage for a fair day's work; they shall not insist upon technicalities where the opposite intent is clear and when points arise not clearly and literally covered by the list they shall be decided upon merit and shall not be governed by what the wage scale may specify for something similar. When any material change from that contemplated by the uniform scale is made in the method of doing any particular work, or of making any particular article, rendering such work more difficult or more simple, full allowance shall be made for said change either by an increase or a decrease in the price as the case may be.

It is agreed that no price or condition shall be considered settled by reason of the fact that it has been agreed upon by a firm not a member of the United States Potters' Association or by a workman not a member of the National Brotherhood of Operative Potters.

Penalty for violation of agreement: In view of the fact that the committee representing the United States Potters' Association and the National Brotherhood of Operative Potters are both empowered with full and final authority to act for their respective organizations in the formation of this agreement, it shall be considered that the individual members of both are parties to this contract, and should any individual member of either refuse to accept any condition herein, or should anyone withdraw from his organization by reason of his dissatisfaction with the terms hereof, such act shall be considered a violation of contract upon the part of that individual and shall cancel his right to demand that he shall participate in the benefits and privileges of this wage agreement and his right to demand that he shall employ or be employed at the rates and under the conditions specified.

Both parties to this agreement, through their duly authorized representatives of the conference committee, pledge themselves to use every honorable means to enforce the acceptance and observance of this agreement by all parties affected, to discourage any opposition on the part of individuals, and to favor in every reasonable way those employers and employees who faithfully and honorably abide by this contract in all its provisions.

GENERAL RULES AND RECOMMENDATIONS.

Manufacturers are requested when work is short to instruct foremen to divide work as equally as possible, and not to prefer some men over others in the distribution.

No workman shall be charged for losses for which he is not responsible.

It shall be left optional with individual firms whether they shall pay at noon on pay day, and whether they shall observe a Saturday half holiday.

Adequate closets shall be provided separately for male and female employees, and they shall be kept in sanitary condition.

Double time shall be allowed for all labor required to be done on Christmas, July 4, and Labor Day, except to firemen, oddmen, and to others whose labor is necessary to maintain the orderly running of the plant, and for the proper protection of plant and property.

It is recommended that heat be provided in all those departments where workmen are now exposed to excessive cold.

It is recommended that an investigation be made of the heating conditions where the blower system is now installed, and if this system anywhere proves to be injurious to workmen an effort shall be made to provide a remedy.

It is recommended that manufacturers shall take up with the workmen in their respective clay shops the subject of sweeping floors in such shops and endeavor to make some mutually satisfactory arrangement whereby such shops shall be swept after regular working hours.

When prior to the expiration of a wage agreement the National Brotherhood of Operative Potters desires to propose amendments to be embodied in the new agreement, such amendments shall be submitted to the United States Potters' Association as nearly as may be feasible, 60 days prior to the meeting of the joint conference committee, and the United States Potters' Association shall submit its amendments as nearly as may be possible 30 days in advance of said meeting.

APPENDIX B.

WAGE SCALE OF THE NATIONAL WINDOW GLASS WORKERS, EFFECTIVE OCTOBER 15, 1912, EXPIRING MAY 29, 1913.

NATIONAL WAGE SCALE FOR BLAST OF 1912-13.

The undersigned manufacturer of glass, located at _____, agrees to the following wage scale and conditions. This wage agreement shall be in full force and effect from October 15, 1912, to May 29, 1913, inclusive.

Per 100-foot box, single:	A	B
6 by 8 to 16 by 24.....	\$0.52	\$0.42
16 by 25 to 24 by 36.....	.54	.46
All above.....	.62	.54
Per 100-foot box, double:		
16 by 8 to 16 by 24.....	.52	.42
16 by 25 to 24 by 36.....	.72	.64
24 by 37 to 30 by 41.....	.79	.70
30 by 42 to 39 by 60.....	.84	.78
40 by 60 to 40 by 78.....	1.75	1.60
All above.....	3.22	3.00
Grinders.....		.46

1. On the price specified in the above brackets there shall be paid an advance of 15 per cent. It is also understood and agreed that future advances which may be secured under the provisions of this scale shall be added to the amount due as wages after 15 per cent has been applied.

2. Gatherers shall receive 80 per cent as much as blowers' wages for both single and double in all sizes.

Flattners shall receive 27 per cent as much as blowers' wages.

3. Cutters shall be paid for cutting single strength 18 cents per box of 100 square feet, plus 15 per cent; for double strength, 23 cents per box of 100 square feet, plus 15 per cent.

4. All triple strength or 32-ounce glass shall be paid for as follows: Blowers wages per 100-foot box, up to and including 16 by 24, \$1.90; all above 16 by 24, \$2.15.

All triple blown, containing 110 or more united inches, \$4 per box.

Gatherers, 75 per cent as much as blowers' wages.

Flattners, 27 per cent as much as blowers' wages.

Cutters, 50 cents per box of 100 square feet, with price and one-half for all fractional sizes booked, 16 by 16 and under.

5. When orders are given for 29 ounce glass averaging 7 lights to the inch, all trades to be paid at the rate of 25 per cent less than price specified for triple strength.

6. Fifteen per cent above price specified for triple strength shall be paid for 42 ounce or glass averaging five lights to the inch.

7. Thirty per cent advance above price specified for triple strength shall be paid for 52 ounce or glass averaging four lights to the inch.

8. The basis of wages from date of this scale up to and including November 7 or 8, 1912, shall be the before-specified scale. For each succeeding four weeks, settlement shall be made on the basis of sales as shown by report for previous settlement period computed on the basis of 1 1/2 per cent advance in wages for every 1 point the price of glass advances above the discount of 90-20 single strength and 90-25 double strength.

9. Sworn monthly statements showing sales of glass during the four weeks preceding shall be submitted not later than three days after the close of each settlement period by the secretary of the National Window Glass Manufacturers' Association. The National Window Glass Workers shall have full privilege to examine the books and records of the secretary of the National Window Glass Manufacturers' Association in order to verify statements that are submitted.

10. The wage commissioners for the National Window Glass Workers shall be appointed by either the national president or executive board of the National Window Glass Workers and shall meet at the call of the president as soon after the close of each settlement as possible and tabulate sales reports submitted by the secretary of the National Window Glass Manufacturers' Association. The average selling discount shall be ascertained from the gross and net sales and a general average of these discounts shall be taken as the selling price for the settlement upon which basis settlement shall be made for the ensuing four weeks, as specified in section 8 of this wage scale. In such general average less than one-fourth per cent shall be dropped from consideration, and one-fourth to one-half per cent shall be counted as one-half per cent.

11. The standard size of single strength shall be to cut 42 by 56; 44 by 56, or its equivalent in inches, not to exceed 64 inches in length, can be made as special orders at any time that by so doing it is possible to avoid cutting in sizes up to 16 by 24, inclusive. Single strength shall be made at the rate of 9 rollers per hour.

Number of double-strength rollers allowed per hour:

All sizes up to and including 1,728 square inches, 9 per hour.

All sizes up to and including 2,160 square inches, 8 per hour.

All sizes up to and including 2,584 square inches, 7 per hour.

All sizes above 2,584 square inches, 6 per hour.

Up to and including—

	Per hour.

12. Cutters shall receive price and one-half for all fractional sizes above 16 by 16 excepting 13 1/2 by 26 and 28, and double price for all fractional sizes booked 16 by 16 and under, and double price for all sizes under 14 united inches, and above prices shall be subject to no discounts.

13. A boss cutter shall be employed by all firms, and shall be a member of the National Window Glass Workers. Boss cutters shall receive the following rate of wages for their services: For 12 pots or less, \$12.50 per week, and \$2.50 for each additional 12 pots or less per week. This rate only to apply to cutters who are cutting.

14. Ten dollars extra at the end of every four weeks shall be paid to cutters cutting the big plate.

15. The number of lights per box in all strengths shall be uniform.

16. The following list governs cutters when setting out single strength sheets: Six and one-half lights per 100 feet. In setting out double sheets, 48 by 64 or the equivalent in square inches shall be set out at the rate of five lights per box.

17. Stock sheets.—Manufacturers may set out a limited number of stock sheets, amount not to exceed 800 feet per four weeks for any pot, place, or blower. This to apply to both single and double, except that for the last eight weeks of the operating period of this scale the amount heretofore specified may be doubled.

The single and double strength glass set out shall be booked to the blower at the price the single-strength glass and double-strength glass, respectively, cut and packed during the week it is set out, averages per box.

The cutter is to receive full price for all glass set out in stock sheets. Stock sheets shall not be cut up or shipped during the blast.

18. Poor double-strength glass may be set out for grinding at the rate of 1,000 feet per four weeks per pot or place and not to exceed 1,000 feet for any four weeks. Single-strength shall not be set out for grinding purposes.

19. Crackle or muffle glass shall be paid for at the rate of \$1.50 per box of 100 square feet. Gatherers to receive 80 per cent as much as blowers' wages.

20. There shall be no glass blown, gathered, flattened, or cut on the following holidays: Thanksgiving, Christmas, Decoration Day, and Labor Day.

21. Manufacturers shall furnish oil, soap, chalk, and ice for drinking water; also must at their own cost piece blowpipes and put new handles on same.

22. A boss blower shall be employed at all pot furnaces, and shall receive not less than \$1.50 per pot per month.

23. Manufacturers shall pay snappers' wages. When blower and gatherer work without snappers they shall receive snappers' pay.

24. Manufacturers shall deduct from the earnings of all members of the National Window Glass Workers working for them 2 per cent of the amount earned for dues to the National Window Glass Workers, and shall, within 10 days after each and every settlement, present a check for the full amount to the local president, payable to the secretary of

the National Window Glass Workers, together with the names, amount earned, and the amount paid by each member during said period, same to be forwarded by local president to the national secretary. No debt of any kind that a member contracts shall prevent the deduction of this 2 per cent, and any manufacturer who overpays or fails to deduct and forward said money for dues shall be held liable to the National Window Glass Workers for the payment of same, whether the member has anything due him or not. This also to apply to entire earnings for boss cutters. All bills to be presented weekly, with the amount earned. Said bills to have the amount of glass cut in each bracket and amount of A and B.

25. The manufacturer shall deduct money from members' wages when notified to do so by the president, secretary, local president, or executive board, and the National Window Glass Workers agrees to collect from its members money or transportation advanced to its members by any manufacturer, providing the member signs an order and continues to work at his trade.

26. In case of dispute over poor glass, the blower and gatherer shall be required to work at list wages unless released by the manager or local president, except that this shall not apply to stony glass, in which case the manufacturer shall pay an average day's wages if he insists on having the glass worked. The gatherer and flattener shall receive the same proportionate guaranty as the blower's guaranty. When a general guaranty is given at any plant to protect the blower, gatherer, and flattener from poor glass, it shall be made by the local president and local council, subject to ratification by the president or executive board. Should such guaranteed glass amount to more than the specified guaranty, the blower, gatherer, and flattener shall receive the benefit of the full amount of such excess. Should such guaranteed glass amount to less than the specified guaranty, the cutter shall receive the same relative increase as provided for the blower, gatherer, and flattener as above.

27. Manufacturers shall pay all workmen weekly. Members shall be paid for a week's work not later than the following week.

28. Forty hours shall constitute a week's work for blowers and gatherers. The following system may be adopted when locals so decide: In order to do away with the 4 o'clock shift on Saturday morning, the midnight shift shall continue until 8 o'clock, the day shift starting at 8 o'clock and working until 12 noon. The 4 o'clock shift finishes work for the week at midnight Friday night. All work ceases on Saturday at 12 o'clock noon.

29. All manufacturers signing or authorizing the signing of this scale hereby agree and bind themselves to comply with the usages and working rules of the National Window Glass Workers, which shall be printed for the use of both parties.

30. In case of fires being blocked or plants going out of blast, all glass must be cut up and counted off by the regular cutter, and the four trades paid in full at the end of seven days from time of going out of blast.

31. All manufacturers signing this scale hereby bind themselves and those they represent to and with the National Window Glass Workers that they will not, either by themselves or any officer, stockholders, representative, or other authorized person, sign any other scale or agree to pay any other scale of wages than the scale provided herein, and for any violation of this the president of the National Window Glass Workers shall, upon being satisfied of the violation, notify the company or firm, that they have canceled this scale, as to such manufacturers, and all members of the National Window Glass Workers employed by such manufacturer shall cease work.

32. We, the scale committee of the National Window Glass Workers, do hereby declare that we represent each and every member of the National Window Glass Workers, and that we have been given full authority by all of said members to sign this scale, and each manufacturer signing or authorizing the signing of this scale thereby recognizes the said scale committee and acknowledges its authority so to sign.

SECTION II.—Rules for working—Manufacturer.

SECTION 1. Manufacturers shall employ regular skimmers for both day and night shifts to do all necessary skimming. (This to apply to tanks only.) Gatherers shall be permitted to skim at the beginning of the shift and at tempo.

SEC. 2. Manufacturers paying on Saturday shall do so before 12 o'clock noon.

SEC. 3. No local president, executive officer, scale committeeman, or trustee shall be discharged during the blast except it be for willfully neglecting his work or incompetency, which shall be proven to satisfaction of local council.

SEC. 4. Any company hiring a member and said member upon arrival and reporting for duty finding no vacancy existing, that company shall pay said member at the rate of \$15 per week until place is vacant, or said company shall defray all expenses incurred by said member from the time he left his home or place of starting until his return to his destination.

SEC. 5. Any manufacturer introducing into his flattening house, blow furnace, tank, or pots new inventions, supposed improvements, shall so long as said improvements continue to be an experiment, or until it shall have been demonstrated that it shall not be a loss to the workmen, pay a guaranty to all workmen whose work is or may be affected by said machine or invention. Said guaranty shall consist of so much per box, and every 6½ rollers 42 by 56 to constitute a box of single strength, and the number of rollers according to the regular list to constitute a box of double strength. Said guaranty to be arranged between the manager of the said works and the national president of the National Window Glass Workers, subject to ratification of the executive board.

SEC. 6. No member of the National Window Glass Workers shall be denied the right to enter any factory, flattening house or cutting room where the national scale is in force. This not to apply to men under the influence of strong drink, sleeping in factories, or using abusive language.

SEC. 7. Stock sheets.—Manufacturers may set out a limited number of stock sheets, amount not to exceed 800 feet per four weeks for any pot, place, or blower. This to apply to both single and double, except that for the last eight weeks of the operating period of this scale the amount heretofore specified may be doubled. The single and double strength glass set out shall be booked to the blower at the price the single-strength glass and double-strength glass respectively cut and packed during the week which it is set out, averages per box. The cutter is to receive full price for all glass set out in stock sheets. No stock sheets shall be cut up or shipped during the blast.

SEC. 8. Poor double-strength glass may be set out for grinding at the rate of 250 feet per week per pot or place, and not to exceed 1,000 feet for any four weeks. Gatherers shall receive 80 per cent as much as blowers' wages for all grinders.

SEC. 9. There shall be no glass blown, gathered, flattened, or cut on the following holidays: Thanksgiving, Christmas, Decoration Day, and Labor Day.

GENERAL WORKING RULES.

SECTION 1. The following working rules shall govern both manufacturers and members of this association on and after the signing of what is known as the wage scale.

SEC. 2. In all cases, except in cases of willful neglect of work, when immediate discharge may follow, seven days' notice shall be given before discharging any workman. Any workman desiring to quit a place shall be required to give seven days' notice and to faithfully work out the same, unless released by his employers. Notice to quit a place to be valid, must be given in writing to the local president. This to apply alike to employers and men.

SEC. 3. When a member leaves a factory, either by discharge, release by the manager, or after having worked out his week's notice, the local president shall notify the manager or firm that the member's wages are due seven days thereafter.

SEC. 4. Blowlers and gatherers shall not be allowed to work on two successive shifts.

SEC. 5. No member shall gather or blow before 1 o'clock a. m. on Monday.

The foreman of a pot furnace may permit a blower and gatherer to commence before the regular time, but in no case shall they be allowed to make more than the regular number of rollers per hour, nor commence ahead of time—Monday morning at 1 o'clock or 12 o'clock midnight following a holiday.

SEC. 6. No blower or gatherer shall dip out pots, nor shall any blower or gatherer carry out rollers, whether paid for doing so or not.

SEC. 7. No member of this association shall pay for the piecing or repairing of pipes or tools at any time, and the manufacturer shall also furnish pipe handles and have them put on. A rental charge, not to exceed 25 cents per week, may be made when manufacturers furnish a full set of blowpipes.

SEC. 8. Gatherers and blowers working spare glass shall mark it spare and have it kept separate.

SEC. 9. All companies engaging a spare blower will have him mark his glass when gathering the same as when blowing and not pay on average blowing.

SEC. 10. Each pot furnace shall be under the control of a foreman, who shall be either a blower or gatherer, and said foreman shall have full charge during blowing and oversee all pot settings.

SEC. 11. Manufacturers shall furnish blackboard or slate to Lehr tenders and shove boys, on which shall be kept an account of all glass which bursts in the oven and number of pieces coming off Lehr.

SEC. 12. No two blowers or gatherers will be allowed to work in the same place on the same shift except as helper.

SEC. 13. The work of turning pots shall be done by the boss blower, but when requested by the boss blower, blower and gatherer shall assist in turning pots and building up furnace rings in his own place.

SEC. 14. No boss blower or gatherer will be allowed to mend benches except from clute holes hen setting pots. No blower or gatherer shall be allowed to get sand or clay or furnish any other material for pot setting or mending benches.

SEC. 15. The standard size of single strength shall be to cut 42 by 56; 44 by 56 or its equivalent in inches not to exceed 64 inches in length can be made as special orders at any time that by so doing it is possible to avoid cutting in sizes up to 16 by 24, inclusive.

SEC. 16. If any blower or gatherer is absent from pot setting and not excused by the manager or master blower, he shall be subject to fines as follows: Blowlers absent from pot settings without reasonable excuse, \$1; gatherers, 75 cents. This not to apply to spare workers except when they work that blowing.

SEC. 17. A list of all fines imposed shall be handed into the office of the company by the local president, and the amount deducted from such workmen's account at the next settlement.

SEC. 18. A blower or gatherer working at single strength, making a thickness of more than 11 to the inch, shall be fined \$5 for each and every offense.

SEC. 19. Members will not be allowed to work with anyone not a member of this association. This, however, does not apply to discharged apprentices.

SEC. 20. Any blower or gatherer making more grinders than provided for by law, or any cutter cutting or setting out more stock sheets or grinders than provided by law, shall be fined not less than \$5 for the first offense and \$10 for each succeeding offense.

SEC. 21. No single-strength blower or place will be allowed to make double-strength grinders.

SEC. 22. No blower shall be allowed to let snappers open, swing, or put rollers on the crane. Anyone violating this law shall be fined at the discretion of the local council. (This shall also apply to snapper carrying lump to cooling tub.)

SEC. 23. Snappers shall not be allowed to gather on ring irons for the purpose of filling thread pots or glaze blocks or to make trinkets. This does not apply to snappers gathering threads during the blowing.

SEC. 24. Boss blowers in pot furnaces shall receive not less than \$1.50 per pot per month.

SEC. 25. No member or local, when a difficulty arises, shall have the right to cease work or pull pipes without the authority or permission of the national president or executive board through the local council.

SEC. 26. Forty hours shall constitute a week's work for blowers and gatherers. The following system may be adopted when locals so decide: In order to do away with the 4 o'clock short shift on Saturday morning the midnight shift starting at 8 o'clock and working until 12 noon. The 4 o'clock shift finishes work for the week at midnight Friday night. All work ceases on Saturday at 12 o'clock noon.

SEC. 27. Where breakage of glass occurs through fault in construction of flattening oven, or breaking of dip frames, blowers, gatherers, and flatteners shall be reimbursed and receive an average of pay for all glass broken.

SEC. 28. A thorough investigation of the methods of any company shall be undertaken when charges are made by local president and council that members are not receiving proper amount of boxes or wages. Any member assisting in the investigation shall be properly protected by the organization.

FLATTENERS.

SEC. 29. Twelve pots shall be the limit for any one flattening oven.
 SEC. 30. Where 12 pots are flattened in any oven 3 flatteners shall be employed on said oven.
 SEC. 31. All flatteners working over 6 hours shall stop at least 20 minutes for lunch.
 SEC. 32. No flattener shall flatten for more than four pots, unless in case of actual emergency.
 SEC. 33. Any flattener working where coal is used shall not be allowed to clunker out producer or put on braces.
 SEC. 34. No one other than an apprentice shall be allowed to lay out except the oven shall be larger than a four-stone. Any flattener violating this law shall be fined \$25.
 SEC. 35. Flatteners shall not saw or cut the rounds off logs or scantlings to prepare blocks.
 SEC. 36. No flattener shall be allowed to pay any part of layer out's wages, or any help that may be employed about the flattening house.
 SEC. 37. No flattener shall be compelled to rub flattening stones.
 SEC. 38. No flattener shall be allowed to assist in setting flattening stones, building fire boxes or mantles, or anything pertaining thereto. This only to apply during time fire is in blast.

CUTTERS.

SEC. 39. No cutter shall be allowed to cut more than two and a half pots of single strength and three pots of double strength.
 SEC. 40. Each cutter shall assort his own glass, count off the same and credit to the blower, gatherer, and flattener, retaining the amount of glass on his slate until the local president has received the bills for the amount of glass produced each week, and the cutter shall give the blower, gatherer, and flattener a weekly account of glass cut, and shall also place slips which will state number of boxes cut and brackets in which they are booked in glass after having counted off.
 SEC. 41. No cutter shall work while the fire is out filling orders from glass set out in the sheet for weekly wages, when such wages would be exceeded in amount if the glass cut was paid for according to the regular price per box, as fixed in the articles of agreement between this association and manufacturers.
 SEC. 42. Cutters in setting out single strength stock sheets shall book the same to blower, six and a half lights per hundred foot box.
 SEC. 43. Each manufacturer shall employ a boss cutter, said boss cutter to be a member of the National Window Glass Workers, and he shall divide and distribute the orders among the cutters.
 SEC. 44. All fractional sizes shall be counted to the full inch above, not below.
 SEC. 45. No cutter shall be allowed to accept less than the regular price per box for cutting on account of the employment of an assorter.
 SEC. 46. All glass must be flattened and cut weekly, except in cases of ovens breaking down or other unavoidable circumstances.
 SEC. 47. Cutters when squaring up glass in sheets and standing them out shall book the same according to the wage agreement, and any cutter violating this law shall be fined \$25 for the first offense, \$50 for the second offense, and any member found guilty of a third offense shall be suspended from the association.
 SEC. 48. Cutters shall not be allowed to work on Sunday, subject to a fine of \$5 for each and every offense.
 SEC. 49. All stock sheets must be handled by the cutter, who shall receive full pay for doing same.
 SEC. 50. Cutters shall not cut or book more than one blower's glass at any one time.
 SEC. 51. Cutters shall not carry spare glass into their stalls to cut. The company shall bear the expense of such transfer of glass.
 SEC. 52. Cutters shall not be allowed to keep an account of the snapper's work.
 SEC. 53. The manufacturers shall furnish oil and chalk for cutters.
 SEC. 54. Cutters shall not be allowed to cut glass in any size and book same to the company and themselves.
 For violation of the above a fine of \$25 shall be imposed for the first offense, \$50 for the second offense, and suspension from the association for the third offense.
 Accepted:

 Manufacturer.

 Local President.

Manufacturers' scale committee: John Koblegard, chairman; J. S. Walker, secretary; H. R. Hilton, John G. Todd, Charles H. Harding, Joseph Grant, C. F. Lutes.

National Window Glass Workers' scale committee: J. M. Neenan, president; Charles Bryant, secretary; John Siemer, Shreve Ames, George W. Harbert, Charles L. Bryant, Charles Beebe, Jules A. Brasseur, George H. Rozzell, James W. Woodruff.

Mr. LA FOLLETTE. Now, Mr. President, I will ask for a vote pro forma upon those amendments.

Now, Mr. President, I will ask for a vote pro forma upon those amendments.

The VICE PRESIDENT. The question is on agreeing to the amendments proposed by the Senator from Wisconsin.

Mr. STONE. It is understood, of course, that the matter referred to goes in the Record.

The VICE PRESIDENT. Yes; without objection, it goes into the Record. The question is on agreeing to the amendments.

The amendments were rejected.

Mr. LA FOLLETTE. Mr. President, I offer the amendment which I send to the Secretary's desk.

The VICE PRESIDENT. The Secretary will read the amendment.

The SECRETARY. Strike out paragraphs 255 to 271, inclusive, being all the paragraphs of Schedule I, and insert in lieu thereof the following:

1. Cotton card lap, sliver, roving, or roping, 5 per cent ad valorem.
2. Cotton waste and flocks manufactured, 10 per cent ad valorem; antiseptic, medicated, or sterilized cotton, cotton waste, or flocks, 20 per cent ad valorem.

3. Cotton carded yarn in the gray or otherwise, not advanced beyond the condition of singles by grouping or twisting two or more single yarns together, 1 cent per pound on all numbers up to and including No. 10, and one-twentieth of 1 cent per pound additional for each number or fraction thereof in excess of No. 10 and up to and including No. 29 or any fraction thereof; on No. 30 2 cents per pound, and one-tenth of 1 cent per pound additional for each number or fraction thereof in excess of No. 30.

4. Cotton carded yarn or thread not otherwise provided for, in the gray or otherwise, advanced beyond the condition of singles by grouping or twisting two or more single yarns together; and cable-laid yarn or thread, in the gray or otherwise, made by grouping or twisting two or more twisted yarns or threads together, 1½ cents per pound on all numbers up to and including No. 10 and three-fortieths of 1 cent per pound additional for each number or fraction thereof in excess of No. 10 and up to and including No. 29 or any fraction thereof; on No. 30, 3 cents per pound, and three-twentieths of 1 cent per pound additional for each number or fraction thereof in excess of No. 30.

5. Cotton combed yarn, in the gray or otherwise, whether in the condition of singles or advanced beyond the condition of singles by twisting two or more single yarns together, shall be dutiable at the same rates of duty as cotton carded yarns of similar structure, and in addition thereto one-half of 1 cent per pound.

6. Spool thread of cotton, crochet, darning, and embroidery cottons, on spools, shall be dutiable at the same rates of duty as the single yarns from which they are made.

7. Cotton cloth made of carded yarn, plain woven, in the gray, or bleached, dyed, colored, stained, painted, printed, mercerized, or otherwise finished, containing not more than 5 square yards to the pound, 5 per cent ad valorem; containing more than 5 and not more than 7½ square yards to the pound, 10 per cent ad valorem; containing more than 7½ square yards to the pound, 15 per cent ad valorem.

8. Cotton cloth, made wholly or in part of combed yarn, plain woven, in the gray, or bleached, dyed, colored, stained, painted, mercerized, or otherwise finished, containing more than 5 square yards to the pound, 12½ per cent ad valorem; containing more than 5 and not more than 7½

yards to the pound, 17½ per cent ad valorem; containing more than 7½ square yards to the pound, 22½ per cent ad valorem.

9. Cotton cloth, fancy woven, in the gray, or bleached, dyed, colored, stained, painted, printed, mercerized, or otherwise finished, figured or containing figures produced by various weaving devices known as dobby, drop-box, leno, lappet, swivel, and any other name except Jacquard, 25 per cent ad valorem.

10. Cotton cloth, made wholly or in part of dyed yarns, containing less than 5 square yards to the pound, 10 per cent ad valorem; containing 5 or more square yards to the pound, 25 per cent ad valorem.

11. Cotton cloth woven by means of the Jacquard attachment, not otherwise provided for, 30 per cent ad valorem.

12. Cotton table damask, 30 per cent ad valorem; manufactures of cotton table damask, or of which cotton table damask is the component material of chief value, not otherwise specially provided for in this section, 30 per cent ad valorem.

13. Cloths containing silk or artificial silk, in which cotton is the component material of chief value, shall be subject to the same rates of duty as cotton cloths of similar weave or construction, and in addition thereto 5 per cent ad valorem.

14. Cotton cloths filled or coated, in whole or in part, including oil-cloth of cotton; waterproof cloths composed of cotton or in which cotton is the component material of chief value, 25 per cent ad valorem.

15. Handkerchiefs or muffers of cotton, in the piece or otherwise, finished or unfinished, hemstitched or not, not otherwise specially provided for, shall pay the same rate of duty as the cloth of which they are made, and in addition thereto 5 per cent ad valorem.

16. Towels, wash rags or cloths, finished or unfinished and not in the piece, or cloth composed wholly or in part of looped threads lying on the surface, such as are known as terry cloth, and articles made therefrom, not including wearing apparel; any of the foregoing made of cotton or of which cotton is the component material of chief value, 20 per cent ad valorem.

17. Plushes, velvets, and all pile fabrics made of cotton, or of which cotton is the component material of chief value, whether the pile covers the entire surface or not, and cut in whole or in part, 40 per cent ad valorem: *Provided*, That manufactures or articles in any form, including such as are commonly known as bias dress facings or skirt bindings, made or cut from plushes, velvets, or other such pile fabrics composed of cotton, or of which cotton is the component material of chief value, shall be subject to the same rates of duty as the fabrics from which they are made.

18. All articles manufactured of cotton chenille, or of which cotton chenille is the component material of chief value; Jacquard-figured tapestry, and Jacquard-figured upholstery goods, weighing over 6 ounces per square yard, made of cotton, or of which cotton is the component material of chief value, 40 per cent ad valorem.

19. Stockings, hose, and half hose, made wholly or in part on knitting machines or frames, commercially known as seamless, composed of cotton, or of which cotton is the component material of chief value, 20 per cent ad valorem.

20. Stockings, hose, or half hose, made wholly or in part on knitting machines or frames, or knit by hand, and commercially known as full-fashioned, composed of cotton, or of which cotton is the component material of chief value, valued at not more than \$2 per dozen pairs, 50 per cent ad valorem; valued at more than \$2 per dozen pairs, 60 per cent ad valorem.

21. All underwear of every description, made wholly or in part on knitting machines or frames, or knit by hand, finished or unfinished, not otherwise specially provided for, composed of cotton, or of which cotton is the component material of chief value, valued at not more than \$1.50 per dozen garments, 20 per cent ad valorem; valued at more than \$1.50 per dozen garments and not more than \$3 per dozen garments, 30 per cent ad valorem; valued at more than \$3 per dozen garments and not more than \$6 per dozen garments, 40 per cent ad valorem; valued at more than \$6 per dozen garments, 45 per cent ad valorem.

22. Men's and boys' gloves, knitted or woven, composed of cotton, or of which cotton is the component material of chief value, 50 per cent ad valorem.

23. Tire fabric or fabric suitable for use in pneumatic tires, made of cotton, or of which cotton is the component material of chief value, 25 per cent ad valorem.

24. Bone casings, garters, suspenders and braces, webs, webbings, and tubing, any of the foregoing composed wholly or in chief value of cotton or of cotton and India rubber, and not embroidered by hand or machinery; spindle banding, woven, braided, or twisted lamp, stove, or candle wicking, loom harness, beads or collars, boot, shoe, and corset laces, labels for garments or other articles; composed of cotton, or of which cotton is the component material of chief value, 30 per cent ad valorem.

25. Belting for machinery made of cotton and India rubber, or of which cotton is the component material of chief value, 20 per cent ad valorem.

26. Clothing, ready-made, and articles of wearing apparel of every description, wholly or partly manufactured, not otherwise specially provided for, composed wholly or in chief value of cotton, 30 per cent ad valorem.

27. Lace window curtains, pillow shams, and bed sets, finished or unfinished, made on the Nottingham lace-curtain machine, and composed of cotton or other vegetable fiber, when counting not more than six points or spaces between the warp threads to the inch, 35 per cent ad valorem; when counting more than six and not more than eight points or spaces to the inch, 40 per cent ad valorem; when counting nine or more points or spaces to the inch, 45 per cent ad valorem.

28. All articles made from cotton cloth, and all manufactures of cotton, or of which cotton is the component material of chief value, not otherwise specially provided for, 30 per cent ad valorem.

29. The term cotton cloth wherever used in the paragraphs of this schedule, unless otherwise specially provided, shall be held to include all woven fabrics composed wholly or in chief value of cotton, in the piece or cut in lengths, and shall not include any article, finished or unfinished, made from cotton cloth.

Mr. LA FOLLETTE. Mr. President, I desire to submit some observations on this amendment before it is acted upon.

The handbook which has been constantly before us since the first day of this debate presents for each paragraph of the bill a table showing the rate fixed in the Payne-Aldrich tariff law as a basis of comparison with the rates in the pending bill. Throughout our consideration of this subject we have been constantly reminded that a rate under consideration is this or that much "below the Payne-Aldrich rate"; that it "reduces the Payne-Aldrich rate" this or that percent; that it is a "very great reduction over existing duties." Such has been the reiterated

comment. The Payne-Aldrich rates have been taken as a standard of measurement in considering the reductions in the pending bill.

I begin, therefore, on the cotton schedule, as on yesterday I began on the woolen schedule, with a brief discussion of the character of the duties of the Payne-Aldrich cotton schedule. The Dingley rates were concededly high-tariff rates. The call for tariff revision heard throughout the country for years prior to 1909 was based upon a demand for a reduction of those duties. When revision came four years ago, however, some of the most unjustifiable increases were made in the cotton schedule, and instead of being reduced the rates in this schedule were actually increased.

Let me remind Republicans upon this side that the thing that first introduced division in Republican ranks was this demand for tariff revision. The men who, responding to that demand, urged revision came to be known as progressive Republicans. The men who resisted it came to be known as standpat Republicans. The standpat Republicans opposed revision just as long as it was possible to do so. Tariff revision was insisted upon by the great body of the people of this country who believed the duties too high; otherwise there would have been no revision. And it was to secure *downward* revision that the subject was pressed.

When finally revision was forced upon the standpat bosses in Congress and we came to this cotton schedule that revision resulted, as it did in nearly all of the schedules, in wanton and reckless tariff increases instead of the reductions which the public had so urgently demanded.

Mr. President, the cotton rates were already excessive, *even if the cost-of-production principle was applied in the most liberal way*. Cottons are used, sir, by every class in the community, but especially by the poorer classes. But in the face of all this the standpat bosses, resentful that the people had finally forced revision of the tariff, resolved to "give them a lesson in tariff revision that would teach them to be less meddlesome in the future." They denied the plain fact that the duties were already rankly extortionate. They ignored the platform pledge to revise the duties according to the difference in the cost of production at home and abroad, which everyone knew would result in sweeping reductions, and seizing upon the opportunity to give the manufacturers still greater monopoly privileges they boldly and flagrantly increased the tariff on cotton goods in the revision of 1909.

It is difficult to illustrate by means of statistics many increases in these rates, since they were concealed in specific duties. It may be done, however, by a comparison and computation based on the rates themselves. For example, the rate on a certain class of fabrics, valued at over 16 cents per square yard, was raised from 30 per cent to 8 cents per square yard, an increase of over 50 per cent. On a fabric valued at 17 cents there was an increase from 30 to over 47 per cent. I cite these as characteristic of the changes made.

Fortunately, as to this schedule it is possible to demonstrate that the rates on cotton cloth in the Payne-Aldrich law are very excessive. To determine whether the rates in the cotton schedule are excessive it is desirable to see to what extent they restrict importation. These rates are not nearly so prohibitory as the rates on manufactures of wool, but the imports are nevertheless a comparatively small part of the domestic production. The year 1909 is the last year for which we have comparable statistics. In 1909 the total importation of unbleached, bleached, dyed, colored, stained, painted, or printed cotton cloth amounted to 67,985,908 square yards, valued at \$10,100,252. Production figures are only in a general way comparable, but they serve to show that the importation of cotton cloth amounts to a very small per cent of the domestic production. The following table gives the domestic production in 1909:

Production of cotton goods, including cotton small scales, in 1909 in the United States.

Products.	1909	
	Quantity produced.	Value.
Plain cloth for printing or converting.....	Square yards 2,324,635,171	\$115,914,170
Brown or bleached sheetings and shirtings.....	1,396,587,105	84,620,247

Total.....	6,285,461,005	451,226,950

Mr. President, I submit another table based on the Tariff Board's samples. I have before me the cotton textile samples, showing the actual cloth, upon which the Tariff Board based its investigation of 1912. They are, I think, exactly 100 in number. They are typical of the entire cotton industry of this country.

I have applied to these samples the Payne-Aldrich rates. I have had the same computations made upon the rates in the pending cotton schedule and in the substitute which I have offered.

This table gives the kind of cloth, the number of square yards to the pound, the kind of finish, the total American cost of conversion per square yard, the total English selling price per square yard, the duty per square yard under the Aldrich Act, the duty per square yard under the pending bill, and also the duty per square yard under the substitute which I have presented.

Mark you, Mr. President, this table shows the *total cost of conversion*. That means the total expense of making any one of these fabrics—converting them from the raw material as it comes to the factory into the finished product as it goes upon the market.

Now, the utmost that anyone contending for the principle of protection asks to-day is that the tariff shall measure the difference between the cost of production in this country and abroad; that is, the *difference* in the conversion cost.

I have not figured out in this table the difference in the conversion cost, but I have the total American conversion cost. I find that on these hundred samples, which are representative of the whole cotton industry, the present duties in all but 25 of the samples equal the *entire* conversion cost, to say nothing about the difference. In 4 of these hundred samples the duty is 55 per cent of the total conversion cost; in 4 more it is 70

per cent; in 5 more it is 75 per cent; in 6 more it is 80 per cent; in 6 more it is 90 per cent; in 20—that is, in one-fifth of these samples, which represent the cotton industry—it is 100 per cent of the conversion cost.

Just think of it, 100 per cent of the total conversion cost! Think of the burden that the American people have been carrying! Think of the iniquity of this cotton schedule, which, as a part of the tariff bill, was the issue of the campaign for many, many years. The people were promised revision downward, and when revision came the rates were lifted in this iniquitous and reprehensible way, and the American people were victimized. Is it any wonder, Mr. President, that they rose in revolt?

Fourteen of these samples show a duty of 125 per cent of the total cost of conversion; 10 of them carry duties of 150 per cent of the total cost of conversion; 9 of them—that would mean nearly a tenth of the industry—bear a duty to-day which is 175 per cent of the total conversion cost. Three of these samples show duties 200 per cent higher than the total conversion cost. You see the revisers had some special pets in this industry. Four of these typical samples show duties of 250 per cent of the total cost of conversion. Two of these samples carry duties of 300 per cent—not 300 per cent of legitimate protection, but 300 per cent more than all the cost of converting from the raw material to the finished product. One sample has a duty of 400 per cent and two of 600 per cent higher than the conversion cost.

Mr. President, I ask leave to incorporate this table in connection with my remarks without reading it in full.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The table referred to is as follows:

Duties on the Tariff Board cotton samples under the Payne-Aldrich law, the pending bill, and the La Follette substitute compared with the American conversion cost as found by the Tariff Board.

Sample No.	Kind of cloth.	Yarn.		Square yards per pound.	Kind of finish.	Total American cost of conversion per square yard.	Total English selling price per square yard.	Duty per square yard under Payne-Aldrich Act.	Duty per square yard under Senate bill.		Duty per square yard under La Follette substitute.	
		Warp.	Filling.						Per cent.	Amt.	Per cent.	Amt.

² French selling price.

³ As there is no English competition of samples 98, 99, and 100, and this class of goods is exported to England from America, the rate of the present duty is shown by taking the value equal to the lowest American cost obtained plus the cost of finishing and adding 8 per cent, as provided by law to make the value as the minimum basis in applying duty to foreign consigned goods.

Mr. LA FOLLETTE. Mr. President, one of the unjustifiable increases made by that revision of the tariff was on mercerization. Senators who were Members of this body then will remember the contest on that subject. I hold in my hand the evidence which I presented to the Senate at that time. I have not the time to read it now, but I had the original bills for mercerization in England and in this country, and I submitted them to the Senate in that debate to show that we could mercerize in this country as cheaply as they could in England. And yet those who had charge of the cotton schedule at that time, regardless of that evidence, insisted upon fixing a duty of 1 cent per yard for mercerization, to measure the "difference in the cost" of doing that work here and in England.

The opposition of the Progressive Republicans to any duty for mercerization in the tariff debate of 1909 is amply supported by the report of the Tariff Board on Schedule I. I will insert the table covering this subject. It shows that in all cases a duty of 1 cent a yard is much more than the total cost of mercerization. In fact, the difference in cost of mercerization, where there is any difference at all, is so small that it may properly be disregarded. The Tariff Board, in its report on Schedule I, page 503, says:

In order to show the relation of the extra duty on account of mercerization to the cost of mercerization, Table 157 has been arranged to show the labor cost and the total cost of mercerization on the square-yard basis. As will be seen from the table, the labor cost of mercerizing cotton fabrics varies from less than 0.08 of 1 cent to less than 0.11 of 1 cent per square yard, while the total cost of mercerizing varies from more than 0.53 of 1 cent to over 0.72 of 1 cent per square yard.

The extra duty on account of mercerization is 1 cent per square yard. That is to say, the duty is from 9 to 12.5 times the total labor cost of mercerizing and from 1.4 to nearly 2 times the total cost of mercerizing.

Cost per square yard of mercerizing selected samples.

Sample No.—	Width.	Cost per square yard for mercerization.		
		Labor.	Total.	Duty for mercerization.
33.....	Inches. 27	\$0.001069	\$0.007223	\$0.010000
48.....	29½	.000979	.006611	.010000
49.....	29½	.000979	.006611	.010000
64.....	28	.001031	.006965	.010000
65.....	32	.000902	.006904	.010000
67.....	27½	.001055	.007124	.010000
70.....	36½	.000791	.005343	.010000

The table prepared by the Tariff Board just presented shows that 1 cent for mercerization not only covers the difference in the cost, but in some cases considerably more than the whole cost. In some cases it is nearly twice as much as the whole cost. Every opportunity was seized upon in the tariff revision of 1909 to exact more and more from the overtaxed American people.

I have presented here an amendment—a substitute for the cotton schedule proposed in the pending bill. I hope I may offer some suggestions upon this schedule which will lead those in charge of this legislation, and who are disposing of it in their own way, to revise it in some respects. In the main, according to all the evidence of a scientific character which we now have, the cotton schedule proposed in the pending bill is a fair one, but I am satisfied that a critical study of it from any standpoint would result in changes which would materially improve this schedule. I do not mean to imply that those in charge of this schedule have failed to give it intelligent and painstaking scrutiny and investigation. However, I think I have had some advantage over them in the assistance which I have received from the expert who for two or three years—I do not know just how long—worked with the Tariff Board upon this subject. He has had a broader experience than anybody from the appraisers' office could possibly have had. He investigated different mills throughout the United States. And I am hopeful that what I shall incorporate with my remarks in the way of tables and explanations of them will induce the committee to make some changes.

At this point I ask leave, in connection with what I have to say upon this schedule, to print, without reading, the tables to which I have referred.

The VICE PRESIDENT. Is there objection? The Chair hears none, and permission is granted.

Mr. LA FOLLETTE. The rates of duty on yarns in my substitute are specific instead of ad valorem. While there are serious objections to specific duties on cloth and other complex products covered by Schedule I, there are excellent reasons for applying them to yarns, especially when the duties are levied with the object of equalizing the difference in cost of production between this country and abroad. The Tariff Board speaks with approval of making the duties on worsted yarns specific (report on Schedule K, p. 710) and the comments apply equally to cotton yarn. It says:

Yarns are comparatively well standardized and their cost varies in a certain regular relation to the fineness or count of the yarn. It is a simple matter, then, to adopt the specific system in this particular case. A duty can be assessed on No. 1 yarn and be made to increase by a cer-

tain proportion with each additional count of yarn. The proper additions could furthermore be made for doubling, dyeing, hard twisting, etc.

One of the objections, therefore, to the cotton schedule of the pending bill is the ad valorem duties on yarns.

Carded yarns are first considered in my substitute. The Tariff Board gave both the American and English costs for single yarns of number 28s to 60s. A careful analysis of these figures show that a duty of 2 cents on single 30s will a little more than equalize the difference in cost between here and England; it also shows that the difference in cost increases at the rate of about one-tenth of a cent per number between 30s and 60s. These differences were therefore written into my substitute.

The basis for these conclusions is found in the following tables, which are based on Tariff Board figures, and worked out in more detail, to show the conversion cost of warp yarns in the United States and England. All the calculations are in accord with the report of the Tariff Board on Schedule I (pp. 411-423).

Warp yarn conversion cost as found in lowest cost American mill, including spooling and other processes beyond spinning.

Yarn count.	Labor cost per pound through spinning process.	Labor cost per pound, adding 89 per cent for spooling, reeling, and packing.	Works expense cost per pound through the spinning process.	Works expense cost per pound, adding 34 per cent for spooling, reeling, and packing.	Total conversion cost per pound.

It was found, however, that 2 cents per pound on all numbers of yarns up to and including No. 30 would be excessive on the low numbers. This was determined by studying the total American yarn cost for low-count yarns in the Tariff Board report on Schedule I (p. 401). In absence of the English cost it is not possible to determine with accuracy the proper duty on low-count yarn, but the American costs lead to the belief that 1 cent per pound on No. 10s would be adequate and that one-twentieth of 1 cent should be added for each number up to No. 30.

In fixing the duties on twisted yarns allowance must be made for the added cost of twisting. An increase of one-half over the single yarns is adequate. This would make the duty on twisted 30s 3 cents. From this point the duty is made to increase at the rate of three-twentieths of 1 cent per number. As in the case of singles the duty on twisted yarns of low grade was reduced to conform with the rapid decline in the cost of production.

Applying these duties to the various counts we have the following duties in cents per pound resulting:

The rate of duty in cents per pound under the La Follette substitute on carded cotton yarns.

Count of yarn.	Rate of duty on singles cotton yarns (cents per pound).	Rate of duty on twisted cotton yarns (cents per pound).

Combed yarns are separately provided for in paragraph 5 of my substitute. They are made dutiable at the same rates as carded yarns plus $\frac{1}{2}$ cent per pound. The grading of the carded-yarn duties takes care of the increase in cost of combed yarns that comes with increased fineness and the flat $\frac{1}{2}$ cent additional covers the combing cost. The cost of combing cotton used in fine yarns is not materially greater than in medium yarns. Up to the roving and spinning processes the costs are substantially parallel. It is in the spinning process where the cost of fine yarns increases so much faster than medium and low yarns.

COTTON CLOTH.

Five paragraphs provide duties for cotton cloth in my substitute:

- Paragraph 7, plain cloth containing carded yarn.
- Paragraph 8, plain cloth containing combed yarn.
- Paragraph 9, fancy woven cloth.
- Paragraph 10, dyed yarn cloth.
- Paragraph 11, jacquard figured cloth.

PLAIN CLOTHS CONTAINING CARDED YARN.

These cloths are classified according to the number of square yards of cloth in one pound. Into the two lower classifications of this paragraph (7), the bulk of the automatic loom production of the country falls. (Illustrated by samples 1 to 5 of Tariff Board.) On these cloths the rates of duty proposed is 10 and 15 per cent. Automatic loom goods are produced as cheaply in this country as anywhere in the world; at least this is a fair inference from the findings of the Tariff Board.

PLAIN CLOTHS CONTAINING COMBED YARN.

Illustrated by Tariff Board samples 19 and 20. The same classification is followed here as in the case of carded yarn cloths and $2\frac{1}{2}$ per cent is added to cover combing.

FANCY WOVEN CLOTH.

Illustrated by Tariff Board samples 32, 35, 37, 57, and 60. Paragraph 9 provides a flat duty of 25 per cent on all fancy woven cloths, woven by means of any of the various known devices except Jacquard. A glance at the cost of production of 1,268 cotton cloths, on pages 743-797 of the Tariff Board report on Schedule I, shows that the percentage of labor cost in these goods is very much greater than on plain goods. This is due in a large degree to the fact that a weaver can run fewer looms on these goods than on plain goods. A few examples are here given of cloths having over 100 and not over 150 threads per square inch, and having over 4 and not over 6 square yards per pound. They are taken from pages 758-763 of the report.

Cotton cloths having over 100 and not over 150 threads per square inch and having over 4 and not over 6 square yards per pound.

[Tariff Board report on Schedule I, pp. 758-763.]

	Plain-weave colored yarn.	Plain-weave gray yarn.	Drop-box weave colored yarn.
Per cent labor is of total cost.....	33.3	15.3	31.9

Do.....	27.5	19.5	35.5
Do.....		17.2	30.5
Do.....		20.3	35.9

NOTE.—These, of course, are not the same samples. The plain-weave samples are Nos. 487 to 501, inclusive; the drop-box weave samples are Nos. 554 to 568, inclusive; the plain-weave colored-yarn samples are Nos. 515 to 527, inclusive.

YARN-DYED CLOTHS.

Tariff Board samples 81 and 83 illustrate the fabrics which are dutiable under the highest classification in paragraph 10 of my substitute. The reason for a higher duty on these goods than on plain goods is shown in the foregoing table. The labor cost in them is almost twice as much as the labor cost in plain cloths. The lower classification is to take care of such goods as are illustrated by sample 77 of the Tariff Board samples. They do not need as much protection as the fine ginghams.

Yarn-dyed cloths are not provided for in the pending bill, and it is probable that if the importers desire to test the matter in the courts they may be made dutiable as plain cloths. This is a serious defect.

A very effective argument against Schedule I, as the committee has presented it to the Senate, is to be found in a brief submitted by Simeon B. Chase for the independent manufacturers of the New England States. His argument is based on the Tariff Board report. Part of his Exhibit D, which is inserted below, makes it clear that higher duties should be levied on combed-yarn cloths and fancy cloths.

Showing the error made by the Ways and Means Committee in not separating in wider proportion the duties for combed yarn and fine or fancy cloths against duties for carded-yarn productions.

Yarns above 60s, as used in cloth, are largely combed yarns. The Tariff Board gave details but did not mention the application in the table of 100 representative cloths, or in Table 215, pages 744-789, which table covered all cloth investigated.

Compare the facts as established in Tariff Board report on cloths of plain weave, 6 to 9 square yards per pound, viz:

Carded-yarn cloths, as represented by samples 26 to 117 (yarn number from 4 to 37), page 744/6—92 samples:	Per cent.
Labor-cost averages.....	14.97
Conversion-cost averages.....	28.82
Combed-yarn cloths, as represented by samples 615 to 693 (yarn number from 42 to 120), page 764/6—79 samples:	Per cent.
Labor-cost averages.....	29.4
Conversion-cost averages.....	46.4

JACQUARD FIGURED GOODS.

Illustrated by No. 33 of the Tariff Board samples. The pending bill makes Jacquard figured goods dutiable at the same rate as "cloth when bleached, dyed, colored, stained," and so forth. It is designated as "woven figured." There is no reason to justify this classification. The pending bill is too low on these goods. My substitute makes them dutiable at 30 per cent (par. 11). Jacquard figured goods are woven in Europe on broad looms with a double selvedge in the middle. The goods are then split. It is said that American manufacturers can not compete with this cheap production without a very high tariff. This argument does not appeal strongly to me, but I do think that Jacquard figured goods require more protection than ordinary cotton cloths.

In my substitute no additional duties are added for any of the finishing processes, such as bleaching, dyeing, coloring, staining, painting, printing, or mercerizing. (The paragraph, 10, relating to dyed-yarn fabrics relates to coloring done before weaving.) The Tariff Board establishes that the cost of finishing is as low in the United States as abroad; it therefore may be disregarded. (Tariff Board Cotton Report, p. 502.)

The pending bill increases the rates 2½ per cent, to cover the finishing processes mentioned above. They thus err both ways. They leave unprotected by a differential several classes of goods that need it, and protect by a differential, classes of goods that do not need it.

OBJECTIONS TO CLOTH DUTIES OF PENDING BILL.

The objections to the cloth duties of the pending bill may be summed up as follows:

First. It stands admitted on the record of the proceedings of the Senate that it would be next to impossible to have administered the cloth paragraph of the pending bill as it was reported from the Finance Committee, classifying cloths according to the "highest" count of yarn which they contain.

Following criticism on this paragraph in the debate, the Finance Committee proposed to amend the same by substituting the word "average" for the word "highest." This would classify cloths according to the average count of yarn which they contain. This is virtually an abandonment of the principle upon which the paragraph was framed at the outset. As the wording now stands, cloths would be classified somewhat as they are under the Payne-Aldrich law.

The committee has attempted to escape from what was admittedly an error, but it still retains the framework of the original scheme upon which it ventured, and gives us finally a classification in debatable language that will prove difficult and embarrassing in administration.

Second. The pending bill does not provide a differential for cloths containing combed yarns. These cloths have a much higher labor cost than carded yarn cloths, and they should have such a differential as is found in my substitute.

Third. No provision is made in the pending bill for yarn-dyed cloths. The phrase "bleached, dyed, colored, stained, painted," and so forth, does not provide for these cloths, since the courts have held that this phrase refers to finishing operations subsequent to weaving. Hence dyed yarns would be dutiable in the pending bill as plain cloths.

Fourth. Adequate provision is not made for Jacquard figured goods. They should not be classed with "cloth when bleached, dyed, colored, stained," and so forth. Their cost of production is very much greater than that of the cloths with which they are classed. They should be separated and made dutiable at a higher rate.

Fifth. The increase of duties in the pending bill because of such finishing processes as bleaching, dyeing, coloring, printing, mercerizing, and so forth, is not justified. The framers of this schedule have fixed differentials where they are not needed and omitted them where needed.

FILLED COTTON CLOTH AND WATERPROOF CLOTH.

The rates of duty on these cloths in the pending bill and my substitute are the same.

The pending paragraph (259) provides duties for waterproof cloths containing "other vegetable fiber" as well as cotton. A separate amendment accompanies my substitute, transferring waterproof cloth containing "other vegetable fiber" to Schedule J.

HANDKERCHIEFS.

The provision of my substitute (par. 15) that handkerchiefs and mufflers shall be dutiable at the same rates of duty as the cloth from which they are made plus 5 per cent is a much more equitable duty than the rates of 25 and 30 per cent provided in paragraph 260 of the pending bill. In my substitute all the changes in the cloth paragraphs help to equalize the duties.

TOWELS, TERRY CLOTH, ETC.

My substitute provides on these articles a duty of 20 per cent (par. 16); the rate in the pending bill is 25 per cent (par. 269).

DAMASK.

Damask is illustrated by Tariff Board samples 38 and 89. Under paragraph 268 of the pending bill it is dutiable at 25 per cent. Under paragraph 12 of my substitute it is dutiable at 30 per cent. The Jacquard is frequently used in the manufacture of damask; it therefore is fair to put the same rate on it as on Jacquard figured goods.

CLOTHS CONTAINING SILK.

Illustrated by Tariff Board samples 96 to 100, inclusive. On these goods the pending bill fixes a flat rate of 30 per cent

(par. 259); my substitute makes them dutiable at the same rates as cloths of similar structure plus 5 per cent. This is much fairer. It avoids excessive duties on cotton goods containing silk, with plain weaves, and it provides adequate duties on goods of more complicated weaves. The flat rate in the pending bill is too high on plain-weave goods and too low on the more complicated weaves, such as Jacquards.

PLUSHES, VELVETS, ETC.

Illustrated by Tariff Board samples 91 and 92. The rate of duty on these goods in my substitute (par. 17) is the same as in the pending bill (par. 262).

JACQUARD FIGURED TAPESTRIES, UPHOLSTERY GOODS, ETC.

Illustrated by Tariff Board sample 93. The pending bill carries a rate of 35 per cent (par. 263); my substitute a rate of 40 per cent (par. 18).

HOSE.

Paragraphs 19 and 20 of my substitute provide duties on hosiery. They correspond to paragraphs 264 and 265 in the pending bill. Both bills recognize the distinction between machine-made hosiery and full-fashioned, hand-finished hosiery. On the former both bills fix the duty at 20 per cent. On the latter my rates are higher. They are justified by the following table based on the Tariff Board report (p. 615).

Costs of ladies' full-fashioned hose in the United States and Germany.
[Statistics are for 1 dozen pairs. M. C. P.=Mercerized combed peeler cotton; C. E. L.=Combed Egyptian lisle; M. E. L.=Mercerized Egyptian lisle.]

Unit No.	Description of yarn.	German mill selling price.	American conversion cost, including selling expense and profit.	German conversion cost, including selling expense and profit.	Difference in cost.	Difference in cost expressed in per cent.	Duty under pending bill, per cent.
1	United States, 1/18 M.C.P.	\$1.3750	\$1.5200	\$0.7090	\$0.8110	58.9	50
2	Germany, heavy lisle	1.5000	1.2150	.7650	.450	30.0	50
3	United States, 2/80 C. E. L.	1.0000	1.2300	.5400	.690	69.0	30
4	Germany, 1/16 Egyptian	2.0000	1.3125	1.1100	.1725	8.6	50
5	United States, 2/70 M.E.L.	.9290	1.2777	.5240	.7537	81.1	30
6	Germany, Egyptian	.9930	1.2100	.5880	.6220	62.7	30
7	United States, 1/12 K. P.	1.0000	1.5309	.5800	.9509	95.1	30
	Germany, Am. cotton						
	United States, 1/24 C. P.						
	Germany, 1/20 A. M.						

¹ The German mill expense, selling expense, and profit on these samples (Tariff Board report, p. 615) is very much higher than on the other samples. It is fair to assume that there was a mistake in transcribing the figures.

Discussing the costs of full-fashioned hosiery in the United States and Germany, the Tariff Board says in its report on Schedule I (p. 614):

In the full-fashioned hosiery industry the labor cost in the United States is notably higher than in Germany. A number of manufacturers stated to agents of the board that perhaps this wide divergence of labor costs is due to the fact that this branch of the industry in this country is comparatively new; that it is necessary to employ laborers at day wages until they have become sufficiently skilled in their occupation to permit of a piece wage being established, and that at the present time it is very difficult to obtain proficient workmen. A high degree of skill is required to operate a full-fashioned knitting machine and a proficient workman is able to demand a relatively high wage, since he is able not only to increase the output per machine, but also to reduce to a minimum the defects which would necessitate selling the article at a reduced price, though the cost of production remains the same.

UNDERWEAR.

The bill places a flat rate of 30 per cent on underwear (par. 266); my duties are graded according to value and are lower than the rates of the pending bill on cheap goods and higher on expensive goods (par. 21).

On underwear valued at not more than \$1.50 per dozen garments, a rate of 20 per cent as proposed in my substitute is adequate. Thirty per cent in the pending bill is excessive on this cheap product, but not sufficient on garments valued at more than \$3 per dozen. My substitute here proposes duties of 40 and 45 per cent, according to the value.

KNITTED OR WOVEN GLOVES.

The Senate bill raised the duty on these goods from the House rate of 35 per cent to 45 per cent (par. 265); this is not far from correct, although the 50 per cent in my substitute is fairer (par. 22).

WEARING APPAREL.

The rate of duty on wearing apparel of cotton is 30 per cent in both the substitute which I offer (par. 26) and the pending bill (par. 261).

One of the amendments accompanying my substitute, however, changes the duties on shirts and collars, composed of linen, in Schedule J.

LACE WINDOW CURTAINS, ETC.

I have adopted without change paragraph 270 of the pending bill and incorporated it as paragraph 27 of my substitute.

SUMMARY OF OBJECTIONS TO THE COTTON SCHEDULE OF THE PENDING BILL.

First. It imposes ad valorem instead of specific duties upon yarns.

This suggestion is not intended to raise the much-controverted issue between specific and ad valorem duties generally. But as applied to cotton yarns, where the classification has been so perfected and so absolutely standardized, and where the expense of making the yarns sustains a very constant ratio to the fineness of the yarn, the specific rate is not only much fairer than the ad valorem and much more certain to maintain a competitive level of duty, but is much more easily administered than the ad valorem.

Second. The cloth paragraphs impose duties which in administration, I believe, will prove very difficult of execution.

Third. The rate fixed on carded yarn cloth is as high as the rate on combed yarn cloth. This is manifestly wrong upon any theory.

Fourth. Yarn dyed cloths are cloths in which the color has not been added as a part of the finishing after the weaving, but is attained by the dyeing of the yarns before weaving. This is a separate process, attended with a degree of expense which should be recognized in the duty levied. The labor cost in these yarn dyed cloths is nearly twice as great as in the plain cloths. In the pending bill they are given the same rate as plain cloths. The rates should recognize the difference.

The courts have held that the phrase "bleached, dyed, colored, stained, painted," and so forth, refers to the coloring of cloths after weaving, and not to the process of weaving the color into the cloth by the use of yarns which have been previously dyed by a separate process.

Fifth. The duty upon the machine-made hosiery in the pending bill, I believe to be adequate; but upon full-fashioned hosiery it is below a competitive rate when compared with the cost of production in Germany, as shown by the Tariff Board report.

Sixth. The duties on cheap grades of underwear in the pending bill are too high; and too low on the more expensive grades.

Mr. President, if the substitute which I offer for this schedule is not adopted I venture to hope that the conferees may find time for some consideration of the comment which I have submitted upon this schedule.

I think it is upon the cloth paragraphs of the cotton schedule of the pending bill that the severest criticism can be made. I am hopeful that further consideration will lead to an abandonment of the method of classifying cloths which was proposed first in the House bill and which was reported unchanged by the Finance Committee into the Senate, but which was practically abandoned in the Committee of the Whole. I trust that it may be abandoned altogether, and I beg of the committee in charge of this schedule to scrutinize the system of imposing the duties upon cloths contained in the amendment which I have proposed.

Now, Mr. President, a word in conclusion.

On yarns, the rates in the pending schedule and in my substitute are about the same; on plain carded yarn cloths of the automatic-loom production, my rates are 5 per cent lower than the rates presented in the bill by the committee; on plain combed yarns my rates are about 2½ per cent higher.

Mr. WILLIAMS. Mr. President, I did not quite catch what the Senator said were the rates that were 15 per cent lower in his amendment.

Mr. LA FOLLETTE. On plain carded yarn cloths of automatic-loom production. Those I am confident would stand a reduction of 5 per cent and still leave a protective rate amounting to the difference in the cost of production here and abroad.

On plain combed yarn cloth as distinguished from carded yarn cloth, which is woven on automatic looms, the rates that I suggest for the consideration of the committee are 2½ per cent higher. The weaving of these cloths requires very intelligent supervision and mechanical skill of a high order.

On plain carded yarn cloths that are bleached, colored, printed, stained, mercerized, and so forth, the rates which I have suggested are 2½ per cent lower. We perform all of those operations in this country just as cheaply as they are performed abroad.

On fancy woven cloths the rates are substantially the same. On yarn dyed cloths, containing less than 5 square yards per pound, the rates in the amendment which I have proposed are

from 5 to 10 per cent lower than the rates in the committee bill.

On yarn dyed cloth, containing 5 or more square yards per pound, the rates in the schedule which I submit are 2½ per cent higher, but on the others they are from 5 to 10 per cent lower. That adjustment will maintain the industry in this country, and will subject the manufacturers to such competition as will restrain them from exorbitant charges to the consumer.

On Jacquard figured cloth the rates which I have suggested in the amendment submitted are about 5 per cent higher. On terry cloth, and so forth, including everything embraced in that paragraph, they are 5 per cent lower.

On plushes and velvets the duty is the same. On Jacquard figured tapestry, for reasons which I assigned a moment ago, they are 5 per cent higher. On the cheap machine-made hosiery the duties are the same. On full-fashioned hosiery, which requires the very highest skill in the operation of the machines, they are about 10 per cent higher.

On underwear valued at not more than \$1.50 a dozen the rates proposed are 10 per cent lower than the rates proposed in this pending schedule. On underwear valued at more than \$3 per dozen the rates are about 10 per cent higher. On cotton clothing the duties are the same.

It may be said in a general way that the level of rates in the pending bill and in my substitute are on the average the same. The average ad valorem rate would probably not vary more than a very small per cent.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Wisconsin. [Putting the question.] The yeas seem to have it. The yeas have it, and the amendment is rejected.

Mr. LA FOLLETTE. Mr. President, I can not hope in the brief time which I feel privileged to take to even approach a full presentation of the schedules upon which I had made preparation to be heard. I think perhaps the best I can do—for I appreciate the desires of other Senators—is to confine myself to a discussion of the iron and steel schedule.

I have assembled information upon the cost of production of steel products, not only in this country, but in Germany and in England, from official or semiofficial sources; and I ask leave to incorporate as a part of my remarks in connection with this schedule certain tables, with descriptive comment.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and permission is granted.

Mr. LA FOLLETTE. Unprejudiced specific information relating to the cost of production of a majority of the products covered by Schedule C is not available.

Important information, however, is available on pig iron, ingots, steel rails, and similar heavy products. This data is so complete as to amount to a demonstration that upon these commodities, the basis of the metal schedule, the proof is complete that we can produce them in the United States more cheaply than they can be produced abroad. They should therefore be placed on the free list. The Senate bill properly transfers these products to the free list.

The authority upon which I rely for the production cost of pig iron, ingots, steel rails, and similar heavy products in the United States, is the report of the Commissioner of Corporations on the Steel Industry, issued May 6, 1913. This is by far the most comprehensive and thoroughly scientific study of production cost dealing with a great industry ever made in this or any other country. The investigation covered a period of nearly two years. It embraced from 70 to 90 per cent or more of the total production of the respective articles discussed. It included nearly all of the manufacturing concerns making steel products, large and small. Small companies were included for two reasons—first, because their conditions of production were different, and it was important to have such data for purposes of comparison; and, second, because in the manufacture of certain products there were only a limited number of large manufacturers engaged, and hence it was desirable to have a number of the small manufacturers in addition thereto to make the averages more representative.

The report states:

The costs of production for the United States Steel Corporation were included for every article for which cost statement is made in this report. On account of the predominant position of this company in many lines of manufacture, the original costs presented in this report are necessarily very near the average costs of the Steel Corporation, since for most of the products its proportions of production were so large that its costs have a controlling influence upon the averages.

There were also a number of very large independent manufacturing companies whose aggregate production for most of the commodities here considered form a very important part of the total tonnage, namely, Jones & Laughlin Steel Co., Lackawanna Steel Co., Republic Iron & Steel Co., Cambria Steel Co., Penn-

sylvania Steel Co., Tennessee Coal, Iron & Railroad Co. (acquired by Steel Corporation in 1907), and the Colorado Fuel & Iron Co.

Also included in these cost averages are the products of a group of wholly or partly ungraded concerns of less importance, namely, La Belle Iron Works, Wisconsin Steel Co., Inland Steel Co., Youngstown Sheet & Tube Co., Pittsburgh Steel Co., Wheeling Steel & Iron Co., Sloss-Sheffield Steel & Iron Co., and the Shenango Furnace Co.

Besides these companies, 14 smaller iron and steel producing concerns furnished cost data. While these companies were all relatively small, they included some very well managed and profitable enterprises.

Nothing short of a careful study of this report can convey an adequate idea of its scope and thoroughness in every detail. As an example of its character, I quote one paragraph:

The meaning of the item of labor as forming a part of the mere costs of the several products needs brief explanation. The labor costs, as shown, represent in every instance the wages paid for all forms of producing labor for that particular product at that particular department of the works, including labor in repairs and maintenance. There are, in addition, other small expenditures for labor not classified as such by most steel companies. The labor in connection with the operation of steam plants, which is included under the item of steam, is practically the only labor cost not so classified, and this amounts to only a very few cents per ton for most products.

FIG IRON COSTS IN GREAT BRITAIN.

J. Stephen Jeans is a recognized English authority on iron, steel, and allied industries. He has been for many years secretary of the British Iron Trade Association. He was formerly secretary to the Iron and Steel Institute, and managing editor of the Iron and Coal Trades Review. He is the author of the "Iron trade of Great Britain"; also author of "Steel, its manufacture and uses"; also editor of the "Reports of the commissioners appointed by the British Iron Trade Association to inquire into iron and steel and allied industries of the United States."

In his report to the tariff commission of England, Mr. Jeans said:

All other things being approximately equal, the country that produces the cheapest pig iron should in the long run be master of the iron-trade situation.

I believe that authoritative data are now at hand to prove that the United States is that country. The most reliable costs of producing pig iron in England are those submitted by Mr. Jeans to the British tariff commission. The costs reported by Mr. Jeans are for 1903 and 1904.

The cost of producing pig iron in Great Britain, according to this authority, is as follows:

Item of cost.	Cost of Cleveland pig iron ¹ (Great Britain).	Cost of Bessemer pig iron (West Coast).
	Per ton.	Per ton.
Iron ore.....	\$3.89	\$6.20
Coke.....	3.89	5.11
Limestone.....	.36	.32
Wages at furnace.....	.91	.97
Stores, loose plant, etc.....	.16	.14
Bricks, clay, and boiler coal.....	.16	.16
Fixed charges, including relining and repairs.....	.55	.57
Total.....	9.92	13.47

¹ The pig iron produced in this district is foundry, basic, and Bessemer. Of this the foundry pig predominates in quantity, the basic is next most important in quantity, and the Bessemer the least important in quantity.

FIG IRON COSTS IN GERMANY.

While there are a number of countries that promise to be large producers of pig iron, the real competition at the present time is between Great Britain, Germany, and the United States. The cost of pig iron in Germany is given by Charles M. Pepper, a special agent of the Department of Commerce and Labor, in his report on the German iron and steel industry, 1909. His costs are not itemized, and it is not possible to analyze them. He states that the cost of producing pig iron in 1908 was—

Dortmund (district and city), basic pig..... \$13.57 to \$14.28
Luxemburg, basic pig..... 11.42 to 12.61

FIG IRON COSTS IN THE UNITED STATES.

The report of the Bureau of Corporations on the cost of production in the steel industry, issued May 6, 1913, furnishes conclusive information relating to the cost of producing pig iron in the United States.

The various kinds of pig iron produced are defined in the report substantially as follows:

Bessemer iron: This is the most important kind of pig iron produced in the United States. It is a quality of pig iron

which is suitable for the production of steel by the original Bessemer process. It must not contain more than 1 per cent of phosphorus and at least 1 per cent of silicon. Phosphorus in excess of 1 per cent does not make Bessemer steel of suitable quality. Bessemer ores are more expensive than non-Bessemer ores, and for that reason the cost of Bessemer pig is usually higher than for other grades which do not require Bessemer ore. Of the total production of Bessemer iron the cost data presented in the report covers 93.1 per cent.

Basic iron is second in importance to Bessemer iron. It is the iron in which the phosphorus exceeds 1 per cent, and it is made from non-Bessemer ores. It is called basic because it is suitable for the manufacture of steel by the basic process. In the United States the only basic steel-making process in present use is the basic open-hearth process.

The cost of basic iron is less than Bessemer, but its value is less. Its production has increased more rapidly than Bessemer in recent years.

Of the total production of basic pig iron, the cost statements presented in this report cover 61 per cent.

Foundry iron: This grade of iron includes a wide variety of pig irons which are suitable for casting. Foundry irons vary considerably in cost value. Generally speaking, the cost is lower than for Bessemer iron, because the ores ordinarily used are cheaper.

The greater part of the southern pig iron covered by the cost statements presented in this report is of the foundry grade. Of the total production of southern pig iron the cost data presented covers 53 per cent.

Forge iron: This kind of pig iron is fourth in rank in respect to the tonnage produced. It is a grade suitable for making wrought iron in the puddling furnace, and so of much greater relative importance in former times than at present. The grades of forge iron are different and consequently they have different costs and values. As foundry and forge irons are not used in making steel products, comparatively little information was obtained except for southern foundry. For northern foundry and for forge iron the information was insufficient to make it practicable to give the results in detail.

From the tables presented in the report, I am able to submit the average costs in detail of Bessemer pig iron, of basic pig iron, and of southern pig iron—mainly foundry grade—produced in the United States.

From the costs reported by Mr. Jeans to the British tariff commission, I am able to submit the average cost in detail of Cleveland-Bessemer, basic, and foundry-pig irons, and the cost of hematite Bessemer—West Coast—produced in Great Britain.

From the report of Charles M. Pepper, special agent of the Department of Commerce and Labor, on the German iron and steel industry, I am able to submit the costs, not itemized, of producing pig iron in Germany.

All of these costs in tabular form are presented as follows, which I will insert in the RECORD without reading:

Comparison of the costs of producing pig iron in the United States, Great Britain, and Germany.

Item.	United States.			Great Britain, 1903-4.	
	Cost of Bessemer pig iron, 1902-1906.	Cost of basic pig iron, 1902-1906.	Steel Corporation cost of southern pig iron, 1910. ¹	Cost of pig iron in Cleveland district. ²	Cost of Bessemer pig iron, west coast. ³
Iron ore, etc.	\$6.10	\$6.69	\$2.88	\$3.89	\$6.20
Coke	3.28	2.79	3.80	3.89	5.11
Limestone	.43	.47	.19	.36	.32
Labor	.73	.60	.75	.91	.97
Steam	.10	.10	.12		
Materials for repair and maintenance	.13	.11	.19		
Supplies and tools	.12	.10			
Miscellaneous works, expense	.24	.24		.87	.87
Relining and renewals	.18	.18	.20		
Contingent fund	.03	.02	.15		
General expense and depreciation	.76	.52	.50		
Total	12.10	11.82	9.07	9.92	13.47

¹ Mainly foundry pig.

² Mainly foundry, considerable quantity basic, also some Bessemer.

³ Bessemer pig iron.

Germany, 1908: Dortmund, cost of basic pig iron, \$13.57 to \$14.28; Luxemburg, cost of basic pig iron, \$11.42 to \$12.61. That is an average for the Dortmund district of \$14.04, an average for the Luxemburg district of \$12.01, or a total average cost of basic pig iron for both districts of \$13.03.

It will be seen from the foregoing table that in the United States we produce—

	Per ton.
Bessemer pig iron at an average cost of	\$12.10
Basic pig iron at an average cost of	11.82
Foundry pig iron; that is, southern pig iron which is mainly foundry, at an average cost of	9.07

That in Great Britain they produce—

	Per ton.
Bessemer pig iron, West Coast, at an average cost of	\$13.47
Foundry pig iron, basic pig iron, and Bessemer pig iron, Cleveland, at an average cost of	9.92

That in Germany they produce—

	Per ton.
Basic pig iron, Dortmund district and city, at an average cost of	\$13.92
Basic pig iron, Luxemburg district, at an average cost of	12.01

An average for both districts of

	12.96
--	-------

The largest proportion of the production in the Cleveland district is foundry; basic is second; Bessemer third. The cost of basic iron is less than Bessemer, and the cost of foundry iron less than basic. The large production of foundry and basic in the Cleveland district accounts for the low average cost. This production cost, therefore, should be compared with the United States cost of southern pig iron, which is also largely foundry grade.

In other words, the average cost of producing Bessemer pig iron in this country is \$1.37 per ton less than in Great Britain.

The average cost of producing basic pig iron in this country is \$1.14 lower than the average cost of producing basic pig iron in the Dortmund and Luxemburg districts of Germany.

I have been unable to obtain the average cost of producing basic pig iron in Great Britain, separated from other grades of pig iron.

The average cost of producing foundry pig iron in the United States is 85 cents per ton cheaper than the average cost of producing foundry pig iron in Great Britain.

The average cost of United States Bessemer and United States basic, which I have given, are the averages stated in the steel report and include the small as well as the large companies.

The average cost of producing Bessemer pig iron, based on the investigation of the small companies alone, is higher, amounting to \$14.21 per ton as against an average of \$12.10 per ton when all companies are included, and an average of \$9.23 per ton when only the large companies are considered.

The average cost of basic pig iron produced in the United States by the small companies is shown to be \$13.90 per ton as against \$11.82 per ton when all companies are included in the average, and as against \$11.65 per ton, the average cost of basic pig iron when only the large companies are considered.

If, now, we contrast the average cost of producing Bessemer and basic pig iron by the small companies of this country with the average cost of Great Britain and Germany, we find that the small manufacturers of the United States produce Bessemer pig iron at an average cost of \$14.21 per ton; the average cost for Great Britain being \$13.47, which is 74 cents cheaper than the average cost of the small companies in this country.

The small manufacturers of the United States produce basic pig iron at an average cost of \$13.90 per ton; the average cost for Germany being \$12.96, which is 94 cents per ton cheaper than the average cost of the small companies of this country.

The Steel Corporation cost of southern or foundry pig iron, heretofore given at \$9.07 per ton, represents the lowest cost of producing southern or foundry pig iron.

But the average cost of the production of this class of pig iron in the southern district was higher when carried on by companies which were much less efficient on the whole than the Steel Corporation and was also higher than that of the companies in the North. This is especially true from the point of view of capital, the plant equipment, and the labor cost. The labor conditions in the South were particularly unfavorable for economical production. The cost of a ton of this grade of pig iron as produced by the Steel Corporation was, as before stated, \$9.07. The average cost of a ton of this same grade of southern pig iron produced by the various southern companies investigated was \$9.65, a difference of exactly 58 cents per ton.

The average cost of a ton of pig iron most nearly corresponding to this grade produced in Great Britain, as before stated, was \$9.92. That is to say, even in the poorer equipped mills in the southern district we produce this grade of pig iron 27 cents per ton cheaper than does Great Britain.

It is interesting to note that the labor cost in a ton of pig iron is very much higher in the southern district, where the rates of wages are low, as compared with other districts. This is due to the fact that in the southern district, relatively speaking, there is an absence of modern labor-saving devices for

handling material, and the further and very important fact that labor is less efficient. The labor cost of producing a ton of Bessemer pig, the same being the average for all companies, is but 73 cents per ton; the labor cost of producing a ton of basic pig iron, including all the companies investigated, is 60 cents per ton, while the labor cost in the southern district averaged \$1.23 per ton.

This statement in itself is important. It has always been deemed a final argument to cite the difference in wages paid. It has always been regarded decisive of the whole question. It proves nothing to say that wages are higher in this country than in competing countries; that is to say, high wages rarely, if ever, prove high labor cost. The lowest wages, as a rule, represent the highest labor cost, because low wages almost invariably mean inefficient labor and excessive labor cost. And contra, high wages, as a rule, mean high efficiency and low labor cost.

In conclusion, therefore, taking into account all of the companies in the United States, both large and small, and taking the best information obtainable as to foreign costs, we produce Bessemer pig iron \$1.37 per ton cheaper than our foreign competitors, basic pig iron \$1.14 per ton cheaper than our foreign competitors, and foundry pig iron 85 cents per ton cheaper than our foreign competitors.

Leaving out of the calculation the larger companies in the United States and comparing the cost of production exclusively between the smaller companies of this country and our foreign competitors, it costs us 74 cents per ton more than our foreign competitors to produce Bessemer pig iron, 94 cents per ton more than our foreign competitors to produce basic pig iron, and 27 cents per ton less than our foreign competitors to produce foundry or southern pig iron.

We are therefore at a disadvantage in only two classes of pig-iron production, namely, 74 cents per ton on Bessemer pig iron and 94 cents per ton on basic pig iron, and that, too, only in the case of the production cost of the smaller and most poorly equipped companies, where the wages are low and the labor relatively inefficient.

And this brings me to present for the consideration of the Senate the protection offered the producers of this country by the transportation charge which the foreign competitor must bear in order to reach our market with his product.

I have procured, through the kindly offices of the Interstate Commerce Commission, the rates on pig iron by the Red Star Line from Antwerp and other continental points, including the Netherlands, to New York, Baltimore, and Philadelphia. The established rate from continental points to New York, Baltimore, and Philadelphia is 8.85 cents per 100 pounds. That amounts to \$1.80 per short ton, or about \$2 per long ton.

The proof is conclusive, therefore, that on the great bulk of our production of pig iron we produce more cheaply than our foreign competitor. On two grades of pig iron produced by our smaller and poorer equipped companies—companies operating under the disadvantage of low wages and inefficient labor—our production cost is in the case of Bessemer pig iron 74 cents per ton higher and in the case of basic pig iron 94 cents per ton higher than our foreign competitor. Against the foreign competitor, however, we have the protection of a transportation charge of \$2 per ton, which he must pay before he can land his pig iron in the American port.

The committee is therefore fully warranted in placing pig iron, as they have, on the free list.

INGOTS.

The ingot is the second advanced form in the manufacture of steel. An ingot is usually about 6 feet long, 2 feet wide, and 1½ feet thick. It weighs about 4 gross tons.

Steel ingots under the Payne-Aldrich law carry 14 different rates of duty, ranging from 19.15 to 31.23 per cent. The Underwood-Simmons bill proposes to place ingots on the free list.

Is any duty required in this case; and if so, how much? To determine that question I think the Senate should be advised, in so far as possible, as to all the facts bearing upon production in this and the competing countries.

The cost of Bessemer ingots in Great Britain, according to the report of J. Stephen Jeans to the British tariff commission, is \$17.88 per ton, the labor cost being 69 cents.

Again the best authority at hand as to German costs is the report of Charles M. Pepper, special agent of the Department of Commerce and Labor. He gives the cost of steel making, 1908, in the Dortmund district, from \$16.90 to \$18.09 per ton, the labor cost being from 84 to 93 cents. In the Luxemburg district, 1908, the cost is given as \$17.13 to \$18.56 per ton, the labor cost being from 60 to 72 cents.

From the tables presented in the report of the Commissioner of Corporations on the steel industry I am able to give United

States costs. The cost of producing Bessemer billet ingots, 1902 to 1906, was \$15.47 per ton, the labor cost being 57 cents. The cost of producing Bessemer rail ingots, 1902 to 1906, was \$15.75 per ton, the labor cost being 55 cents. The Steel Corporation cost of producing Bessemer rail ingots, 1910, was \$12.77, the labor being 52 cents.

I submit, without reading, the various items of cost in detailed tabular form, as follows:

Comparison of the costs of producing ingots in the United States, Great Britain, and Germany.

Item.	United States.			Germany.	
	Cost of Bessemer billet ingots, 1902-1906.	Cost of Bessemer rail ingots, 1902-1906.	Steel Corporation cost of Bessemer rail ingots, 1910.	Cost of Bessemer ingots, 1903-1904, in Great Britain.	Cost of steel making in Dortmund district, 1908.
Pig iron, etc.	\$12.84	\$12.70	\$10.24	\$13.52	\$13.57-\$14.28
Labor	.57	.55	.52	.69	.84-.96
Manganese	.28	.73	.78		.60-.72
Limestone	.02	.01			
Fuel	.22	.13	.09		
Steam	.15	.11	.13		
Molds and stools	.15	.11	.07		
Materials in repairs and maintenance	.09	.10	.06	3.67	2.49-2.85
Supplies and tools	.10	.12			5.11-5.23
Miscellaneous works expense	.13	.14	.28		
General expense and depreciation	.92	1.05	.60		
Total cost	\$15.47	\$15.75	\$12.77	17.88	16.90-18.09

¹ If the so-called "book costs" of the Bureau of Corporations had been used, these figures would have been \$17.56, \$17.59, and \$17.45, respectively. Perhaps it is fairer to use these costs.

It will be observed as to labor that the highest American cost is lower than the lowest foreign cost.

Taking the several German costs given we find the average to be \$17.67 per ton.

Taking the average of Great Britain with the German average we find the general European average to be \$17.77.

The average book cost of ingots in the United States is \$17.53 per ton. This is 24 cents per ton less than the average European cost.

As in the case of pig iron, these ingot figures show that for years we have been producing these products of iron ore more cheaply than our foreign competitors.

Indeed, we have become an exporter even of these crude products. Our export to Europe last year of products of this class amounted to more than \$5,000,000, and in tonnage was more than eight times the amount imported.

Besides being able to produce more cheaply than they produce in Europe, we have had in addition to the Payne-Aldrich prohibitory duties, the additional protection of an ocean freight rate of from \$2.42 to as high as \$3.41 per ton (Liverpool to New York) depending upon the size and weight of the ingots.

BESSEMER STEEL RAILS.

The third stage of iron and steel manufacture is the rolling of ingots into different forms, such as billets, rails, bars, wire rods, sheets, and so forth.

The cost of producing Bessemer steel rails in Great Britain is given by J. Stephen Jeans as \$22.63. Of this cost the charge for labor is \$1.66.

The report of Special Agent Pepper, of the Department of Commerce and Labor, on the German iron and steel industry does not enter into the cost of steel-rail production.

The report of the Commissioner of Corporations on the steel industry gives the American cost of producing heavy Bessemer rails \$18.80, the labor cost being \$1.16. It gives the Steel Corporation cost of producing heavy standard Bessemer rails as \$16.67, the labor cost being \$1.14. It gives the Steel Corporation cost of heavy standard open-hearth rails (southern) as \$20.89 per ton, the labor cost being \$1.72.

Taking the book costs, which includes miscellaneous expenses, depreciation, and intercompany profits, the report gives us for the heavy Bessemer rails a cost of \$21.27, instead of \$18.80, and for the Steel Corporation cost of heavy standard Bessemer rails \$21.53, instead of \$16.67.

If we add to the cost of the open-hearth rails an allowance for general expenses, depreciation, and intercompany profits, it would increase the cost of these rails to \$22.54 per ton.

As in the case of ingots, I submit in detailed tabular form a comparison of the cost of production of steel rails in the United States and Great Britain, as follows:

Comparison of the cost of production of steel rails in the United States and Great Britain.

Item.	United States.			Great Britain—Cost of Bessemer rails, 1903-4.
	Cost of heavy Bessemer rails, 1902-1906.	Steel Corporation cost of heavy standard Bessemer rails, 1910.	Steel Corporation cost of heavy standard open-hearth rails (southern), 1910.	
Ingots.....	\$15.05	\$13.03	\$14.86	\$17.88
Labor.....	1.16	1.14	1.72	1.66
Fuel.....	.13	.16	.18	
Steam.....	.41	.36	.73	
Rolls.....	.15	.12	.46	
Materials in repair and maintenance.....	.21	.17	.44	3.09
Supplies and tools.....	.08	.39	.85	
Miscellaneous works expense.....	.32			
General expense and depreciation.....	1.29	1.30	1.65	
Total.....	\$18.80	\$21.67	\$20.89	\$22.63

¹ Book cost, \$21.27.

² Book cost, \$21.53.

It will be noted that the labor cost in the case of heavy Bessemer rails is 50 cents less per ton in the United States than in Great Britain, and in the case of heavy standard Bessemer rails (Steel Corporation) it is 52 cents less. In the production of heavy standard open-hearth rails the Steel Corporation labor cost in the United States is slightly in excess of the British labor cost.

Neither in the report of Mr. Jeans, the report of Mr. Pepper, nor from any other source, have we data on the foreign costs of production of steel products more advanced than steel rails. I am therefore unable to extend the comparison of cost production further. But the report of the Bureau of Corporations covers a number of articles of steel manufacture of higher finish, and an examination of these figures, and especially the labor cost of each, will be found helpful in considering the rates of duty applied in the pending bill.

LARGE BESSEMER BILLETS.

The detailed figures for the rolled products given in the Report of the Commissioner of Corporations on the Steel Industry show that for the years 1902-1906 the average book cost for all companies producing large Bessemer billets per ton was \$20.18; the labor cost was 55 cents.

The Steel Corporation's mill cost per gross ton of large Bessemer billets, as shown by the records of the corporation for 1910, approximate intercompany profits included therein, and integration mill cost, was \$17.97; the labor cost was 40 cents.

LARGE BASIC OPEN-HEARTH BILLETS.

For the years 1902-1906 the average book cost for all companies producing large basic open-hearth billets per ton was \$20.87; the labor cost was 55 cents.

The Steel Corporation's mill cost per gross ton of large basic open-hearth billets, as shown by the records of the corporation for 1910, approximate intercompany profits included therein and integration mill cost, was \$19.37, the labor cost being 59 cents.

SMALL BESSEMER BILLETS.

For the years 1902-1906 the average book cost for all companies producing small Bessemer billets per ton was \$19.68, the labor cost being 66 cents.

The Steel Corporation's mill cost per gross ton of small Bessemer billets, as shown by the records of the corporation for 1910, approximate intercompany profits included therein, and integration mill cost, was:

(1) From ingots.....	\$18.23
The labor cost being.....	.61
(2) From blooms.....	18.46
The labor cost being.....	.46
(3) From large billets.....	18.03
The labor cost being.....	.19

In this connection the following observation of the Bureau of Corporations is important:

The cost records as kept by the different plants producing these small Bessemer billets were found not to be on a comparable basis. For instance, at one mill small Bessemer billets were rolled directly from ingots, while at other mills they were rolled from blooms, and at still other mills large billets were rolled down to small billets. It is evident, therefore, that since the raw material differed with the different stages of rolling, which would necessarily affect both the cost of material and the cost above material, a statement giving the cost in detail of the total production of small Bessemer billets would not be at all repre-

sentative. Therefore the separate costs of rolling small Bessemer billets from (1) Bessemer billet ingots, (2) Bessemer blooms, and (3) large Bessemer billets as shown by the books of the producing companies are given. (Steel report, p. 454.)

SMALL BASIC OPEN-HEARTH BILLETS.

For the years 1902-1906 the average book cost for all companies of small basic open-hearth billets per ton was \$19.67, the labor cost being 74 cents.

The Steel Corporation's mill cost per gross ton of small basic open-hearth billets, as shown by the records of the corporation for 1910, approximate intercompany profits included therein, and integration mill cost, was:

(1) From blooms.....	\$20.18
The labor cost being.....	.32
(2) From large billets.....	20.32
The labor cost being.....	.30

Upon this point the Bureau of Corporations observes:

It is not practical to give the cost in detail for this total production, as a part was rolled from blooms and a part from large billets. Therefore * * * there are shown separately * * * the costs of rolling small basic open-hearth billets from blooms and from large billets. (Steel report, p. 457.)

SHEARED PLATES.

For the years 1902-1906 the average book cost for all companies of sheared plates from slabs per ton was \$27.49, the labor cost being \$2.36.

The Steel Corporation's mill cost per gross ton of basic open-hearth sheared plates, as shown by the records of the corporation for 1910, approximate intercompany profits included therein, and integration mill cost, was \$25.01, the labor cost being \$1.91.

UNIVERSAL PLATES.

For the years 1902-1906 the average book cost for all companies of universal plates per ton was:

(1) From slabs.....	\$26.40
The labor cost being.....	1.83
(2) From ingots.....	21.82
The labor cost being.....	1.24

The Steel Corporation's mill cost per gross ton of universal plates, as shown by the records of the corporation for 1910, approximate intercompany profits included therein, and integration mill cost, was:

(1) From basic open-hearth ingots.....	\$22.79
The labor cost being.....	1.24
(2) From basic open-hearth slabs.....	23.74
The labor cost being.....	1.47
(3) From mixed Bessemer and basic open-hearth slabs.....	25.97
The labor cost being.....	2.21

The following observation from the report of the Bureau of Corporations is relevant here:

The Steel Corporation's production of universal plates in 1910, as shown by the cost records of the producing companies, was rolled from both ingots and slabs. As the costs of the material and costs above material would not be on the same basis, because slabs have gone through one stage of rolling, it is necessary to show separately the costs of universal plates rolled from ingots and of those rolled from slabs. Furthermore, the plates rolled directly from ingots ordinarily comprised plates of greater average thickness of gauge which could be produced at less cost than lighter gauges. There are given, therefore, the Steel Corporation's average mill cost of universal plates in 1910 rolled from (1) basic open-hearth ingots, (2) basic open-hearth slabs, and (3) mixed Bessemer and basic open-hearth slabs, as shown by the books of the producing companies. (Steel report, pp. 471-472.)

STRUCTURAL SHAPES.

For the years 1902-1906 the average book cost for all companies of structural shapes per ton was: (1) From ingots, \$26.52, the labor cost being \$2.15; (2) from large billets, \$27.76, the labor cost being \$2.54.

The Steel Corporation's mill cost per gross ton of heavy structural shapes, as shown by the records of the corporation for 1910, approximate intercompany profits included therein, and integration mill cost, was \$24.57, the labor cost being \$1.77.

Following is a list of the average book costs for all companies per ton and the labor cost of certain rolled products for the years 1902-1906. The report of the Commissioner of Corporations on the steel industry does not appear to give the Steel Corporation cost of these products:

Product.	Book cost per ton.	Labor.
Bessemer sheet bars.....	\$18.98	\$0.57
Open-hearth sheet bars.....	24.58	.88
Heavy rails.....	22.23	1.25
Light rails.....	24.24	2.32
Merchant steel bars:		
(1) From large billets.....	28.12	3.06
(2) From small billets.....	26.73	2.87
Hoops and light bands.....	31.67	5.04
Cotton ties.....	30.57	4.22
Wire rods.....	27.21	1.53
Bright coarse wire.....	29.12	1.62
Black sheets.....	39.37	10.39
Black plate for tinning.....	48.99	12.73
Tin plate (box of 100 pounds).....	3.18	.19
Tin plate (ton of 2,240 pounds).....	71.23	4.25

We have, therefore, Mr. President, reliable information on both the domestic and foreign cost of producing pig iron, ingots, and steel rails, and it can be accepted as an established fact that we produce these products at less cost than our foreign competitors. It is therefore certain that there is no warrant for imposing any duties whatever upon pig iron, ingots, or rails.

While we have no accurate and impartial evidence as to the foreign cost of producing steel articles more advanced in manufacture than pig iron, ingots, and rails we are, fortunately, supplied in the report of the Bureau of Corporations on the steel industry, with detailed figures on the cost of a number of these more advanced products.

From this report I have shown that the cost of producing large Bessemer billets is \$20.18 per ton. The labor cost is 55 cents. The pending bill fixes the rate of duty on billets at 10 per cent. A ton of billets, calculated on the American cost, would pay a duty of \$2.01 at the customhouse in New York. This duty is therefore nearly four times the total labor cost of producing a ton of billets in this country.

The steel report, as I have already stated, gives the cost of a ton of sheared plates at \$27.49. The labor cost is given as \$2.36. The pending bill imposes a duty of 10 per cent on pressed, sheared, or stamped shapes. The duty upon a ton of sheared plates calculated upon the American cost would be \$2.74. The total labor cost in a ton of this product is \$2.36. The duty therefore would be more than the total labor cost in this product.

The Bureau of Corporations, as I have shown, reports the cost of producing a ton of structural shapes from large billets as \$27.76. The labor cost in a ton of structural shapes is \$2.54. The pending bill imposes a duty of 10 per cent on this product. The duty upon a ton of structural shapes, calculated upon the American cost, is \$2.77. The total labor cost in a ton of this product is \$2.54. The duty therefore more than covers the total labor cost, besides the ocean freight rate on all construction iron and steel, ranges from \$3.55 to \$7.66 per ton, furnishing that much additional protection.

Open-hearth sheet bars are reported by the Bureau of Corporations as costing in this country \$24.58 a ton. Under the pending bill they are assessed a duty of 10 per cent. The labor cost in a ton of open-hearth bars is 88 cents. Calculated upon the American cost, a ton of this product would be required to pay a duty of \$2.45 at the customhouse. This amounts to nearly three times the total labor cost in a ton of this product.

The steel report gives the average cost of a ton of merchant steel bars as \$23.12. The Senate committee reduced the duty on these bars to 5 per cent. Calculated upon the American cost, a ton of merchant bar would be assessed a duty of \$1.40 at the customhouse. The steel report gives the labor cost in a ton of merchant bar at \$3.06. Even if the labor cost in this country were double the foreign cost, the tariff would practically cover the difference in labor cost.

The ocean freight on a ton of iron and steel bar, loose or in bundles, from Liverpool to New York, is \$3.41. The freight rate would therefore, by itself, furnish a protection more than equivalent to the total labor cost of producing a ton of merchant bar in the United States.

The Bureau of Corporations reports the average cost of a ton of black plate for tinning in this country at \$48.99. The Senate bill places a duty of 15 per cent on this product. Calculated upon the American cost, a ton of black plate would be assessed at the New York customhouse a duty of \$7.34. The Bureau of Corporations reports the labor cost in a ton of black plate for tinning at \$12.73. It is usually claimed that the wages paid in this country are double the wages paid in Great Britain. Accepting this as true and assuming that the rate of wages may be taken as a criterion of labor cost and that the labor cost in a ton of black plate in this country is double that of Great Britain, even then the duty of \$7.34 would more than measure the difference in labor cost.

The report of the Bureau of Corporations gives the American cost of producing a box of 100 pounds of tin plate at \$3.18. The pending bill imposes a duty of 15 per cent on tin plate. Computed upon the American cost, a hundred-pound box of tin plate would be assessed a duty of 46 cents. The Bureau of Corporations reports the labor cost in a hundred-pound box of tin plate at 19 cents. The duty fixed by this bill would therefore amount to two and one-half times the total labor cost.

FINER ARTICLES OF HIGHER FINISH.

In many industries in this country we know that wages are nearly double the wages paid in Great Britain. And in all industries we know that the wages of England are much lower than for the corresponding industries of this country.

But it should be constantly borne in mind that low wages do not mean low labor cost. Indeed, I think it may be stated as the unvarying rule that low wages mean high labor cost. It will be remembered that for pig iron the labor cost in Great Britain is 91 cents per ton; in Germany, 97 cents per ton. In the United States the highest labor cost is 75 cents per ton. And it is likewise true that the labor cost on ingots and Bessemer steel rails is higher in the competing foreign country than in the United States.

In making any tariff bill, certain information is essential. The cost of production is important; the imports and exports; the ratio of imports to the total domestic production; the prices, domestic and foreign, of all material. Each is entitled to be given due weight and consideration. The element of prices is entitled to less consideration than would be true if both foreign and domestic prices were not, as we know they are, subject more or less to artificial control. It is to be regretted that we have no accurate detailed cost data, either domestic or foreign, for the articles of finer manufacture. Among these products are wire, tubes, firearms, cutlery, watches, machinery, wares made wholly or in part of copper, aluminum, brass, nickel, platinum, gold and silver, and many other articles, any one of which represents a large industry.

Upon most of these products the pending bill makes marked reductions in duties. In many of the more highly finished articles, though we have no disinterested report upon it, we know that the labor cost represents a very large proportion of the total cost of the product. Under the existing law the duties on these articles range from 10 to 98 per cent. In the pending bill the rates upon these products range from 15 to 55 per cent ad valorem. To present this more specifically:

The rates on wire under the existing law are from 37 to 74 per cent. These duties are reduced in the pending bill to from 15 to 25 per cent. The rates on wire would stand a very considerable reduction, as indicated from the fact that we imported but a little more than \$2,000,000 worth and exported four times that amount. And we produced more than fifty times as much as we imported.

The rates on tubes, pipes, flues, cylindrical or tubular tanks, and welded cylindrical furnaces are from 30 to 50 per cent under the existing law. In the pending bill these rates are fixed at from 20 to 30 per cent. We imported almost none of these products. The total value of all kinds imported in 1912 was \$634,941. The value of the production of these manufactures in this country amounted to \$97,259,000.

Under the existing law the rate on muskets and muzzle-loading firearms is 25 per cent. The pending bill reduces the duty to 15 per cent. The rates on breech-loading rifles, shotguns, pistols, and parts thereof under the existing law is 46 per cent. The pending bill reduces this duty to 35 per cent. The imports of these products was a negligible quantity, indicating that the existing duty is practically prohibitory.

But on cutlery there is reason to apprehend that the duties have been reduced below the difference in the cost of production, or, in other words, below the competitive rate.

In the manufacture of cutlery the material is but a small part of the cost of the finished product. The forging, grinding, polishing, and etching of a razor blade, for example, is largely hand labor, and constitutes by far the major portion of the total cost.

The existing law fixes the duty upon penknives and pocket-knives at 77 per cent. The pending bill reduces this duty to 40 per cent.

The existing law places a duty on razors of 72 per cent. The pending bill reduces that duty to 50 per cent.

The existing law places a duty on scissors of 53 per cent. The pending law reduces that duty to 30 per cent.

The existing law fixes the duty on table cutlery at 42 per cent. The pending bill reduces that duty to 27 per cent.

There is absolutely no data outside of the imports of these highly finished products upon which one can rest with confidence as to what measure of duty is necessary to maintain these industries in this country. As suggested, the element of labor is a very important one in these products. It is claimed by manufacturers that the labor cost is 70 to 80 per cent of the total cost of many of these articles. This statement comes from interested parties, and it is no disparagement to the gentlemen who make it to say that it must be received with that fact in mind. In the absence of data from unbiased sources, the legislator is impressed with the value of such reports as that made by the Bureau of Corporations on the heavier steel products and by the Tariff Board in the reports which it submitted to the Sixty-second Congress on cottons, woolsens, pulp wood, and print paper.

The imports of the four classes of cutlery named aggregated \$2,022,321 for 1912.

I was somewhat surprised to find that our exports on cutlery for the year 1912 amounted to \$1,162,203. And of this amount we exported cutlery to Great Britain to the value of \$258,122; to Germany, cutlery valued at \$33,806.

It is contended by the manufacturers that the wages in the United States in these industries are twice as high as in England and three times as high as in Germany. This in itself furnishes but little guidance in fixing a fair rate of duty. Nothing appears as to the efficiency of the foreign as compared with the American labor. If the labor were equally well organized, superintended, supplied with like tools, and equally skillful and efficient, then the statement as to wages would furnish some criterion for fixing rates.

If 75 per cent of the value of a product is labor and the labor were equally productive, a 40 per cent duty would a little more than measure the difference in labor cost in competition with Great Britain and a little less than measure the difference in the labor cost in competition with Germany.

We are likewise without the necessary information to determine the proper duties on watches, watch movements, clocks, and clock movements, and parts of the same. The existing law fixes the duties from 40 to 98 per cent. The pending bill reduces these duties to 30 per cent.

The imports of the articles covered by these duties constitute but a small percentage of the amount produced in this country. The total value of our manufacture was \$35,571,000. The value of the imports was but \$1,537,144.

That the committee was warranted in making marked reductions in the duties on all of these more advanced products there can be no doubt. Whether the cut is deeper than the industries can stand without harm to the labor employed can not, so far as I am aware, be determined to a certainty by any known facts.

Upon machinery, engines, printing presses, and machine tools the existing law imposes a duty of 30 to 45 per cent. The pending bill fixes these duties from 15 to 25 per cent. The imports are small, indicating that the Payne-Aldrich duties are higher than necessary. The reduction of the duties will be of advantage to manufacturers in equipping plants with machines of foreign make, some of which are not produced at all in this country. And this again will open the way for further reduction of the duties on products manufactured with the machinery thus cheapened.

Wares made in whole or in part of copper, aluminum, brass, nickel, platinum, gold, and silver are dutiable under existing law at 45 per cent. The pending bill reduces these duties to 20 per cent, excepting as to articles made in whole or in part of platinum, gold, and silver, which it increases to 50 per cent.

The imports of these articles under the present duties are a negligible quantity, and the duties fixed by the pending bill may prove to be reasonably fair and just to the American manufacturers.

Recurring, Mr. President, to the heavier metal products, we produce pig-iron billets, in fact all of the heavy steel products, not only as cheaply, but cheaper than they are produced abroad. Besides, we have the further protection of the ocean freight rate.

I have gathered, after diligent inquiry prosecuted through the Department of Commerce, the transportation rate on substantially everything of importance imported into this country, and I ask leave to incorporate those tables, with the matter explanatory thereof, as an appendix to my remarks.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and permission is granted.

Mr. LA FOLLETTE. In conclusion, Mr. President, I repeat, I am apprehensive that upon some of the finer products of the steel schedule the rates fixed in this bill are too low. As to that, it is not possible, I believe, for anybody to be absolutely certain, for I can not find that data from official sources, or from sources that are reliable and unprejudiced, as to the cost of producing in this country and in competing countries pocket cutlery, table cutlery, razors, scissors, and the like.

Manufacturers who have appeared before various congressional committees have made the general statement that the labor cost in these more highly finished products represents 70 to 80 per cent of their value. They do not give us any information whatever as to the efficiency of that labor. They do not give us the information that is required to fix the duty upon any basis, either competitive or protective. And, then, they are interested witnesses.

I do not believe that the difference in the cost of production, if it could be ascertained to the very last cent, is the only guide to follow in fixing tariff rates. I know that the selling price is not the absolute standard. Prices in this country are artificially controlled. To some extent they are artificially con-

trolled abroad. There are many important things to be taken into consideration in fixing a tariff. And this is true, I repeat, whether you are framing a protective tariff or a tariff for revenue with incidental protection.

That is why, Mr. President, we require constantly the services of a scientific board or commission, a scientific board composed of able, disinterested men, who, in the spirit of truth seekers, shall exhaust every possible line of inquiry that bears upon or has any relevancy to this great subject of the tariff. However, I would not clothe such a board with power to fix tariff rates.

I think I voted for an amendment with such a feature during the pendency of this bill. I hurried to the Chamber to vote, from my committee room where I was at work, and being informed that the amendment under consideration provided for a tariff commission, I voted for it without fully understanding the details. I would not support a bill clothing a commission with power to fix rates.

Furthermore, Mr. President, I should like to see imposed upon every product that comes into this country a small tax—say a fraction of 1 per cent—that would not affect the cost to the consumer, but would create a fund which would pay for gathering statistical data on all of the imports that come to us. This material, properly classified, would be of the greatest value to Congress in tariff legislation.

And now I must yield the floor. I have an understanding with other Senators who desire to be heard that I would do so at this time.

Mr. THORNTON. Mr. President—

Mr. LA FOLLETTE. Just one further word, if the Senator will permit me. It has been a matter of common understanding here for several weeks that there was no possibility of securing the adoption of any amendments of a sweeping character to the pending bill. So I have not felt pressed to offer the results of my study of this schedule at an earlier time. I do hope, however, that what I have presented will receive some consideration from the committee in the calmness and deliberation of the conference room.

APPENDIX.

Freight rates, Liverpool, England, to New York.

Iron ore:	Per long ton.
Packed.....	\$3.04
In bulk.....	2.68
Pig iron.....	2.43
Ferromanganese.....	2.43
Billets, ingots, blooms:	
Loose, weighing up to 1 ton per piece.....	2.43
Loose, weighing up to 5 tons per piece.....	3.16
Over 3 tons per piece.....	3.41
Iron and steel:	
Bar and hoop, loose or in bundles.....	3.41
Construction iron and steel:	
(A.) Angles, channels, plates, tees, ties, rods, zeds, and joists, up to 15 inches in depth. No piece over 2 tons (see note 1 below).....	
Up to and not exceeding 30 feet in length.....	3.35
Up to and not exceeding 36 feet in length.....	3.65
Up to and not exceeding 40 feet in length.....	3.93
Up to and not exceeding 45 feet in length.....	4.26
Up to and not exceeding 50 feet in length.....	4.87
Up to and not exceeding 55 feet in length.....	5.47
Exceeding 55 feet in length.....	6.08
(B.) Rolled and built beams, joists over 15 inches in depth, and girders not bent or flanged. No piece over 2 tons in weight (see note 1 below).....	
Up to and not exceeding 30 feet in length.....	3.65
Up to and not exceeding 36 feet in length.....	3.95
Up to and not exceeding 40 feet in length.....	4.26
Up to and not exceeding 45 feet in length.....	4.56
Up to and not exceeding 50 feet in length.....	6.03
Up to and not exceeding 55 feet in length.....	6.68
Exceeding 55 feet in length.....	7.66
(C.) Girders, wrought, set up, not over 40 hundredweight or 30 feet in length.....	3.95
Girders, extra lengths or weights (as beams).	
NOTE 1.—Pieces over 2 tons and not exceeding 3 tons, \$1.22 per ton extra; pieces over 3 tons and not exceeding 4 tons, \$2.43 per ton extra; pieces over 4 tons and not exceeding 5 tons, \$3.60 per ton extra; pieces over 5 tons, as per agreement, with minimum rate of \$17.03.	
NOTE 2.—Plates, angles, channels, girders, beams, columns and castings, lattice girders, etc., with finished material or if bent or flanged, to pay \$1.22 per ton over the ordinary rates.	
Copper ingots:	Per long ton.
Packed.....	\$5.48
Loose.....	6.69
Cutlery: (Same as dry goods—see dry goods.)	
Chains:	
Packed or coiled up to 1 ton.....	3.65
Packed or coiled up to 2 tons.....	4.26
Packed or coiled up to 3 tons.....	4.87
Loose.....	4.28
Machinery appurtenances.....	5.48
Machinery up to 1 ton per piece or package.....	4.26
Machinery up to 2 tons per piece or package.....	4.87
Machinery up to 3 tons per piece or package.....	6.08
Machinery up to 4 tons per piece or package.....	7.30
Machinery up to 5 tons per piece or package.....	9.73
Over 5 tons, as per special agreement, with minimum rate of \$9.73.	

INTERSTATE COMMERCE COMMISSION,
OFFICE OF THE SECRETARY,
Washington, August 11, 1913.

Hon. ROBERT M. LA FOLLETTE,
United States Senate, Washington, D. C.

DEAR SIR: There is inclosed herewith a statement prepared by our Division of Tariffs, which was prepared at your request, showing a comparison of domestic and import rates on all articles now given specific import commodity rates from New York to Chicago via all rail.

Respectfully,

G. B. MCGINTY, Secretary.

Statement showing comparison of domestic and import rates on all articles now given specific import commodity rates, from New York, N. Y., to Chicago, Ill., via all rail.

Articles.	Rates, in cents, per 100 pounds, unless otherwise noted.	
	Domestic.	Import.
Bagging, burlap.....C. L.	30	20
Burlaps.....C. L.	135	20
Carbon slack.....C. L.	125	17
China, German, Austrian, and Japanese, released to (L. C. L. valuation of \$12 per 100 pounds.....C. L.	165	43
Clay.....C. L.	20	16
Crockery, in crates or slatted boxes.....L. C. L.	140	31
Earth, fuller's.....C. L.	22	20
Earthenware, in crates or slatted boxes.....L. C. L.	140	31
Ferromanganese.....C. L.	500	2400
Glycerine, crude.....C. L.	130	29
Ixite.....C. L.	130	24
Ixite.....C. L.	130	24
Logs, wood, all kinds.....C. L.	25	23
Magnesite.....C. L.	22	17
Ore, chrome in bulk.....C. L.	425	380
Ore, iron, crude, in bags or bulk.....C. L.	1200	380
Ore, magnesite.....C. L.	125	17
Ore, manganese, in bulk.....C. L.	425	380
Pyrites, iron.....C. L.	1200	380
Rags, waste paper, jute waste, hemp waste, flax-rove waste, scrap jute bagging, pressed in bales, and old rope, in straight or mixed carloads, minimum weight 30,000 pounds.....C. L.	125	21
Rice, brewers'.....C. L.	125	21
Sisal.....C. L.	130	24
Soda, nitrate of.....C. L.	130	20
Sweepings, cotton factory, minimum weight 30,000 pounds, C. L.	130	25
Sweepings, tea, in bales or bags, minimum weight 30,000 pounds.....C. L.	No rate.	22
Tallow, vegetable.....C. L.	130	25
Waste, cotton thread, minimum weight 30,000 pounds.....C. L.	130	20
Wood pulp, minimum weight 36,000 pounds.....C. L.	22	25

¹ Class rates. No commodity rates in effect.

² Per 2,340 pounds.

¹ Per 2,240 pounds.

² Class rates. No commodity rates in effect.

Tariff references: B. & M. R. R. I. C. C. No. A-140; F. S. Davis's I. C. C. Nos. 1, 4, and 12.

Mr. THORNTON. Mr. President, it is hard that I should feel compelled to vote against a bill made a party measure by the Democratic Party—the party to which I have given my allegiance since I cast my first vote 45 years ago. It is harder still that I should be compelled to do so on account of the fact that the Democratic Party, to which my State of Louisiana has also given a steadfast allegiance during the past 36 years in which her white people have controlled her affairs, seeks now, by a provision of this bill, to strike a mortal blow at one of her great agricultural interests in violation of its settled tariff policy and of the pledges of its last national platform.

Because as an ambassador here from the State of Louisiana I am charged with the duty of defending her vital interests against injurious assault, and recognizing that I owe a higher degree of duty to my State than I owe to the Democratic Party, and because, further, I recognize the binding obligation resting on me to redeem the solemn pledges I made to her people concerning this very question, and because, further, the Democratic Party in the State of Louisiana, in convention assembled in June, 1912, denounced this very provision of this bill as a "heavy and cruel blow against Louisiana"—for each and for all of these reasons I can not vote for a bill which will needlessly destroy one of the great agricultural industries of my State, and of many other States of this Union as well, and deliver the people of this country into the power of the rapacious and infamous Sugar Trust composed of the group of eastern seaboard refiners.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Nebraska [Mr. NORRIS], on which the yeas and nays have been ordered. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND] and therefore withhold my vote. If at liberty to vote, I should vote "nay."

Mr. SHEPPARD (when Mr. CULBERSON's name was called). My colleague [Mr. CULBERSON], who is necessarily absent, is paired with the Senator from Delaware [Mr. DU PONT].

Mr. LEA (when his name was called). I announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If at liberty to vote, I would vote "nay."

Mr. LEWIS (when his name was called). I announce my pair with the junior Senator from North Dakota [Mr. GRONNA]. If I were at liberty to vote, I would vote "nay."

Mr. REED (when his name was called). I am paired with the Senator from Michigan [Mr. SMITH] and, being unable to secure a transfer, I withhold my vote. I would vote "nay" if at liberty to vote.

Mr. THOMAS (when his name was called). I make the same transfer as announced heretofore and vote "nay."

The roll call was concluded.

Mr. REED. I transfer my pair to the Senator from Ohio [Mr. POMERENE] and vote "nay."

Mr. GALLINGER. I will announce the unavoidable absence of the junior Senator from Maine [Mr. BURLEIGH] on account of illness. I will likewise announce a pair between the Senator from West Virginia [Mr. GOFF] and the Senator from Alabama [Mr. BANKHEAD].

Mr. SMOOT. I desire to announce the absence from the city on account of illness of the senior Senator from Delaware [Mr. DU PONT]. If he were here, he would vote "yea."

Mr. REED (after having voted in the negative). The Senator from Ohio [Mr. POMERENE] having come into the Chamber since I transferred my pair, I withdraw my vote in order that he may vote in his own right.

Mr. POMERENE. I vote "nay."

Mr. STERLING. I desire to announce that my colleague [Mr. CRAWFORD], who is necessarily absent, would if present vote "yea." He is paired with the Senator from Tennessee [Mr. LEA], as has been announced.

The result was announced—yeas 30, nays 48, as follows:

YEAS—30.

Borah	Cummins	Lodge	Stephenson
Bradley	Dillingham	McCumber	Sterling
Brady	Fall	Nelson	Sutherland
Brandeggee	Jackson	Norris	Warren
Bristow	Jones	Perkins	Weeks
Catron	Kenyon	Poindexter	Works
Clapp	La Follette	Sherman	
Colt	Lippitt	Smoot	

NAYS—48.

Ashurst	James	Pittman	Smith, Ga.
Bacon	Johnson	Pomerene	Smith, Md.
Chamberlain	Kern	Ransdell	Smith, S. C.
Chilton	Lane	Robinson	Stone
Clark, Wyo.	Martin, Va.	Root	Swanson
Clarke, Ark.	Martine, N. J.	Saulsbury	Thomas
Fletcher	Myers	Shaftroth	Thompson
Gallinger	O'Gorman	Sheppard	Thornton

Hollis	Owen	Simmons	Walsh
Hughes	Penrose	Smith, Ariz.	Williams

NOT VOTING—17.

Bankhead	Culberson	Lewis	Smith, Mich.
Bryan	du Pont	McLean	Townsend
Burleigh	Goff	Newlands	
Burton	Gronna	Page	
Crawford	Lea	Reed	

So Mr. NORRIS's amendment was rejected.

Mr. SMOOT. Mr. President, I expected to submit a substitute for Schedule K and to speak upon it to-day, but conditions arose which prevented it. I now offer the substitute and ask unanimous consent that it be printed in the RECORD without reading. I make the request that the reading be omitted to save time.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The amendment proposed by Mr. SMOOT was, on page 87, after line 15, to insert the following:

SCHEDULE K—WOOL AND MANUFACTURES OF.

1. All wools, hair of the camel, goat, alpaca, and other like animals shall be divided for the purpose of fixing the duties to be charged thereon into the three following classes:

2. Class 1, that is to say, merino, mestiza, metz, or metis wools or other wools of merino blood immediate or remote, down clothing wools, and combing wools of like character with any of the preceding, including Adrianople skin wool or butcher's wool, and such as have been heretofore usually imported into the United States from Buenos Aires, New Zealand, Egypt, Australia, Cape of Good Hope, Russia, Great Britain, Canada, Morocco, and elsewhere, and down combing wools, Canada long wools, or other like wools of pure English blood, and usually known by the terms herein used, and all wools not hereinafter provided for in class 3.

3. Class 2, that is to say, all hair of the camel, goat, alpaca, or other like animal and Leicester, Cotswold, Lincolnshire, and similar long-combing wools of pure English blood not hereinafter provided for in class 3.

4. Class 3, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, Bagdad wool, China

lamb's wool, Castel Branco, and all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Syria, and elsewhere, excepting improved wools hereinafter provided for.

5. The standard samples of all wools or hair which are now or may be hereafter deposited in the principal customhouses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools and hair under this act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other customhouses of the United States when they may be needed.

6. Whenever wools of class 3 shall have been improved by the admixture of merino, or English blood, from their present character, as represented by the standard samples, now or hereafter to be deposited in the principal customhouses of the United States, such improved wools shall be classified for duty as class 1.

7. If any bale or package of wool or hair specified in this act shall be entered as class 3, and shall contain a greater percentage of class 1 wool or class 2 hair than does the proper standard sample thereof, then the whole bale or package shall be subject to the rate of duty chargeable on wool of class 1, or hair of class 2, as the case may be; and if any bale or package shall be entered by the importer, or anyone duly authorized to make entry thereof, as shoddy, mungo, docks, wool, hair, or other material of any class specified in this act, and such bale or package shall contain any admixture of any one or more of the foregoing, or of any other material subject to a higher rate of duty, the whole bale or package shall be dutiable at the highest rate imposed by this act upon any article or material in said bale or package.

8. The duty on all wools of class 1 shall be, if scoured, 16 cents per pound; if in the grease, 15 cents per pound on the clean wool contained therein which shall be ascertained by scouring tests made in accordance with regulations prescribed by the Secretary of the Treasury.

9. The duty on all hair and wool of class 2 shall be, if scoured, 14 cents per pound; if in the grease, 13 cents per pound on the clean hair or wool contained therein which shall be ascertained by scouring tests made in accordance with regulations prescribed by the Secretary of the Treasury.

10. The duty on wools and camel's hair of class 3, imported in their natural condition, shall be 7 cents per pound; if scoured, 14 cents per pound: *Provided*, That on imported wools and camel's hair of class 3, upon which duty shall have been paid, used in the United States in the manufacture of carpets, druggets, bookings, mats, rugs for floors, screens, covers, hassocks, bed sides, art squares, and portions of carpets or carpeting, there shall be allowed to the manufacturer or producer under regulations prescribed by the Secretary of the Treasury a drawback equal to 99 per cent of the duty paid on such wool or hair of class 3 used in the manufacture of any of the foregoing articles.

11. The duty on wools or hair on the skin shall be 1 cent less per pound than is imposed upon the clean content as hereinbefore provided for such wools or hair of class 1, 2, or 3, as the case may be, imported in their natural condition not on the skin; the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

12. Top waste and slubbing waste, 18 cents per pound.

13. Roving waste, ring waste, and garnetted waste, 14 cents per pound.

14. Nolls, carbonized, 10 cents per pound; not carbonized, 8 cents per pound.

15. Thread waste, yarn waste, and all other wool waste, not specially provided for, $7\frac{1}{2}$ cents per pound.

16. Shoddy and wool extract, $7\frac{1}{2}$ cents per pound.

17. Woolen rags, flocks, and mungo, 5 cents per pound.

18. Combed wool or tops, made wholly or in part of wool, or camel's hair, 10 per cent ad valorem, and, in addition thereto, 18 cents per pound on the wool or hair contained therein.

19. Wool and hair which have been advanced in any manner, or by any process of manufacture, beyond the washed or scoured condition, but less advanced than yarn, not specially provided for in this act, 23 $\frac{1}{2}$ cents per pound on the wool contained therein.

20. On yarns made wholly or in part of wool, 30 per cent ad valorem and in addition thereto 19 $\frac{1}{2}$ cents per pound on the wool contained therein.

21. On women's and children's dress goods, coat linings, Italian cloths, buntings and goods of similar description and character, composed wholly or in part of wool, 50 per cent ad valorem, and in addition thereto 23 $\frac{1}{2}$ cents per pound on the wool contained therein: *Provided*, That on all of the foregoing weighing over 4 ounces per square yard the duty shall be the same as imposed by this schedule on cloths.

22. On cloths, knit fabrics, flannels, felts, and all other fabrics of every description, made wholly or in part of wool, not specially provided for in this act, valued at not more than 30 cents per pound, the duty shall be 35 per cent ad valorem, and in addition thereto, 12 cents per pound on the wool contained therein; valued at more than 30 cents and not more than 40 cents per pound, 35 per cent ad valorem, and in addition thereto, 16 cents per pound on the wool contained therein; valued at more than 40 cents and not more than 60 cents per pound, 35 per cent ad valorem, and in addition thereto, 23 $\frac{1}{2}$ cents per pound on the wool contained therein; valued at more than 60 cents and not more than 80 cents per pound, 40 per cent ad valorem, and in addition thereto, 23 $\frac{1}{2}$ cents per pound on the wool contained therein; valued at more than 80 cents and not more than \$1 per pound, 45 per cent ad valorem, and in addition thereto, 23 $\frac{1}{2}$ cents per pound on the wool contained therein; valued at more than \$1 and not more than \$1.25 per pound, 50 per cent ad valorem, and in addition thereto 23 $\frac{1}{2}$ cents per pound on the wool contained therein; valued at more than \$1.25 per pound, 55 per cent ad valorem, and in addition thereto, 30 cents per pound on the wool contained therein: *Provided*, That in no case shall the duty on any of the foregoing articles or materials be less than that imposed by the respective paragraphs of the existing law on manufactures, of the component material of chief value, of which the goods, wares, and merchandise provided for in this paragraph are composed.

23. Blankets not exceeding 3 yards in length, and ready-made clothing, and articles of wearing apparel of every description (except such as are knitted), manufactured wholly or in part, including such as are composed in chief value of silk, cotton, or other vegetable fiber, or of fur, all of the foregoing composed wholly or in part of wool, and all manufactures not knitted, and not specially provided for, composed of

not less than 10 per cent in value of wool, 60 per cent ad valorem: *Provided*, That on blankets composed wholly or in part of wool, exceeding 3 yards in length, the same duty shall be paid as on cloth made wholly or in part of wool.

24. On knitted wearing apparel of every description, and all knitted articles and manufactures thereof, valued at 80 cents per pound or more, composed wholly or in chief value of wool, 23 cents per pound, and in addition thereto 45 per cent ad valorem; if valued at less than 80 cents per pound, 20 cents per pound and in addition thereto 35 per cent ad valorem; on all the foregoing composed in part of wool, but in chief value of any other material, 60 per cent ad valorem.

25. On hand-made anubusson, Axminster, oriental, and similar carpets, rugs, or other coverings for floors, made wholly or in part of wool, 40 per cent ad valorem; all other carpets of every description, druggets, bookings, mats, screens, hassocks, bedsides, art squares, and portions of carpets, or carpeting, and all other coverings for floors, composed wholly or in part of wool, 25 per cent ad valorem.

26. Whenever in any paragraph of this act or any schedule of the existing law the word "wool" is used in connection with a material or manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other like animal, whether manufactured by the woolen, worsted, felt or any other process.

27. In no case shall any of the wools or wastes enumerated in sections 8, 9, 10, 11, 12, 13, 14, and 15 in this schedule pay a duty more than is equivalent to an ad valorem duty of 40 per cent.

28. The rates of duty provided in the paragraphs of this act for all wools and hair shall not take effect until the 1st day of November, 1913, and upon all manufactures of wools and hair on the 1st day of February, 1914.

The VICE PRESIDENT. The question is on agreeing to the amendment submitted by the Senator from Utah [Mr. Smoot].

Mr. SMOOT. I am not going to ask for the yeas and nays, because I think it would be improper for me to ask the Senate to vote for this substitute without a chance of explaining the same. I shall simply ask for a viva voce vote upon the substitute.

The amendment was rejected.

Mr. GALLINGER. Mr. President, some time ago I gave notice that I would offer an amendment in the nature of a substitute for the entire bill. I now send that amendment to the desk and ask that it may be read.

The VICE PRESIDENT. The Chair will state to the Senator from New Hampshire that the bill is not yet perfected. There are several amendments yet to be disposed of.

Mr. GALLINGER. Very well.

Mr. JAMES. On behalf of the Committee on Finance I move an amendment on page 208, line 25—

The VICE PRESIDENT. The Senator from Kentucky moves that the vote whereby the amendment was concurred in may be reconsidered.

Mr. SIMMONS. I was going to suggest that that is one of the reserved amendments. I do not think it will have to be reconsidered.

Mr. BRISTOW. I desire to say that that amendment was reserved by myself.

Mr. JAMES. The amendment was reserved last night.

The VICE PRESIDENT. The amendment proposed by the Senator from Kentucky on behalf of the committee will be stated.

The SECRETARY. Strike out all after the word "collectors" and the comma in line 25, page 208, down to the word "and" in line 6, page 209, and insert:

Inspectors and other employees authorized by this section of this act shall be appointed by the Commissioner of Internal Revenue with the approval of the Secretary of the Treasury under such rules and regulations as may be fixed by the Secretary of the Treasury to insure faithful and competent service.

The VICE PRESIDENT. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The amendment as amended was concurred in.

Mr. JOHNSON. On page 126, paragraph 369, line 12, I move to amend by striking out the semicolon after the word "skins" and inserting in place thereof a comma.

Mr. LODGE. Is the reference to the new print or the old?

Mr. JOHNSON. The new print.

The VICE PRESIDENT. The clerks at the desk are following the old print.

Mr. JAMES. The amendment I offered, which had just been acted upon favorably, was to the old print.

Mr. JOHNSON. In the old print the page to which I refer is page 115, line 21.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. On page 115, in the committee amendment, line 21, after the word "skins," strike out the semicolon which was inserted at that point and in lieu thereof insert a comma.

The amendment to the amendment was agreed to.

Mr. JOHNSON. Also in line 23, upon the same page, after the word "leather" and the comma, for the committee I move to insert the words "all the foregoing."

The amendment to the amendment was agreed to.

The amendment as amended was concurred in.

Mr. HUGHES. By direction of the Finance Committee I desire to submit an amendment. On page 121, paragraph 390, line 20, after the word "foot" at the end of the paragraph—

The VICE PRESIDENT. Has paragraph 390 been reserved?

Mr. HUGHES. This is a new provision in the bill.

The VICE PRESIDENT. Yes; but was the paragraph reserved?

Mr. HUGHES. The paragraph was not reserved.

The VICE PRESIDENT. If not, the Chair will entertain a motion to reconsider.

Mr. HUGHES. Then, I move to reconsider the vote by which paragraph 390 was concurred in.

The motion to reconsider was agreed to.

Mr. HUGHES. I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 121, line 20, at the end of paragraph insert the following proviso:

Provided, however, That all photographic films imported under this section shall be subject to such censorship as may be imposed by the Secretary of the Treasury.

The amendment to the amendment was agreed to.

The amendment as amended was concurred in.

Mr. SMOOT. I move to strike out the words "calcium carbide and," on page 133, line 12. It would remove from the free list calcium carbide.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 449, page 133, line 12, strike out the words "calcium carbide and."

Mr. SMOOT. I will simply say to the Senator having the paragraph in charge that this will throw the item into conference and give, I think, a little longer time for consideration. I sincerely trust that the Senator from Maine can see his way clear to accept the amendment.

Mr. JOHNSON. I will say to the Senator from Utah that the subcommittee having these schedules in charge gave this matter a great deal of study and consideration, and there are many reasons why at this time we should not accept the amendment.

Mr. LODGE. Mr. President, I rise to a question of order. Under the unanimous-consent agreement nothing is in order except five-minute explanation from a Senator proposing an amendment.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Utah [Mr. Smoot].

The amendment was rejected.

Mr. CATRON. I have a short amendment proposing a new paragraph which I ask to have read.

The VICE PRESIDENT. It will be read.

The SECRETARY. On page 87, after line 14, insert a new paragraph, to be numbered 294½, as follows:

294½. On wool of the sheep, hair of the camel, goat, alpaca, and other like animals, all wools and hair on the skin of such animals, noils, top waste, card waste, slubbing waste, roving waste, ring waste, yarn waste, bur waste, thread waste, garnetted waste, shoddies, mungo, flocks, wool extract, carbonized wool, carbonized noils, all other wastes, and on woolen rags composed wholly of wool or of which wool is the component material of chief value, and not specially provided for in this section, 20 per cent ad valorem.

Mr. CATRON. Mr. President, the paragraph which I submit proposes to impose a duty which is not adequate for wool, but if it should be adopted it would be better than nothing. It covers what are now on the free list, according to the bill which is about to be enacted, but it is exactly what our friends on the other side of the Chamber a year ago, I understand, unanimously agreed to enact into a law. It is what the House of Representatives passed prior to the bill coming here at the last Congress—

Mr. REED. Mr. President, I rise to a question of order.

Mr. CATRON. I am through. It will not be necessary for the Senator to call me to order.

Mr. LODGE and others. The Senator from New Mexico is in order.

Mr. REED. I rose to a question of order, and I would like to state the question of order.

The VICE PRESIDENT. The Senator from Missouri will state it.

Mr. REED. The unanimous-consent agreement was to the effect that there should be no speaking whatever, except that a Senator offering an amendment might explain the purpose and

purport of his amendment. There was no right given for a five-minute speech when a Senator is not explaining the purport of his amendment. The Senator is not doing that, but is talking about something that happened at a prior session of Congress.

Mr. CATRON. I insist that that is just what I was doing. I was explaining my amendment.

The VICE PRESIDENT. The Chair rules that if the Senator from New Mexico thinks he is making an explanation of his amendment he has a right to proceed, but he will be judge of that.

Mr. CATRON. As I was saying, this is the rate of duty which was fixed by the House of Representatives at the last Congress on the very articles that are mentioned in this paragraph, and the Democratic part of the Senate adopted that rate and voted for it. I can not suppose that they will now be unwilling to accept what they were willing to accept at that time. For that reason I submit the amendment, and I call for the yeas and nays on agreeing to it.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair with the Senator from Michigan [Mr. TOWNSEND] and withhold my vote.

Mr. KERN (when his name was called). On account of my pair with the Senator from Kentucky [Mr. BRADLEY], who is absent from the Chamber, I withhold my vote. If at liberty to vote, I would vote "nay."

Mr. LEA (when his name was called). I again announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If I were at liberty to vote, I would vote "nay."

Mr. LEWIS (when his name was called). I again announce my pair with the junior Senator from North Dakota [Mr. GRONNA].

Mr. REED (when his name was called). I announce my pair with the Senator from Michigan [Mr. SMITH], and therefore withhold my vote. If permitted to vote, I would vote "nay."

Mr. THOMAS (when his name was called). I announce the same pair and transfer as heretofore and vote "nay."

The roll call was concluded.

Mr. LEA. I desire to transfer my pair with the Senator from South Dakota [Mr. CRAWFORD] to the senior Senator from South Carolina [Mr. TILLMAN] and vote. I vote "nay."

The result was announced—yeas 35, nays 42, as follows:

YEAS—35.

Borah	Dillingham	McCumber	Sherman
Brady	Fall	McLean	Smoot
Brandege	Gallinger	Nelson	Stephenson
Bristow	Jackson	Norris	Sterling
Catron	Jones	Oliver	Sutherland
Clapp	Kenyon	Penrose	Warren
Clark, Wyo.	La Follette	Perkins	Weeks
Colt	Lippitt	Polndexter	Works
Cummins	Lodge	Root	

NAYS—42.

Ashurst	Johnson	Ransdell	Smith, S. C.
Bacon	Lane	Robinson	Stone
Chamberlain	Lea	Saulsbury	Swanson
Chilton	Martin, Va.	Shafroth	Thomas
Clarke, Ark.	Martine, N. J.	Sheppard	Thompson
Fletcher	Myers	Shields	Thornton
Gore	O'Gorman	Shively	Vardaman
Hitchcock	Overman	Simmons	Walsh
Hollis	Owen	Smith, Ariz.	Williams
Hughes	Pittman	Smith, Ga.	
James	Pomerene	Smith, Md.	

NOT VOTING—18.

Bankhead	Crawford	Kern	Smith, Mich.
Bradley	Culberson	Lewis	Tillman
Bryan	du Pont	Newlands	Townsend
Burleigh	Goff	Page	
Burton	Gronna	Reed	

So Mr. CATRON's amendment was rejected.

Mr. McCUMBER. I offer an amendment, to come in on page 56, line 1.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 56 it is proposed to strike out paragraph 192 and to insert in lieu thereof the following:

192. Barley, 20 cents per bushel of 48 pounds; oats, 15 cents per bushel of 32 pounds; wheat, 20 cents per bushel of 60 pounds; flaxseed, 25 cents per bushel of 56 pounds.

Mr. McCUMBER. Mr. President—

Mr. WILLIAMS. Mr. President, I desire to ask the Senator has he not already had a vote upon each one of those propositions?

Mr. McCUMBER. No; Mr. President, I could not do so on account of a lack of reservation; but I think this debate is out of order, and I wish to make a very short explanation.

Mr. WILLIAMS. I ask merely for information as to whether the Senator has not already had a yea-and-nay vote on each one of these propositions?

Mr. McCUMBER. I will say that I have not.

Mr. President, the present tariff on barley is 30 cents per bushel; under the pending bill it would be reduced to 15 cents. The present duty on oats is 15 cents a bushel; under the pending bill it will be reduced to 6 cents a bushel. The present duty on wheat is 25 cents a bushel; under the present bill it will be free. The present duty on flax is 25 cents a bushel, and under the present bill the duty is 15 cents. This amendment makes the duty on barley 20 cents; the duty on oats 15 cents; on wheat 20 cents; and on flax 25 cents.

I only wish to say a word in reference to wheat—and I say it from an accurate knowledge of the effect of the tariff on the price of all these cereals along the Canadian border—and that is, under normal conditions, that we only get about one-half of the real tariff benefit upon wheat. On the others we get the full benefit. Therefore, if the duty on wheat is placed at 20 cents per bushel, it would not make a difference in the price of more than 10 cents a bushel.

As this is most important to my State I will ask for the yeas and nays on the amendment, and it is the only amendment on which I will ask the yeas and nays.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from North Dakota, on which he demands the yeas and nays.

The yeas and nays were ordered.

The Secretary proceeded to call the roll, and Mr. ASHURST answered to his name.

Mr. LA FOLLETTE. Mr. President—

The VICE PRESIDENT. The roll call having begun—

Mr. LA FOLLETTE. I think it had not begun when I addressed the Chair.

Mr. PENROSE. No debate is in order.

Mr. LA FOLLETTE. I will propose an amendment to the amendment, which is in order.

The VICE PRESIDENT. The Chair will have to hold that the roll call has begun.

Mr. LA FOLLETTE. If the Chair rules that the roll call has begun, I will not proceed.

The Secretary resumed the calling of the roll.

Mr. BRYAN (when his name was called). I again announce my pair, and therefore withhold my vote.

Mr. KERN (when his name was called). I withhold my vote because I am paired with the senior Senator from Kentucky [Mr. BRADLEY].

Mr. REED (when his name was called). I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from South Carolina [Mr. TILLMAN] and vote "nay."

Mr. THOMAS (when his name was called). I make the same announcement of my pair and its transfer as heretofore and vote "nay."

The roll call was concluded.

Mr. LEA. I again announce my pair with the Senator from South Dakota [Mr. CRAWFORD]. If I were at liberty to vote, I should vote "nay."

Mr. LEWIS. I announce my pair with the junior Senator from North Dakota [Mr. GRONNA] upon this amendment.

The result was announced—yeas 25, nays 49, as follows:

YEAS—25.

Borah	Gallinger	Oliver	Stephenson
Brady	Jackson	Penrose	Sutherland
Brandege	Lippitt	Perkins	Warren
Catron	Lodge	Polndexter	Weeks
Clark, Wyo.	McCumber	Root

Burleigh	Goff	Newlands	
Burton	Gronna	Page	
Clapp	Kern	Smith, Mich.	

So Mr. McCUMBER's amendment was rejected.

Mr. LA FOLLETTE. I voted this morning, Mr. President, against the amendment presented by the Senator from North Dakota [Mr. McCUMBER] which would impose a duty upon wheat in excess of the difference in the cost of production at home and abroad. During the pendency of this bill I have submitted data, derived from all known sources of information, which established beyond any possibility of contradiction that the difference between the cost of producing wheat in the competing sections of this country and Canada—the only country which offers any present competition—is about 6 cents a bushel.

Mr. President, I do not believe in a lopsided system of protection. I believe that the difference in the cost of production between this and competing countries should be regarded as the measure of protection on all products. The phrase "difference in the cost of production" should not be narrowly interpreted. As I have suggested repeatedly in the course of this debate, there are other vital elements to be weighed. But this is the simple way of characterizing the measure of tariff rates contended for according to the modified protective policy.

It has been a disappointment to me to see some of my associates, who subscribe to that doctrine and proclaim it vigorously whenever a tariff bill is under consideration, vote to impose a duty upon farm products, two, three, four, or five times that difference. The American farmer does not ask anything more than adequate protection, Mr. President, and those who are ready to go on record as favoring excessive duties on agricultural products, in the belief that by such course they will gain popularity with him, underestimate his intelligence and understanding.

Mr. President, I propose to amend paragraph 198, page 56, of the old print of the bill, by inserting as line 18 the following:

198. Wheat, 6 cents per bushel.

I have data showing the cost of producing wheat in the United States in the sections in competition with Nova Scotia, and also in the sections that are in competition with western Canada, as well as the general cost of producing wheat in the whole of the United States, as compared with the cost of producing wheat in Canada. This data is based on an analysis of all the available information in Canada and in this country upon that subject. The cost of production generally in the two countries is on a level. But there is a difference at two points, namely, in the States that come in direct competition with Nova Scotia and the States that come in direct competition with Manitoba, of about 6 cents a bushel.

The sections relating to wheat and flour in the Payne-Aldrich Act are:

Sec. 242. Wheat, 25 cents per bushel.

Sec. 243. Wheat, flour, and semolina, 25 per cent ad valorem.

Sec. 237. Macaroni, vermicelli, and all similar preparations, 1½ cents per pound.

The pending bill puts wheat, flour, and so forth, on the free list with a countervailing duty, as follows:

646. Wheat, wheat flour, semolina, and other wheat products: *Provided*, That wheat shall be subject to a duty of 10 cents per bushel; that wheat flour shall be subject to a duty of 45 cents per barrel of 196 pounds; and semolina and other products of wheat, 10 per cent ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on wheat or wheat flour or semolina or any other product of wheat imported from the United States.

The provision for macaroni, and so forth, is as follows:

195. Macaroni, vermicelli, and all similar preparations, 1 cent per pound.

FACTORS IN THE PROBLEM.

Up to less than a decade ago the duty on cereals was of no benefit to the American farmer, since his prices were fixed in foreign markets, to which he shipped his surplus. Duties were placed on his products in order to conserve the system of protection in the interests of the manufacturing classes who needed the support of the farmer to maintain the protective system. And it was the plain understanding that the protection of agricultural products would be continued whenever the American farmer should be menaced with foreign competition. The farmer through all of that period bought his manufactured goods in a protected market and sold his products in a free market.

He has, therefore, derived on the great bulk of all he produces but little direct benefit from the protective system. The duties

on wool and beet sugar have been a material aid to the limited number of farmers growing wool and sugar beets. The duty on wheat, barley, flax, poultry, and vegetables has yielded some protection to the farmers in the States contiguous to the Canadian border. The same is true to a limited extent as to meats and animals from which they are derived.

But as to all these products, excepting wool and beet sugar, the advantage has been comparatively small and severely limited in the territory so located as to be brought into competition with imported products. For the millions of farmers distributed throughout the country the only benefit of the protective system has been that which came to them through the upbuilding of diversified industries and the near-by markets which the employees of these industries created to be supplied by products of the American farm.

This home market has been the basis of effective appeal to the farmers to support high protective duties on manufactured products since the days of Horace Greeley.

As a member of the Ways and Means Committee that framed the McKinley bill in 1890, speaking of the great advantage to the farmers which would flow from its enactment, I said:

The bill seeks to give the farmers of this country a much larger body of consumers for their products right here at home by multiplying factories, adding to the millions engaged in mining and manufacturing pursuits.

More than that, we encouraged the farmer to believe that this home market, with its millions of industrial workers, employed at wages so high that they would afford him the highest priced market in the world in which to sell his products, was his market.

The theory was sound; the argument logical; the belief in it sincere. And, sir, it was effective. For years and years the farmers of this country, particularly of the Northern States, have stood solidly for the protective principle. They have gone to the polls, election after election, and returned to power the party pledged to this doctrine. They have had small part in the writing of the tariff schedules. It was not directly for their advantage that the tariff wall was raised higher and higher. But in the belief that they were ultimately to come into their own through the upbuilding of this great home market, for many years they consented to the maintenance of these high duties.

They were not unmindful of the fact that they were thereby compelled to pay more for the manufactured products which they purchased than would otherwise be the case if those products came to them untaxed. But strong in the faith that they would be rewarded in the prices paid for their products in the American market, they were content to go on paying more to the manufacturers who made their cloth, their machinery, manufactured their lumber, furniture, and all supplies which they were obliged to purchase. They believed that by fostering our manufacturing industries the general prosperity of the Nation would be enhanced—that a great and well-paid manufacturing population was the best guaranty of a great and well-patronized farming population.

Thus the farmer was persuaded to support the protective system. With patience and good cheer he gave long years of toil and hardship in opening up new lands and creating new agricultural empires to offer a wider and firmer foundation for the Nation's prosperity.

What was his reward?

The home market was created, but it was not just the home market which had been his dream and for which he had sacrificed so much. Behind the protective wall which he had helped to rear, the industries of the country, sheltered from foreign competition, had grown rich and powerful. They had become allied with other great and powerful interests engaged in transportation, and these in turn had formed monster organizations for the control of stockyards, packing houses, and grain elevators. These interests owned and controlled his home market. They fixed his prices arbitrarily. They took the profit of his toil. Added to this, protected against foreign competition, the manufacturers suppressed home competition and compelled the farmer and other consumers to pay higher and higher prices for manufactured products.

The result of these conditions may be said to be somewhat reflected in the recent census report which shows a steady increase in the proportion of farms mortgaged to those which are free from incumbrance. In 1890 the number was 28.2 per cent; in 1900 it was 31.1 per cent; in 1910 it had increased to 33.6 per cent.

With the market in which he must buy all his manufactured products controlled largely, if not wholly, by combination, which has steadily increased the price of everything he buys,

and with the market in which he must sell everything he produces controlled by combinations which arbitrarily fix the price that he receives, the farmer's support of the protective system will be a constantly diminishing factor as long as these unfair conditions are maintained.

A change has come over our economic life. The situation of a decade and more ago is being reversed. The manufacturers of many goods, having supplied the American market, are looking abroad for fields in which to expand. To them the tariff is becoming less and less a necessity. On the contrary, the producer of agricultural products is beginning to feel for the first time the effect of foreign competition. The tariff duties on many of his products are to be removed or reduced just at the time when he is feeling the need of such duties.

The farmer has, in some measure, been prepared for this change. He discovered in 1910 that the manufacturers could not be relied upon to keep faith with him in protecting the products of the farm. Under the protection afforded them the manufacturers had secured control of the American market for their products and grown so strong that they were ready to invade the markets of foreign countries. In order to smooth the way for the introduction of their manufactured products abroad, in 1910 they turned their backs upon the American farmer, who had been the most loyal supporter of their system, and through their powerful influence with the Taft administration secured an agreement with Canada, by the terms of which Canadian duties were to be lowered on products of American manufacture to their great benefit, in exchange for the entire removal of the duties upon agricultural products, to the great detriment of the American farmer on the Canadian border. In other words, they were ready to join hands with the South in betraying the agricultural interests, in order to extend the market for their manufactured products abroad.

Hence, the American farmer may take the practical view that the protective system, in so far as his products are concerned, has little chance to survive at the hands of either party, and that if it is to go he will fare better if it goes with a system of reduced duties on manufactured products rather than as a part of a system which maintains high duties on manufactured products and uses the farm products as a pawn in the reciprocity game to secure enlarged foreign markets for the benefit of the manufacturer.

Speaking for myself, I believe neither in the policy of buying foreign markets for one branch of American producers at the expense of another branch of American producers, as attempted under the Taft administration, nor in the policy of maintaining protective duties upon manufactured products and exposing the farmer to free competition from Canada or any other foreign country. I believe that a just and wise policy should give to the product of American toil, whether of the farm or factory, the same measure of protective duty. In no case should the tariff rate exceed the difference in the cost of production at home and abroad. And for this reason, as before stated, I voted against the amendment proposed by the Senator from North Dakota and have offered instead an amendment which does measure the true difference in cost.

There are two factors affecting American grain production: The United States, in the first place, is rapidly ceasing to be a grain-exporting Nation. Ten years ago the price of American wheat was fixed in Liverpool; to-day this is not true. Foreign demand, of course, has still an effect on the price of American wheat, but the domestic demand is now an important factor also. The time is not far distant when the American consumer will absorb all the surplus American production, and we will be forced to import wheat. If it be a good policy to tax breadstuffs, now is the time the producer of these products needs protection. The decline in the exports of American wheat and flour is shown in the following table:

TABLE 1.—Exports of American wheat and flour, 1900–1912.

Year.	Wheat.	Flour.
	Bushels.	Barrels.
1902.....	154,836,102	17,759,203

ARGENTINA COMPETITION.

In the second place, the American agriculturist has a potential competitor in Argentina as well as a present and con-

stantly increasing competition from Canada which he did not have a decade or more ago. In the United States new lands are practically exhausted; agriculture will tend to become more intensive and therefore more expensive. In Argentina and Canada there is still a moving frontier; there are vast areas of new land awaiting the exploitation of extensive cultivation. The increasing production of these countries, however beneficial to the consumer, means lower prices to the unprotected producer in the United States.

Argentina is laboring under many disadvantages, such as lack of adequate transportation and an unsatisfactory system of land tenure. But her wheat-production possibilities are very great. The following table shows the area under cultivation and the production in Argentina:

TABLE 2.—Area planted and production of wheat in Argentina, 1907–1911.

Year.	Area growing wheat.	Production.
	Acres.	Bushels.
1907.....	14,065,600	155,991,000

EXPANSION OF CANADIAN FIELDS.

In the eleventh edition of the Encyclopædia Britannica (vol. 5, p. 153) the following comment on the importance and extent of Canadian wheat production appears:

Canada is clearly destined to rank as one of the most important grain-producing countries of the world. The northern limits of the wheat-growing areas have not been definitely ascertained, but samples of good wheat were grown in 1907 at Fort Vermilion, on the Peace River, nearly 600 miles north of Winnipeg, in latitude 58.34, and at Fort Simpson, on the Mackenzie River, in latitude 61.52, more than 800 miles north of Winnipeg and about 1,000 miles north of the United States boundary.

The expansion of wheat growing in Canada is shown in the following table:

TABLE 3.—Area planted and production of wheat in Canada 1907–1911.

Year.	Area growing wheat.	Production.
	Acres.	Bushels.
1907.....	6,050,400	92,691,000
1908.....	6,610,300	112,434,000
1909.....	7,750,400	106,744,000
1910.....	9,294,800	149,990,000
1911.....	10,374,000	215,851,000

COST OF PRODUCTION IN THE UNITED STATES.

The table I now present contains a summary of the cost of production of wheat in the United States as found by the United States Department of Agriculture. The following table is taken from the Crop Reporter of the United States Department of Agriculture of May, 1911:

Cost of producing wheat in the United States in 1909, by geographical divisions.

Item.	United States.	North Atlantic States.	South Atlantic States.	South Central States.	North Central States.	North Central States—Mississippi River.	North Central States—Mississippi River.	Far Western States.

COMPARATIVE COST OF WHEAT PRODUCTION.

From the nature of the business, the ascertainment of the costs of producing agricultural products is more difficult to obtain, and these costs must be used with more care than costs of producing manufactured products. The reasons for this are: First, the lack of business methods on our farms and the almost complete absence of cost accounting, so that costs are generally mere estimates; second, the great influence of natural conditions and resources in determining cost. The costs used in the tables which I shall present, except in the case of Minnesota, are estimates made by agents or correspondents and are not the result of scientific investigation. They have, however, the stamp of official approval and are the best obtainable.

The following table presents the cost of production of wheat in the United States, Canada, and Argentina. The authorities for the figures are given in the footnotes.

TABLE 4.—Cost of production of wheat per acre and per bushel in the United States, Canada, and Argentina.

¹ Crop Reporter of United States Department of Agriculture, May, 1911, pp. 36-37.
² Cost of Producing Minnesota Farm Products, 1902-1907, United States Department of Agriculture Bulletin 73, p. 50.
³ Census and Statistics Monthly, Ottawa, Canada, March, 1912, pp. 51-57.
⁴ Wheat Production in Argentina, United States Department of Agriculture Bulletin 27, p. 56.

The cost of production of \$0.615 per bushel for the whole of the United States is almost identical with the cost of production for the whole of Canada, which is \$0.617. The cost in the North Atlantic States should be compared with costs in Nova Scotia, since in both sections commercial fertilizer was used. Conditions in the North Central States west of the Mississippi River are similar to those in Manitoba, so that the costs in columns 3 and 4 of the table may properly be compared with those in column 7. In comparing the Argentine cost with those in the United States allowance should be made for the freight rate to New York.

Just what conclusion each Senator may draw from the costs in this table will depend somewhat on his attitude toward a tariff on agricultural products. I am inclined to give the farmer the benefit of the doubt and to see in the table a justification

of a duty of 6 cents a bushel on wheat. The real competition is between wheat produced in the Dakotas, Wisconsin, and the other North Central States on the one hand and in Manitoba and Alberta on the other. The table shows that wheat can be produced a little less than 6 cents per bushel cheaper in Manitoba than in the North Central States.

COUNTERVAILING DUTIES.

The pending bill provides for countervailing duties on wheat, flour, and other wheat products. As long as foreign countries maintain duties on these products when imported from the United States the domestic producer will be adequately protected. In this connection it is important to take into consideration a provision in the Canadian law which provides that by an order in council any article may be put on the free list for any period of time. The rates on wheat and flour might be removed when convenient to Canada and then restored when such free entry was not beneficial to her industry.

The Canadian law reads as follows (R. S., 1906, ch. 48):

286. The governor in council may from time to time and in the manner hereinafter provided, in addition to the other purposes and matters in this act mentioned, make regulations for or relating to the following purposes and matters.

"(k) Transferring to the list of goods which may be imported into Canada free of duty, any or all articles, whether natural products or products of manufacture, used as materials in Canadian manufactures; any such materials transferred to the free list by such order in council, to be free of duty of customs for the time therein appointed for that purpose.

"(m) Reducing the duty on any or all articles, whether natural products or products of manufactures, used as materials in Canadian manufactures; any such materials specified in such regulation to be subject to such reduced duty of customs and no other, for the time and under the conditions therein provided."

302. All general regulations made by the governor in council under this act shall have effect from and after the duty on which the same are published in the Canada Gazette or from and after such later day as is appointed for the purpose in such regulations; and during such time as is therein expressed for that purpose, then until the same are revoked or altered.

MANUFACTURES OF WHEAT.

Little need be said about the duty on wheat flour. All that the millers themselves ask in the briefs is a compensatory duty. If flour is free, they ask for free wheat. If there is a duty on wheat, they ask for a duty on a barrel of flour equal to the wheat duty times the number of bushels of wheat required to make a barrel of flour.

PRODUCTION COST OF OATS.

Mr. President, while on my feet, and in order that it may be preserved in the Record, I also present data with reference to the difference in the cost of producing oats in this country and in competing countries and in the cost of producing barley in this country and in competing countries. It will show that the rates fixed in this bill on oats are adequate to measure the difference in the cost of production and that the rates fixed in this bill on barley are in excess of the difference in the cost of production.

The rates of duty on oats and oat products in the Payne-Aldrich law are:

238. Oats, 15 cents per bushel.
 239. Oatmeal and rolled oats, 1 cent per pound; oat hulls, 10 cents per hundred pounds.

The Senate bill proposes the following rates:

196. Oats, 6 cents per bushel of 32 pounds, and 33 cents per hundredweight on oatmeal and rolled oats, and 9 cents per hundredweight on oat feed.

The cost of production of oats per acre and per bushel in the United States and Canada are presented in the following table:

TABLE 5.—Cost of production of oats per acre and per bushel in the United States and Canada.

¹ Crop Reporter of United States Department of Agriculture, June 1911, p. 47.

² Census and Statistics Monthly, Ottawa, Canada, March, 1912, pp. 51-57.

The table shows that the cost of production of oats for the whole of the United States is \$0.209 per bushel and is substantially the same as the cost for the whole of Canada, which is \$0.307 per bushel. Comparing, however, the costs in the North Central States with those in Manitoba, the Canadian costs are about 4.5 cents lower than the costs in the United States. The duty of 6 cents a bushel in the Senate bill is probably not far from correct.

OAT PRODUCTS.

It seems to be agreed that it requires 10 bushels of oats to make a barrel of 180 pounds of rolled oats or oatmeal. The duty of 33 cents per 100 pounds on oatmeal carried in the Senate bill is ample compensation, based on this fact.

BARLEY.

The following table taken from the Crop Reporter of the United States Department of Agriculture for October, 1911, gives the production cost of barley in the United States in 1909: Cost of producing barley in important barley States of the United States.

Item.	United States.	New York.	Wisconsin.	Minnesota.	Iowa.	North Dakota.	South Dakota.	Nebraska.	California.

¹ Crop Reporter of the United States Department of Agriculture, October, 1911 p. 80.

² Census and Statistics Monthly, Ottawa, Canada, March, 1912, pp. 51-57.

The production cost of barley, as shown by this table, varies widely and makes it difficult to draw accurate conclusions. It is fair to say, however, that the 15 cents per bushel duty allowed in the Senate bill is ample protection.

FLAXSEED.

The Senate bill proposes the following duties on flax products:

- Section 217, flaxseed, 15 cents per bushel of 56 pounds.
- Section 46, flaxseed oil, 10 cents per gallon of 7½ pounds.
- Section 492, flax straw, free.
- Section 492, flax, hatched, free.
- Section 492, flax, not hatched, free.
- Section 492, tow of flax, free.

The information on the cost of production of flaxseed is limited, but from the most reliable data available I have prepared the following table:

TABLE 6.—Cost of production of flaxseed per acre and per bushel in the United States and Canada.

	Minnesota, 1902-1907.			Canada, 1911.

² Census and Statistics Monthly, Ottawa, Canada, March, 1912, pp. 51-57.

RYE AND BUCKWHEAT.

The rates of duty on rye and buckwheat in the Payne-Aldrich Act are as follows:

234. Buckwheat, 15 cents per bushel of 48 pounds; buckwheat flour, 25 per cent ad valorem.

241. Rye, 10 cents per bushel; rye flour, one-half of 1 cent per pound.

The Senate bill puts all these products on the free list and does not provide even countervailing duties.

Specific information on the production of these grains is not available. There would seem to be no reason, however, why these products should be free, oats protected, and a countervailing duty placed on wheat. All these cereals should be treated alike, at least in a general way. The position of the buckwheat and rye interests is so well stated in the following letter that I think it desirable to present it in full. It will appear from a perusal of this letter that it was written under a misapprehension. Mr. Blodgett assumed that, as a member of the Finance Committee, I was permitted to have some voice in the preparation of the tariff bill. He did not understand that the Republican members of the committee were excluded by their Democratic colleagues from taking part in the work of the Finance Committee.

JANESVILLE, WIS., July 1, 1913.

HON. ROBERT M. LA FOLLETTE,
United States Senate, Washington, D. C.

SIR: It is with considerable hesitancy that we again address you in reference to the pending tariff bill, but in view of the inconsistent treatment accorded to cereals and cereal products by the provisions of the agricultural schedule, we feel that we should at least again direct your attention to the matter.

The agricultural schedule now provides:

"Unrestricted free entry of rye, buckwheat, and the products thereof. "Wheat and its products ostensibly free, but really protected by the countervailing duty of 10 cents per bushel on the grain and 45 cents per barrel on the flour."

"Oats, 6 cents per bushel, with 33 cents per hundredweight, or 66 cents per barrel duty on the product."

If it is your purpose to consider the consumer alone, unrestricted free entry should be accorded all cereals and cereal products.

Of the three cereal "breadstuffs"—wheat, rye, and buckwheat—the consumer uses 99 per cent wheat products and 1 per cent of rye and buckwheat products.

Therefore if it was your purpose to consider the consumer alone when you made rye, buckwheat, and their products free, you should also have made wheat and its products free.

But even on the 1 per cent of rye and buckwheat products which the consumer uses he receives but slight benefit from the free, unrestricted entry of these products. For four-fifths of the rye flour reaches the actual consumer in the shape of rye bread baked at the bakery, not at his home.

Half of the buckwheat flour goes from the mill to the manufacturer of "self-rising buckwheat," and reaches the actual consumer blended with wheat and corn flour.

Placing rye and buckwheat upon the free list benefits almost wholly the baker and the blender, the actual consumer receiving the benefit on only one-fifth of the rye flour produced and only one-half of the buckwheat flour produced; whereas the greater part of the wheat flour manufactured reaches the consumer in the original mill package, and he would directly benefit by a cheapening of the price through placing wheat and its products on the free list.

We have referred in the above particular to a comparison of wheat products with rye and buckwheat products because we have the actual figures on the comparative consumption of all three products.

In the matter of oats, oatmeal, and oat feed, you are protecting the farmer who produces oats and the miller who manufactures oatmeal at the expense of the consumer. The duty of 6 cents per bushel on oats protects the farmer to that extent. The duty of 33 cents per hundredweight on oatmeal protects the miller of oatmeal, because the duty on the product is in excess of the duty on the grain, for it does not require 5½ bushels (160 pounds) of oats to make 100 pounds of oatmeal.

Your treatment of wheat and oat products should be wholly satisfactory to the farmer and the miller, because you protect them both

against foreign importations, except where a reciprocal advantage is given of free entry of our wheat and wheat flour to foreign countries.

In short, your treatment of these four cereals—wheat, oats, rye, and buckwheat—is highly inconsistent.

If free entry is desirable for rye, buckwheat, and the products thereof, it is far more desirable for wheat, oats, and the products thereof.

If wheat and its products are to enter free only from such countries as permit free entry of our wheat and its products, why should not like treatment be accorded to rye, buckwheat, oats, and their products?

If, however, protection is to be afforded to the farmers who grow oats and the millers who grind them, why should not that principle also be applied to wheat, rye, buckwheat, and their products?

Any one of these three principles—free trade, reciprocal treatment, or protection—if applied alike to all cereals would, to say the least, be consistent. But to apply free trade to rye, buckwheat, and the products thereof, reciprocal treatment to wheat and its products, while protecting oats and its products is highly inconsistent.

The only branch of the milling business that has ever been attacked by the Government as constituting a trust in restraint of trade is the milling of oats. And yet of all the cereals the only one that is fully protected by your tariff is oats.

Of all four cereals mentioned the millers of rye and buckwheat have not been personally represented at Washington, for the reason that they have no organization and are dependent upon their own individual efforts to secure fair treatment in Congress, and no individual miller of rye and buckwheat could afford to come to Washington and stay indefinitely while this bill was under consideration.

We have endeavored in the brief that we presented and in the letters that we have written to you to present the situation fairly as regards rye, buckwheat, and the products thereof. All that we have asked is that these cereals and their products be given exactly the same treatment as wheat and its product. But up to the present time our success has not been flattering, for the only breadstuff cereals to which the principle of free trade is applied by your committee are rye and buckwheat.

During the past year rye grain has ruled at two-thirds the value of wheat; buckwheat in the New York market at 70 cents per bushel against 90 cents to \$1 per bushel in the same market for wheat. The effect of the present provisions of this bill will be to still further cheapen these two cereals—rye and buckwheat—that are already cheap, leaving the higher-priced cereals unchanged; to cheapen the little-used cereal products and to leave unchanged the universal breadstuff.

The result of the provisions of the tariff bill in its present form as applied to rye and buckwheat will be absolute demoralization of the milling of those two cereals. It will result in making their production unremunerative to the farmers, who have heretofore produced them, and with only the slightest benefit to the consumer.

Are we requesting anything that is not fair and equitable when we ask your committee to so amend this bill as to give like treatment to wheat, rye, buckwheat, and the products thereof?

We trust that a reconsideration of this matter may result in complying with our request.

Yours, respectfully,

THE BLODGETT MILLING CO.,
FRANK H. BLODGETT, President.

The VICE PRESIDENT. The paragraph has heretofore been agreed to; it was not reserved.

Mr. LA FOLLETTE. I think perhaps I ought to precede my request by a motion to reconsider the vote by which the committee amendment was agreed to, unless I can have it reconsidered by unanimous consent. I ask unanimous consent that the vote may be reconsidered, and that I may have a direct vote on my amendment.

The VICE PRESIDENT. Is there objection? The Chair hears none.

Mr. LA FOLLETTE. Now I ask for a direct vote on the amendment which I have offered.

The VICE PRESIDENT. The amendment proposed by the Senator from Wisconsin will be stated.

The SECRETARY. In paragraph 198, page 56, line 18, before the word "cents," it is proposed to strike out "10" and insert "6," so as to read:

198. WHEAT, 6 cents per bushel.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question recurs upon the committee amendment.

The amendment was concurred in.

The SECRETARY. On page 155, paragraph 646, relating to wheat flour and semolina, was reserved by Mr. McCUMBER.

Mr. McCUMBER. I think, Mr. President, we have had a record vote on those matters, and I shall not ask for another.

The VICE PRESIDENT. Without objection, then, the committee amendments to the paragraph are concurred in in the Senate.

The SECRETARY. On page 158, paragraph 652, relating to wool of the sheep, hair of the camel, etc., was reserved.

Mr. BRISTOW. We have just had a vote on an amendment proposing to put wool on the dutiable list; so I shall not ask for an amendment to this paragraph. It would be useless, as it would be in substance just what has been voted down.

The VICE PRESIDENT. Without objection, then, the amendments made to the paragraph as in Committee of the Whole are concurred in in the Senate, and the paragraph as amended is adopted.

The SECRETARY. On page 165, subdivisions 1 and 2 of section 2, relative to the income tax, were reserved by Mr. BRISTOW, Mr. SIMMONS, Mr. LA FOLLETTE, and Mr. STERLING.

Mr. BRISTOW. Mr. President, I offer the amendment which I send to the desk to subdivision 2 of section 2, and I will ask the Secretary to read it as marked in the copy of the Record which I send to the desk.

The VICE PRESIDENT. The Secretary will read as requested.

The SECRETARY. On page 165, line 19, it is proposed to strike out "\$20,000" and insert in lieu thereof "\$10,000"; in line 20 strike out "\$50,000" and insert in lieu thereof "\$20,000"; on page 166, in line 1, strike out "\$50,000" and insert in lieu thereof "\$20,000," and strike out "\$100,000" and insert in lieu thereof "\$30,000"; in line 3 strike out "\$100,000" and the period and insert in lieu thereof "\$30,000 and does not exceed \$40,000, and 4 per cent per annum upon the amount by which the total net income exceeds \$40,000 and does not exceed \$50,000, and 5 per cent per annum upon the amount by which the total net income exceeds \$50,000 and does not exceed \$60,000, and 6 per cent per annum upon the amount by which the total net income exceeds \$60,000 and does not exceed \$70,000, and 7 per cent per annum upon the amount by which the total net income exceeds \$70,000 and does not exceed \$80,000, and 8 per cent per annum upon the amount by which the total net income exceeds \$80,000 and does not exceed \$90,000, and 9 per cent per annum upon the amount by which the total net income exceeds \$90,000 and does not exceed \$100,000, and 10 per cent per annum upon the amount by which the total net income exceeds \$100,000."

Mr. BRISTOW. The amendment is the same as that I offered in Committee of the Whole. Since that amendment was adopted the Committee on Finance has reported to amend the bill as the bill was reported to the Senate by increasing the tax on incomes between \$75,000 and \$100,000 per annum from 3 to 4 per cent and increasing the tax on incomes from \$100,000 to \$250,000 to 5 per cent—1 per cent additional—and on incomes from \$250,000 to \$500,000 6 per cent, or 2 per cent additional, over the bill as reported to the Senate. While that is an improvement over the bill as reported, I do not think it is as good as the amendment which I offer; and upon that amendment I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair with the junior Senator from Michigan [Mr. TOWNSEND] and withhold my vote.

Mr. LEA (when his name was called). I transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the senior Senator from South Carolina [Mr. TILLMAN] and will vote. I vote "nay."

Mr. REED (when his name was called). I again announce my pair with the senior Senator from Michigan [Mr. SMITH] and withhold my vote.

Mr. THOMAS (when his name was called). I make the same transfer as heretofore and will vote. I vote "nay."

The roll call was concluded.

The result was announced—yeas 18, nays 61, as follows:

YEAS—18.

Borah	Gallinger	Nelson	Stephenson
Brady	Jones	Norris	Sterling
Bristow	Kenyon	Penrose	Works
Clapp	La Follette	Polindexter	
Cummins	McCumber	Sherman	

NAYS—61.

Ashurst	Hughes	Owen	Smith, S. C.
Bacon	Jackson	Perkins	Smoot
Bradley	James	Pittman	Stone
Brandeggee	Johnson	Pomerene	Sutherland
Catron	Kern	Ransdell	Swanson
Chamberlain	Lane	Robinson	Thomas
Chilton	Lea	Root	Thompson
Clark, Wyo.	Lippitt	Saulsbury	Thornton
Clarke, Ark.	Lodge	Shafroth	Vardaman
Coit	McLean	Sheppard	Walsh
Dillingham	Martin, Va.	Shields	Warren
Fall	Martine, N. J.	Shively	Weeks
Fletcher	Myers	Simmons	Williams
Gore	O'Gorman	Smith, Ariz.	
Hitchcock	Oliver	Smith, Ga.	
Hollis	Overman	Smith, Md.	

NOT VOTING—16.

Bankhead	Crawford	Gronna	Reed
Bryan	Culbertson	Lewis	Smith, Mich.
Burleigh	du Pont	Newlands	Tillman
Burton	Goff	Page	Townsend

So Mr. BRISTOW's amendment was rejected.

Mr. BRISTOW. I offer the amendment which I send to the desk, and desire to say that upon this I shall not call for the

yeas and nays, because it would be uselessly taking up the time of the Senate. The amendment is the same as the one I offered before, advancing one-half per cent for each additional \$10,000 until \$100,000 is reached, and then advancing 1 per cent for each \$250,000, making the rate on incomes of \$1,000,000 8 per cent per annum, which is more than the present bill proposes. In my opinion, however, it is a very much better division of the rate than that incorporated in the pending bill as amended.

The amendment submitted by Mr. BRISTOW is as follows:

On page 165, in line 6, before the figure "1," insert " $\frac{1}{2}$ of," and in line 18, before the figure "1," insert " $\frac{1}{2}$ of"; in line 19 strike out "\$20,000" and insert in lieu thereof "\$10,000"; in line 20 strike out "\$50,000" and insert in lieu thereof "\$20,000," and strike out the figure "2" and insert in lieu thereof the figure "1."

On page 166, in line 1, strike out "\$50,000" and insert in lieu thereof "\$20,000," strike out "\$100,000" and insert in lieu thereof "\$30,000," and strike out the figure "3" and insert in lieu thereof " $\frac{1}{2}$ "; in line 3 strike out "\$100,000" and the period and insert in lieu thereof "\$30,000 and does not exceed \$40,000, and 2 per cent per annum upon the amount by which the total net income exceeds \$40,000 and does not exceed \$50,000, and $2\frac{1}{2}$ per cent per annum upon the amount by which the total net income exceeds \$50,000 and does not exceed \$60,000, and 3 per cent per annum upon the amount by which the total net income exceeds \$60,000 and does not exceed \$70,000, and $3\frac{1}{2}$ per cent per annum upon the amount by which the total net income exceeds \$70,000 and does not exceed \$80,000, and 4 per cent per annum upon the amount by which the total net income exceeds \$80,000 and does not exceed \$90,000, and $4\frac{1}{2}$ per cent per annum upon the amount by which the total net income exceeds \$90,000 and does not exceed \$100,000, and 5 per cent per annum upon the amount by which the total net income exceeds \$100,000 and does not exceed \$250,000, and 6 per cent per annum upon the amount by which the total net income exceeds \$250,000 and does not exceed \$500,000, and 7 per cent per annum upon the amount by which the total net income exceeds \$500,000 and does not exceed \$1,000,000, and on incomes over \$1,000,000 8 per cent per annum.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Kansas [Mr. BRISTOW].

The amendment was rejected.

Mr. WILLIAMS. Mr. President, the Senator from Wisconsin [Mr. LA FOLLETTE] offered an amendment in Committee of the Whole, and I do not remember whether or not he reserved the right to offer it in the Senate.

Mr. LA FOLLETTE. Mr. President, if the Senator will yield to me, I did, through the kindness of the Senator from Nebraska [Mr. NORRIS], reserve the right to offer it here. I had just sent for it, and was prepared to offer it.

Mr. WILLIAMS. That is the Senator's amendment upon the income tax?

Mr. LA FOLLETTE. Yes; upon the income tax.

Mr. WILLIAMS. I should like to have it voted upon in the Senate. It was voted upon in Committee of the Whole.

Mr. LA FOLLETTE. Let me inquire whether the Senator from Kansas requested a yeas-and-nays vote upon the amendment he has just offered.

Mr. BRISTOW. No; not on the last amendment. I did on the one that preceded it.

Mr. LA FOLLETTE. I do not wish to interfere with the Senator from Kansas. I will inquire if he has another amendment to offer upon this subject. If he has I will not take the floor.

Mr. BRISTOW. No; I am through.

Mr. LA FOLLETTE. Then I present the amendment which I send to the Secretary's desk, and ask to have it read.

The VICE PRESIDENT. The Secretary will read the amendment.

The SECRETARY. It is proposed to strike out all after the word "exceeds," in line 19, page 165; all of lines 20 and 21, on page 165, down to and including "\$100,000," in line 3, page 166, and to substitute in lieu thereof the following:

\$10,000 and does not exceed \$20,000, and $1\frac{1}{2}$ per cent per annum upon the amount by which the total net income exceeds \$20,000 and does not exceed \$30,000, and 2 per cent per annum upon the amount by which the total net income exceeds \$30,000 and does not exceed \$40,000, and $2\frac{1}{2}$ per cent per annum upon the amount by which the total net income exceeds \$40,000 and does not exceed \$50,000, and 3 per cent per annum upon the amount by which the total net income exceeds \$50,000 and does not exceed \$60,000, and 4 per cent per annum upon the amount by which the total net income exceeds \$60,000 and does not exceed \$70,000, and 5 per cent per annum upon the amount by which the total net income exceeds \$70,000 and does not exceed \$80,000, and 6 per cent per annum upon the amount by which the total net income exceeds \$80,000 and does not exceed \$90,000, and 7 per cent per annum upon the amount by which the total net income exceeds \$90,000 but does not exceed \$100,000, and 10 per cent per annum upon the amount by which the total net income exceeds \$100,000.

Mr. LA FOLLETTE. Mr. President, I wish to have printed in the Record in connection with the amendment I have offered a table of computations upon the collection of taxes on incomes which would be made under its provisions. This estimate is made by taking the average in each class and applying the rates of the amendment to that income, then multiplying by the number

of incomes in each class. The number of incomes in each class is taken from an estimate furnished by the Commissioner of Internal Revenue to members of the Ways and Means Committee in 1912. According to this estimate the amount of revenue collected would be \$68,976,000.

The VICE PRESIDENT. Without objection, the table will be printed in the Record.

The matter referred to is as follows:

Table showing number of persons, average of incomes, amount of tax per individual, and total tax based on estimates of Internal Revenue Office as found in House Document No. 416, Sixty-second Congress.

Income of—	Number of persons.	Average of incomes.	Amount of tax for each individual.	Total tax.
\$4,000 to \$10,000.....	250,000	\$6,000	\$60	\$15,000,000
\$10,000 to \$20,000.....	60,000	14,000	180	10,800,000
\$20,000 to \$30,000.....	15,000	24,000	400	6,000,000
\$30,000 to \$40,000.....	5,000	34,000	670	3,350,000
\$40,000 to \$50,000.....	3,000	44,000	990	2,970,000

Total.....				68,976,000

Mr. LA FOLLETTE. Under the indirect system of taxation the tariff, in so far as it affects the cost of food and clothing and the necessities of life, bears much more heavily upon the poor than upon the rich. Moreover, in the collection of taxes assessed against real estate and personal property the poor for years have been carrying much heavier burdens relatively than the rich.

There is little danger of overtaxing great wealth. We are coming to recognize more and more forcibly the menace of the swollen fortune. And it is when these great fortunes are being amassed and when they are still in the hands of those who have acquired them with little regard for the rights of others that there is most likelihood of their being used to grind labor and oppress mankind. Instead of waiting, therefore, to reach this concentrated wealth after the death of men like Morgan and Rockefeller through an inheritance tax, the fortunes from which such incomes are derived should be held in check and compelled to pay an equitable and proportionate share of the expenses of government through an income tax that is constitutional, legitimate, and proper.

But I shall not take the time of the Senate to add to the argument I made in offering this amendment in Committee of the Whole, but will ask for the yeas and nays upon it.

The VICE PRESIDENT. The question is upon the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE], upon which the yeas and nays have been demanded.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I make the same announcement about my pair as on preceding roll calls.

Mr. LEA (when his name was called). I again announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If at liberty to vote, I should vote "nay."

Mr. LEWIS (when his name was called). I again announce my pair with the junior Senator from North Dakota [Mr. GRONNA] and withhold my vote.

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the senior Senator from South Carolina [Mr. TILMAN] and will vote. I vote "nay."

Mr. THOMAS (when his name was called). I announce the same transfer as heretofore and will vote. I vote "nay."

The result was announced—yeas 16, nays 62, as follows:

YEAS—16.

Borah	Cummins	McCumber	Poinexter
Brady	Jones	McLean	Sherman
Bristow	Kenyon	Nelson	Sterling
Clapp	La Follette	Norris	Works

NAYS—62.

Ashurst	Clark, Wyo.	Gallinger	James
Bacon	Clarke, Ark.	Gore	Johnson
Brandegee	Colt	Hitchcock	Kern
Catron	Dillingham	Hollis	Lane
Chamberlain	Fall	Hughes	Lippitt
Chilton	Fletcher	Jackson	Lodge

Martin, Va.	Pomerene	Simmons	Thomas
Ransdell	Reed	Smith, Ariz.	Thompson
Myers	Robinson	Smith, Ga.	Thornton
O'Gorman	Root	Smith, Md.	Vardaman
Oliver	Saulsbury	Smith, S. C.	Walsh
Overman	Shafroth	Smoot	Warren
Owen	Sheppard	Stephenson	Weeks
Penrose	Shields	Stone	Williams
Perkins	Shively	Sutherland	
Pittman		Swanson	

NOT VOTING—17.

Bankhead	Crawford	Lea	Tillman
Bradley	Culberson	Lewis	Townsend
Bryan	du Pont	Newlands	
Burleigh	Goff	Page	
Burton	Gronna	Smith, Mich.	

So Mr. LA FOLLETTE's amendment was rejected.

Mr. POINDEXTER. Mr. President, I offer an amendment, and ask that it be inserted after the numerals "\$500,000," in line 16, page 178, of the new print.

The VICE PRESIDENT. The Secretary will state the amendment as it would appear in the old print.

Mr. POINDEXTER. It would come in right after the income-tax amendment of the committee.

The SECRETARY. At the end of the amendment offered by the committee on page 166, which ends with the numerals "\$500,000," it is proposed to insert:

And does not exceed \$1,000,000, and 8 per cent per annum upon the amount by which the total net income exceeds \$1,000,000.

Mr. POINDEXTER. I will say, in explanation of this amendment, that it overcomes an objection which, I think, well lies to the amendment made in Committee of the Whole and to the amendment which I have voted for to-day, in that it levies an increased income tax upon incomes over \$1,000,000, of which there are a great many in the country. I will say, in further explanation of it, that I do not think it is open to the objection that I understand was urged in the Senate a few days ago, that such an income tax is "the pillage of a class." It is not the pillage of a class any more than any enlightened system of taxation is the pillage of a class. It is laid upon the theory that luxuries should be taxed more heavily than necessities; that superfluity should bear a heavier portion of the burdens of the Government than mere sufficiency.

I ask for a yea-and-nay vote upon the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair with the Senator from Michigan [Mr. TOWNSEND].

Mr. LEA (when his name was called). I transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the senior Senator from South Carolina [Mr. TILLMAN] and vote "nay."

Mr. REED (when his name was called). I again announce my pair with the Senator from Michigan [Mr. SMITH] and withhold my vote.

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced, and vote "nay."

The roll call having been concluded, the result was announced—yeas 15, nays 63, as follows:

YEAS—15.

Brady	Jackson	McLean	Sherman
Bristow	Jones	Nelson	Sterling
Clapp	Kenyon	Norris	Works
Cummins	La Follette	POINDEXTER	

NAYS—63.

Ashurst	Hollis	Owen	Smith, Md.
Bacon	Hughes	Penrose	Smith, S. C.
Bradley	James	Perkins	Smoot
Brandeggee	Johnson	Pittman	Stephenson
Catron	Kern	Pomerene	Stone
Chamberlain	Lane	Ransdell	Sutherland
Chilton	Lea	Robinson	Swanson
Clark, Wyo.	Lippitt	Root	Thomas
Clarke, Ark.	Lodge	Saulsbury	Thompson
Colt	McCumber	Shafroth	Thornton
Dillingham	Martin, Va.	Sheppard	Vardaman
Fall	Martine, N. J.	Shields	Walsh
Fletcher	Myers	Shively	Warren
Gallinger	O'Gorman	Simmons	Weeks
Gore	Oliver	Smith, Ariz.	Williams
Hitchcock	Overman	Smith, Ga.	

NOT VOTING—17.

Bankhead	Crawford	Lewis	Tillman
Borah	Culberson	Newlands	Townsend
Bryan	du Pont	Page	
Burleigh	Goff	Reed	
Burton	Gronna	Smith, Mich.	

So Mr. POINDEXTER's amendment was rejected.

Mr. STERLING. I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. The Senator from South Dakota [Mr. STERLING] reserved the amendment to subsection B of the income-tax provision, page 169. He now proposes the following amendment: On page 169, line 15, insert the word "lawful" after the word "in" and before the word "trade," so as to read:

Incurred in lawful trade or arising from fires, storms, or shipwreck, etc.

Mr. STERLING. Mr. President, I simply wish to say that this amendment is in form somewhat different to the one I offered in Committee of the Whole. That amendment referred to losses that might be sustained in legitimate or ordinary trade. I hardly think those were the apt and exact words to be used in this connection, but the word "lawful" is better. It is the purpose of the amendment simply to prevent a claim for losses or a deduction of losses arising out of a trade or a business carried on in violation of law.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from South Dakota [Mr. STERLING].

The amendment to the amendment was rejected.

The VICE PRESIDENT. Has any Senator any further amendment to offer to subsections I and II of the income-tax provision? If not, the amendments made as in Committee of the Whole will be concurred in in the Senate. They are concurred in.

The SECRETARY. The only other reservation undisposed of is by the Senator from New York [Mr. FOOT], on page 172, where he reserved subdivision D.

Mr. ROOT. Mr. President, I offered an amendment to that amendment as in Committee of the Whole, but as the committee and the caucus have determined against it I do not care to take up the time of the Senate by offering it again.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole.

The amendment was concurred in.

The VICE PRESIDENT. The paragraph is adopted. The bill is still in the Senate and open to amendment.

Mr. GALLINGER. Are all the amendments disposed of?

The VICE PRESIDENT. All the amendments are disposed of.

Mr. GALLINGER. I offer an amendment in the nature of a substitute.

The VICE PRESIDENT. The amendment will be read.

The SECRETARY. Strike out all of the bill, including the title and enacting clause, and insert:

Whereas the Democratic Party is in control of the National Government; and

Whereas a tariff bill (H. R. 3321) is under consideration by the United States Senate; and

Whereas any tariff bill affects every citizen of the United States either favorably or adversely; and

Whereas the Democratic Party has repeatedly declared its adherence to the policy of referring national matters to the electorate; and

Whereas in several States represented in whole or in part by Democratic Senators there is strong disapproval of some of the provisions in the pending bill; therefore be it

Resolved, That further consideration of the bill be postponed until the first Monday in December, 1914, in order that the legal voters of the United States at the State and congressional elections to be held during that year may have the opportunity of expressing their approval or disapproval of said bill.

Mr. GALLINGER. Mr. President, I regret that my amendment could not have been offered earlier in the day, so that it might have been debated.

During the progress of the debate on the pending bill I have taken occasion several times to declare that in my opinion it is inevitable that the proposed legislation will result in much disturbance of business and industrial disaster to a greater or less extent. I still entertain that view, and for that reason believe it would be wise for the Senate to postpone the enactment of this bill until after the voters of the country have had an opportunity to express their opinion of it in the elections one year hence. Why should that not be done?

The country is now reasonably prosperous, and will continue so if given an opportunity. There are already indications that the people are getting ready to repudiate the bill now under consideration. If postponed until December, 1914, the voice of the people will have been heard, and then if necessary the bill can be modified and changed to correspond to the popular sentiment.

Doubtless it will be said, Mr. President, that I am a late convert to the referendum doctrine. My answer to that is that the overwhelming importance of the subject is an adequate reason for my attitude. It will also doubtless be further said

that there is no machinery provided for taking the sense of the voters on the tariff question. The electorate of the third congressional district of Maine found no difficulty in giving expression to their views on yesterday, and in the coming congressional elections the voters throughout the country will have the same opportunity.

It is a matter of regret to me, Mr. President, that several Senators, who seem to agree with the general proposition, have declared their purpose to vote against the amendment because of the referendum provision it contains, but, notwithstanding that, it gives me pleasure to vote for it without reference to what other Senators may do. The importance of the subject is a controlling factor, so far as I am concerned.

Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair with the Senator from Michigan [Mr. TOWNSEND].

Mr. THOMAS (when his name was called). I announce the same transfer as heretofore, and vote "nay."

The roll call was concluded.

Mr. REED. I again announce my pair with the Senator from Michigan [Mr. SMITH] and withhold my vote.

Mr. LEA. I again announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If at liberty to vote, I would vote "nay."

The result was announced—yeas 16, nays 63, as follows:

YEAS—16.

Brady	Gallinger	McCumber	Ransdell
Bristow	Jackson	McLean	Sherman
Cañon	La Follette	Oliver	Thornton
Clapp	Lippitt	Penrose	Warren

NAYS—63.

Ashurst	Hollis	Owen	Smith, S. C.
Bacon	Hughes	Perkins	Smoot
Borah	James	Pittman	Stephenson
Bradley	Johnson	Polindexter	Sterling
Brandeggee	Jones	Pomerene	Stone
Chamberlain	Kenyon	Robinson	Sutherland
Chilton	Kern	Root	Swanson
Clark, Wyo.	Lane	Saulsbury	Thomas
Clarke, Ark.	Lodge	Shafroth	Thompson
Colt	Martin, Va.	Sheppard	Tillman
Cummins	Martine, N. J.	Shields	Vardaman
Dillingham	Myers	Shively	Walsh
Fall	Nelson	Simmons	Weeks
Fletcher	Norris	Smith, Ariz.	Williams
Gore	O'Gorman	Smith, Ga.	Works
Hitchcock	Overman	Smith, Md.	

NOT VOTING—16.

Bankhead	Crawford	Gronna	Page
Bryan	Culberson	Lea	Reed
Burleigh	du Pont	Lewis	Smith, Mich.
Burton	Goff	Newlands	Townsend

So Mr. GALLINGER's amendment was rejected.

The VICE PRESIDENT. The bill is still in the Senate and open to amendment. If there be no further amendments—

Mr. LA FOLLETTE. Mr. President, on page 55, line 2, I move to strike out the word "sixteen" and to insert in lieu thereof the word "seventeen." It is in paragraph 179, relating to sugar. It relates to the time when the free-sugar provision shall go into effect.

Mr. CLARK of Wyoming. The Senator has the wrong print.

Mr. LA FOLLETTE. I have the new print.

Mr. CHILTON. It is on page 53 of the old print.

Mr. LA FOLLETTE. I do not know what the new print was intended for if it was not for the use of the Senate.

The VICE PRESIDENT. Does the Senator from Wisconsin move to reconsider the vote whereby the amendments in the paragraph were concurred in?

Mr. LA FOLLETTE. I will make that as my first motion.

The motion to reconsider was agreed to.

Mr. LA FOLLETTE. Now, Mr. President, I renew the motion on my amendment.

The VICE PRESIDENT. The amendment proposed by the Senator from Wisconsin will be stated.

The SECRETARY. In paragraph 179, page 53, line 11, strike out "sixteen" and insert "seventeen," so as to read:

Provided further, That on and after the 1st day of May, 1917, the articles hereinbefore enumerated in this paragraph shall be admitted free of duty.

Mr. LA FOLLETTE. Mr. President, I offer this amendment knowing full well that it will be rejected, but tender it for the purpose of submitting brief observations upon the sugar schedule and, connected therewith, some data upon the sugar industry which should be preserved as a part of the record of this debate.

I have some tables and some matter here explanatory of those tables, which I ask to have printed in the Record.

The VICE PRESIDENT. Is there objection? The Chair hears none, and permission is granted.

Mr. LA FOLLETTE. Mr. President, the Tariff Board began an investigation of the cost of sugar production. Before it had completed its work the existence of the board was terminated by the failure of Congress to make an appropriation for its continuance. But the work which had been inaugurated by the board was transferred to the Bureau of Foreign and Domestic Commerce and completed by that bureau. The results of that investigation are of importance, and I desire to refer briefly to them and to the general sugar situation and its relation to the tariff.

Hawaiian sugar is free. It sells in the American market at the same price as other imported sugar which pays a duty. This means that the Hawaiian sugar producer receives a bounty equivalent to the duty.

Porto Rican sugar comes in free. It sells at the same price here as if it paid the duty. This amounts to the same thing as a bounty to the Porto Rican producer equivalent to the amount of the duty.

Sugar from the Philippine Islands is admitted free of duty, except sugar in excess of 300,000 gross tons. As our present importation is only slightly in excess of one-half of that amount all sugar imported at the present time from the Philippines comes in free. As Philippine sugar brings, in the American market, the same price as though it paid the duty, the remission of the duty is equivalent to a bounty to the Philippine producer equaling the amount of the duty.

In production where mechanical skill is an important factor the wage scale is far from being a determining factor in the cost of production. But in the planting, weeding, pulling, topping, loading, and hauling of sugar beets to the factory the labor is unskilled manual labor, and the rate of wages is important. And it is subjecting the American sugar-beet farmer to more unjust and destructive competition than that which opens his markets to the labor of Germany and France.

WHERE COMPETITION CENTERS.

The quantity and principal sources of the American sugar supply are shown in the following table:

	Pounds.
Continental United States:	
Cane sugar	724,000,000
Beet sugar	1,199,000,000
Noncontiguous territory of the United States:	
Porto Rico	734,000,000
Hawaii	1,205,000,000
Philippines	438,000,000
Cuba	3,187,000,000

The only sugar in the above table that pays duty is Cuban sugar, and it is admitted under the reciprocity treaty at a reduction of 20 per cent on the rates in the act of August 5, 1909. The amount of sugar imported from foreign countries and paying the full duty is so small that the duty paid by Cuban sugar measures the protection given to the producers of sugar in the United States and our insular possessions.

The real struggle for the American market to-day is between the beet-sugar production on the one hand and Cuban production on the other. In studying the difference in the cost of production it is more important to know the cost of producing cane sugar in Cuba than beet sugar in Germany. Cuba has practically unlimited possibilities for growth in sugar culture. The Philippines will soon be another factor to be reckoned with in the competition for the American market. Since 300,000 tons of Philippine sugar were admitted free to the United States (1909) the imports have almost doubled each year. At the present time, however, a comparison of Cuban costs with costs in the United States gives a fair view of the situation and determines the protection required.

The only Government report that we have upon this subject is the work of the Tariff Board on costs in Louisiana. When the board was discontinued, the results of their partial investigation were left in its files, but in January, 1913, they were transferred to the Bureau of Foreign and Domestic Commerce, completed, and published. (The Sugar Industry, mis. series No. 9.) Costs for Cuba and the American beet-sugar industry used subsequently have been taken from unofficial reports.

COSTS IN LOUISIANA.

Table 1 is a summary of the costs of producing raw sugar in Louisiana in 1909, 1910, and 1911, showing the various items of cost and the total factory cost per pound. These costs do not include the cost of refining, which is not done in the Louisiana factories, and therefore can not be compared without an allowance with the costs of American beet-sugar factories.

TABLE 1.—Cost of production of cane sugar in Louisiana in the years 1911, 1910, and 1909.

	1911		1910		1909	
	Cost per pound of sugar.	Percentage of cost.	Cost per pound of sugar.	Percentage of cost.	Cost per pound of sugar.	Percentage of cost.
Cost of cane delivered at factory.....	\$0.0340	77.50	\$0.0277	74.40	\$0.0267	73.90
Manufacturing labor.....	.0025	5.82	.0022	5.90	.0021	5.90
Supplies and operating expenses:						
Fuel.....	.0015	3.48	.0013	3.71	.0015	4.17
Reagents—lime, sulphur, etc.....	.0002	.52	.0002	.67	.0002	.68
Cooperage—sugar bags, barrels, etc.....	.0005	1.19	.0006	1.72	.0006	1.85
Salaries—superintendents, clerks.....	.0003	1.26	.0005	1.43	.0005	1.26
Taxes and insurance.....	.0003	1.50	.0005	1.47	.0005	1.60
Other operating expenses.....	.0012	2.87	.0013	3.67	.0014	3.76
Total operating expenses.....	.0049	10.84	.0048	12.96	.0052	14.30
Repairs and maintenance.....	.0025	5.84	.0025	6.74	.0022	5.90
Total factory cost.....	.0439	100.00	.0372	100.00	.0362	100.00

The foregoing table shows very clearly what causes the high costs in Louisiana. Approximately 75 per cent of the cost is for cane. The problem, then, is really an agricultural one and presents the question whether or not cane growing is economically adapted to the climate of Louisiana. Cane requires a long season for maturing. In tropical countries it is common to allow it to grow for 14 or 18 months before grinding. At best Louisiana cane must be cut in November, and then chances of a frost are taken. It never reaches maturity, and consequently its sugar content is much lower than that found in tropical cane. Furthermore, in countries like Cuba the cane grows year after year from the old stubble, and the planters get from four to eight so-called ratoon crops; in Louisiana there is never more than one ratoon crop. Other economic difficulties confronting the Louisiana cane-sugar industry might be enumerated, but enough has been said to indicate a conclusion. The high costs found by the Tariff Board rather than being an argument for protection are an argument against it. If the Louisiana industry were the only one concerned, public policy would seem to require free sugar. At least the question is raised whether or not the Louisiana industry is not preserved at too great a cost to the consuming public.

BEET-SUGAR COSTS.

The most scientific study of the beet-sugar industry is the recent—1912—work of Prof. Roy G. Blakey, The United States Beet-Sugar Industry and the Tariff. In chapter 4 of his book he analyses all the available material relating to the cost of manufacturing beet sugar in the United States. He sums up his findings as follows:

It seems probable from the figures given above and other facts disclosed in making this study that the average total cost to the American manufacturer of producing granulated beet sugar at the factory is between \$3 and \$3.50 per 100 pounds, being a combination of about \$2.20 for the sugar in the beets and near \$1 for manufacturing the same. In localities where the sugar in the beets costs \$2.75 to \$3 and the manufacturing \$1.25 to \$2, the finished product costs \$4 to \$5, and doubtless there are some factories thus near the margin. In more favorable localities and under more economical manufacturing conditions where the sugar in the beets can be obtained for \$1.75 to \$2 and the manufacturing can be done at a cost of 60 cents to \$1, the total cost is \$2.35 to \$3, and it is probable that a number of factories come within these figures, though very few have published such results.

The manufacturing cost in the above statement, as distinguished from the cost of sugar in the beets, includes the cost of refining. Still the cost of beets is relatively high. It is frequently said that the conversion costs in the United States are as low as in Germany, Cuba, or any other country, due to the American skill in the application of machinery and industrial organization. The chief disadvantage is in the cost of growing the beets. As to the agricultural cost of growing beets in the United States, Blakey says in the book cited above (pp. 129-131):

It is impossible to determine with any degree of certainty the average cost for the United States or for any single State, but the writer's judgment is that in the humid States most of the actual normal costs range near \$30 to \$35 per acre and in the irrigated States \$5 to \$10 higher, not including rent for the land or interest on capital invested in the same.

According to data already given, the experience of the writer has been that over two-fifths of the cost of producing beets has been hand labor working without a team, and nearly another fifth hand labor aided by a team, and over another fifth the labor of the team; that is, on an average, 64.39 per cent of the costs of raising beets was wages, and

the combined cost of laborers and teams was 84.68 per cent. This indicates the importance of the rate of wages and efficiency of labor in the cost of producing beets.

COSTS IN CUBA.

There are many statements about the cost of producing sugar in Cuba in public documents and hearings. Some of them are worthy of consideration, others are obviously colored by the political or industrial interest of the informant. I will give a few of the best authorities. Dr. H. Paasche, the great German sugar authority, in his work, *Die Zuckerproduktion der Welt*, estimates the Cuban cost at \$1.73 to \$1.94 per 100 pounds. In 1905 the United States Department of Commerce and Labor made the following statement:

The cost of raising a pound of sugar in Cuba may be said to be, speaking roughly, 1 cent, and the cost of manufacturing and transporting it to the seaboard under present conditions 1 cent more, so that the total cost of production of sugar in Cuba, from the planting to the shipment at Habana, is about 2 cents a pound—not less than that and perhaps, on the average, a little more.

In 1902, in the Cuban reciprocity hearings, Col. Bliss, collector of the port of Habana, gave the costs which I present in a table. They are for 96° sugar produced on a plantation 60 kilometers from Cienfuegos.

TABLE 2.—Cost of producing 100 pounds of sugar in Cuba.

	Cost per 100 pounds.
Cost of cultivating cane.....	\$0.328
Cutting, piling, and hauling to railroad.....	.520
Hauling by railroad to mill.....	.048
Cost at mill.....	.896
Cost of manufacture.....	.888
Cost per 100 pounds at mill.....	1.784
Freight to port.....	.123
Cost per 100 pounds at port.....	1.907
Cost at port, adding for upkeep (40 cents per 2,500 pounds of cane).....	2.068
Shipping charges.....	.230
Bags.....	.0676
Cost per 100 pounds f. o. b.:	
Spanish gold.....	2.3656
American currency.....	2.25

Willett & Gray, well known as authorities on sugar, have this to say on Cuban costs:

While large and small estates in Cuba vary in cost of production, the same as with beet factories, yet the lowest cost of the large estates is understood to be 1½ cents per pound up to 2 cents per pound for others. The average cost of production may fairly be estimated at 1.85 cents per pound, f. o. b. Cuba; or say 1.95 cents, cost and freight, New York.

Mr. Blakey, to whose book I am indebted for most of the information on Cuban production, thinks that it costs nearly 2 cents f. o. b. at the Cuban port to produce sugar in Cuba, and that the cost is lower on the better-managed plantations.

COMPARISON OF COSTS.

The table which I now present shows a comparison of the most reliable costs discussed above. This is useful as indicating the relative strength of the competing interests.

TABLE 3.—Comparison of the costs of producing 100 pounds of sugar in Louisiana, the American beet-sugar States, and Cuba.

	Louisiana costs for 1909 as reported by Tariff Board, unrefined sugar.	Blakey's conclusion as to beet-sugar costs in the United States, refined sugar.	Col. Bliss's estimates of cost of sugar in Cuba in 1902, unrefined sugar.
Cost of either cane or beets delivered at factory.....	\$2.67	\$2.30	\$0.896
Conversion cost.....	.95	1.00	.888

For obvious reasons caution must be used in drawing conclusions from this table. The costs are for different years. The Cuban costs are for 1902. Cuban costs now are, if anything, lower than at that time. The Louisiana costs are the lowest reported by the Tariff Board. The conversion cost of beet sugar is higher than the others, which was to be expected, since it includes the additional cost for refining. If the refining cost could be deducted in order to put it on a parity with the Cuban and Louisiana conversion costs, it is evident that these costs would all be remarkably close to each other. The great divergence in costs is in the cost of cane or beets, and these figures show where competition centers; they show that the sugar problem is not a manufacturing, but an agricultural problem.

DIFFERENCE IN COST.

The average cost of Cuban sugar f. o. b. at the Cuban port is, according to the best authorities, \$2 per 100 pounds. In a number of cases, however, it falls as low as \$1.50 per 100 pounds.

The best estimates of the cost of American beet sugar are that it varies from \$3 to \$3.50 per 100 pounds.

These figures are not exactly comparable since one is for raw sugar, the other for refined, but the refining cost is very small and a mental allowance for it will be sufficient.

Taking the two high costs, \$2 for Cuba and \$3.50 for beet sugar, there is a difference in cost of \$1.50 per 100 pounds. At the present time the greater part of Cuban sugar imported pays a duty of \$1.65, less the 20 per cent differential, or \$1.32 per 100 pounds. Under the pending bill it would pay \$1.23 less the 20 per cent differential, or \$0.984. The results would be the same if the two low costs are compared. From this comparison the pending rates would seem to be too low, although not so low that the industry could not adjust itself to them.

POTENTIAL COMPETITION IN TROPICAL COUNTRIES.

There are several facts which stand out clearly in a broad survey of the sugar situation:

First. The possibilities of the production of sugar in tropical countries have hardly been realized, and where realized only beginnings have been made in the exploitation of those possibilities. Cuba and the Philippines alone can supply the American market.

Second. Sugar beets can never be grown as cheaply in the United States as cane can be grown in the Tropics. Both natural advantages and labor cost are against the American producer.

Third. If the tariff is removed, production will be stimulated in Cuba and the Philippines, and as the production in these countries increases the production of beet sugar will tend to decline.

Fourth. Foreign tropical sugar is the raw material of the refineries. In so far as free sugar weakens or destroys the American beet-sugar industry, it will to that extent turn over the control of the American market to the refineries.

SUGAR AND THE RACE PROBLEM IN HAWAII.

Efforts have been made by the government of Hawaii to increase the Caucasian element in the population of the island. Considerably over one-half of the population, as is known, is made up of Japanese and Chinese. Active measures have been taken by the government to encourage Caucasian emigration into the islands. Between 1906 and 1912, 12,306 men, women, and children of Portuguese, Spanish, and Russian nationality were brought to the islands, at a total cost of \$893,118.82. This work has been under the supervision of the territorial department of immigration, labor, and statistics.

In the past the sugar planters have introduced oriental labor into the islands; now their efforts to secure Asiatics are confined to Filipinos. The Hawaiian Sugar Planters' Association introduced, in 1910, 2,721 Filipinos; in 1911, 2,209; in 1912, 3,043.

The laborers, by races, on the sugar plantations of Hawaii for 1900, 1905, 1910, 1911, and 1912 are shown in the following table. The increase in the non-Asiatic element is to be noted especially.

	1900	1905	1910	1911	1912
Asiatic races.....	31,623	37,490	32,619	32,111	32,535
Non-Asiatic races.....	4,427	7,753	11,298	12,937	14,810
Per cent non-Asiatic.....	12.30	17.13	25.72	28.71	31.28

The increase in the Caucasian element in the population has brought with it (1) higher wages, which means, on the assumption that the Caucasian labor is not more efficient, a higher cost of production to the sugar planter; (2) improved labor conditions. On the labor conditions in the island Gov. Frear says in his annual report to the Secretary of the Interior for 1912:

The character and condition of the laborers on the sugar plantations are constantly improving. During the last few years nearly all of the sugar plantations have substituted new laborers' cottages with good sanitary arrangements for old tenement houses and increased the garden space around them. Wages have gradually increased, one of the most important changes in this respect having occurred during the last year. At the time of annexation the minimum wages of unskilled laborers were \$12.50 a month. It had increased several years ago to \$18 a month. Year before last a bonus of \$2 a month was added in the case of those who worked an average of 20 days a month throughout the year. On the 1st of January, 1912, the minimum wage was increased to \$20 a month plus a sliding-scale bonus based on the price of sugar; that is to say, all laborers who received \$24 a month or less were to receive a bonus at the rate of 1 per cent of their year's earnings for every dollar per ton over \$70 per ton in the average New York price of 96° sugar for the year. Thus if the average price should be 4 cents a pound, or \$80 per ton, the laborer would receive a bonus of 10 per cent of his year's earnings. The average price of sugar for the 10 years 1902-1911 was 3.9677, or nearly 4 cents. A month is considered as consisting of 26 working days. Some of the plantations have extended this bonus system to all laborers who receive wages up to \$50 a month; others have extended it to all employees, irrespective of the amount of their pay, while still others have adopted a profit-sharing system for employees who receive \$50 or more a month and applied the sliding-scale bonus to those who receive less than that amount. In addition there are furnished free of charge house, water, fuel, and medical at-

tendance, estimated to equal \$5 a month additional, and personal taxes, \$5 a year, are paid for the first three years. Most of the laborers, however, receive much more than the minimum wages, partly because they are worth more or perform higher grades of work, but largely because of the extension of the planting agreement and piecework systems. Statistics seem to show that the average wages of unskilled laborers on the plantations exceed those of unskilled agricultural laborers in many, and perhaps most, of the States on the mainland.

It is said free sugar, which will put Hawaiian sugar interests on a free-trade basis, will arrest the effort to increase the Caucasian element in the population and tend to orientalize the islands. In competition with Cuban sugar the planters will be forced to seek a cheaper labor supply and the oriental races are waiting at the gates. Here is an argument for a duty on sugar that is not economic, but social, and it deserves more attention than it has received.

I believe, Mr. President, that that is all I desire to offer at this time; and, as I offered the amendment only pro forma for the purpose of submitting these observations and presenting this that it might be preserved in the Record, I will now withdraw it, if I may be permitted to do so.

The VICE PRESIDENT. Then the question recurs upon concurring in the amendments to the paragraph made as in Committee of the Whole.

Mr. LA FOLLETTE. Perhaps it would be just as well to have the amendment I have offered voted upon and disposed of.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 53, line 12, it is proposed to strike out "sixteen" and insert "seventeen," so as to read "nineteen hundred and seventeen."

The VICE PRESIDENT. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was rejected.

Mr. BRISTOW. I move to strike out the word "March," in line 10, page 53, and insert "August." The purpose of this amendment is to extend the time when the provisions of the law affecting the duties on sugar shall go into effect from March to August, because there will be a very large part of the beet-sugar crop of this year that will not be marketed at that time, and the reduction will come in the midst of the marketing of the crop. It virtually destroys the value of the extension to the beet-sugar industry for this year. I am not going to ask for a roll call, but I should like to urge the members of the Committee on Finance to take this matter into consideration when the bill is in conference. I hope they will do so, because it is very important to the beet-sugar crop of this year.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Kansas to the amendment made as in Committee of the Whole.

The amendment to the amendment was rejected.

Mr. GALLINGER. On page 53, lines 17, 18, and 19, I move to strike out the proviso. I will say that I will not ask for the yeas and nays. The amendment is to the text of the bill.

The VICE PRESIDENT. Will the Senator from New Hampshire permit the original amendment to be concurred in?

Mr. GALLINGER. Certainly.

The VICE PRESIDENT. The question is on concurring in the amendment of the committee on page 53, beginning in line 9. The amendment was concurred in.

The VICE PRESIDENT. The amendment proposed by the Senator from New Hampshire will be stated.

The SECRETARY. On page 53, it is proposed to strike out the proviso in lines 17, 18, and 19, as follows:

Provided, That on and after the 1st day of May, 1916, the articles hereinbefore enumerated in this paragraph shall be admitted free of duty.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from New Hampshire.

The amendment was rejected.

Mr. GALLINGER. In the same paragraph, line 14, I move to strike out the numeral "3" and insert the numeral "5"; in line 15 to strike out "1½" and to insert "1½"; and in line 16 to strike out "15" and insert "20."

Mr. President, this amendment is proposed to increase the rates of duty to a moderate extent on a product that ought to be protected by the American Congress—maple sugar and maple sirup. As I have grave apprehensions that a yeas-and-nays vote would be adverse to my amendment, I am ready to have the question put without demanding the yeas and nays.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from New Hampshire.

The amendment was rejected.

Mr. PENROSE. Mr. President, I have here an amendment to page 251, line 8, restoring to the bill the provisions of the present law regarding the importations of tobacco and manufactures of tobacco from the Philippines. I ask to have the amendment read, and then I will ask for a roll call.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 251, line 8, after the word "duty" and before the colon, insert:

Except, in any fiscal year, wrapper tobacco and filler tobacco when mixed or packed with more than 15 per cent of wrapper tobacco in excess of 300,000 pounds, filler tobacco in excess of 1,000,000 pounds, and cigars in excess of 150,000,000 cigars, which quantities shall be ascertained by the Secretary of the Treasury under such rules and regulations as he shall prescribe.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Pennsylvania.

Mr. PENROSE. I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair and withhold my vote.

Mr. REED (when his name was called). I again announce my pair. If at liberty to vote, I should vote "nay."

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced and vote "nay."

The roll call was concluded.

Mr. LEA. I again announce my pair. If at liberty to vote, I should vote "nay."

The result was announced—yeas 36, nays 43, as follows:

YEAS—36.

Borah	Cummins	Root
Bradley	Dillingham	Sherman
Brady	Fall	Smoot
Brandeggee	Gallinger	Stephenson
Bristow	Jackson	Sterling
Catron	Jones	Sutherland
Clapp	Kenyon	Warren
Clark, Wyo.	La Follette	Weeks
Colt	Lippitt	Works

NAYS—43.

Ashurst	Johnson	Ransdell	Smith, S. C.
Bacon	Kern	Robinson	Stone
Chamberlain	Lane	Saulsbury	Swanson
Chilton	Martin, Va.	Shafroth	Thomas
Clarke, Ark.	Martine, N. J.	Sheppard	Thompson
Fletcher	Myers	Shields	Thornion
Gore	O'Gorman	Shively	Tillman
Hitchcock	Owen	Simmons	Vardaman
Hollis	Pittman	Smith, Ariz.	Walsh
Hughes	Pomerene	Smith, Ga.	Williams
James		Smith, Md.	

NOT VOTING—16.

Bankhead	Crawford	Gronna	Page
Bryan	Culberson	Lea	Reed
Burleigh	du Pont	Lewis	Smith, Mich.
Burton	Goff	Newlands	Townsend

So Mr. PENROSE's amendment was rejected.

The VICE PRESIDENT. The bill is still in the Senate and open to amendment. If there be no further amendments, the question is, Shall the amendments be engrossed and the bill be read the third time?

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The VICE PRESIDENT. The question is, Shall the bill pass?

Mr. GALLINGER. Mr. President, I ask for the yeas and nays on the passage of the bill.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BANKHEAD (when his name was called). I have a pair with the junior Senator from West Virginia [Mr. GOFF]. If he were present, I should vote "yea."

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND]. In his absence I withhold my vote. If I were at liberty to vote, I should vote "yea."

Mr. SHEPPARD (when Mr. CULBERSON's name was called). I again announce the unavoidable absence of my colleague, the senior Senator from Texas [Mr. CULBERSON], and that he is paired with the Senator from Delaware [Mr. DU PONT].

Mr. LEA (when his name was called). I have a pair with the senior Senator from South Dakota [Mr. CRAWFORD]. In his absence I am not at liberty to vote. If I were at liberty to vote, I should vote "yea."

Mr. LEWIS (when his name was called). I had an arrangement of pair with the junior Senator from North Dakota [Mr. GRONNA] as to all matters transpiring as in Committee of the Whole, with the understanding that I should have the privilege of voting upon the passage of the bill. I announce that if present the Senator from North Dakota would vote against the bill, and in pursuance of my understanding with him I will vote. I vote "yea."

Mr. NEWLANDS (when his name was called). By arrangement with the Senator from Colorado [Mr. THOMAS], I have been paired on amendments to the pending bill with the Senator from Ohio [Mr. BURTON]. On the final vote on the bill I vote "yea."

Mr. REED (when his name was called). I have a pair with the senior Senator from Michigan [Mr. SMITH]. In his absence I withhold my vote. If I were at liberty to vote, I should vote "yea."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON]. I therefore withhold my vote. If I were at liberty to vote, I should vote "yea."

Mr. JONES (when Mr. TOWNSEND's name was called). I desire to announce that the junior Senator from Michigan [Mr. TOWNSEND] is necessarily absent. He is paired with the Senator from Florida [Mr. BRYAN]. If the Senator from Michigan were present, he would vote "nay."

The roll call was concluded.

Mr. STERLING. I again announce the unavoidable absence of my colleague [Mr. CRAWFORD] and the fact that he is paired with the Senator from Tennessee [Mr. LEA]. If present and at liberty to vote, my colleague would vote "nay."

The result was announced—yeas 44, nays 37, as follows:

YEAS—44.

Ashurst	Johnson	Owen	Smith, Ariz.
Bacon	Kern	Pittman	Smith, Ga.
Chamberlain	La Follette	Polindexter	Smith, Md.
Chilton	Lane	Pomerene	Smith, S. C.
Clarke, Ark.	Lewis	Robinson	Stone
Fletcher	Martin, Va.	Saulsbury	Swanson
Gore	Martine, N. J.	Shafroth	Thompson
Hitchcock	Myers	Sheppard	Tillman
Hollis	Newlands	Shields	Vardaman
Hughes	O'Gorman	Shively	Walsh
James	Overman	Simmons	Williams

NAYS—37.

Borah	Dillingham	Nelson	Stephenson
Bradley	Fall	Norris	Sterling
Brady	Gallinger	Oliver	Sutherland
Brandeggee	Jackson	Page	Thornion
Bristow	Jones	Penrose	Warren
Catron	Kenyon	Perkins	Weeks
Clapp	Lippitt	Ransdell	Works
Clark, Wyo.	Lodge	Root	
Colt	McCumber	Sherman	
Cummins	McLean	Smoot	

NOT VOTING—14.

Bankhead	Crawford	Gronna	Thomas
Bryan	Culberson	Lea	Townsend
Burleigh	du Pont	Reed	
Burton	Goff	Smith, Mich.	

So the bill was passed.

Mr. GALLINGER. Mr. President, it is a privilege and a pleasure to me to avail myself of this opportunity to give expression to my personal appreciation of the courteous, kindly, and considerate manner in which the senior Senator from North Carolina [Mr. SIMMONS], chairman of the Committee on Finance, has conducted the debate on the bill just agreed to.

It has been my privilege to participate in the consideration of several tariff bills, and I recall no instance in which a bill has been managed on the floor with greater consideration for the minority and with so little asperity and ill feeling between the contending sides of the Chamber, credit for which is largely due the Senator from North Carolina. [Applause.]

The bill itself is bad, but its management has been in every way creditable to the majority and eminently fair to the minority. [Applause.]

Mr. SIMMONS. Mr. President, I desire to express personally to the Senator from New Hampshire my deep sense of appreciation of the kindly and complimentary terms in which he has referred to my services as the chairman of the Finance Committee in connection with the tariff bill just passed by the Senate. I am deeply grateful for his gracious terms of commendation and approval.

I wish to say, on my part, that throughout the prolonged struggle over the bill every Senator on the other side, especially the Senator from New Hampshire as leader of that side, has been uniformly courteous and considerate of me, and I wish now to make to him and them my sincere acknowledgments. Responding to these kindly sentiments I have sought in every way possible to be fair and considerate of the views and the feelings of my colleagues of the other side of the Chamber as well as on this side.

I want now to say there is nothing in connection with the final conclusion of this forensic and legislative struggle, outside of its success, that gives me so much pleasure as the fact that our deliberations and discussions of this bill have been marked, as the Senator has truthfully said, by less of personal friction, of asperity of feeling, and bitterness in debate than in the consideration of any similar measure during the twelve years I have had the honor of being a member of this body.

Mr. President, I wish to assure my friend from New Hampshire that I shall ever remember with keen appreciation the gracious terms in which he, speaking for himself and his colleagues of the other side of the Chamber, has referred to me

personally and to the part I have played as chairman of the Finance Committee in connection with the great legislative measure upon which we have just voted.

Mr. President, I move that the Senate request a conference with the House of Representatives upon the amendments of the Senate, and that the Chair appoint seven managers of the conference on the part of the Senate.

The motion was agreed to; and the Vice President appointed as managers at the conference on the part of the Senate Mr. SIMMONS, Mr. STONE, Mr. WILLIAMS, Mr. JOHNSON, Mr. PENROSE, Mr. LODGE, and Mr. LA FOLLETTE.

Mr. STONE. Mr. President, I appreciate the compliment of being appointed one of the conferees on the part of the Senate to confer with a like committee on the part of the House to discuss and determine any differences that may exist between the two Houses with respect to this bill. Circumstances of a personal nature, however, of commanding moment to me will make it impossible for me to serve. Although I greatly esteem the honor and regret my inability to take part in this important work, I feel obliged to ask the Chair and the Senate to excuse me from this honorable service.

The VICE PRESIDENT. The Chair regrets the inability of the Senator from Missouri to serve as one of the conferees on the part of the Senate, and appoints in his stead the Senator from Indiana, Mr. SHIVELY.

HOOR OF MEETING TO-MORROW.

Mr. KERN. Mr. President, I move that when the Senate adjourns to-day it adjourn to meet to-morrow at 2 o'clock p. m. The motion was agreed to.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 20 minutes spent in executive session the doors were reopened, and (at 6 o'clock and 10 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, September 10, 1913, at 2 o'clock p. m.

NOMINATIONS.

Executive nominations received by the Senate September 9, 1913.

SECRETARY OF LEGATION.

Jefferson Caffery, of Louisiana, to be secretary of the legation of the United States of America at Stockholm, Sweden, vice Jordan Herbert Stabler, assigned to duty in the Department of State.

ASSISTANT TREASURER OF THE UNITED STATES.

Irving Shuman, of Illinois, to be Assistant Treasurer of the United States at Chicago, Ill., in place of Len Small, resigned.

REGISTER OF THE LAND OFFICE.

F. F. Fritz, of Towner, N. Dak., to be register of the land office at Minot, N. Dak., vice Thomas E. Olsgard, whose term expired July 23, 1913.

PROMOTIONS IN THE ARMY.

CAVALRY ARM.

Second Lieut. Murray B. Rush, Fourteenth Cavalry, to be first lieutenant from September 5, 1913, vice First Lieut. Moss L. Love, Eleventh Cavalry, killed in aeroplane accident September 4, 1913.

INFANTRY ARM.

Lieut. Col. Charles W. Penrose, Infantry, unassigned, to be colonel from September 5, 1913, vice Col. Cornelius Gardener, unassigned, retired September 4, 1913.

Maj. Tredwell W. Moore, Seventh Infantry, to be lieutenant colonel from September 5, 1913, vice Lieut. Col. Charles W. Penrose, unassigned, promoted.

Capt. Edward Sigerfoos, Fifth Infantry, to be major from September 5, 1913, vice Maj. Tredwell W. Moore, Seventh Infantry, promoted.

First Lieut. William S. Neely, Infantry, unassigned, to be captain from September 5, 1913, vice Capt. Edward Sigerfoos, Fifth Infantry, promoted.

Second Lieut. Stanley L. James, Twenty-eighth Infantry, to be first lieutenant from September 5, 1913, vice First Lieut. William S. Neely, unassigned, promoted.

APPOINTMENTS IN THE ARMY.

TO BE SECOND LIEUTENANTS FROM AUGUST 30, 1913

Cavalry Arm.

Corpl. Ray Wehnes Barker, Quartermaster Corps.
Corpl. Henry Abby, jr., Troop C, Eleventh Cavalry.
Corpl. Earl Howard Coyle, Company B, Sixteenth Infantry.
Pvt. Mack Garr, Company I, Fifteenth Infantry.

Corpl. Stanley Carl Drake, Troop M, Thirteenth Cavalry.
Pvt. Maxwell Kirby, Company B, First Battalion of Engineers.

Sergt. Edmund Peyton Duval, Troop G, Eleventh Cavalry.
Corpl. Robert E. Carmody, Company M, Seventh Infantry.

Field Artillery Arm.

Corpl. Ernst Sedlacek, Third Company, Coast Artillery Corps.
Infantry Arm.

Corpl. Frank Bonne Jordan, Company F, Third Infantry.
Sergt. Alfred Eugene Sawkins, Quartermaster Corps.

PROMOTIONS IN THE NAVY.

Lieut. Commander Ridley McLean to be a commander in the Navy from the 1st day of July, 1913.

Lieut. Commander Stephen V. Graham to be a commander in the Navy from the 1st day of July, 1913.

Lieut. Louis J. Connelly to be a lieutenant commander in the Navy from the 1st day of July, 1913.

Lieut. Thomas R. Kurtz to be a lieutenant commander in the Navy from the 1st day of July, 1913.

Lieut. Harold E. Cook to be a lieutenant commander in the Navy from the 1st day of July, 1913.

Lieut. (Junior Grade) John B. Rhodes to be a lieutenant in the Navy from the 1st day of July, 1913.

CONFIRMATIONS.

Executive nominations confirmed by the Senate September 9, 1913.

UNITED STATES MARSHAL.

F. R. Brenneman to be United States marshal for the District of Alaska, division No. 3.

POSTMASTERS.

ILLINOIS.

Joseph F. Traband, Lebanon.

MASSACHUSETTS.

Martin B. Crane, Merrimac.

Michael T. Kane, Ludlow.

Martin H. Ryan, Northboro.

NEW YORK.

E. A. Arnold, Katonah.

William Y. McIntosh, Pleasantville (late Pleasantville Station).

OKLAHOMA.

J. M. Crutchfield, Tulsa.

M. C. Falkenbury, Miami.

Walter T. Fears, Eufaula.

S. R. Hawks, jr., Clinton.

W. T. Kniseley, Glencoe.

PENNSYLVANIA.

S. O. Bender, Trafford.

Daniel Clarey, Sayre.

Albert K. Kneule, Norristown.

HOUSE OF REPRESENTATIVES.

Tuesday, September 9, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Infinite and eternal Source of Life and all its attendant blessings, we approach Thee with unfeigned love and gratitude that we exist, that all our wants are anticipated and bountifully provided; and we most devoutly pray that we may respond more readily to the voices which are ever calling to us out of the depths of our being, that we may make dominant in our lives all that is purest, noblest, best; and so enter into the joys of the faithful. Amen.

The Journal of the proceedings of yesterday was read and approved.

NATIONAL CONSERVATION EXPOSITION.

The SPEAKER laid before the House the following communication:

THE NATIONAL CONSERVATION EXPOSITION,
Knoxville, Tenn., August 25, 1913.

Hon. CHAMP CLARK,

Speaker of House of Representatives, Washington, D. C.

DEAR SIR: The president and board of directors of the National Conservation Exposition take pleasure in announcing to the House of Representatives of the United States that they will, on September 1, 1913, at Knoxville, Tenn., open the National Conservation Exposition, which is the first exposition ever held for the purpose of giving accent and emphasis to the necessity for conservation of the natural resources of the country and for the teaching by concrete example of the best means and methods for such conservation.

Said exposition will be open until October 31, and we request the honor of the presence of the Members of the House of Representatives of the United States at some time during said exposition to be designated by the House of Representatives.

T. A. WRIGHT, *President*.
W. M. GOODMAN, *Secretary*.

Mr. PEPPER. Mr. Speaker, I ask unanimous consent for the present consideration of the following resolution.

The SPEAKER. The gentleman from Iowa [Mr. PEPPER] asks unanimous consent for the present consideration of a resolution which the Clerk will report.

The Clerk read as follows:

House resolution 247.

Resolved, That the invitation of the National Conservation Exposition, of Knoxville, to the House of Representatives to attend the exposition at Knoxville at some date to be set by the Speaker is accepted.

That a committee consisting of the Speaker and 14 Members of the House to be designated by him be appointed to attend said exposition on behalf of the House of Representatives, and that the expenses of said committee be paid out of the contingent fund of the House of Representatives upon vouchers to be approved by the Speaker and audited by the Committee on Accounts.

The SPEAKER. Is there objection to the present consideration of the resolution?

Mr. HUMPHREY of Washington. Mr. Speaker, I reserve the right to object. I want to ask the gentleman a question: Is this conservation meeting a part of the old conservation movement that has had to do with the so-called conservation of our forests?

Mr. PEPPER. I am not able to say whether it is a part of any other movement or not. It is a movement originating in the South, immediately fostered by the people of Knoxville to further the conservation idea, and especially the conservation of the soil of the South. I understand it is backed by a number of men who have been identified with the conservation movement, but the exposition itself is for the purpose of calling attention to many of the problems of the Southern States, particularly in the way of conservation.

Mr. HUMPHREY of Washington. What I was trying to ascertain was whether or not the same men who started this general conservation proposition that resulted in placing most of the timber of the Western States in forest reserves and in giving the Santa Fe Railroad a million and a quarter acres of land practically for nothing, and in giving the Northern Pacific 450,000 acres of land—valuable land—for barren mountain tops, in the name of conservation—whether the same set of men are now back of this movement.

Mr. PEPPER. I do not think any of the gentlemen who are backing this exposition or who have been instrumental in bringing it about have had anything to do with the things mentioned by the gentleman from Washington. It may be that some of the men to whom he refers are interested in this proposition, but only in an advisory way, or as a part of the general movement; and, in my judgment, this exposition is a very worthy proposition. It has been financed by the citizens of that country entirely up to the present time, and I may say that most of the Southern States have become interested in the exhibits that have been placed there and in the work that is being fostered by this exposition. The meeting itself is the third annual exposition, and the idea of sending a committee down there is for the purpose of encouraging the work that is being done by these men. As to their connection with any other conservation proposition, I know nothing about that.

Mr. HUMPHREY of Washington. I think, from what the gentleman has said, that I have no objection to this resolution. When it was first mentioned I thought perhaps it was a part of the same old publicity propaganda that was carried on here for years, largely at the expense of the Government, when Mr. Pinchot was at the head of the Forest Service, when they had an army of publicity agents paid out of the Treasury of the United States to propagate doctrines which, in my judgment, were absolutely wrong and which resulted in tying up the resources of the country, absolutely taking millions of acres of timber off the market and letting it rot in the forests, for the advantage of Weyerhaeuser and the other great timber barons of this country. I wanted to find out about it for that reason, because if it was a part of that same old propaganda, certainly it would not go through here by unanimous consent.

Mr. PEPPER. I do not think you will find there is anything objectionable in this.

Mr. HUMPHREY of Washington. I have no objection.

The SPEAKER. Is there objection?

Mr. HUMPHREY of Washington. I have no objection.

Mr. FOSTER. Mr. Speaker, reserving the right to object, I would like to ask the gentleman from Iowa [Mr. PEPPER] if this exposition is to take in the general scope of conservation; that is, in reference to water-power sites and matters of that kind?

Mr. PEPPER. Mr. Speaker, I do not believe they have any exhibit of water-power sites down there.

Mr. FOSTER. I understand that they would not have, but whether the general policy of the Government in reference to these matters is to be taken up at this exposition.

Mr. PEPPER. I am not able to say whether they are going to have any lectures or discussions upon that subject or not. I may say that the exhibits embrace, for instance, a building for the work of the Children's Bureau, and they also have exhibits of the various appliances used under the direction of the Bureau of Mines, in which the gentleman is particularly interested. They have other exhibits that embrace the conservation of the soil, especially of the Southern States, and, as I understand the exposition, its purpose is to cover all phases of conservation. Whether or not they have anything pertaining to water power I am not able to say.

Mr. COX. That is in the bill, is it not?

Mr. PEPPER. There is nothing like that in the bill.

Mr. FOSTER. I take it that this conservation exposition would cover the whole scope of conservation of the natural resources of the country.

Mr. PEPPER. If they are able to do it. They no doubt will attempt to.

Mr. FOSTER. I do not know about whether they are able to do it, but that is the intention of it.

Mr. PEPPER. I think the intention is just as broad as the word "conservation."

Mr. FOSTER. So that that would take in all of these matters?

Mr. PEPPER. If they are able to present an exhibit that would cover the subject of water power, and that was a matter of interest to that section of the country, I have no doubt they will do so.

Mr. FOSTER. I hope that is the case, because a discussion of these matters will be of some advantage to Congress and to the country generally, and I commend my good friend from Tennessee [Mr. AUSTIN] to this, and hope that he will be able to learn something during this exposition in reference to these matters, and I know that that will be of advantage to the country.

Mr. TOWNER. Mr. Speaker, will the gentleman yield?

Mr. PEPPER. Yes.

Mr. TOWNER. Mr. Speaker, reserving the right to object, I would like to ask the gentleman if it is not the fact that this exposition originated especially with the movement in the South toward soil conservation?

Mr. PEPPER. That is true.

Mr. TOWNER. And is it not primarily, perhaps, intended to demonstrate the necessity and the advantages, and especially be a practical ocular demonstration of the methods by which the soils of the South can be preserved and benefited thereby?

Mr. PEPPER. I would say yes; that I think perhaps that was in the minds of the men who originated the exposition, but I think it was there because that is the big problem in the South. I think, however, that the exposition itself is expected to grow in value, so as to embrace the entire problem of conservation; but the problem to which the gentleman refers is the big problem in the South, and they have given more attention to it than to anything else.

Mr. TOWNER. At least it can be said that this is not devoted to any theoretical ideas of conservation, but especially to the practical things that will be found in the conservation of the soil and its assistance in the agricultural development of the South and the country generally.

Mr. PEPPER. Yes.

Mr. MADDEN. Mr. Speaker, will the gentleman yield?

Mr. PEPPER. Yes.

Mr. MADDEN. How much is this going to cost the Government of the United States?

Mr. PEPPER. The estimate is \$612.50.

Mr. MADDEN. That is all?

Mr. PEPPER. That is all of the estimate.

Mr. MADDEN. What are we proposing to do?

Mr. PEPPER. The resolution calls for the appointment of a committee of 15, including the Speaker, to accept an invitation of the people of Knoxville and attend the exposition and view the exhibits, and, of course, make such report or convey such information as they see fit to Congress.

Mr. MADDEN. The gentleman means that 15 men are to go?

Mr. PEPPER. Yes.

Mr. MADDEN. And their expenses are to be paid?

Mr. PEPPER. Yes; the expenses of these 15 men will amount to only \$612.50.

Mr. MADDEN. And of what does that consist?

Mr. PEPPER. Railroad fare, Pullman, meals, hotels.

Mr. MADDEN. Are these men supposed to go on exhibition or to make speeches?

Mr. PEPPER. I do not know. The resolution does not call for any particular exhibit by the committee, but I have no doubt that if the Speaker selects such gentlemen as the gentleman from Illinois [Mr. MADDEN] they will be quite an attraction.

Mr. MADDEN. I just want to suggest that he ought to select men who are known to be conservationists and who are also the handsomest men of the House.

The SPEAKER. Is there objection?

Mr. DONOVAN. Mr. Speaker, reserving the right to object, there was a little colloquy down front that none of us heard, and I want to inquire if there are any public lands in Tennessee? I understand that this is where this exposition takes place.

Mr. PEPPER. I do not know just what is the extent of the public lands in Tennessee.

Mr. BYRNS of Tennessee. Oh, yes; there are thousands of acres.

Mr. DONOVAN. Is there any public land down there?

Mr. AUSTIN. I will say to the gentleman from Connecticut that the Government already has purchased about 200,000 acres which is within the Appalachian Forest Reserve that is located within twenty-odd miles of this exposition.

Mr. DONOVAN. Now, this carries an appropriation.

Mr. PEPPER. Which amounts to the sum of \$612.50.

Mr. DONOVAN. Where do you get the money—out of the contingent fund?

Mr. PEPPER. The contingent fund of the House.

Mr. DONOVAN. Well, the gentleman is a Democrat, I take it?

Mr. PEPPER. Yes; I admit it.

Mr. DONOVAN. Was the gentleman present and heard the criticism of Democrats yesterday for their spending money and taking so much out of the contingent fund, amounting to about \$100,000 a year more than Republicans? Was the gentleman present?

Mr. PEPPER. I did not hear that part of it.

Mr. DONOVAN. Is the gentleman in favor of depleting the Treasury, of keeping that up, and allowing Republicans to accuse us of extravagance and waste of the public funds?

Mr. PEPPER. I will say to the gentleman that, so far as the conduct of the Democratic Party is concerned in this sort of matter, I am not so particularly fearful of our Republican brethren; and I take it there are just two propositions involved in this—

Mr. DONOVAN. I simply wanted an answer; I do not want the gentleman to use my time.

Mr. PEPPER. The gentleman has not any time; I am just simply answering him in my time.

Mr. DONOVAN. Mr. Speaker, I decline to yield further. [Laughter and applause.] Now, Mr. Speaker, we were told by the chairman of the Committee on Appropriations yesterday, I believe, and the Record will bear me out, that toward \$100,000 was in excess of what the Republicans had spent in the way of a contingent fund. Now, gentlemen, what does my Democratic friend from Illinois—

Mr. PEPPER. No; Iowa.

Mr. DONOVAN. He proposes to help out the Republicans by keeping up this waste and expenditure of money. I have no particular objection to what goes on in Tennessee, and if 14 Members of this House can have their expenses paid—Pullman fare, imported cigars, the proverbial small bird and cold bottle—I will be satisfied with the noise I have already made.

Mr. PEPPER. Mr. Speaker, I think it is only fair to say that this matter, in view of the remarks of the gentleman from Connecticut, ought to be judged by two standards. The first test ought to be this: Is the object of this exposition worthy to be recognized by this Congress? In other words, is the conservation idea as it will be exemplified by this exposition worthy of our consideration and attention? If it is, gentlemen should be in favor of the resolution. And the second test is, will there be any public use or any public service rendered in sending a committee of Congress down there? If there is no public need of it, if there will be no benefit coming from it, the committee ought not to go at all. If there is some public benefit the committee ought to be allowed its necessary expenses. That is all there is to it as far as I am concerned. I am not particularly interested in the resolution. The Committee on Industrial Arts and Expositions have instructed me to ask unanimous consent for its consideration, and I now ask the Speaker to put the question.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. The question is on agreeing to the resolution.

The question was taken, and the resolution was agreed to.

URGENT DEFICIENCY BILL.

The SPEAKER. The unfinished business to-day is the Bartlett amendment to the urgent deficiency bill (H. R. 7898).

The question was taken, and the Speaker announced the ayes seemed to have it.

Mr. MANN. Mr. Speaker, I should call for the yeas and nays, but I think it would be more convenient for Members in voting to make the point of no quorum, and therefore I make the point of no quorum present.

The SPEAKER. The gentleman from Illinois makes the point of no quorum present. The Chair will count. [After counting.] Two hundred and five gentlemen are present—not a quorum. The Doorkeeper will close the doors, the Sergeant at Arms will notify absentees, and the Clerk will call the roll.

The question was taken; and there were—yeas 180, nays 78, answered "present" 7, not voting 164, as follows:

YEAS—180.

So the amendment was adopted.

The Clerk announced the following pairs:

For the session:

Mr. SLAYDEN with Mr. BARTHOLOTT.

Mr. SCULLY with Mr. BROWNING.

Mr. HOBSON with Mr. FAIRCHILD.

On the vote:

Mr. SIMS with Mr. PROUTY.

Mr. DONOHUE (for) with Mr. FITZGERALD (against).

Until further notice:

Mr. HART with Mr. CRAMTON.

Mr. MCCOY with Mr. STEVENS of Minnesota.

Mr. FOWLER with Mr. MILLER.

Mr. TALBOTT of Maryland with Mr. MERRITT.

Mr. CRISP with Mr. HINDS.

Mr. SHERLEY with Mr. GILLET.

Mr. MCGILLICUDDY with Mr. GUERNSEY.

Mr. MCCLELLAN with Mr. J. R. KNOWLAND.

Mr. BYRNES of South Carolina with Mr. BARCHFIELD.

Mr. BELL of Georgia with Mr. BURKE of South Dakota.

Mr. ASHBROOK with Mr. AINEY.

Mr. BEALL of Texas with Mr. ANTHONY.

Mr. BROWN of West Virginia with Mr. CALDER.

Mr. CANTRILL with Mr. BROWNE of Wisconsin.

Mr. CARLIN with Mr. CARY.

Mr. DALE with Mr. BRYAN.

Mr. CHURCH with Mr. BURKE of Pennsylvania.

Mr. CONRY with Mr. COPELY.

Mr. COVINGTON with Mr. BUTLER.

Mr. CURLEY with Mr. DANFORTH.

Mr. DIFENDERFER with Mr. FARR.

Mr. DRISCOLL with Mr. GOOD.

Mr. ESTOPINAL with Mr. DUNN.

Mr. FINLEY with Mr. GRAHAM of Pennsylvania.

Mr. FRANCIS with Mr. GRIEST.

Mr. GARRETT of Texas with Mr. HAMILTON of New York.

Mr. GITTINS with Mr. HAMILTON of Michigan.

Mr. GOEKE with Mr. HAUGEN.

Mr. GOLDFOGLE with Mr. HINEBAUGH.

Mr. GRAHAM of Illinois with Mr. FORDNEY.

Mr. GREGG with Mr. HUGHES of West Virginia.

Mr. HAMLIN with Mr. KAHN.

Mr. GRIFFIN with Mr. KENNEDY of Rhode Island.

Mr. HAYDEN with Mr. KIESS of Pennsylvania.

Mr. KEATING with Mr. LA FOLLETTE.

Mr. LEVER with Mr. LANGHAM.

Mr. LEVY with Mr. LAFFERTY.

Mr. MCANDREWS with Mr. LENROOT.

Mr. MORGAN of Louisiana with Mr. MCGUIRE of Oklahoma.

Mr. MURRAY of Massachusetts with Mr. MORIN.

Mr. O'HARE with Mr. MOTT.

Mr. O'SHAUNESSY with Mr. PARKER.

Mr. PALMER with Mr. PATTON of Pennsylvania.

Mr. PATTEN of New York with Mr. ROBERTS of Nevada.

Mr. REILLY of Connecticut with Mr. ROBERTS of Massachusetts.

Mr. RICHARDSON with Mr. PORTER.

Mr. RUCKER with Mr. SHEREVE.

Mr. SABATH with Mr. SMITH of Idaho.

Mr. SAUNDERS with Mr. TREADWAY.

Mr. SMALL with Mr. SMITH of Minnesota.

Mr. SMITH of New York with Mr. WALTERS.

Mr. STANLEY with Mr. WILDER.

Mr. TAYLOR of Alabama with Mr. WOODRUFF.

Mr. THACHER with Mr. WINSLOW.

Mr. UNDERHILL with Mr. MARTIN.

Mr. WHITE with Mr. J. I. NOLAN.

Mr. FIELDS with Mr. McDONALD.

Mr. AIKEN with Mr. BELL of California.

Mr. BRUCKNER with Mr. HAWLEY.

Mr. CRISP. Mr. Speaker, I voted "yea," but the Clerk announced that I am paired with the gentleman from Maine, Mr. HINDS, so I desire to withdraw my vote and to answer "present."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time.

Mr. MONDELL. Mr. Speaker—

The SPEAKER. For what purpose does the gentleman rise?

Mr. MONDELL. To offer a motion to recommit with instructions.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. MONDELL. I am opposed to the bill as it now stands.

The SPEAKER. Is there any gentleman in the House who is opposed to the bill without qualification who wishes to offer a motion to recommit with instructions? If so, the Chair will recognize him.

Mr. BARTLETT. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BARTLETT. Did I understand the gentleman from Wyoming to state that he was opposed to the bill?

The SPEAKER. He said he was opposed to it as it stood, and the Chair announced that if there was any gentleman in the House who was opposed to it without any limitations or qualifications he would recognize him.

Mr. MANN. How is that a limitation or qualification? He could not be opposed to it in any other way.

The SPEAKER. He may be opposed to it entirely.

Mr. MANN. That is, as it stands.

The SPEAKER. Suppose one man says he is opposed to a bill and another man says that unless he gets an amendment placed in the bill he will oppose it.

Mr. MANN. The gentleman from Wyoming says he is opposed to it as it stands. That is, the engrossed copy of the bill.

Mr. MONDELL. Mr. Speaker, I shall vote against the bill unless it is amended as I suggest.

The SPEAKER. The Clerk will report the motion of the gentleman from Wyoming.

The Clerk read as follows:

Mr. MONDELL moves to recommit the bill H. R. 7898, entitled "A bill making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes," to the Committee on Appropriations, with directions to that committee to report the bill back to the House forthwith with the following amendments:

"In paragraph commencing with line 24, on page 28, and reading as follows: 'Investigating cost of production: For salaries and all other actual necessary expenses, including field investigations at home and abroad, compensation of special agents, clerk hire, and rental of quarters in Washington, D. C., purchase of books of reference and manuscripts, to enable the Bureau of Foreign and Domestic Commerce of the Department of Commerce to ascertain at as early a date as possible, and whenever industrial changes shall make it essential, the cost of producing articles at the time dutiable in the United States, in leading countries where such articles are produced, by fully specified units of production, and under a classification showing the different elements of cost of such articles of production, including the wages paid in such industries per day, week, month, or year, or by the piece; and hours employed per day; and the profits of manufacturers and producers of such articles; and the comparative cost of living, and the kind of living; what articles are controlled by trusts or other combinations of capital, business operations, or labor, and what effect said trusts or other combinations of capital, business operations, or labor have on production and prices, fiscal year 1914, \$50,000,' strike out \$50,000 and insert \$100,000 in lieu thereof.

"In the paragraph on page 35 reading as follows: 'Commissioners of conciliation: To pay the expenses of commissioners of conciliation in labor disputes, whenever appointed in pursuance to section 8 of the act creating the Department of Labor, \$5,000, or so much thereof as may be necessary,' strike out \$5,000 and insert \$25,000 in place thereof."

Mr. BARTLETT. Mr. Speaker, I did not catch the reading of the amendment. As I understood it, it simply changes the amount.

Mr. MANN. Simply the amount.

Mr. BARTLETT. Is that all?

Mr. MANN. That is all?

Mr. BARTLETT. I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit. Mr. MANN. On that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 79, nays 170, answered "present" 4, not voting 170, as follows.

YEAS—79.

So the motion to recommit was lost.

The following additional pairs were announced:

Until further notice:

Mr. CANTRILL with Mr. CAMPBELL.

Mr. CARTER with Mr. McGUIRE of Oklahoma.

Mr. FITZGERALD with Mr. CALDER.
 Mr. MORGAN of Louisiana with Mr. BURKE of Pennsylvania.
 Mr. DONOHUE with Mr. KINKAID of Nebraska.
 Mr. BURGESS with Mr. MANAHAN.
 Mr. CANDLER of Mississippi with Mr. SINNOTT.
 Mr. CLARK of Florida with Mr. WILDER.
 Mr. CULLOP with Mr. J. I. NOLAN.
 Mr. DOREMUS with Mr. PORTER.
 Mr. DUPRE with Mr. HAMILTON of New York.
 Mr. GILMORE with Mr. LAFFERTY.
 Mr. HULL with Mr. GOOD.
 Mr. HUMPHREYS of Mississippi with Mr. KEISS of Pennsylvania.

Mr. KINKEAD of New Jersey with Mr. COPLEY.
 Mr. BELL of Georgia. Mr. Speaker, did the gentleman from South Dakota, Mr. BURKE, vote?

The SPEAKER. He did not.
 Mr. BELL of Georgia. I am paired with the gentleman. I voted "no" and I wish to withdraw that and vote "present."

The result of the vote was then announced as above recorded.
 The SPEAKER. The question now is on the passage of the bill.

The question was taken, and the bill was passed.
 On motion of Mr. BARTLETT, a motion to reconsider the vote whereby the bill was passed was laid on the table.

COMMITTEE TO ATTEND THE KNOXVILLE EXPOSITION.

The SPEAKER. The Chair lays before the House the names of the committee to visit the Knoxville exposition.
 The Clerk read as follows:

The SPEAKER, Mr. UNDERHILL, Mr. CANTRILL, Mr. JONES, Mr. HAMILIN, Mr. GOULDEN, Mr. PEPPER, Mr. KONOP, Mr. FRANCIS, Mr. MOON, Mr. WOODS, Mr. KAHN, Mr. KENT, Mr. SMITH of Idaho, and Mr. AUSTIN.

The SPEAKER. If any of the gentlemen named can not go, the Chair will be obliged to him if he will give notice as soon as he can.

THE CURRENCY BILL.

Mr. UNDERWOOD. Mr. Speaker, I understand the gentleman from Virginia [Mr. GLASS] this morning reported back to the House H. R. 7837, the currency bill. I would like to inquire if we can make some arrangement as to the time to take up the bill and the length of general debate.

Mr. HAYES. Mr. Speaker, I am ready to make any arrangement that can be made.

Mr. UNDERWOOD. I understand that the gentleman from California [Mr. HAYES] and the gentleman from Virginia [Mr. GLASS] have had some discussion of the matter, and that it would be agreeable to take up the bill to-morrow at 11 o'clock, have daily sessions every morning from 11 o'clock until Saturday, and night sessions when anyone desires to speak, and to close general debate when the House adjourns on Saturday night.

Mr. HAYES. Mr. Speaker, I have a large number of requests for time, but we do not desire to extend general debate unreasonably. I think we will try our best to close Saturday night.

Mr. UNDERWOOD. I will say to the gentleman that I thought debate ought to close on Friday night, and I proposed to insist on it until I understood that gentlemen wanted the additional day.

Mr. MURDOCK. Will the gentleman yield?

Mr. UNDERWOOD. Yes.

Mr. MURDOCK. How many hours would that give for general debate in the four days?

Mr. UNDERWOOD. In the meantime, there will be a rule to send the tariff bill to conference, but I do not think that will take over three hours.

Mr. MURDOCK. How many will that leave, taking out the three hours?

Mr. UNDERWOOD. I assume that Calendar Wednesday will by agreement be included.

Mr. MANN. That will be included by agreement.

Mr. UNDERWOOD. We can not agree to set aside Calendar Wednesday until we get there, but we will have that understanding in the House.

Mr. MURDOCK. Has the gentleman made a computation of the number of hours?

Mr. HAYES. If the gentleman will permit me, I will say that if three hours are taken out in sending the tariff bill to conference it will leave 38 hours.

Mr. MANN. That is assuming that we have night sessions until 10 o'clock?

Mr. MURDOCK. My experience has been that night sessions do not hold out.

Mr. MANN. They do not hold out.

Mr. MURDOCK. I would like to say to the gentleman that I would like to have some time.

Mr. UNDERWOOD. I understand the gentleman from California will make an equitable division of the time.

Mr. HAYES. I understand that the gentleman from Minnesota [Mr. LINDBERGH] is to have four hours yielded to him.

Mr. MURDOCK. But that is hardly an equitable division out of 38 hours.

Mr. HAYES. But I have only half of that.

Mr. MURDOCK. The gentleman has 19 hours.

Mr. HAYES. If the gentleman from Kansas wants more we will be able to accommodate him.

Mr. MURDOCK. I have a demand for more than four hours. Probably the pressure is not so great on the gentleman from Virginia.

Mr. UNDERWOOD. I think it will be necessary for the gentleman from Virginia to use his time.

Mr. MANN. It depends on whether gentlemen will be willing to address the House in the evening if the House is willing to remain in session. I take it if the unanimous consent is given the House will have evening sessions.

Then if gentlemen are not ready for any reason to address the House in the evening, it would be their own fault and not the fault of the House.

Mr. MURDOCK. Mr. Speaker, I wish that the gentleman would make his request so that the gentleman from Minnesota [Mr. LINDBERGH] can have that time to distribute for us.

Mr. HAYES. The gentleman from Minnesota and I have that arrangement. It is all understood.

Mr. MURDOCK. The gentleman from Minnesota is to yield us our time?

Mr. HAYES. Yes.

Mr. MURDOCK. I want to say in explanation of that that in the division of time of general debate on the tariff bill there was some embarrassment by reason of the fact that the gentleman from New York [Mr. PAYNE] thought that we were trying to get in at advantageous times. There was no such attempt, and in the distribution of this time for the minority all of the men upon our side ought not to be put in on the night sessions. There ought to be an equitable distribution, so far as the time is concerned, as between afternoon and night.

Mr. MANN. And they ought not to ask to be exempt from night sessions, as they did in the tariff debate.

Mr. UNDERWOOD. I understand there is a satisfactory arrangement made between the gentleman from Minnesota and the gentleman from California.

Mr. HAYES. Yes.

Mr. MURDOCK. If we find we can not get all of the time that we need upon our side, is there any objection to the gentleman from Virginia [Mr. GLASS] giving us some of his time?

Mr. UNDERWOOD. If the gentleman from Virginia has any extra time, I have no doubt that he would be willing to give it; but the gentleman from Virginia controls only one-half of the time, with more than two-thirds of the House on his side, and he has heavier demands upon him than either the gentleman from California or the gentleman from Minnesota.

Mr. MURDOCK. From the fact that the gentleman limited the debate to four days I thought probably there was no great demand.

Mr. LINDBERGH. Mr. Speaker, I understood that the 4 hours would come out of 32 or 33 hours. Of course, if we could get a little more time out of 38 hours, we would like it very much.

Mr. MURDOCK. Can not the gentleman give us four and a half hours?

Mr. HAYES. I am able to do more than that, perhaps.

Mr. MANN. Let him have four and a half hours.

Mr. HAYES. I have no objection to that.

Mr. HULINGS. Mr. Speaker, what is the difficulty about adding one or two or three or four additional days to this time for debate? We have been hanging around here now all summer, doing nothing, waiting for this bill to come in. It is a very important measure. Very few of the Members of the House have seen the bill as yet. I believe the last print of it coming from the committee is not yet at the disposition of the House, and very many of the Members of the House are unfamiliar with its terms. What is the difficulty about extending the debate of this highly important measure until the middle of next week, if so much time should be required by Members who wish to discuss it? Time does not seem to have been of such enormous value here up to this moment. Why close the debate on Saturday if Members here want a longer time to debate the measure? Why fix now a limit of debate when the House does not even know what the bill is to be?

Mr. UNDERWOOD. Mr. Speaker, I will say to the gentleman that I think the time we are arranging for will allow ample time for all who really want to talk. The object of trying to make the agreement is that I think that within two weeks the tariff bill will probably go to the President, and I think if we can get this bill out of the House by that time and into the Senate there is a possibility of our making an arrangement between the two sides of the House which will let the Members go home and take a rest for a while. [Applause.]

Mr. MURDOCK. Is it just a possibility?

Mr. MONDELL. Mr. Speaker, will the gentleman yield?

The SPEAKER. The gentleman from Alabama asks unanimous consent that for the next four days—Wednesday, Thursday, Friday, and Saturday—the House meet at 11 o'clock a. m., and at 6 o'clock take a recess until 8 o'clock—

Mr. MANN. That was not in the agreement.

Mr. HULINGS. Well, put it in.

Mr. UNDERWOOD. I think we better leave that in the control of the House.

The SPEAKER. That for the next ensuing four days the House meet at 11 o'clock instead of 12, and that the general debate on the currency bill run during those four days.

Mr. UNDERWOOD. One-half of the time to be within the control of the gentleman from Virginia [Mr. GLASS] and one-half to be controlled by the gentleman from California [Mr. HAYES], and that when the House adjourns on Saturday night the general debate on the bill shall be closed.

The SPEAKER. One-half of the time to be controlled by the gentleman from Virginia [Mr. GLASS], one-half by the gentleman from California [Mr. HAYES], and four and a half hours by the gentleman from Minnesota [Mr. LINDBERGH], and that when the House adjourn on Saturday general debate shall be closed.

Mr. MONDELL. Mr. Speaker, reserving the right to object, I am not informed as to the number of gentlemen who desire to speak, and it occurs to me that the time proposed is very brief. The gentleman knows that there is not a Member of the House who desires to address the House at a night session, and the gentleman knows that Members will not listen to speeches at night sessions.

Mr. UNDERWOOD. I think the gentleman is entirely mistaken about that. My experience has been—

Mr. MANN. The best speeches I have ever heard in the House were at night sessions.

Mr. UNDERWOOD. With a baseball game running in the afternoon, my experience is there is a much better attendance at night than then.

Mr. MONDELL. I have not had the pleasure of hearing the splendid speeches my friend has heard at night, but the fact is that what the gentleman suggests is at most 21 hours' debate on the currency bill. It was before the Democratic caucus two weeks.

Mr. UNDERWOOD. That is the time estimated by the other gentlemen; I have not made the estimate myself.

Mr. MONDELL. It is true there may be additional time at night when Members will not be here and when gentlemen do not desire to speak, and it seems to me that there ought not to be any such rush so that we can not have a reasonable time for a discussion of this bill.

Mr. UNDERWOOD. I think the time agreed upon will be reasonable discussion to take care of all who want to speak, and I think those who will speak at night will have a better audience than those who speak in the day.

Mr. LANGLEY. That has been my observation, too, especially during the baseball season.

Mr. MONDELL. In the galleries.

Mr. UNDERWOOD. No.

Mr. MURDOCK. The gentleman from Alabama will remember there is a pretty good audience at night, but there is an interim between 6 and 8 o'clock in which it requires a powerful lot of nerve for a man to stand up and address what audience he has.

Mr. CALLAWAY. I want to say to the gentleman that I will want an hour.

Mr. GLASS. The gentleman will have no difficulty.

Mr. UNDERWOOD. Mr. Speaker, I ask that the request be put.

The SPEAKER. The gentleman from Alabama asks unanimous consent—

Mr. BARTON. Mr. Speaker, reserving the right to object, I think whereas the other side of the House has had sufficient time to study this currency question and to give consideration as to its effect upon the country, I know that the minority side has had no time at all for its consideration, and as one of the Representatives in this body I will object to the time allowed.

Mr. UNDERWOOD. Mr. Speaker, I will give the gentleman notice that to-morrow, when the bill is taken up, I shall offer a motion to limit the time of debate.

Mr. BARTON. I will reserve the right to object.

Mr. UNDERWOOD. I give notice—does the gentleman withdraw his objection?

The SPEAKER. Does the gentleman from Nebraska [Mr. BARTON] object?

Mr. BARTON. I withdraw.

The SPEAKER. The gentleman from Alabama asks unanimous consent—

Mr. MOSS of West Virginia. Mr. Speaker, I desire to object. I do not think that the Members of this House—

Mr. FOSTER. Regular order!

The SPEAKER. The regular order is to put this request. The gentleman from Alabama asks unanimous consent that for the next four days the House shall meet at 11 o'clock instead of 12, and that general debate on this bill shall close on the adjournment of the House on Saturday. Is there objection? [After a pause.] The Chair hears none, and it is so ordered. The time is to be divided, one half to be controlled by the gentleman from Virginia [Mr. GLASS] and the other half by the gentleman from California [Mr. HAYES], with four and a half hours to be controlled by the gentleman from Minnesota [Mr. LINDBERGH].

Mr. MOSS of West Virginia. Mr. Speaker, I offered an objection and I would like to know if it was considered.

The SPEAKER. Does the gentleman object or not?

Mr. MOSS of West Virginia. I certainly objected and never withdrew it.

Mr. MURDOCK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MURDOCK. If the objection is good, what arrangement is there for a division of the debate?

The SPEAKER. No arrangement at all.

Mr. MANN. I hope the gentleman from Alabama [Mr. UNDERWOOD] will now make the request that the House meet at 11 o'clock each morning until further ordered. I think we can make the other arrangement in regard to the division of time when we get through.

ADJOURNMENT UNTIL 11 O'CLOCK A. M. ON WEDNESDAY.

Mr. UNDERWOOD. I will ask unanimous consent, Mr. Speaker, that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow morning.

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow morning. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. UNDERWOOD. Mr. Speaker, I would like to give notice that we shall want a quorum here to-morrow when the House meets at 11 o'clock.

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] gives notice that we shall want a quorum here to-morrow when the House meets at 11 o'clock. The debate will begin as soon as an arrangement can be made about the division of time, and so forth.

THE CURRENCY BILL.

Mr. UNDERWOOD. I ask unanimous consent, Mr. Speaker, that 5,000 copies of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, and 5,000 copies of the report (H. Rept. 69) thereon be printed and placed in the document room for the use of Members.

The SPEAKER. The gentleman from Alabama asks unanimous consent that 5,000 copies of the bill H. R. 7837 and the committee reports thereon be printed and placed in the document room for the use of Members. Is there objection?

Mr. MANN. Reserving the right to object, Mr. Speaker, of course that includes the minority views?

Mr. UNDERWOOD. Yes; they will be printed with the other reports.

Mr. MANN. I make that reservation. I wish to ask the gentleman from Alabama, further, for the information of the House, a question in reference to the tariff bill. It is currently reported that the tariff bill will be acted upon finally in the Senate to-day. Assuming that it passes to-day and that it should get over to the House the day after to-morrow, does the gentleman expect to get it into conference immediately?

Mr. UNDERWOOD. I think the House is entitled to know what motion I shall make. I shall ask unanimous consent to

send the bill immediately to conference. If that is objected to, I shall introduce a rule and ask the House to adopt the rule.

Mr. MANN. I shall object in advance to the unanimous-consent request. I thought that the gentleman would not want to proceed further with the consideration of the tariff bill in view of the news in this morning's papers from the State of Maine. [Applause and laughter on the Republican side.]

Mr. LANGLEY. And the currency bill—why not abandon that, too?

Mr. FOSTER. That has reference to sardines. [Laughter.]

Mr. MANN. No; I am not talking personally about that side of the House. [Laughter on the Republican side.]

Mr. ADAMSON. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. ADAMSON. Is there anything surprising for the Dutch to capture Holland? [Laughter.]

The SPEAKER. Not that the Chair ever heard of.

Mr. LANGLEY. A good many of you can not hide your surprise and chagrin nevertheless. [Laughter.]

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] asks unanimous consent that 5,000 copies of the currency bill, together with 5,000 copies of the three reports thereon, be printed and placed in the document room for the use of Members. Is there objection?

Mr. BARNHART. Mr. Speaker, reserving the right to object, I would like to make a statement for the information of the gentleman from Alabama [Mr. UNDERWOOD]. When the currency bill was reported before, the copies were placed in the document room, and a good many complaints came to the Committee on Printing to the effect that the supply was exhausted before certain Members got what might be considered as their quota. I was going to suggest to the gentleman from Alabama that I believe it would be better if he would place 2,500 or 3,000 copies of this document in the folding room, and say 2,500 or 2,000 in the document room, or say 3,000 copies in the document room and 2,000 copies in the folding room.

Mr. UNDERWOOD. I will say to my friend from Indiana that experience has shown that these temporary bills when they go to the folding room accumulate there, and some Members do not send them out at all or use them. This bill has been reported back with some amendments, and it is only a temporary bill at this time. On the other hand, if the printed copies go to the document room, the Members that want them can readily get them, and if the supply is exhausted we can ask for another reprint.

Mr. MANN. If the gentleman from Alabama will permit, the first print of the Glass bill was printed and sent to the folding room. My information is that there are 2,000 copies of that bill still in the folding room. Of course they are valuable only as waste paper, if they are valuable for that. The last bill was sent to the document room, and all of those copies were used. If Members want more copies, I do not think that anybody will object to giving them such copies as they need. Is it not better to print such copies as will be used than to fill up the folding room, where they will occupy valuable space for the next 10 years?

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] asks unanimous consent that 5,000 copies of the currency bill, together with 5,000 copies of the committee reports thereon, be printed and placed in the document room for the use of Members. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

PANAMA-PACIFIC INTERNATIONAL EXPOSITION.

Mr. UNDERWOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7595; and, pending that, I ask unanimous consent that the bill may be considered in the House as in the Committee of the Whole. It is a privileged bill. It is a bill providing for free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition, and for the protection of foreign exhibitors. In other words, it is the usual bill that is passed to allow exhibits to come into these national expositions.

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] moves that the House resolve itself into Committee of the Whole House on the state of the Union to consider the bill H. R. 7595; and, pending that, he asks that the bill be considered in the House as in Committee of the Whole House on the state of the Union. The question is on agreeing to the motion.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Alabama asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. UNDERWOOD. Mr. Speaker, I will ask that the report be read. It explains the bill as well as I could state it.

The SPEAKER. The Clerk will read the report.

The report (by Mr. UNDERWOOD) was read as follows:

The Committee on Ways and Means, to whom was referred the bills (H. R. 7595) providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors, having had the same under consideration, report it back to the House without amendment, and recommend that it do pass.

On February 2, 1912, in conformity with the joint resolution of Congress approved February 15, 1911, the President of the United States issued a proclamation extending to the nations of the world an invitation to participate in the Panama-Pacific International Exposition to be held in San Francisco in 1916, to celebrate the construction of the Panama Canal.

The President in his message to Congress of January 3, 1913, says: "I recommend also such legislation as will facilitate the entry of material intended for exhibition and to protect foreign exhibitors against infringement of patents and the unauthorized copying of patents and designs."

This bill is framed with this intent and has the approval of the Secretary of the Treasury, the Secretary of the Interior, and the Librarian of Congress.

Section 1 provides for the free importation, for the purpose of exhibition, of articles and materials imported solely for use in constructing, installing, and maintaining foreign buildings and exhibits at the exposition, and for the withdrawal of the articles imported for the purpose of the exhibition and the payment of duty on such as are not duly exported.

Section 2 authorizes and directs the Librarian of Congress and the Commissioner of Patents to establish a branch office at the exposition not later than July 1, 1914, which is to be maintained until the close of the exposition. This office has authority to grant certificates to all proprietors of certificates of registration, copyrights, trade-marks, or patents issued by any foreign Government, protecting any pattern, model, design, copyright, trade-mark, or manufactured article imported for exhibition at the exposition.

Section 3 makes it unlawful for any person, without authority of the proprietor, to copy, imitate, reproduce, or republish any pattern, model, design, trade-mark, copyright, or manufactured article protected by the law of any foreign country imported for exhibition at the exposition. This section makes any person infringing these rights liable—

- (a) To an injunction restraining such infringement.
- (b) To pay damages and profits during the period of infringement and places the burden of proof upon the defendant to prove every element of cost which he claims, the plaintiff only having to prove sales.
- (c) To deliver up on oath all articles alleged to be infringed, to be impounded during the pendency of the action.
- (d) To deliver up on oath for destruction all the infringing articles and all means and devices for making the same.

Section 4 fixes the penalty for infringement under this act to imprisonment not exceeding one year or by fine of not less than \$100 or more than \$1,000, or both, in the discretion of the court.

Section 5 makes the sections applicable to civil action brought under the copyright act of March 4, 1909, applicable to civil actions authorized to be brought under the provisions of this act.

Section 6 provides that the rights protected by this act shall begin on the date of arrival within the exposition grounds of the pattern, model, design, copyrighted article, trade-mark, or manufactured article, and that these rights shall extend for a period of three years from the date of the closing of the exposition.

On August 2, 1913, a similar bill (S. 2433) passed the Senate. This bill differs only from H. R. 7595 in certain amendments which were suggested by the Secretary of the Treasury and the Commissioner of Patents. Copies of the letters making these suggestions are hereto attached and made a part of this report:

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 7, 1913.

Hon. JULIUS KAHN,
House of Representatives, Washington, D. C.

MY DEAR MR. KAHN: In accordance with your oral request I have indicated certain changes in the bill (H. R. 5844) providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition, and for the protection of foreign exhibitors, which it seems to me to be desirable, namely:

(1) The omission of the words "or otherwise infringe" in line 11, page 3, of the bill, on the ground that they are indefinite and might lead to controversy as to their meaning, and since the preceding words "copy, imitate, reproduce, or republish" appear to be quite sufficient.

(2) The omission of the word "patent" in line 12, page 3 of the bill, so as to make the wording correspond with that in line 25, page 2 of the bill, and since it is the manufactured article which is protected with a patent rather than the patent, that is protected by the laws of the foreign country, also since it is the manufactured article protected by the patent, rather than the patent, that will be imported and exhibited at the Panama-Pacific International Exposition.

The bill should contain a provision limiting the time of protection afforded thereby. The laws of all countries provide that the monopoly enjoyed under a regularly issued patent shall be for a limited time, and certainly the protection it is proposed to confer by the bill should be temporary in character. The protection afforded to exhibitors of foreign literary, artistic, or musical works at the Louisiana Purchase Exposition, under section 5 of the act of January 7, 1904 (33 Stats. L., p. 4), was limited to two years. From certain correspondence between the Interior Department and the Department of State it appears that the French ambassador has indicated that in his opinion protection limited to two years, which was the term of the protection afforded in connection with the Louisiana Purchase Exposition, as noted above, is not sufficient, and that temporary protection should be afforded for a period of five years.

I have indicated as a desirable addition to the bill section 6, providing that the protection afforded by the bill should be limited to three years. It is believed that a temporary protection for this period should be sufficient and that to extend the protection to five years might prove

an undue hardship upon American manufacturers, especially where the patents of the foreign exhibitors had expired in the meantime.

In view of the fact that a large portion of the matter covered by the bill, namely, patents including patents for designs, trade-marks, and copyrights covering labels, are under the jurisdiction of the Commissioner of Patents, and that many questions will doubtless arise relating to these subjects, it seems desirable that the Patent Office should be joined with the copyright division of the Library of Congress in the establishment and direction of the branch office which it is proposed to establish by the bill. I would therefore suggest that the words "and the Commissioner of Patents" be inserted after "Librarian of Congress" in line 15, and after "Register of Copyrights" in line 17, page 2 of the bill; also that the word "copyright" be omitted before the word "office" in line 16, page 2, and lines 4 and 6, page 3, of the bill.

Respectfully,

EDWARD B. MOORE,
Commissioner.

TREASURY DEPARTMENT,
Washington, D. C., August 8, 1913.

The CHAIRMAN COMMITTEE ON WAYS AND MEANS,
House of Representatives.

SIR: The department refers to a letter from the clerk of the Ways and Means Committee, dated the 1st instant, stating that the committee had referred some time since to the department H. R. 5844, providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors, and requesting that a report be made thereon. In this connection I have the honor to state that the records of the department do not show the receipt of the committee's letter referred to.

The department has carefully considered the bill in question, and it is noted that while prior enactments of this character provided for the free entry of articles imported solely for exhibition at certain expositions, the present bill grants free entry to articles imported for the sole purpose of constructing, installing, and maintaining foreign buildings and exhibits at the said exposition. In order that no question may arise as to the free entry of articles imported for exhibition purposes thereunder, it is suggested that this provision of the bill (lines 3 to 9, page 1) be amended to read as follows:

"That all articles that shall be imported from foreign countries for the purpose of exhibition and articles and material imported solely for use in constructing, installing, and maintaining foreign buildings and exhibits at the Panama-Pacific International Exposition upon which there shall be a tariff or customs duty shall be admitted free of the payment of duty, customs fees, or charges, under such regulations as the Secretary of the Treasury shall prescribe."

The remaining provision of section 1 of the bill appears to duly provide for the withdrawal of the articles imported for the purpose of exhibition and the payment of duty on such as are not duly exported.

In the opinion of the department the customs features of the bill do not present any administrative difficulties.

Respectfully,

W. G. MCADOO, Secretary.

APPENDIX.

[H. R. 7595, Sixty-third Congress, first session.]

A bill to provide for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors.

Be it enacted, etc., That all articles that shall be imported from foreign countries for the purpose of exhibition, and articles and material imported solely for use in constructing, installing, and maintaining foreign buildings and exhibits at the Panama-Pacific International Exposition upon which there shall be a tariff or customs duty, shall be admitted free of the payment of duty, customs fees, or charges, under such regulations as the Secretary of the Treasury shall prescribe; but it shall be lawful at any time during the exposition to sell for delivery, at the discretion of the exposition company, any goods or property imported for and actually on exhibition in the exposition buildings or grounds, subject to such regulations for the security of the revenue and for the collection of import duties as the Secretary of the Treasury may prescribe: *Provided*, That all such articles when sold or withdrawn for consumption or use in the United States shall be subject to the duty, if any, imposed upon such articles by the revenue laws in force at the date of withdrawal; and on such articles as shall have suffered diminution or deterioration from incidental handling and necessary exposure the duty, if paid, shall be assessed according to the appraised value at the time of withdrawal for consumption or use, and the penalties prescribed by law shall be enforced against any person guilty of illegal sale, use, or withdrawal.

Sec. 2. That the Librarian of Congress and the Commissioner of Patents are hereby authorized and directed to establish a branch office under the direction of the Register of Copyrights and the Commissioner of Patents at the Panama-Pacific International Exposition, in suitable quarters to be furnished free of charge by the Panama-Pacific International Exposition Company, said office to be established not later than July 1, 1914, and maintained until the close of said exposition; and the proprietor of any certificate of registration, copyright, trade-mark, or patent issued by any foreign Government protecting any pattern, model, design, copyright, trade-mark, or manufactured article imported for exhibition and exhibited at said Panama-Pacific International Exposition may, upon presentation of satisfactory proof of such proprietorship, obtain without charge a certificate from said branch office, which shall be legal evidence of such proprietorship; and said branch office shall keep a register of all certificates of registration, trade-mark, or patent, and a register of all certificates of copyright issued, which shall be open to public inspection.

At the close of said Panama-Pacific International Exposition the register of certificates of registration, trade-mark, or patent shall be deposited in the United States Patent Office at Washington, D. C., and the register of certificates of copyright shall be deposited in the Copyright Office of the Library of Congress at Washington, D. C.

Sec. 3. That it shall be unlawful for any person without authority of the proprietor thereof to copy, imitate, reproduce, or republish any pattern, model, design, trade-mark, copyright, or manufactured article protected by the laws of any foreign country by registration, copyright, patent, or otherwise, which shall be imported for exhibition at the Panama-Pacific International Exposition, and there exhibited; and any person who shall infringe the rights protected under this act shall be liable—

- (a) To an injunction restraining such infringement.

(b) To pay to the proprietor such damages as the proprietor may have suffered due to the infringement, as well as all the profits which the infringer may have made from such infringement, and in proving profits the plaintiff shall be required to prove sales only and the defendant shall be required to prove every element of cost which he claims, or in lieu of actual damages and profits such damages as to the court shall appear to be just.

(c) To deliver up on oath, to be impounded during the pendency of the action, upon such terms and conditions as the court may prescribe, all articles alleged to infringe the rights herein protected.

(d) To deliver up on oath for destruction all the infringing articles, as well as all means and devices for making such infringing articles.

SEC. 4. That any person who willfully and for profit shall infringe any right protected under this act, or who shall knowingly and willfully aid or abet such infringement, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment for not exceeding one year or by a fine of not less than \$100 nor more than \$1,000, or both, in the discretion of the court.

SEC. 5. That sections 25, 26, 27, 34, 35, 36, 37, 38, 39, and 40 of the copyright act approved March 4, 1909, are hereby made applicable to civil actions authorized to be brought under the provisions of this act.

SEC. 6. That the rights protected under the provisions of this act shall begin on the date of the arrival of the pattern, model, design, copyrighted article, trade-mark, or manufactured article so imported for exhibition within the grounds of the Panama-Pacific International Exposition at San Francisco, and shall continue for a period of three years from the date of the closing of said exposition.

Mr. UNDERWOOD. Mr. Speaker, the report explains the bill. It is merely the usual form of a bill granting the right of free entry, under proper protection, for goods coming in to be exhibited at the San Francisco exhibition. The only additions to it are some provisions about copyrighted articles, and these provisions have been passed on by the experts under the Librarian of Congress. I am not sufficiently versed in the law of copyrights to be able to pass judgment on it myself, but I referred the bill to the Librarian of Congress, and as it is now presented to the House it has his approval, and he makes the statement that the laws of the United States will be properly protected.

Mr. MOORE. Will the gentleman yield?

Mr. UNDERWOOD. I yield to the gentleman.

Mr. MOORE. The report has the unanimous indorsement of the Committee on Ways and Means, has it?

Mr. UNDERWOOD. It has the unanimous indorsement of the Committee on Ways and Means.

Mr. MONDELL. Is the gentleman quite confident that there is nothing in section 6 of the bill which will have the effect of extending a patent? He says that the whole matter has been referred to patent experts, and they are satisfied with the provisions of the bill.

Mr. UNDERWOOD. They are. I candidly admit to the gentleman from Wyoming that I am not a patent lawyer or a copyright lawyer, and that I am not advised about the technicalities of those matters; but I referred this bill to the Treasury Department, to the Commissioner of Patents, and to the Librarian of Congress, who has charge of copyrights, and they suggested certain amendments, which the gentleman from California [Mr. KAHN] incorporated in his bill, which he then reintroduced; and the bill as reintroduced meets with the approval of these various departments. Outside of the copyright provisions it is the usual bill that has passed, under these circumstances.

Mr. BATHRICK. Will the gentleman yield?

Mr. UNDERWOOD. I will.

Mr. BATHRICK. If I understand this proposition rightly, I notice that any article, pattern, or design exhibited at the exposition is protected from being copied or reproduced under more drastic laws than we have at the present time.

Mr. UNDERWOOD. I do not think they are more drastic laws than we have at the present time; but of course it prohibits copying or reproduction, because it gives the people who bring goods here to be exhibited the same protection when they come into our country under our invitation to exhibit that would be given to our own people.

Mr. BATHRICK. I agree with the gentleman that that ought to be done; but under our international copyright law, if an article manufactured in England and patented there is not patented in the United States, have we not the right to patent it here and produce it?

Mr. UNDERWOOD. I will say to the gentleman that I am not a patent lawyer, and I am not on that committee, and I am not able to answer his question. I will admit that candidly.

Mr. BATHRICK. I will say to the gentleman that while I am not a patent lawyer, I have had some experience in the matter, and it is my impression that if an Englishman manufacturing some new article has not taken out a patent in the United States, if he desires to protect the article without taking out a patent here, he can obtain protection under a more drastic law than we have in this country merely by exhibiting the article at the San Francisco Exposition.

Mr. UNDERWOOD. No; because the rights he acquires under this law only run for three years and then they expire.

If he wanted to protect himself by a patent he would take out a patent which would run for 17 years.

Mr. RAKER. As I understand the gentleman from Alabama, this is practically the same as bills that have passed heretofore for other expositions?

Mr. UNDERWOOD. In all respects except in reference to the copyright law.

Mr. RAKER. And that is additional?

Mr. UNDERWOOD. Yes.

Mr. RAKER. And that is for the purpose of permitting foreign exhibitors to exhibit here, so that their copyrights will not be infringed upon.

Mr. UNDERWOOD. I understand there have been complaints heretofore that they were not protected under our laws.

Mr. RAKER. And this is for the purpose of protecting them?

Mr. UNDERWOOD. This is for the purpose of protecting them, so they will bring their articles here and exhibit them.

Mr. RAKER. I hope the bill will pass in its present form.

Mr. UNDERWOOD. Mr. Speaker, unless there is some one who desires to speak, I ask for a vote.

The SPEAKER. The Clerk will read the bill.

The Clerk read as follows:

Be it enacted, etc., That all articles that shall be imported from foreign countries for the purpose of exhibition, and articles and material imported solely for use in constructing, installing, and maintaining foreign buildings and exhibits at the Panama-Pacific International Exposition upon which there shall be a tariff or customs duty shall be admitted free of the payment of duty, customs fees, or charges, under such regulations as the Secretary of the Treasury shall prescribe; but it shall be lawful at any time during the exposition to sell for delivery at the discretion of the exposition company any goods or property imported for and actually on exhibition in the exposition buildings or grounds, subject to such regulations for the security of the revenue and for the collection of import duties as the Secretary of the Treasury may prescribe; *Provided*, That all such articles when sold or withdrawn for consumption or use in the United States shall be subject to the duty, if any, imposed upon such articles by the revenue laws in force at the date of withdrawal; and on such articles as shall have suffered diminution or deterioration from incidental handling and necessary exposure the duty, if paid, shall be assessed according to the appraised value at the time of withdrawal for consumption or use, and the penalties prescribed by law shall be enforced against any person guilty of illegal sale, use, or withdrawal.

SEC. 2. That the Librarian of Congress and the Commissioner of Patents are hereby authorized and directed to establish a branch office under the direction of the Register of Copyrights and the Commissioner of Patents at the Panama-Pacific International Exposition, in suitable quarters to be furnished free of charge by the Panama-Pacific International Exposition Co., said office to be established not later than July 1, 1914, and maintained until the close of said exposition; and the proprietor of any certificate of registration, copyright, trade-mark, or patent issued by any foreign Government protecting any pattern, model, design, copyright, trade-mark, or manufactured article imported for exhibition and exhibited at said Panama-Pacific International Exposition may, upon presentation of satisfactory proof of such proprietorship, obtain without charge a certificate from said branch office, which shall be legal evidence of such proprietorship; and said branch office shall keep a register of all certificates of registration, trade-mark, or patent, and a register of all certificates of copyright issued, which shall be open to public inspection.

At the close of said Panama-Pacific International Exposition the register of certificates of registration, trade-mark, or patent shall be deposited in the United States Patent Office at Washington, D. C., and the register of certificates of copyright shall be deposited in the Copyright Office of the Library of Congress at Washington, D. C.

SEC. 3. That it shall be unlawful for any person without authority of the proprietor thereof to copy, imitate, reproduce, or republish any pattern, model, design, trade-mark, copyright, or manufactured article protected by the laws of any foreign country by registration, copyright, patent, or otherwise, which shall be imported for exhibition at the Panama-Pacific International Exposition, and there exhibited; and any person who shall infringe the rights protected under this act shall be liable—

(a) To an injunction restraining such infringement;

(b) To pay to the proprietor such damages as the proprietor may have suffered due to the infringement, as well as all the profits which the infringer may have made from such infringement, and in proving profits the plaintiff shall be required to prove sales only and the defendant shall be required to prove every element of cost which he claims, or in lieu of actual damages and profits such damages as to the court shall appear to be just;

(c) To deliver up on oath, to be impounded during the pendency of the action, upon such terms and conditions as the court may prescribe, all articles alleged to infringe the rights herein protected;

(d) To deliver up on oath for destruction all the infringing articles, as well as all means and devices for making such infringing articles.

SEC. 4. That any person who willfully and for profit shall infringe any right protected under this act, or who shall knowingly and willfully aid or abet such infringement, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment for not exceeding one year or by a fine of not less than \$100 nor more than \$1,000, or both, in the discretion of the court.

SEC. 5. That sections 25, 26, 27, 34, 35, 36, 37, 38, 39, and 40 of the copyright act approved March 4, 1909, are hereby made applicable to civil actions authorized to be brought under the provisions of this act.

SEC. 6. That the rights protected under the provisions of this act shall begin on the date of the arrival of the pattern, model, design, copyrighted article, trade-mark, or manufactured article so imported for exhibition within the grounds of the Panama-Pacific International Exposition at San Francisco, and shall continue for a period of three years from the date of the closing of said exposition.

Mr. MONDELL. Mr. Speaker, I move to strike out the last word. I understand that there is no opposition to the passage of this legislation. It is an act to aid in making the Panama-

Pacific Exposition a greater success, and we are all anxious to contribute to the success of that great exposition.

We approved a resolution earlier in the day providing for the acceptance of an invitation extended to Congress by the management of the Conservation Exposition at Knoxville, Tenn. I think it is very proper to do that, and I trust that the gentlemen appointed will all attend and that they will bring back good reports of what is accomplished there in the matter of furthering the work of practical conservation.

In this connection I desire to call attention to the fact that perhaps the most important conservation meeting this year is to be held at Tulsa, Okla., in the latter part of October. This particular conservation meeting is known as the Dry Farming Congress. There is present in the city to-day the very efficient and hustling secretary of the Dry Farming Congress to interest Members of Congress in that coming meeting. I presume that Oklahoma is so far away from us that it will be held to be impracticable to appoint Members as a body representing the House to attend that meeting. I wish it were practicable to do that. This year of all others in our history is the one that ought to attract people to the work which is being undertaken and carried on by the Dry Farming Congress. The very extensive and far-reaching drought in the Southwest has had the effect of very greatly reducing the crop production of a number of Western and Southwestern States.

This organization that meets at Tulsa preaches the gospel of successful agriculture carried on under conditions of limited moisture; preaches the gospel of moisture conservation, preaches the gospel of good farming; it is a gospel not only useful and helpful to the western territory, where droughts are perhaps more frequent than in some other parts of the country, but it is a gospel that would be very helpful indeed in Virginia, Maryland, up in New York, and in New England.

As I have motored over the adjacent States somewhat this year I have noticed many farms suffering greatly from drought, and I have noticed conditions which might be very greatly improved by the application of the principles known as dry farming, deep plowing, and thorough surface tilling in order that the moisture which the soil receives shall all be utilized by the growing plant and shall not by capillary attraction, through the numberless capillary tubes that form on the surface of untilled soil, be carried into the air and wasted.

I say I regret that hustling, growing Tulsa is so far away that perhaps it will be difficult, possibly not practicable, to appoint a committee to attend the Dry Farming Congress. But if that could be done I am sure that the addresses made there, the doctrines promulgated there, the exhibits made would be found very helpful and useful to widely scattered and separate portions of this country.

This year particularly impresses the necessity of thorough cultivation in that particular territory. But every year, in the small aggregate of our production, compared with our acreage, emphasizes the necessity of better farming all over the Union, emphasizes the necessity of intensified cultivation, of improved methods tending to make crops more abundant and certain. All these things are taught by the Dry Farming Congress, and are parts of the plan that is proposed and is being urged upon the farmers of the country by those who have been for years engaged in the dry-farming movement. I should like to see the Dry Farming Congress brought farther east this year.

Mr. COX. Why not bring it to Washington?

Mr. MONDELL. Not to Washington, but I think it would be a good thing if we could have it in the rich and fertile district represented by the gentleman from Indiana.

Mr. MOORE. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. MOORE. Where does this Dry Farming Congress meet?

Mr. MONDELL. In Tulsa, Okla.

Mr. MOORE. Will they give consideration to the development of waterways and canals that will open up some parts of the country?

Mr. MONDELL. It is not the province of the Dry Farming Congress to study the problems of irrigation, for they have rather a larger field—a field covering that great proportion of the country which can not be irrigated. The proposition of irrigation and waterways, with regard to which my friend from Pennsylvania, [Mr. MOORE] is an expert, is an important one. This is an equally important one.

Mr. MOORE. Why can not we get together—the dry farmers and the wet farmers—and discuss these matters at Tulsa?

Mr. MONDELL. I think it is always well to cooperate in any work.

Mr. MOORE. But the gentleman referred to lands in Maryland and in Pennsylvania, over which he has traversed recently

in his automobile, which he said were badly in need of water. Could we not by conferring with each other at Tulsa, the beauties of which as a convention city the gentleman has described, undertake in some way to get together, in order that by cooperation we might influence Congress in a proper way to irrigate the various portions of the land that need water and navigation. I do not want to break into the gentleman's argument.

Mr. MONDELL. Oh, the gentleman has not broken into my argument at all. I thank him for his suggestion. Cooperation is always a good thing, and the dry farmers, I am sure, will welcome the aid and assistance of so enthusiastic and forceful a gentleman as my friend from Pennsylvania. I think he can do as much, if he takes hold of the matter, to further the interest of conservation of moisture as he has to further the interest of the extension of waterways, and I am with him heart and soul in all of the propositions for which he stands and for which he has labored. I hope he will take an interest in this great work, which will be helpful to certain abandoned farms in New England and certain worn-out lands elsewhere in the country, just as helpful as to the great Southwest, where nature is a little niggardly in the matter of supplying sufficient moisture; and that it will be found practicable to appoint a committee of Congress to visit Tulsa, but if it shall not, then that we as individuals will visit Tulsa and become interested in the Dry Farming Congress and the work it stands for.

Mr. UNDERWOOD. Mr. Speaker, I move that all debate on the paragraph close in two minutes.

The motion was agreed to.

Mr. WEAVER. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record.

The SPEAKER. Is there objection?

There was no objection.

Mr. RAKER. Mr. Speaker, I rise to oppose the amendment of the gentleman from Wyoming. There seems to be no doubt that this bill will pass. It will add much to the success of the Panama-Pacific International Exposition. The foreign nations and foreign exhibitors will feel protected with this law on the statute books. I have given it consideration before the committee and feel much interest in its passage. It seems to me the gentleman from Wyoming takes a wrong view when he says that this is because Oklahoma is farther away than Knoxville, Tenn., and that, therefore, the people there should not be given consideration. That is one of the troubles that we have to contend with. The mere fact of 2,000 or 3,000 miles should not make any difference to this Government in the matter of sending committees to visit these places. They ought to be sent with as much readiness and as much cheerfulness as though the place were quite near, so that the people might know what is being done. We trust that Congress will send not a committee of 14 but a committee of 48 to California to the exposition, so that they may see and know and observe for themselves what is being done at San Francisco in 1915, and the invitation is extended now to all of the Members of Congress to attend that exposition.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. UNDERWOOD, a motion to reconsider the vote by which the bill was passed was laid on the table.

STATION GROUNDS IN COLVILLE INDIAN RESERVATION, WASH.

Mr. STEPHENS of Texas. Mr. Speaker, I call up the bill (S. 2711) to provide for the acquiring of station grounds by the Great Northern Railway Co. in the Colville Indian Reservation, in the State of Washington, and ask unanimous consent that it be considered in the House as in Committee of the Whole. It is a short bill and will not take very much time.

The SPEAKER. The gentleman from Texas calls up a bill and asks unanimous consent that it be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

An act (S. 2711) to provide for the acquiring of station grounds by the Great Northern Railway Co. in the Colville Indian Reservation in the State of Washington.

Be it enacted, etc., That there be, and hereby is, granted to the Great Northern Railway Co., a corporation organized under the laws of the State of Minnesota, subject to and upon compliance by the company with all the provisions of the act of March 2, 1899, entitled "An act to provide for the acquiring of rights of way by railroad companies through Indian reservations, Indian lands, Indian allotments, and for other purposes," and the acts amendatory thereto of June 21, 1906 (34 Stats. L., 330), and June 25, 1910 (36 Stats. L., 859), and the regulations issued by the Secretary of the Interior thereunder, additional station grounds adjoining the right of way of the said railway com-

pany in the Colville Indian Reservation in the State of Washington, adjacent to the village of Okanogan, in the county of Okanogan, in the said State, and at the said railway company's station known as Chilliwist, located in lots 4 and 6, section 1, township 32 north, range 25 east, Willamette meridian, in the Colville Indian Reservation, in the State of Washington, to the extent of not to exceed 200 feet in width by a length of 3,000 feet for each of said station grounds: *Provided*, That if any of the lands to be acquired by the railway company under the provisions of this act shall have been tentatively selected by Indians as a part of their allotments they shall be entitled to receive upon the approval of their allotments the compensation for damages to said lands and improvements thereon paid by the said railway company: *And provided further*, That such station grounds are granted subject to the right of the United States to cross the same and the works constructed thereon with canals of water conduits of any kind, or with roadways, or with transmission lines for telephone, telegraph, or electric power, or with any other public improvements which may now or in the future be built by or under authority of the United States across such grounds; and the said company shall build and maintain at its own expense all structures that may be required at such crossing, and in accepting this grant shall release the United States from all damages which may result from the construction and use of such crossings, canals, conduits, transmission lines, and other improvements.

Mr. MOORE. Mr. Speaker, it was not my pleasure to have been in the House yesterday when the gentleman from Georgia [Mr. ADAMSON], who is of a poetic turn of mind, gave great praise to the gentleman from Wisconsin [Mr. Esch] for his just tribute to the island of Navassa, which stands up like a gaunt specter in the Caribbean Seas. The gentleman from Georgia is a poet by nature, having in his soul much of that divine afflatus which is characteristic of great men. But there is some poetry which has not yet appealed to him. For instance, there is a timely tribute, not written by the gentleman from Georgia, in no way pertaining to the island of Navassa, that does not refer to the gentleman from Wisconsin [Mr. Esch], but it is nevertheless extremely pertinent at this time. It is an improvisation from a celebrated versification, which was heralded broadcast over the country years ago, and which gave hope and inspiration to a party destined to control the affairs of this Nation, and that did so virtually until by an unfortunate incident of dissension there came a change last year. The versification which I now present to the House and the country affects two of the great men of the Nation, one of whom is specially dear to us on either side of the House. With one mind and accord and at great personal sacrifice they enlisted in a recent campaign in the far North, with a view of electing a Democratic Congressman and holding down certain recalcitrant Republicans who were gradually coming back home. The query indicates that they were not successful:

Oh, have you heard the news from Maine?
How it voted safe and sane;
How with CLARK and Bryan stumping,
Democrats still got their thumping,
And the State is right again?

[Applause on the Republican side.]

Mr. ADAMSON. Mr. Speaker, I hope the gentleman will not withdraw his amendment or his point of order or whatever he has offered until I reply to him.

The SPEAKER. The gentleman has five minutes.

Mr. ADAMSON. Mr. Speaker, I have often heard the gentleman from Pennsylvania accused of being a poet, I have heard him accused of sentiment—and from personal acquaintance know both to be true. I know he is active and practical and always sticking in his oar and grabbing all that is coming to his part of the country. I am glad if anything I said about the performance of the gentleman from Wisconsin could have informed or entertained him either as a piece of poetry or sentiment, and I am sorry that he took the back track and retreated into the old mire of shouting for the stand-pat Republicans. The news from Maine has not been given correctly in the papers. If it were possible for a Republican paper or politician to tell the whole truth when asked about the news from Maine, they would compare the congressional election of yesterday with the congressional election of last November instead of comparing the congressional election of yesterday with the presidential vote of last November. If they will make that latter comparison they will find a Republican was elected in November last and there was a Republican Congressman who died and left a vacancy which was filled by a Republican yesterday. If they will publish the papers and figures to show the congressional vote last November they will find it very different from those published about the President and that the Democrats have lost no ground. If they want to try it over about the Presidency in Maine, I dare them to put up Taft again and let Roosevelt nominate himself again and let Wilson try it over again, and we will thrash them again, and in Maine. I dare them to try it. [Applause on the Democratic side.]

The SPEAKER. The gentleman from Wyoming withdraws his pro forma amendment.

Mr. MONDELL. Mr. Speaker, I should like to have an explanation of the bill. It seems to be a grant, but it is a grant in

conformity with a certain act of Congress, with the provisions of which I am not familiar, I regret to say. That act, I assume, provides for the payment of a fair value for the land taken. Is that true?

Mr. STEPHENS of Texas. That is correct. The land to be granted by this bill for two new stations on this line of railway is a right of way 100 feet on each side of the center of the track of the railroad company instead of 50 feet on each side, and this new or additional grant extends a length of 3,000 feet along the track at each station.

Mr. MONDELL. It seems to be approved by the Commissioner of Indian Affairs.

Mr. STEPHENS of Texas. Yes; and by the Secretary of the Interior—

Mr. MONDELL. Who suggested certain amendments which were adopted?

Mr. STEPHENS of Texas. That is true.

Mr. MONDELL. The act of Congress provides for compensation.

Mr. STEPHENS of Texas. The amount of compensation under existing laws is to be agreed upon between the Commissioner of Indian Affairs and the railway company.

Mr. MONDELL. That is simply a widening of the right of way to give greater facilities for transportation?

Mr. STEPHENS of Texas. Yes; it gives 100 feet in the right of way, instead of 50 feet, for 3,000 feet in length for each of the station grounds and sidings.

Mr. MONDELL. They are necessary facilities?

Mr. STEPHENS of Texas. Yes.

Mr. MURRAY of Oklahoma. I will say to the gentleman that under the law they had a station every 10 miles, and this is to grant additional facilities between them.

Mr. MONDELL. Where they are necessary?

Mr. MURRAY of Oklahoma. Yes; where they are necessary.

Mr. STEPHENS of Texas. The town of Okanogan is on the southwest side of the river, and the Indian agency is on the other side of the river, directly opposite the town.

The people of the town have to go 4 miles one way and 6 miles the other way to get to a station. It is a new but quite an important town.

It is for the benefit of the town as well as for the benefit of the Indians that this station should be built at this point. There is a large Indian school on this reservation near this railroad, and the pupils have to go 6 miles one way or 4 miles the other way to get to their nearest railroad station, 10 miles being the distance between the present railway stations. One of the stations will be known as Chilliwist and the other as Okanogan.

I find in the new western country that the more stations and sidetracks we have along the line of railroad, the better it is for the Indians—and for the white people as well—who own the lands through which the railroads run, because they afford better shipping facilities. The railroads do not like to build additional stations if they can get travel and traffic without them.

Mr. MONDELL. Has the gentleman's attention been called to the language on page 2, line 24?

Mr. STEPHENS of Texas. Yes. I will state to the gentleman that this bill was drafted by the department. It is not the bill introduced formerly by Representative LA FOLLETTE.

Mr. MONDELL. It says:

And provided further, That such station grounds are granted subject to the right of the United States to cross the same and the works constructed thereon with canals of water conduits of any kind.

I assume the word "or" is intended there instead of "of," between the words "canals" and "water."

Mr. STEPHENS of Texas. Possibly so. I will examine and see if that is a misprint; and if it is, it will be corrected.

Mr. MONDELL. On line 24 there is clearly a misprint. What is sought to be accomplished is to reserve a right of way for canals or water conduits across the right of way.

Mr. STEPHENS of Texas. Yes; for irrigation purposes. That is correct. This is in an irrigation country.

Mr. MONDELL. Mr. Speaker, I move to amend by striking out the word "of" on line 24, page 2, and inserting the word "or."

The SPEAKER. There is a misprint in the copy which the gentleman has, but the original bill is correct.

Mr. MONDELL. The word which I propose to strike out is the fourth word from the end of the line.

Mr. STEPHENS of Texas. There are two "of's" in that line.

The SPEAKER. In the engrossed copy of the bill it is right.

Mr. STEPHENS of Texas. Then the amendment is unnecessary.

Mr. MONDELL. Very well.

The SPEAKER. The gentleman withdraws his amendment. Mr. CAMPBELL. Has the gentleman from Texas examined the engrossed copy of the bill?

The SPEAKER. It is at the desk here, and it is correct.

Mr. STEPHENS of Texas. It is correct.

The SPEAKER. The question is on the third reading of the Senate bill.

The bill was ordered to a third reading, and was accordingly read the third time and passed.

On motion of Mr. STEPHENS of Texas, a motion to reconsider the last vote was laid on the table.

IMMEDIATE TRANSPORTATION, DALLAS, TEX.

Mr. SUMNERS. Mr. Speaker, I ask unanimous consent for the present consideration of House bill 4937 in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Texas asks unanimous consent for the present consideration of House bill 4937 in the House as in Committee of the Whole. Is there objection?

Mr. HARDWICK. Reserving the right to object, I should like to have the bill read so that we may see what it is.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill (H. R. 4937) extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement, as follows:

Be it enacted, etc., That the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement be, and the same are hereby, extended to the port of Dallas, in the State of Texas.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on the engrossment and third reading of the bill.

Mr. MONDELL. Mr. Speaker, I think we should have some explanation of the bill, because there are undoubtedly Members who do not understand what the privileges under section 7 of the act approved June 10, 1880, are. I confess that I for one am not familiar with the character of those privileges.

Mr. SUMNERS. That act provided for the immediate transportation of imported merchandise to certain interior ports. When the service was reorganized Dallas was designated as one of these ports, but it has been found necessary to pass a bill of this sort in order to permit immediate transportation. If the gentleman will read the last two paragraphs of the report of the Treasury Department, contained in the report of the committee on this bill, they will give the information which the gentleman wants.

Mr. MONDELL. Do I understand that the privilege granted is the privilege to have merchandise shipped from the port of entry to another port for appraisement?

Mr. SUMNERS. Yes; it is shipped in bonded cars to a bonded warehouse.

Mr. COX. It is what is called inland transportation.

Mr. SUMNERS. Yes; they have to build a warehouse and bond it, and then goods coming to the port of New York are shipped from New York to Dallas in bonded cars.

Mr. COX. Without being opened up until they get to Dallas?

Mr. SUMNERS. Yes.

Mr. MONDELL. The bill that passed originally contained the names of the ports to which that privilege was extended. did it?

Mr. SUMNERS. At that time.

Mr. MONDELL. So it is necessary to extend the privilege to other ports by act of Congress?

Mr. SUMNERS. Yes.

Mr. MONDELL. There is no way by which it can be done as a matter of administration?

Mr. SUMNERS. No. Has the gentleman the report of the committee?

Mr. MONDELL. Yes.

Mr. SUMNERS. Then I will ask the gentleman to read the last two paragraphs of the report of the Treasury Department, by which he will see that the passage of this bill is recommended as being for the benefit of the service, and it is also stated that it is an urgent measure.

Mr. MONDELL. It is expected that there will be considerable importation at this port in the near future?

Mr. SUMNERS. Yes.

Mr. MONDELL. We hope that will be true, although some of us on this side have fears that that will be true to a very dangerous extent with regard to a great many of the ports of the United States. We shall be glad to see Dallas grow as a port of entry, but at the same time we trust that the imports of the country, taken altogether, will not grow too rapidly as a result of your recent tariff legislation.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. SUMNERS, a motion to reconsider the last vote was laid on the table.

The SPEAKER. The gentleman from Pennsylvania is recognized.

IMMEDIATE TRANSPORTATION, PERTH AMBOY.

Mr. MOORE. Mr. Speaker, I move to consider in the House as in Committee of the Whole the bill H. R. 7377, extending to the port of Perth Amboy, N. J., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent to consider in the House as in the Committee of the Whole the bill H. R. 7377. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement, be, and the same are hereby, extended to the port of Perth Amboy, N. J.

The SPEAKER. The question is on the engrossment and third reading of the bill.

Mr. MONDELL. Mr. Speaker, I understand that the conditions necessitating this legislation are similar to those referred to in connection with the bill just passed with reference to Dallas.

Mr. MOORE. They are just the same.

The bill was ordered to be engrossed and read a third time, and was read the third time, and passed.

On motion of Mr. MOORE, a motion to reconsider the vote whereby the bill was passed was laid on the table.

PAYMENT OF INDEMNITY—ANGELO ALBANO.

Mr. FLOOD of Virginia. Mr. Speaker, I ask unanimous consent to take up the bill H. R. 7384, to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject, and consider the same in the House as in Committee of the Whole.

The Clerk read the bill, as follows:

A bill (H. R. 7384) to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject.

Be it enacted, etc., That there is hereby authorized to be paid, out of any money in the Treasury not otherwise appropriated, out of humane consideration and without reference to the question of liability therefor, to the Italian Government as full indemnity to the heirs of Angelo Albano, an Italian subject who was killed by an armed mob at Tampa, Fla., on the 20th day of September, 1910, the sum of \$6,000.

The SPEAKER. The gentleman from Virginia asks unanimous consent to take up the bill 7384 and consider the same in the House as in Committee of the Whole. Is there objection?

Mr. MONDELL. Mr. Speaker, reserving the right to object, I trust the gentleman from Virginia will give us a brief statement of it.

Mr. FLOOD of Virginia. Mr. Speaker, the party who was killed was an Italian subject. The evidence on that point in the message submitted to Congress by the President is clear. He was born in Italy, and while a youth he came with his father to this country, but his father had never declared his intention to become an American citizen; in fact, he declared that he never would, and so had this young man. So his citizenship is clearly established; there is no question that he was an Italian subject at the time he was lynched by a mob in Tampa.

He was accused of having been implicated in the murder of a clerk in a tobacco store there, and was arrested in West Tampa, taken from there to the courthouse in Tampa. While in the custody of two deputy sheriffs he was set upon by a mob, taken from them, and hung, I think; at any rate, he was killed.

Mr. MONDELL. Are there any precedents for legislation of this character?

Mr. FLOOD of Virginia. Oh, yes; we have had five or six such cases within the last few years—one in Colorado, one in Mississippi, and a number in Louisiana.

Mr. MONDELL. In these cases legislation was enacted providing for the payment of an indemnity?

Mr. FLOOD of Virginia. In every one of the cases. The case in Colorado which I cited the other day in the discussion of a point of order, the case in Mississippi, and three cases in Louisiana.

Mr. MONDELL. In this particular case the President has considered it of sufficient importance to call it to the attention of Congress by special message?

Mr. FLOOD of Virginia. On the 26th of June the President recommended that, as an act of grace and without reference to the question of liability of the United States, Congress take action and make appropriation in accordance with the suggestion of the Italian Government. Six thousand dollars was the indemnity suggested by that Government, the amount carried in this bill.

Mr. CAMPBELL. Mr. Speaker, I would like to ask the gentleman from Virginia if the committee took into account the extraordinary attitude occupied by the father of this alien and by the alien himself, declaring their intention of not becoming citizens of this country?

Mr. FLOOD of Virginia. That is a fact. The evidence shows it.

Mr. CAMPBELL. What length of time had the father of this alien been in the country?

Mr. FLOOD of Virginia. A number of years. He worked in the West awhile and then went to Florida; he had certainly been in this country seven or eight years.

Mr. CAMPBELL. Does the gentleman know exactly or approximately how long he has been here?

Mr. FLOOD of Virginia. No; the record does not show exactly how long, but it does show that he has been here quite a number of years. One of these affidavits tells about his working at several places in this country, certainly six or seven years.

Mr. CAMPBELL. The situation that presents itself to me is this: Here is an alien who came to our country, willing to partake of all of the benefits that our opportunities for employment afford, willing to partake of the benefit of our high wages, but unwilling to assume the responsibility of citizenship, and yet occupying the advantageous position, in case of injury by our citizens, of having an advantage that a citizen of the Republic itself does not have.

Mr. FLOOD of Virginia. Well, not very much of an advantage. The Italian Government is simply asking that we accord the citizens of their country the best and not the worst treatment that we would give to a citizen of our own country. Our own citizens ought to be and are protected from mob law.

Mr. CAMPBELL. But in this case we are giving indemnity to the heirs of an alien who was in our country merely for the purpose of taking advantage of the benefits that arise because of his being here.

Mr. SHARP. Mr. Speaker, will the gentleman yield?

Mr. FLOOD of Virginia. Certainly.

Mr. SHARP. It seems to me that the logic of the gentleman would lead us to take the position that when foreigners who come to our land became American citizens they would forfeit all rights that foreign subjects enjoy upon our soil. It does not seem to me we ought to go to that length.

Mr. CAMPBELL. I would not care to go to that length.

Mr. FLOOD of Virginia. And the gentleman will recall that other Italian citizens had had experience in this country that might have justified the position of this one. There had been seven of them killed in Colorado and a number of them in Louisiana and some in Mississippi; and with these acts in the knowledge of this man, he said it would do him no good to become an American citizen, because some of those killed in Colorado had declared their intentions to become American citizens.

Mr. CAMPBELL. Mr. Speaker, while I shall not object to the consideration of this bill at this time, I do say that if there is not a precedent on all fours we are establishing a somewhat dangerous precedent by giving an indemnity to an alien who had declared his intention of not becoming a citizen of our country and yet remaining here and taking advantage of every opportunity that our country affords, but who is unwilling to assume any of the responsibilities of citizenship.

I think our precedents should be along this line, that when an alien is traveling through our country we should give him every protection to which he is entitled, but if a man should come here, and within a reasonable time declare his intention to become a citizen, then he should be entitled to every protection an alien should have.

Mr. SHARP. Applying that argument to the situation as it involves our relations with Mexico at this time, would the gentleman claim that as to the thousands of American citizens who are in Mexico to-day, and who have very properly, I think, refused to cast off allegiance to America; the Mexican Government owes them no protection down there?

Mr. CAMPBELL. I do not care to be drawn into that phase of the Mexican question, but I will say this: I have not that warm sympathy for American citizens who think that the Mexican Government affords them better opportunities for living and for getting returns on their capital than the Government of the United States.

Mr. SHARP. That does not answer the question.

Mr. COX. Mr. Speaker, will the gentleman yield?

Mr. FLOOD of Virginia. Certainly.

Mr. COX. I presume there must be some treaty obligation between this country and Italy on which the gentleman bases his bill? What does the treaty provide on this point?

Mr. FLOOD of Virginia. The bill is not based on any treaty obligations.

Mr. COX. What is it based upon?

Mr. FLOOD of Virginia. On the sense of justice and equity of this Government, as an act of grace and without reference to the question of liability.

Mr. COX. Then there is nothing in any treaty between this country and Italy that binds us to pay these terms?

Mr. FLOOD of Virginia. I think the treaty would bind us to make a proper indemnity, but the Executive does not put it upon the grounds of treaty rights. It is on the rights and propriety of the situation. Here is an Italian citizen in this country—

Mr. COX. No doubt the gentleman has read the treaty obligations on this point, if any exist between this country and Italy, and if they do, if the gentleman can inform the House, I would like to hear him.

Mr. FLOOD of Virginia. To this extent, that we guarantee the safety of citizens of Italy just as we do our own citizens. We guarantee them against mob violence, against clandestine murder, just as we do our own citizens.

Mr. CULLOP. Is it not the duty of this Government to protect these men against unlawful violence? Our obligation to the Government of Italy was to protect any of its citizens against unlawful violence. This man was taken out of the custody of the officers by a mob, as I understand.

Mr. FLOOD of Virginia. That is a fact.

Mr. CULLOP. Then it becomes our duty, under international obligations, to protect the citizens of Italy and to respond in damages if we do not do that, and that is the basis for this bill, is it not?

Mr. FLOOD of Virginia. That is the basis. The first steps taken were by the authorities of Hillsboro County, Fla., to try to ascertain the perpetrators of this crime and bring them to justice. That they were unable to do, and as a consequence the Italian Embassy, in the name of the Government of Italy, appealed to the sense of equity and justice of this Government for some settlement of this case, and requested that an indemnity of \$6,000 be granted to that end.

Mr. COX. What heirs did he leave?

Mr. FLOOD of Virginia. He certainly left a mother.

Mr. COX. Have you a record?

Mr. FLOOD of Virginia. Yes; we have the evidence here of his mother.

Mr. COX. As I understand now, it is not primarily based upon the treaty obligation but more upon the obligation of humanity that one Government owes to another.

Mr. FLOOD of Virginia. A sense of equity and justice that this Nation owes to a citizen of another nation who happens to be in this country on a legitimate and proper business.

Mr. COX. Does the gentleman now recall any case where any American citizen has been mobbed in a foreign country and recompense made to his heirs in this country?

Mr. FLOOD of Virginia. No; but the Italian Government only recently paid \$25,000 to this Government to reimburse the Archaeological Institute of America. This organization was, at the time of the outbreak of war between Italy and Turkey, engaged in making excavations at the ancient city of Cyrene in northern Africa.

As one of the results of that war the Cyrenaica came into the possession of Italy, and the concession was relinquished to the Italian Government upon the payment by that Government of \$25,000 in compensation to the institute and the interests represented by it for losses incurred, including actual expenditures, the property necessarily abandoned by the individual members of the expeditions, and the sacrifice of the further rights in the scientific exploration of the concession at Cyrene.

Mr. COX. Then I have nothing else to say.

Mr. KINDEL. Mr. Speaker, I desire to ask the gentleman what has been the habit of foreign countries paying Americans for loss of life?

Mr. FLOOD of Virginia. America has been in the habit of insisting upon indemnities.

Mr. KINDEL. How much?

Mr. FLOOD of Virginia. That would depend upon the circumstances of each particular case.

Mr. KINDEL. How do you happen to fix upon the amount of \$6,000?

Mr. FLOOD of Virginia. The Italian Government suggested it to the State Department and Secretary Bryan recommended to Congress that an appropriation of \$6,000 be made. It is a matter of agreement between the Italian ambassador and our Government, through the State Department.

Mr. KINDEL. How much did they pay for the lives lost in Colorado?

Mr. FLOOD of Virginia. I think they are about \$2,000 apiece. There was, however, some question whether the Italians were all then American citizens or citizens of Italy.

Mr. KINDEL. It is a matter of compromise; that is, this \$6,000?

Mr. FLOOD of Virginia. Yes; of agreement.

Mr. KINDEL. It is not based on the value of the youth or the quality of the man or anything of that sort?

Mr. FLOOD of Virginia. It is a matter simply of agreement between the representatives of the two Governments.

The SPEAKER. Is there objection?

Mr. MONDELL. Mr. Speaker, reserving the right to object, I shall not object, and I shall not object largely because the President of the United States, having taken this matter up with the Italian Government and having considered it, I assume, in view of our obligations under our treaty and in view of past precedents, has recommended that the sum be paid.

Except for the recommendation of the President, I should be rather inclined to take the view that has been suggested by my friend from Kansas, that as to the case of this Italian coming here and living here for many years without any effort to take upon himself the responsibilities of citizenship, possibly we have no such obligation as would necessitate or make proper the payment of indemnity. But the President has evidently gone into the matter carefully. The President has considered this in connection with our treaty obligations and in connection with other matters of similar character, and I am very much inclined to favor the enactment of the bill, and shall not object, very largely because of the President's recommendation.

The SPEAKER. The time of the gentleman has expired.

Mr. HARDWICK. Mr. Speaker, will the gentleman yield for a question?

The SPEAKER. Does the gentleman yield?

Mr. FLOOD of Virginia. Yes.

Mr. HARDWICK. I just want to know this, for my own information, as well as for the information of the House: Have we not got any recourse on the local authorities for carelessness and neglect? The fault is not in the United States Government, but in those local authorities down there in Tampa, Fla., according to the case that is made out. Is there no way by which we can make them responsible down there? Are there no precedents along that line?

Mr. FLOOD of Virginia. There is no way that I know of. This Government has always paid indemnity of this character.

Mr. CLARK of Florida. I call for the regular order, Mr. Speaker.

The SPEAKER. The gentleman from Florida [Mr. CLARK] calls for the regular order. The regular order is to put the question for unanimous consent. Is there objection?

There was no objection.

Mr. AUSTIN rose.

The SPEAKER. For what purpose does the gentleman rise?

Mr. AUSTIN. I want to say a few words on this bill before final action is had.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 7384) to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject.

Be it enacted, etc., That there is hereby authorized to be paid, out of any money in the Treasury not otherwise appropriated, out of humane consideration and without reference to the question of liability therefor, to the Italian Government as full indemnity to the heirs of Angelo Albano, an Italian subject who was killed by an armed mob at Tampa, Fla., on the 20th day of September, 1910, the sum of \$6,000.

The SPEAKER. The gentleman from Tennessee [Mr. AUSTIN] is recognized.

Mr. AUSTIN. Mr. Speaker, I am going to vote for this proposition, especially since the President of the United States has recommended it and the Committee on Foreign Affairs, having investigated it, has submitted a favorable report thereon, and inasmuch as the Senate of the United States has passed it without opposition.

But I wish to take this occasion to remind the membership of this House that by the enactment of this bill they place a value of \$6,000 upon the life of an Italian subject. In the Sixty-first Congress and in the Sixtieth Congress, against my protest, the House of Representatives fixed a value on the life of an Ameri-

can citizen at as low as \$500, and in any number of instances at \$1,000 and \$1,500, in the cases of men who had lost their lives in the employ of the United States Government without any fault on their own part. The Committee on Claims of this House in the Sixtieth Congress and in the Sixty-first Congress, in an omnibus claims bill, reported here, recommended appropriations varying from \$1,000 to \$2,000 to compensate a widow and a number of children for the loss of the husband and father; and yet no appeals would reach the hearts of the Members of this House and those bills were passed through here and were sent to the Senate of the United States.

I hope that every man who votes for this bill, carrying an indemnity of \$6,000, as they say, for humanitarian purposes to a foreign subject, will not forget an American citizen when that question comes up for consideration again. [Applause.]

Mr. HARDWICK. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman yield?

Mr. AUSTIN. Yes.

Mr. HARDWICK. Mr. Speaker, I would like to ask one question. I quite agree with what the gentleman is saying; but does it not look to the gentleman as though, when the Government of the United States incurs obligations to foreign Governments on account of such transactions as this, there ought to be some way to make these local authorities who are careless reimburse the Federal Government?

Mr. AUSTIN. Yes; there ought to be some authority to compel the local authorities to pay the damages.

Mr. CULLOP. Mr. Speaker, I move to strike out the last word.

The SPEAKER. The gentleman from Indiana [Mr. CULLOP] moves to strike out the last word.

Mr. CULLOP. There is a power already existing under the law to make the local authorities responsible.

Mr. HARDWICK. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman yield?

Mr. CULLOP. Yes.

Mr. HARDWICK. Will the gentleman tell me where and how he will proceed to do it? Where is that authority?

Mr. CULLOP. In the law of the land.

Mr. HARDWICK. What part of the law of the land?

Mr. CULLOP. The law for a tort. These people have a recourse, and the Government has recourse. A man charged with the responsibility of executing the law is liable if he does not fulfill his obligations and the promises he has made to his Government. From this obligation he can not escape.

Mr. HARDWICK. If that might be true—and it is true, so far as any liability to a person injured as the result of carelessness is concerned—it would not be true in a case like this, in the absence of legislation, if the Government of the United States, in discharging its obligations to a foreign power, should make an appropriation of this character and seek to get reimbursement. What I have suggested is that we ought to have some sort of legislation by which, when we pay these indemnities that result from the carelessness or inefficiency of local authorities, we could make the local authorities responsible to us and reimburse us in the amount we have paid out.

Mr. CULLOP. I fully agree with the gentleman upon that proposition, but the right already exists to make the negligent or careless party, in this or any other case like it, responsible to the injured party.

Mr. HARDWICK. Yes; I agree with the gentleman about that.

Mr. CULLOP. That right already exists. Now, as to whether the Government should be subrogated to the rights of the parties or not is another question, and one that it might perhaps require legislation to enforce.

Now, Mr. Speaker, some gentlemen on the other side of the aisle of this House have seen proper in the exuberance of their appreciation of small favors to allude to the election in the third congressional district of Maine held on yesterday. They have with much apparent delight referred to it as an indorsement of Republican policies. Such an indorsement as it affords, I take it, can be of but little comfort, and the more they investigate the result and the result of former elections in that district the less comforting it will be. Their joy doubtless is found in the fact that their vote was larger than the vote of the Progressive Party. The Republican and Progressive Parties just exchanged places. Last fall in the election in that district the Republican Party was third in the race and now the Progressive Party is third. Some have gone so far in their enthusiasm over the result as to declare it is a repudiation of Democratic policies and the Wilson administration. This conclusion is far from the fact and the reverse is nearer true.

Last year the Republican candidate for Congress in that district beat the Democratic candidate by about 800 majority. In yesterday's election the Republican was elected over the Democrat by about 500 plurality. If there is comfort in this result for our Republican friends, they are welcome to it; but, for one, I fail to see where it is or why they should rejoice over it. Instead of being a repudiation of the Wilson administration it was an indorsement of the same. It was made the issue and the Democratic candidate received over 150 votes more on yesterday than was cast at the November election last year for President Wilson. The tariff was an issue, the leading one, and the Democratic candidate, Mr. Pattingall, indorsed it, and yet he was only defeated by a small plurality in that rock-ribbed Republican district. The truth is the Republican candidate and those who spoke for him did not dare come out in the open and defend the Payne-Aldrich tariff law; did not dare announce their tariff position. If they had indorsed the Republican tariff law they would have been overwhelmingly defeated. It was repudiated last year in that district and would have been at the election this year if the Republican Party had announced it stood for it.

The result shows it was not the repudiation of the Underwood bill nor the Wilson administration; but, on the other hand, both were indorsed by a larger vote than was cast for the Democratic ticket last fall. This fact refutes their claim and clearly supports the contention that high protection is doomed even in this heretofore stronghold of high protection.

Mr. STEENERSON. I desire to ask the gentleman in charge of the bill if he knows how much is paid for death by wrongful act, under the laws of Florida?

Mr. FLOOD of Virginia. I do not think there is any limitation. I will ask the gentleman from Florida [Mr. CLARK].

Mr. STEENERSON. My recollection is that it is \$5,000.

Mr. FLOOD of Virginia. I do not suppose it is as small as that. I do not know of any State where it is less than \$10,000. I do not think there is any limit in Florida.

Mr. STEENERSON. Oh, yes; it is \$5,000 in several of the States.

Mr. FLOOD of Virginia. I will ask the gentleman from Florida [Mr. CLARK] to state.

Mr. CLARK of Florida. There is absolutely no limit. It is a question entirely for the court and jury. Of course, the supreme court of the State has frequently set aside verdicts as being excessive, but there is absolutely no statute fixing any limit of recovery.

Mr. MOORE. Does the gentleman know the rule that holds in the Department of Commerce or in the War Department with regard to the amount of damages to be paid to an alien who may be employed in the service of the Government?

Mr. FLOOD of Virginia. It is one year's salary, I understand.

Mr. MOORE. That is the rule; so that if Angelo Albano had been employed on river and harbor work, and had been killed in the course of his employment and his yearly wage amounted to \$850, his heirs would have been paid \$850 by this Government?

Mr. FLOOD of Virginia. Yes; I so understand.

Mr. MOORE. Presuming he had been in the employ of the Government and had been rendering it a service, that is the limit, is it not?

Mr. FLOOD of Virginia. That is as I understand it.

Mr. MOORE. But in this instance the sum of \$6,000 has been fixed to pay the heirs of one who was accused of crime, who happened to be an alien, and who therefore came to the notice of the President in view of our international relations. And we are paying what appears to be an excessive sum not because of any service rendered to the Government or any obligation to the heirs of Albano, but because of international relations.

Mr. FLOOD of Virginia. Because this Government failed to protect this man from a mob that murdered him.

Mr. MOORE. Will the gentleman yield for one further question? Could the State of Florida be held in any way responsible for the act of its agents who may have caused the death of Albano?

Mr. FLOOD of Virginia. I do not see any way in which you can hold the State of Florida responsible.

Mr. MOORE. Could the United States recover in any way, or could any arrangement be made with the State of Florida by which this sum might be reimbursed to the United States?

Mr. FLOOD of Virginia. I do not know what arrangement might be made with the State of Florida. I do not know of any way by which the United States could recover from the State of Florida. I do not believe it could.

Mr. STEENERSON. Is there any evidence anywhere as to what was the earning capacity of this man?

Mr. FLOOD of Virginia. Not the slightest. The message of the President puts this claim upon the principles of justice and equity.

Mr. STEENERSON. But the President fails to state whether the man was earning \$100 a year or \$1,000 a year.

Mr. FLOOD of Virginia. I suppose the man was earning more than the interest on \$8,000.

Mr. STEENERSON. It does not appear, nor does it appear anywhere, that he was earning anything.

Mr. FLOOD of Virginia. You might assume that much.

Mr. STEENERSON. It seems to me it was the duty of the State Department to give to Congress the information upon which they arrived at this sum of \$6,000.

Mr. FLOOD of Virginia. We know that he was an Italian subject. Nobody questions that. We know that he was in the custody of the officers of the law, and we know that a mob set upon him, took him from the officers, and murdered him, and under these circumstances it does not seem to me that \$6,000 is excessive.

Mr. STEENERSON. We also know that it was not the United States Government that had him in charge. The State of Florida had him in charge.

Mr. FLOOD of Virginia. The United States Government has assumed responsibility in this case, as it has in all similar cases.

Mr. STEENERSON. It has not done it always.

Mr. FLOOD of Virginia. It has done it wherever it was brought to the attention of the Government and the facts were similar to this case.

Mr. STEENERSON. I think the first instance was the Louisiana case, where Mr. Blaine recognized it as a matter of generosity, not as a matter of right. He expressly stipulated that it was not a matter of right.

Mr. FLOOD of Virginia. The majority of those people had become American citizens. The mistake Mr. Blaine made, and for which he was criticized, was in assuming the responsibility of this Government to pay for American citizens under the circumstances.

Mr. STEENERSON. They were not all American citizens.

Mr. FLOOD of Virginia. Most of them were.

Mr. STEENERSON. It was expressly reserved and stipulated that that should not be considered a precedent.

Mr. FLOOD of Virginia. It has not been urged as a precedent in this case. There have been a half a dozen cases since then which are precedents for the pending bill.

Mr. STEENERSON. I fail to recognize any precedent for this. They are asking \$6,000, and you do not know whether the man was worth \$5,000 or \$6,000. It appears he was charged with homicide, and presumably he was not a very valuable citizen. He probably did not earn very much. It seems to me the State Department ought to inform Congress what kind of a man he was and why we should be appropriating \$6,000.

Mr. MONDELL. Will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. MONDELL. No doubt the gentleman from Minnesota has read the President's recommendation. The recommendation is that this be done as a matter of grace. I am inclined to think the President had good reason for making the recommendation.

Mr. STEENERSON. I will say to the gentleman from Wyoming that I will be equally generous with the President, and concede that he does this as a matter of grace. For that reason I shall not press any further objection, although I think if another case like this comes up there will be more objection to passing the bill than there is at this time. I want to give the President and the State Department fair warning that no case will pass in this House with my consent unless we are shown more facts that will entitle them to the appropriation.

Mr. FLOOD of Virginia. I hope the bill will pass. Italy has simply suggested that when one of her citizens goes abroad in the peaceful pursuit of his own affairs the nationality which he carries shall protect him from clandestine murder by foreign mobs; that under the principles of international law, the comity of nations, and our treaties with her, her citizens who happen within our jurisdiction are entitled to the best, not the worst, treatment which we give our own people.

Less than this we would not accept ourselves, and less than this we are too generous to offer another.

The SPEAKER. The gentleman from Indiana withdraws his pro forma amendment. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. Flood of Virginia, a motion to reconsider the vote whereby the bill was passed was laid on the table.

ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 15 minutes p. m.) the House, under its previous order, adjourned until to-morrow, Wednesday, September 10, 1913, at 11 o'clock a. m.

EXECUTIVE COMMUNICATION.

Under clause 2 of Rule XXIV, a letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on examination and survey of Menominee Harbor and River, Mich. and Wis., with a view to securing increased depth and width of channel and to extending the improvements as far as practicable above the Ogden Street bridge (H. Doc. No. 228), was taken from the Speaker's table, referred to the Committee on Rivers and Harbors, and ordered to be printed with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. GLASS, from the Committee on Banking and Currency, to which was referred the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, reported the same with amendments, accompanied by a report (No. 69), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. POWERS: A bill (H. R. 8007) for the enrollment of certain Choctaw Indians heretofore unidentified and for the settlement of their claims, and for other purposes; to the Committee on Indian Affairs.

By Mr. CLARK of Florida (by request): A bill (H. R. 8008) to authorize the construction of a system of large-diameter underground pneumatic tubes to connect the public buildings in Washington, D. C.; to the Committee on Public Buildings and Grounds.

By Mr. BYRNES of South Carolina: A bill (H. R. 8009) to provide for an experiment in the improvement of post roads by the Secretary of Agriculture in cooperation with the Postmaster General, and for other purposes; to the Committee on Appropriations.

Also, a bill (H. R. 8010) to confer jurisdiction upon the Court of Claims to hear and determine the claims of churches, lodges, and educational or eleemosynary institutions arising from the late Civil War; to the Committee on War Claims.

By Mr. CARAWAY: A bill (H. R. 8011) to amend the practice and procedure in Federal courts; to the Committee on the Judiciary.

By Mr. BARTLETT: Resolution (H. Res. 246) directing the Committee on Expenditures in the Department of Commerce to examine and investigate expenditures in the Bureau of Light-houses; to the Committee on Rules.

By Mr. BYRNES of South Carolina: Joint resolution (H. J. Res. 128) directing the Secretary of Agriculture to cause a survey and investigation to be made of the swamp and tidal lands of the second congressional district of South Carolina, to determine the feasibility and cost of leveeing and draining said lands, and the benefits to agriculture and the public health which would result therefrom; to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARCHFELD: A bill (H. R. 8012) granting a pension to Mary Beherz; to the Committee on Invalid Pensions.

By Mr. BORLAND: A bill (H. R. 8013) for the relief of the heirs of Thomas Rogers, deceased; to the Committee on the Post Office and Post Roads.

By Mr. BYRNES of South Carolina: A bill (H. R. 8014) for the relief of the heirs of Dr. John W. Kirk, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8015) for the relief of the heirs of Joseph G. Thorpe, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8016) for the relief of the legal representatives of Reuben R. Turner; to the Committee on War Claims.

Also, a bill (H. R. 8017) for the relief of Bethesda Baptist Church, of Bamberg County, S. C.; to the Committee on War Claims.

Also, a bill (H. R. 8018) for the relief of Beech Branch Baptist Church, of Hampton County, S. C.; to the Committee on War Claims.

By Mr. FOSTER: A bill (H. R. 8019) granting a pension to Hector C. Fairfowl; to the Committee on Pensions.

Also, a bill (H. R. 8020) granting a pension to Garet Williamson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8021) granting a pension to Norman K. Bedell; to the Committee on Pensions.

Also, a bill (H. R. 8022) granting a pension to Nancy Lee-right; to the Committee on Pensions.

Also, a bill (H. R. 8023) granting a pension to George W. Irvin; to the Committee on Pensions.

Also, a bill (H. R. 8024) granting an increase of pension to D. H. Green; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8025) granting an increase of pension to Rufus M. Patterson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8026) granting an increase of pension to William Snider; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8027) granting an increase of pension to Ella A. Walker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8028) granting an increase of pension to Joseph Thompson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8029) granting an increase of pension to Charles W. Zahnow; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8030) to remove the charge of desertion from the record of Herman Kneofler; to the Committee on War Claims.

By Mr. LANGLEY: A bill (H. R. 8031) granting a pension to John M. Clark; to the Committee on Pensions.

Also, a bill (H. R. 8032) granting an increase of pension to Mary Pauley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8033) granting an increase of pension to Malinda Pauley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8034) granting an increase of pension to Nancy Moore; to the Committee on Invalid Pensions.

By Mr. LINTHICUM: A bill (H. R. 8035) waiving the age limit for admission to the Pay Corps of the United States Navy in the case of Charles W. Stevenson; to the Committee on Naval Affairs.

By Mr. MOSS of West Virginia: A bill (H. R. 8036) granting a pension to Caroline Parks; to the Committee on Invalid Pensions.

By Mr. SMITH of New York: A bill (H. R. 8037) granting an increase of pension to William H. Chapman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8038) granting an increase of pension to Michael Minehan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8039) granting an increase of pension to Thomas H. Caley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8040) granting a pension to William C. Roderick; to the Committee on Pensions.

Also, a bill (H. R. 8041) granting restoration of pension to Eliza Steele, now Riehl; to the Committee on Invalid Pensions.

By Mr. SUTHERLAND: A bill (H. R. 8042) granting a pension to Charles B. Cundiff; to the Committee on Invalid Pensions.

By Mr. TAGGART: A bill (H. R. 8043) granting a pension to Edward H. Lewis; to the Committee on Pensions.

Also, a bill (H. R. 8044) granting a pension to Eva Gerber; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8045) to correct the military record of Samuel D. Jarman; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, papers were laid on the Clerk's desk and referred as follows:

By Mr. BARCHFELD: Papers to accompany bill granting a pension to Mary Beherz; to the Committee on Invalid Pensions.

SENATE.

WEDNESDAY, September 10, 1913.

The Senate met at 2 o'clock p. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. CHAMBERLAIN and by unanimous consent, the further reading was dispensed with and the Journal was approved.

POLICEMEN'S AND FIREMEN'S PENSION ROLLS (S. DOC. NO. 183).

The VICE PRESIDENT laid before the Senate a communication from the Commissioners of the District of Columbia, transmitting in response to a resolution of April 9, 1913, lists showing the names, rate of pensions, employment, and compensations therefor of persons borne on the policemen's and firemen's pension rolls of the District of Columbia, etc., which, with the accompanying paper, was referred to the Committee on the District of Columbia and ordered to be printed.

ESTIMATE OF APPROPRIATION (S. DOC. NO. 182).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, transmitting a letter from the Commissioner of Internal Revenue submitting for inclusion in the deficiency appropriation bill an estimate of deficiency in the sum of \$10,000 in the appropriation for salaries and expenses of agents and subordinate officers of Internal Revenue for the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the House had passed the following bill and joint resolution:

S. 2711. An act to provide for the acquiring of station grounds by the Great Northern Railway Co. in the Colville Indian Reservation, in the State of Washington; and

S. J. Res. 68. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the commission, etc.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 4937. An act extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement;

H. R. 7377. An act extending to the port of Perth Amboy, N. J., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement;

H. R. 7384. An act to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject;

H. R. 7595. An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors; and

H. R. 7898. An act making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes.

PETITION.

Mr. OLIVER presented a petition of the Central Labor Union of Scranton, Pa., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

HENRY B. FREEMAN.

Mr. CHAMBERLAIN, from the Committee on Military Affairs, to which was referred the bill (S. 2585) for the relief of Henry B. Freeman, asked to be discharged from its further consideration and that it be referred to the Committee on Claims; which was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SHAFROTH:

A bill (S. 3101) to authorize the Court of Claims to hear and determine the claims against the United States of the heirs of Andrew D. Huff, deceased; to the Committee on Claims.

By Mr. LANE:

A bill (S. 3102) granting a pension to William W. Oglesby; to the Committee on Pensions.

By Mr. THOMPSON:

A bill (S. 3103) granting a pension to Lucinda Randall (with accompanying papers); to the Committee on Pensions.

By Mr. CATRON:

A bill (S. 3104) for the relief of Fernando Baca; to the Committee on Claims.

A bill (S. 3105) for the construction of a public highway through the Pecos National Forest; to the Committee on Agriculture and Forestry.

By Mr. BRADY:

A bill (S. 3106) to provide for the erection of a public building at Blackfoot, Idaho; to the Committee on Public Buildings and Grounds.

By Mr. DILLINGHAM:

A bill (S. 3107) for the relief of John E. Johnson; to the Committee on Military Affairs.

By Mr. JOHNSON:

A bill (S. 3108) to remove the charge of desertion from the record of Thomas J. Woodworth (with accompanying papers); to the Committee on Military Affairs.

By Mr. JONES:

A bill (S. 3109) for the relief of William H. Hare; and

A bill (S. 3110) for the relief of Ira M. Krutz; to the Committee on Claims.

A bill (S. 3111) granting an increase of pension to Rachel C. Smith; to the Committee on Pensions.

AMENDMENTS TO DEFICIENCY APPROPRIATION BILL.

Mr. PERKINS submitted an amendment providing that the balance remaining upon the books of the Treasury on July 30, 1913, of the appropriation of \$15,000 for improvements at Fort Bidwell School, in California, be reappropriated and made available for the fiscal year ending June 30, 1914, etc., intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. KERN submitted an amendment authorizing the Secretary of the Treasury to consider, adjudicate, and pay, under the act of Congress approved July 27, 1912, the claim of any trust company for the refund of taxes erroneously assessed or illegally collected under the war-revenue act of July 13, 1898, on its capital, etc., intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

CONSTITUTION OF THE CONFEDERATE STATES (S. DOC. NO. 181).

Mr. JONES. Mr. President, I ask unanimous consent to have printed as a document a paper, being quotations from the statutes at large of the Confederate States of America, edited by James M. Matthews, attorney at law and law clerk to the Department of Justice.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it will be printed as a public document.

SABINE RIVER BRIDGE, TEX.

Mr. SHEPPARD. I ask that the Committee on Commerce be discharged from the further consideration of the bill (H. R. 3406) to authorize the construction of a bridge across the Sabine River at Orange, Tex. I send the bill to the desk, and when the committee has been discharged I shall ask for its present consideration.

The VICE PRESIDENT. Does the Senator from Texas report the bill from the Committee on Commerce?

Mr. SHEPPARD. I am not authorized to make a report of the bill. The committee has held no meeting, but this is mere routine business to which, I believe, there will be no objection.

Mr. GALLINGER. Do I understand correctly that the bill is in the hands of the committee?

The VICE PRESIDENT. The bill was referred on the 20th of August to the Committee on Commerce. The Senator from Texas asks, as the committee have had no meeting, that the committee be discharged from the further consideration of the bill with a view to its passage.

Mr. SHEPPARD. I will state to the Senator from New Hampshire that the parties who want to have the bridge constructed are ready to go to work on it. There was a unanimous report by the House committee on the bill. It is an ordinary bridge bill.

Mr. GALLINGER. I notice that the chairman of the Committee on Commerce is present, and I have no suggestion to make about it.

Mr. CLARKE of Arkansas. Mr. President, the procedure adopted by the Senator from Texas is an erroneous one. Such bills are generally referred to a subcommittee of the Committee on Commerce, and when they are merely formal the subcommittee is authorized to report them to the Senate as the action

of the full committee. There is no reason why that course should not be adopted on the present occasion.

The presentation of the bill at this time may be treated as a report from the Committee on Commerce under that rule. I take the responsibility as chairman and as the organ of the committee to make that announcement. There is no occasion for the discharge of the committee from the further consideration of the bill, because the full committee is never called upon to consider bills of this character, unless there be some objection to the measure.

Mr. WARREN. It is now reported by the subcommittee?

Mr. CLARKE of Arkansas. It is now reported by the subcommittee.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

Mr. OLIVER. I will ask the Senator from Texas whether this matter has been referred to the department?

Mr. SHEPPARD. I have the report from the War Department recommending it.

Mr. OLIVER. It is all right, then.

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. SHEPPARD. If there is no objection, I will have the report of the House committee on the bill inserted in the Record at this point.

The VICE PRESIDENT. That may be done.

The report referred to is as follows:

[House Report No. 48, Sixty-third Congress, first session.]

BRIDGE ACROSS THE SABINE RIVER, ORANGE, TEX.

Mr. Rayburn, from the Committee on Interstate and Foreign Commerce, submitted the following report, to accompany H. R. 3406:

The Committee on Interstate and Foreign Commerce, to whom was referred the bill (H. R. 3406) to authorize the construction of a bridge across the Sabine River at Orange, Tex., having considered the same, report thereon with a recommendation that it pass.

The bill has the approval of the War Department, as will appear by the letter attached and which is made a part of this report.

[Second indorsement.]

WAR DEPARTMENT,
Washington, July 14, 1913.

Respectfully returned to the chairman Committee on Interstate and Foreign Commerce, United States House of Representatives.

The Chief of Engineers reports that House bill 3406, Sixty-third Congress, first session, to authorize the construction of a bridge across Sabine River at Orange, Tex., makes ample provision for the protection of navigation interests, and I know of no objection to its favorable consideration by Congress, so far as those interests are concerned.

HENRY BRECKINRIDGE,
Assistant Secretary of War.

GARDEN CITY (KANS.) WATER USERS' ASSOCIATION.

Mr. THOMPSON. I ask unanimous consent to call up the bill (S. 221) for the relief of the Garden City (Kans.) Water Users' Association, and for other purposes. The bill has been favorably reported from the Committee on Irrigation and Reclamation of Arid Lands, and it is also recommended by the department.

The VICE PRESIDENT. The Senator from Kansas asks unanimous consent for the present consideration of the bill he has indicated.

Mr. LODGE. Let the bill be read for information.

The VICE PRESIDENT. The Secretary will read the bill.

The Secretary read the bill, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to have appraised and dispose of at not less than the appraised value, at public or private sale, by sealed bids or otherwise, under such terms as may be approved by him, the irrigation plant built under the terms of the reclamation act of June 17, 1902 (32 Stat. L., p. 388), located in Finney County, Kans., together with the machinery, wells, pumps, transmission lines, and all other appurtenances, and the lands of the United States on which they are located, either as a whole or separately, in his discretion. The Secretary of the Interior is hereby authorized to execute appropriate conveyances for the real property sold hereunder.

SEC. 2. That the contracts heretofore entered into between the Finney County Water Users' Association, of Finney County, Kans., or with individual landowners, and the Secretary of the Interior, for the supply and use of water from the irrigation plant of the United States be, and the same are hereby, canceled and relieved and the liens upon the lands in said county created by such contracts are hereby released and discharged.

SEC. 3. That the Secretary of the Interior shall make to Congress a statement of the expenditure connected with this reclamation project and the amount received from its sale.

Mr. BORAH. I wish to ask the Senator from Kansas a question. The bill, I am aware, was reported from the committee of which I am a member. I understand it is confined to one project, the Garden City project.

Mr. THOMPSON. Yes, sir.

Mr. BORAH. The bill does not affect the reclamation law in any other respect?

Mr. THOMPSON. No, sir. The bill was originally drawn for the purpose of relieving the farmers from the contracts—

Mr. BORAH. I understand the purport of the bill, but I was not sure that it was limited in its operation to this one project.

Mr. THOMPSON. It is.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles and referred to the Committee on Commerce:

H. R. 4937. An act extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisal; and

H. R. 7377. An act extending to the port of Perth Amboy, N. J., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisal.

H. R. 7334. An act to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject, was read twice by its title and referred to the Committee on Foreign Relations.

H. R. 7505. An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors was read twice by its title.

Mr. ASHURST. Mr. President, if I may be indulged to make an observation at this time, I should like to ask the chairman of the Finance Committee if that committee will not examine House bill 7595 to-day and report it favorably?

The VICE PRESIDENT. The bill will be referred to the Committee on Finance.

An act (H. R. 7308) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 6 hours and 25 minutes spent in executive session the doors were reopened, and (at 8 o'clock and 45 minutes p. m.) the Senate adjourned until tomorrow, Thursday, September 11, 1913, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate September 10, 1913.

CONSULS GENERAL.

Leo Allen Bergholz, of New York, now consul at Kingston, Jamaica, to be consul general of the United States of America at Dresden, Germany, vice T. St. John Gaffney, nominated to be consul general at Munich.

OKLAHOMA.

W. H. Davis, Stilwell.

WASHINGTON.

Edgar Battle, Seattle.

WISCONSIN.

Gustave Keller, Appleton.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, September 10, 1913.

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Incline Thine ear, O God our heavenly Father, and hear our petition. As the manna fell from heaven upon the children of Israel, to feed and strengthen them, so let Thy blessing descend upon all the Members of this House, to feed and strengthen them in the work they have been called to do; especially be very near to the Members who are confined to their homes on beds of sickness with Thy healing touch, that they may be restored to health and be permitted again to come and go among us; and everlasting praise be Thine, in the name of the Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

SPECIAL INVESTIGATING COMMISSION.

Mr. STEPHENS of Texas. Mr. Speaker, I desire to ask unanimous consent to discharge the Committee on Indian Affairs from the further consideration of Senate joint resolution 68 and to consider the same at the present time. I will state this is a resolution from the Senate providing for the payment of the joint expenses of the investigation commission authorized by this House at this session of Congress to be sent to the States of Washington and New Mexico to make report, and this authorizes the chairman of that commission to draw upon the contingent funds of the House and Senate.

The SPEAKER. What committee is it in now?

Mr. STEPHENS of Texas. It is in the Committee on Indian Affairs, and I ask that that committee be discharged.

The SPEAKER. The gentleman from Texas asks unanimous consent that the Committee on Indian Affairs be discharged from the further consideration of the joint resolution which the Clerk will report, and that it may be now considered.

The Clerk read as follows:

Joint resolution (S. J. Res. 68) authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the commission, etc.

Resolved, etc., That to enable the commission appointed under section 23 of the act "Making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for the fiscal year ending June 30, 1914," approved June 30, 1913, to make the investigation ordered in said section, in the States of Washington and New Mexico; that the Secretary of the Senate and the Clerk of the House of Representatives be, and they are hereby, authorized to advance to the chairman of said commission such sums as may be necessary to pay witnesses, stenographers at not exceeding \$1 per printed page, and for clerical assistance, and the traveling expenses of the commission incident to said investigation from the contingent fund of the Senate and House of Representatives in equal parts; itemized vouchers for all such expenditures on the part of the Senate to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate, and those on the part of the House of Representatives, by the Committee on Accounts of the House of Representatives.

Mr. COX. Mr. Speaker, reserving the right to object, I think the House ought to have some information in regard to this resolution.

Mr. STEPHENS of Texas. For the information of the House I will read the act authorizing the appointment of this com-

mission. This is an act approved very recently, and is part of the last Indian appropriation bill, and reads as follows:

A commission consisting of two members of the Senate Committee on Indian Affairs, to be appointed by the chairman of said committee, and two Members of the House of Representatives to be appointed by the Speaker, is hereby created for the purpose of investigating the necessity and feasibility of establishing, equipping, and maintaining a tuberculosis sanitarium in New Mexico for the treatment of tuberculous Indians, and to also investigate the necessity and feasibility of procuring impounded waters for the Yakima Indian Reservation, or the construction of an irrigation system upon said reservation, to impound the waters of the Yakima River, Wash., for the reclamation of the lands on said reservation, and for the use and benefit of the Indians of said reservation. That said commission shall have full power to make the investigations herein provided for, and shall have authority to subpoena and compel the attendance of witnesses, administer oaths, take testimony, incur expenses, employ clerical help, and do and perform all acts necessary to make a thorough and complete investigation of the subjects herein mentioned, and that said commission shall report to Congress on or before January 1, 1914: *Provided*, That one-half of all necessary expenses incident to and in connection with the making of the investigation herein provided for, including traveling expenses of the members of the commission, shall be paid from the contingent fund of the House of Representatives and one-half from the contingent fund of the Senate on vouchers therefor signed by the chairman of the said commission, who shall be designated by the members of the said commission.

I will state to the gentleman from Indiana that this commission is already organized. We have elected Senator ROBINSON as chairman of this commission. We have ascertained from the wording of this statute that it is impossible to get money advanced to pay railroad tickets, transportation, and so forth, to make this investigation which has to be concluded on the 1st of January next.

Mr. COX. Now, has the gentleman any idea or data which he can give the House as to what this is going to cost?

Mr. STEPHENS of Texas. I have not; but this commission is authorized by the law which I have just read to the gentleman.

Mr. COX. I understand the force of that law, but has the gentleman any data or any information at all which will give us an idea as to what the cost will be?

Mr. STEPHENS of Texas. There are four members of this commission. I presume the railroad tickets will possibly be \$150 each, and we will have a secretary, and possibly we will have to have other employees when we get to the reservations to be investigated.

Mr. COX. How many employees, in addition to the four members, will be taken from the city of Washington to the various places where you are to have hearings?

Mr. STEPHENS of Texas. I understand only one employee will attend the commission from Washington. We will get such other clerical help as we will want in Washington and New Mexico. We simply want to obviate having to advance the money ourselves and to have it advanced from the contingent funds of the two Houses.

The SPEAKER. Is there objection to the present consideration of this joint resolution? [After a pause.] The Chair hears none.

The joint resolution was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. STEPHENS of Texas, a motion to reconsider the vote by which the joint resolution was passed was laid on the table.

INVITATION TO ATTEND GRAND PATRIOTIC MASS MEETING, CHESAPEAKE BEACH, MD.

The SPEAKER. The Chair lays before the House the following communication.

The Clerk read as follows:

138 KENTUCKY AVENUE SE.,
Washington, D. C., September 9, 1913.

UNITED STATES HOUSE OF REPRESENTATIVES,
House Chamber, Washington, D. C.

GENTLEMEN: On behalf of the Federated Patriotic Orders of Washington, D. C., I beg to extend to your honorable body a cordial invitation to attend a grand patriotic mass meeting to be held at Chesapeake Beach, Md., to-morrow (Wednesday, September 10).

Yours, very truly,

JNO. A. MCKNIGHT, Secretary.

CURRENCY.

Mr. UNDERWOOD. Mr. Speaker, I desire to ask unanimous consent that the House may at once take up for consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, and that it shall be in order for the House to resolve itself into Committee of the Whole House on the state of the Union for the consideration of that bill, and that general debate thereon shall be concluded when the House adjourns on Saturday next; that the House in the meantime shall meet at

11 o'clock—that is, on Thursday, Friday, and Saturday—and that one-half of the time shall be controlled by the gentleman from Virginia [Mr. GLASS] and one-half of the time be controlled by the gentleman from California [Mr. HAYES].

Mr. HARDWICK. Mr. Speaker, reserving the right to object, I shall want one hour of the time myself, and I want to know first whether I can get that before I agree.

Mr. UNDERWOOD. That will be in the control of the gentleman from Virginia [Mr. GLASS], and I have no doubt the gentleman can make the arrangement.

Mr. HARDWICK. I would like to know from the gentleman. I am willing to agree to the request, but I want an hour of time.

Mr. GLASS. I can not promise any gentleman one hour's time.

Mr. HARDWICK. Then, Mr. Speaker, I shall have to object.

Mr. MOSS of West Virginia. And I object, Mr. Speaker.

Mr. GLASS. I would say to the gentleman from Georgia [Mr. HARDWICK] that we will do the best we can.

Mr. UNDERWOOD. Mr. Speaker, I demand the regular order.

The SPEAKER. The regular order is that the gentleman from Alabama [Mr. UNDERWOOD] asks unanimous consent—

Mr. UNDERWOOD. I understood the gentleman from Georgia [Mr. HARDWICK] objected.

Mr. HARDWICK. Unless there can be some understanding about the disposition of the time, I shall have to object. I will have an hour the other way, and this way I can not get it.

Mr. GLASS. That may be true; the gentleman may not get it. But I shall do the best I can for him and other Members, but not any more for one Member than for another. [Applause.]

The SPEAKER. The Clerk will call the committees.

Mr. MANN. Mr. Speaker, I suggest to the gentleman from Alabama [Mr. UNDERWOOD] that he ask unanimous consent that this bill be given the status of bills reported from committees having the right to report at any time, so as to make it privileged during the debate on the bill from the first.

Mr. UNDERWOOD. My intention, I will say to the gentleman from Illinois, was, when we reached the bill on the call of committees, to move to go into Committee of the Whole and when we came out to limit debate on Saturday next. No one else will interfere on this side, and those on this side are the only gentlemen who are entitled to call up the bill.

Mr. MANN. I understand; but that would not give the bill a privileged status to-morrow morning, and the committees would have to be called twice every day. I think no one would object to giving the bill a privileged status.

Mr. UNDERWOOD. Then, Mr. Speaker, I ask unanimous consent that the bill H. R. 7837 may have the status of a privileged bill and that the House may at any time resolve itself into Committee of the Whole House on the state of the Union for its consideration.

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] asks unanimous consent that House bill 7837—that is, the currency bill—be given the status of a privileged bill. Is there objection?

Mr. MOORE. Mr. Speaker, reserving the right to object, this bill is brought in this morning as the result of caucus action on the Democratic side without any hearings—public hearings—having been had by the committee in charge and a report is presented which is obtainable by Members for the first time only this morning, which contains 166 printed pages. It is now proposed by unanimous consent to begin immediate debate upon this bill, this side of the House having had no opportunity to hear witnesses or to obtain the benefit of their evidence and the House itself not having had an opportunity to get the benefit of any hearings on the part of those directly interested.

I do not propose to object to the request made by the gentleman from Alabama [Mr. UNDERWOOD], which will enable the majority to work out its will, but as one Representative from a large State whose interests are vitally and prejudicially affected by this bill I desire at this time to register a protest against the secrecy with which the deliberations upon this bill have thus far been conducted by one side of the House only and against the method by which it is proposed to force this legislation through the House.

Mr. MOSS of West Virginia. Mr. Speaker, reserving the right to object, I desire to state that I have not yet had the opportunity to investigate the bill just reported. I may vote for the bill. I intend to vote for it if I conclude that it is for the best interests of the country. I am not taking this position on any partisan ground; but I do believe that a bill which is as important as any that can pass this House ought to receive con-

sideration of more than four days in debate by the Members of this House.

A great many of us think we know something about the tariff bill. Almost everybody has an opinion on the tariff; but there are comparatively few men who have any knowledge of this banking subject; and I want to say in all frankness that my sole desire is simply to understand the provisions of this bill. I do not believe that the Members of the House can get a comprehensive grasp of the bill in four days, but I have no objection to its immediate consideration, as proposed by the gentleman from Alabama [Mr. UNDERWOOD].

The SPEAKER. Is there objection?

Mr. MURDOCK. I should like to ask the gentleman from Alabama whether it is the intention to let these sessions of the House run on into the night?

Mr. UNDERWOOD. That will be entirely in the control of the gentleman from Virginia [Mr. GLASS]; but I understand it is his intention to have night sessions when there is anybody here to speak.

Mr. MURDOCK. I should like to ask the gentleman from Virginia [Mr. GLASS] about that—whether it is his intention to have night sessions?

Mr. GLASS. It is.

Mr. MURDOCK. As long as men offer themselves to speak?

Mr. GLASS. Yes.

The SPEAKER. Is there objection to the request of the gentleman from Alabama for unanimous consent to give this bill the status of a privileged bill? The Chair hears none, and it is so ordered.

Mr. UNDERWOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of House bill 7837.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, with Mr. GARNER in the chair.

Mr. GARNER took the chair amid general applause.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the purpose of considering House bill 7837, which the Clerk will report.

The Clerk read the title of the bill.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent to dispense with the first reading of the bill.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to dispense with the first reading of the bill. Is there objection?

There was no objection.

Mr. UNDERWOOD. Mr. Chairman, this is a very important bill, one that I think should be acted on as speedily as possible, allowing due latitude for debate.

My purpose in making this statement is to start the debate, so that in accordance with the rule the committee may rise and go back into the House and fix a time for closing general debate. Therefore, having now made this statement in debate, I move that the committee do now rise and report the bill back to the House.

Mr. MANN. Mr. Chairman, there is some doubt as to whether that is a beginning of debate on the bill. I suggest that the gentleman prefer a request for unanimous consent in the committee.

Mr. UNDERWOOD. I do not think the committee has the authority, but I will prefer the request in the House.

Mr. MANN. Oh, the committee has the authority. Of course, it could not do it by a vote, but it has the authority by unanimous consent.

Mr. UNDERWOOD. I do not think the committee has authority to close general debate in the committee; but I will renew the request.

Mr. MANN. That is frequently done, I will say to the gentleman.

Mr. UNDERWOOD. I will renew the request when we get back into the House, before making the motion. I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision

of banking in the United States, and for other purposes, and had come to no resolution thereon.

Mr. UNDERWOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of H. R. 7837; and pending that motion I ask unanimous consent that all general debate on the bill be concluded when the House adjourns on Saturday next. If that request is granted, I shall move that the House meet each morning at 11 o'clock.

Mr. HARDWICK. You make no request about the control of the time?

Mr. UNDERWOOD. I have not included that. I understood the gentleman from Georgia intended to object.

Mr. HARDWICK. No; I do not know that I shall object, provided I can get an answer to one question from the gentleman from Virginia. I will ask the gentleman, Are the demands on his time so great that it will preclude him from letting me have an hour in which to speak on the bill?

Mr. GLASS. Frankly, I can not say. I have many applications for time. I think it likely I shall be unable to give any gentleman who is not a member of the committee an hour's time.

Mr. HARDWICK. The reason I ask, still reserving the right to object, is this: While I do not want to be captious about making an agreement, I think I can get the time I wish for under the rules of the House if we make no agreement. At any rate, I think I will have a better chance than under the proposed agreement. If the gentleman has ample time, he can give it to me. I know what my rights are, and I think I can protect them.

Mr. GLASS. I want to say to my friend in all kindness that I do not intend to give him any advantage over other Members.

Mr. HARDWICK. I do not want any advantage over other gentlemen, but the gentleman can not deprive me of my rights.

Mr. GLASS. I have no disposition to interfere with the gentleman's rights.

Mr. HARDWICK. Unless there is some reasonable prospect that I may get the time, I shall have to object. What time is the gentleman going to give the others?

Mr. GLASS. I have already said that I will put my friend from Georgia on a plane of equality with all the other Members and give him as much time as I possibly can.

Mr. HARDWICK. That is the point. How many applications has the gentleman—enough to take up all the time?

Mr. GLASS. So far I have 28 applications.

Mr. HARDWICK. Has the gentleman figured out how much time we will have for debate?

Mr. GLASS. Eighteen hours on this side.

Mr. HARDWICK. Will the gentleman assure me that he can give me 30 minutes?

Mr. GLASS. I think so.

Mr. HARDWICK. Well, then, I will not object, if I can get my fair share of the time, as the gentleman from Virginia [Mr. GLASS] assures me.

Mr. CALLAWAY. Mr. Speaker, I am not a member of the committee. I want to discuss this bill, but I know and every Member of this House knows that no Member can discuss the bill in 30 minutes. He can not start it in 30 minutes. I do not think we are so pressed on this important question that men should be cut down to 30 minutes because they are not members of the committee. This is a matter of vital importance to the people of the country. We have been sitting here all summer through the heat, most of the time doing practically nothing, and now we have got the bill before the House and they want to cut us down to four days. No man can discuss this bill in 30 minutes and do it justice.

The SPEAKER. Is there objection?

Mr. CALLAWAY. Mr. Speaker, if I can not get some assurance of enough time to discuss the bill, I shall have to object.

Mr. UNDERWOOD. I have no doubt the gentleman from Virginia will yield as much time to the gentleman from Texas as he can.

Mr. CALLAWAY. We can extend this time so as to give a man who really wants to discuss the matter time to discuss it.

Mr. UNDERWOOD. I will say that it is important that we shall get an early vote on this bill, and I think four days' discussion is a liberal debate.

Mr. CALLAWAY. It is evidently not liberal if it does not give all men who want to discuss it time to discuss it.

Mr. UNDERWOOD. I think the gentleman from Virginia will arrange to give the gentleman a reasonable time.

Mr. MURDOCK. If the gentleman from Texas is in need of more time for discussion, what does he think of Members on this side that have not had the benefit of the Democratic caucus?

Mr. UNDERWOOD. They have had the benefit of the bill.

The SPEAKER. The Chair wishes to say that the Chair forgot to announce this morning that this is Calendar Wednesday. I think everyone else forgot it.

Mr. UNDERWOOD. Mr. Speaker, I move that proceedings under Calendar Wednesday be dispensed with.

The SPEAKER. The gentleman from Alabama moves that the proceedings under Calendar Wednesday be dispensed with.

The question was taken; and two-thirds having voted in favor thereof, the motion was agreed to.

The SPEAKER. The gentleman from Alabama asks unanimous consent that general debate on the currency bill (H. R. 7837) shall end when the House adjourns next Saturday night. Is there objection?

Mr. MONDELL. Mr. Speaker, reserving the right to object, the gentleman from Alabama must appreciate that this is the most important legislation, with the exception possibly of the tariff legislation that is about to be disposed of finally, that has been before Congress for a great many years; that it is a great nonpartisan question, and that it is a question about which there is a great difference of opinion in the country.

Mr. RAKER. Mr. Speaker, I call for the regular order.

The SPEAKER. The regular order is demanded, and the regular order is—

Mr. MOSS of West Virginia. Mr. Speaker, I rise to a point of order.

The SPEAKER. The gentleman will state it.

Mr. MOSS of West Virginia. I submit it is not proper, when a gentleman has been recognized by the Speaker and is speaking, to call for the regular order.

The SPEAKER. The gentleman had not the floor except for the purpose of reserving the right to object. If he had had the floor in his own right to make a speech in debate, that is another thing.

Mr. MURDOCK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MURDOCK. If a man calls for the regular order, should he not rise to his feet?

Mr. RAKER. Mr. Speaker, I called for the regular order, and I am on my feet and I call for it now.

Mr. MURDOCK. But the gentleman was not on his feet when he first called for the regular order.

The SPEAKER. The point of order raised by the gentleman from Kansas is absolutely correct. When gentlemen desire to address the House or the Chair for any purpose whatever they must rise, otherwise they are not entitled to be heard at all. The gentleman from California is on his feet and demands the regular order.

Mr. MADDEN. Mr. Speaker, some time ago I rose, was recognized by the Chair, and demanded the regular order.

The SPEAKER. That is true, and the Chair started to put it and then some other gentleman intervened.

Mr. MADDEN. It was my good nature—

Mr. MOSS of West Virginia. Mr. Speaker, I object to the unanimous consent asked for.

The SPEAKER. The gentleman from West Virginia [Mr. Moss] objects.

Mr. UNDERWOOD. Mr. Speaker, pending the motion to go into the Committee of the Whole House on the state of the Union I move that all general debate on this bill be closed when the House adjourns on Saturday next.

The SPEAKER. The gentleman from Alabama moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of H. R. 7837, generally known as the currency bill, and pending that motion he moves that all general debate on the bill close when the House adjourns on next Saturday.

Mr. BATHRICK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BATHRICK. I have been very anxious to get some time on this subject, as all the rest of the gentlemen here, and I want to know if this motion of the gentleman from Alabama for the previous question prevails what rights have I?

The SPEAKER. The gentleman has not any at all [laughter], except the gentleman can get some time from the gentleman from Virginia [Mr. GLASS] or some from the gentleman from California [Mr. HAYES].

Mr. HARDWICK. Oh, Mr. Speaker, that is not included in this request.

The SPEAKER. That is true. The request has not been made.

Mr. MURDOCK. Mr. Speaker, who will have control of the time?

The SPEAKER. The Chairman of the Committee of the Whole House on the state of the Union will have control of the time, and the Chair takes it for granted he will proceed as

the practices of the House have been and will recognize the gentleman from Virginia for an hour, and then he will recognize, unless his time is continued by unanimous consent, the gentleman from California [Mr. HAYES] for an hour, and alternate that way until he gets through with the committee, and then the first Member who could get up—if that did not take all the time—who got recognition, would get an hour, and so on ad infinitum.

Mr. MURDOCK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MURDOCK. The preference of recognition in the Committee of the Whole will go to members of the Banking Committee?

The SPEAKER. Why, of course.

Mr. MURDOCK. That would exclude all the rest of the House.

The SPEAKER. That is the practice of the House. Of course the Speaker can not tell what the Chairman of the Committee of the Whole will do. That is what the Speaker would do if he were Chairman.

Mr. BATHRICK. On that ruling there will be 21 members of the committee, will there not?

Mr. MANN. Mr. Speaker, I call for the regular order.

The SPEAKER. The regular order is the motion of the gentleman from Alabama that the House resolve itself into the Committee of the Whole House on the state of the Union to consider this currency bill, and supplementing that is the motion that general debate on the currency bill close when the House adjourns next Saturday. The Chair will put the last motion first.

Mr. MOSS of West Virginia. Mr. Speaker, I raise the point of no quorum—Mr. Speaker, I withdraw it for the present.

Mr. HULINGS. Mr. Speaker—

The SPEAKER. For what purpose does the gentleman rise?

Mr. HULINGS. Mr. Speaker, I got up for the purpose of suggesting again to the gentleman—

Mr. MANN. Mr. Speaker, I ask for the regular order.

The SPEAKER. The regular order has been demanded—

Mr. HULINGS. I move to amend the motion.

The SPEAKER. The gentleman has a right to amend it.

Mr. UNDERWOOD. Mr. Speaker, I desire to make the point of order that a quorum has been demanded.

The SPEAKER. The gentleman from West Virginia [Mr. Moss] withdrew that point.

Mr. UNDERWOOD. Then, Mr. Speaker, I move the previous question on the two motions.

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] moves the previous question on both of these motions. The question is on ordering the previous question.

The previous question was ordered.

The SPEAKER. The question is, whether general debate shall close when the House adjourns next Saturday night.

The question was taken, and the Speaker announced that the "ayes" seemed to have it.

Mr. MANN. I object to the vote, Mr. Speaker, and make the point that there is no quorum present, so that Members may be inconvenienced in the roll call.

The SPEAKER. The Chair will count. [After counting.] One hundred and ninety-three gentlemen are present, not a quorum. The Doorkeeper will lock the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll. Those in favor of limiting general debate until the adjournment next Saturday night will, when their names are called, answer "yea"; those opposed will answer "nay."

The question was taken; and there were—yeas 188, nays 80, answered "present" 6, not voting 155, as follows:

So the motion to limit debate was agreed to.
The Clerk announced the following pairs:

For the session:

Mr. SLAYDEN with Mr. BARTHOLDT.

Mr. SCULLY with Mr. BROWNING.

Mr. HOBSON with Mr. FAIRCHILD.

Until further notice:

Mr. THACHER with Mr. WINSLOW.

Mr. SPARKMAN with Mr. J. I. NOLAN.

Mr. SMALL with Mr. MORIN.

Mr. SHARP with Mr. LENROOT.

Mr. SABATH with Mr. WOODS.

Mr. RUCKER with Mr. SUTHERLAND.

Mr. REILLY of Connecticut with Mr. WILDER.

Mr. PEPPER with Mr. WALTERS.

Mr. MCGILICUDDY with Mr. GUERNSEY.

Mr. CRISP with Mr. HINDS.

On this vote:

Mr. SISSON with Mr. PROUTY.

Mr. GUERNSEY. Mr. Speaker, I voted no. I wish to withdraw my vote and answer present.

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present. The doorkeeper will unlock the doors. Those in favor of resolving—

Mr. UNDERWOOD. Mr. Speaker, pending the motion to go into the Committee of the Whole House on the state of the Union, I desire to request that on Thursday, Friday, and Saturday the House meet at 11 o'clock.

The SPEAKER. The gentleman from Alabama moves that the House resolve itself into the Committee of the Whole House on the state of the Union to consider the currency bill—H. R. 7837—and pending that he asks unanimous consent that on Thursday, Friday, and Saturday the House meet at 11 o'clock a. m. instead of 12 noon. Is there objection to the request?

Mr. DYER. Mr. Speaker, reserving the right to object, will not the gentleman say 10 o'clock and give us a little more time?

Mr. UNDERWOOD. I think it will be difficult to get anybody here at 10 o'clock. I have no objection myself, but I think 11 o'clock is early enough.

Mr. DYER. I have no objection.

The SPEAKER. Is there objection to the request of the gentleman fixing the time of the meeting for the rest of the week at 11 o'clock instead of 12?

There was no objection.

Mr. UNDERWOOD. Now, Mr. Speaker, pending the motion to go into the Committee of the Whole House on the state of the Union, I ask unanimous consent that all Members of the House may have leave to print on this bill up to and including five legislative days after the final vote on the bill, and I also include in the request that the time for general debate may be equally divided between the two sides of the House, the gentleman from Virginia [Mr. GLASS] to control one half and the gentleman from California [Mr. HAYES] to control the other half in general debate.

The SPEAKER. Pending the motion to go into Committee of the Whole, the gentleman from Alabama asks unanimous consent that all gentlemen have five legislative days after this bill is disposed of by the House to print remarks in the Record, and also that the time be controlled one half by the gentleman from Virginia [Mr. GLASS] and the other half by the gentleman from California [Mr. HAYES]. Is there objection?

Mr. UNDERWOOD. Mr. Speaker, I desire it understood that my request is that gentlemen have either leave to print or to extend remarks.

The SPEAKER. Either leave to print or to extend. Is there objection?

There was no objection.

The SPEAKER. The question is on the motion that the House resolve itself into the Committee of the Whole House on the state of the Union to consider the currency bill—H. R. 7837.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the currency bill—H. R. 7837—with Mr. GARNER in the chair.

Mr. GLASS. Mr. Chairman, I desire to present to the House, as in Committee of the Whole, a brief explanation of H. R. 7837, reported from the Banking and Currency Committee, with immaterial amendments, and to give the reasons which actuated the committee in its construction and consideration of this measure. I would ask the kind indulgence of my colleagues as I make this presentation of the bill, and would especially request that the continuity of my speech be not interrupted, as the topic is technical and as I am unused to addressing the House. When we come to consider the bill paragraph by paragraph under the five-minute rule the chairman of the committee and other members who have collaborated with him will be glad to answer all questions, if they can.

I think it is pretty generally agreed that there is a pressing necessity for currency legislation in this country. The country itself thinks so if any significance may be attached to the thousands of letters received by the Banking and Currency Committee of the House within the last six months or to the resolutions passed by hundreds of commercial bodies throughout the United States calling for immediate consideration and action by Congress. From every quarter and from all classes of citizens the demand has proceeded; and, in the judgment of the Banking and Currency Committee, Congress should no longer evade an imperative duty.

"A BARBAROUS SYSTEM."

For more than a quarter of a century there have been strong symptoms of an intense dissatisfaction with the prevailing national banking and currency system; and this spirit of discontent has been accentuated as, from time to time, the utter inadequacy of the system has been made manifest in periods of financial peril. While the existing system has operated satisfactorily under ordinary business conditions, and while the administration of the system for the 50 years of its history furnishes a high tribute to the integrity and efficiency of those concerned in its operation and oversight, its very best friend is bound to admit that in time of stress and storm it has broken down utterly. This has occurred so often and the ensuing disaster has been so dreadful as to cause the banking experts of other nations and practical financiers everywhere to marvel at our continued failure either to adopt a better system or correct the evils of the one we have. Financial textbook writers of Europe have characterized our American system as "barbarous," and eminent bankers of this country who, from time to time, have appeared before the Banking and Currency Committee of the House, have not hesitated to confess that this bitter criticism is merited. While we may boast that no note holder has ever lost a dollar, and that the losses of depositors constitute an inconsiderable percentage of the total liabilities of the banks, nevertheless the failure of the system in acute exigencies has caused widespread business demoralization and almost universal distress. Five times within the last 30 years financial catastrophe has overtaken the country under this system; and it would be difficult to compute the enormous losses sustained by all classes of society—by the banks immediately involved; by the merchants whose credits were curtailed; by the industries whose shops were closed; by the railroads whose cars were stopped; by the farmers whose crops rotted in the fields; by the laborer who was deprived of his wage. The system literally has no reserve force. The currency based upon the Nation's debt is absolutely unresponsive to the Nation's business needs. The lack of cooperation and coordination among the more than 7,300 national banks produces a curtailment of facilities at all periods

of exceptional demand for credit. This peculiar defect renders disaster inevitable.

EFFORTS AT REFORM.

For years the business and banking community has been casting about for a remedy. In 1898 the Indianapolis Monetary Commission met and offered suggestions which were ignored. Later the American Bankers' Association at Atlantic City drafted an emergency currency bill which was introduced by Mr. Fowler, referred to the Banking and Currency Committee, but never reported or enacted into law. Several years thereafter we had the Lovering bill, and next the Fowler bill, consideration of which latter measure was rudely interrupted by the action of the Republican congressional caucus in May, 1908. Ignoring the Banking and Currency Committee, the party caucus agreed upon the Vreeland bill for an emergency currency and caused the discharge of the House Banking and Currency Committee from further consideration of currency matters at that session of Congress. Meanwhile, Mr. Aldrich had introduced a bill in the Senate and, by an act of legislative miscegenation, the two became one, and in hyphenated form we have the Vreeland-Aldrich law, which soon will expire by limitation. Not one dollar of currency has ever been issued under its provisions, thus literally confirming the prediction made at the time by those who opposed the measure. However, the commission for which the bill provided was duly appointed and for three years, at a cost of nearly \$300,000 to the Government, prosecuted the work of investigation, making its report and recommendations to the Sixty-second Congress.

THE ALDRICH SCHEME.

I do not desire at this time to make any comments upon the work of the Monetary Commission. It is treated in some detail in the report of the Banking and Currency Committee which accompanies the bill now under consideration. It is sufficient to say that those members of the Banking and Currency Committee peculiarly charged with the responsibility of recommending legislation felt precluded from considering the so-called Aldrich bill by reason of the fact that the platform of the Democratic Party adopted at Baltimore explicitly denounced that proposed legislation. It is interesting to note also that the platform of the Progressive Party likewise denounced the plan of the Monetary Commission, while the platform of the Republican Party was silent on the subject. The wisdom of these platform declarations has since been justified by the fact that thousands of bankers have abandoned the Aldrich bill and even some of those whom it was most intended to benefit have publicly confessed that the measure contains some exceedingly dangerous provisions.

The proponents of the bill now under consideration did not hesitate to appropriate any suggestion of a meritorious nature made by the Monetary Commission, just as the so-called Aldrich scheme embodied many of the provisions of the Fowler bill and the Muhleman central-bank plan. We also made a careful study of the branch banking system of Canada and while we found that it had admirably served its purpose in that country we came to the conclusion that it would not be possible to apply it to the American system without vital alterations which would run athwart the banking principles and the business habits to which the American people have been so long accustomed. Hence, after exhaustive investigation and hearings, extending over a period of many months, the pending bill was drafted and, after full consideration as to every detail, is reported to the House with the recommendation that it be passed. Thus, Mr. Chairman, the Banking and Currency Committee feels that it has fully discharged its own duty and that further responsibility is with this body.

TIME TO ACT.

I venture to express the sincere hope that the House will not delay the enactment of this bill. The chief and everlasting curse of attempted banking and currency legislation in this country has been the proneness of public men to procrastinate. When the Vreeland-Aldrich makeshift was adopted ex-Secretary Lyman J. Gage warned the committee and Congress that the bill was "merely a dangerous narcotic to lull the Nation to sleep, from which slumber it would some day awaken in agony." Remembering that financial panics in the United States are decennial, and that we are fast approaching the time-limit from 1907 to 1917, it seems to me that the obligation to legislate is immediate. We should no longer, from habit or timidity, gravely shake our heads and insist that we "will not be hurried in this matter"; that we want further time for consideration; that we must have other hearings and additional information. Sometimes I am brought to wonder, Mr. Chairman, what sort of information is wanted by the public men who eternally plead for delay. There is no theme on earth upon which information may more readily be obtained than upon the

currency question. There is no topic upon which we have more authoritative expert expression and there are few subjects upon the general principles of which expert opinions are in greater accord. If it did no other good, the Monetary Commission, at a cost of approximately \$150,000, assembled a great library on the subject of banking and currency reform, which for two years has been accessible to every Member of Congress. Less than six months ago the Banking and Currency Committee of the House closed exhaustive hearings on the subject, at which the best selected representatives of every known national group testified—big bankers and little bankers, merchants and farmers, credit men and manufacturers, currency experts, laboring men and textbook writers. And there is scarcely a provision of this pending currency bill which may not be related to these hearings. They took the widest range and reflected every conceivable variety of opinion; and there is absolutely no excuse for further delay.

THE PLEDGE OF PARTIES.

All parties are committed to the solution of this problem. When the Vreeland-Aldrich bill was passed five years ago the Republican Party in Congress solemnly pledged itself to speedily replace that temporary expedient with a permanent and comprehensive statute, while one of the latest public expressions of the last Republican President was upon the necessity of banking and currency reform. Mr. Taft declared that—

It is more important than the tariff, more important than conservation, more important than the question of trusts and more important than any political legislation that has been presented.

The last national platform of the Democratic Party committed us to "a systematic revision of the banking laws of the country," and the Democratic President of the United States who was elected on that platform appeared at the Speaker's desk of this House more than two months ago and urged Congress not to wait until "the demands of the country shall have become reproaches." The President recommended the lines upon which we should proceed, saying:

We must have a currency, not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings. Our banking laws must mobilize reserves; must not permit the concentration anywhere in a few hands of the monetary resources of the country or their use for speculative purposes in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of the system of banking and of issue which our new laws are to set up must be public, not private, must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative.

REGIONAL RESERVE BANKS.

Upon these precise lines this bill is cast. Guided by the lamp of experience, taking note of the fact that, in time of emergency, clearing-house associations in the great money centers, and even in smaller communities, repeatedly succeeded in arresting financial disaster, the House Banking and Currency Committee conceived the idea that regional organizations of individual banks throughout the country might effectually prevent disaster. Hence, the fundamental idea of the bill now presented is the creation of a new class of banks to be known as Federal reserve banks. The country is to be divided into twelve parts, having reference to capital and the existing course of business; and in each of these regions is to be organized a Federal reserve bank. The minimum capital is to be \$5,000,000 and the bank is to be owned and operated by the stockholding banks of the district, both National and State. The capitalization of the reserve bank is to be 20 per centum of the capital of the stockholding banks, one-half paid in and one-half subject to call. The business of the reserve bank will be the rediscounting of paper presented by member banks growing out of commercial, industrial, and agricultural transactions, with a maturity in some cases of not more than 90 and in others of not more than 120 days. These banks may also buy and sell Government securities, gold and silver bullion, foreign coin, foreign exchange, and open-market bills of given maturity. They are also to conduct, without charge, the fiscal operations of the United States Government.

Under this bill there is vastly less interference with the existing independent banking system than was provided by the Aldrich scheme. Each member bank is to deal directly with its regional reserve bank in securing rediscounts, and in no case is its paper to be guaranteed by other banks. While subject to limited control by the Federal reserve board, the regional reserve bank is given an independent status as well as exceedingly important functions. It has the initiative in fixing rates of discount within its territory and the exclusive determination of the amount of paper to be rediscounted for member banks. It is operated by a board of nine directors, two-thirds of whom

are selected directly by the member banks and one-third by the Federal reserve board. Three of the nine directors must fairly represent the commercial, industrial, or agricultural interests of the community.

SMALL BANKS PROTECTED.

In order to provide against control by the larger banks of a given district, the member banks of each region are divided into three groups equal, as nearly as may be, in number and of similar capitalization. Each bank, regardless of its size, is given one vote in the selection of directors. Notwithstanding the care which has been exercised to protect the rights of the small banks in the selection of directors, fears continue to be expressed that the larger banks of the district may control the system. By reference to the last annual report of the Comptroller of the Currency anybody who entertains a doubt on this point may readily have his apprehension quieted. I shall embody the table taken from the comptroller's report in my remarks:

Number of national banks, classified by capital (paid in), on Sept. 4, 1912.

Class.	Number.	Per cent.	Amount.	Per cent.
\$25,000.....	2,004	27.09	\$50,069,730	4.79
Over \$25,000 and less than \$50,000.....	381	5.15	12,849,335	1.23
\$50,000 and less than \$100,000.....	2,321	31.38	124,452,200	11.90
\$100,000 and less than \$250,000.....	2,006	27.12	254,053,385	24.29
\$250,000 and less than \$1,000,000.....	498	6.73	195,282,230	18.67
\$1,000,000 and less than \$5,000,000.....	169	2.29	234,305,700	22.40
\$5,000,000 and over.....	18	.24	175,000,000	16.72
Grand total.....	7,397	100.00	1,046,012,580	100.00

It will be noted that of the 7,397 national banks 2,004 have not more than \$25,000 capital; 2,321 have less than \$100,000; 2,006 have less than \$250,000, while only 685 banks exceed a capitalization of \$250,000. Thus of the 7,397 national banks in the system 6,712 may be classified as small banks, making it next to impossible for the larger banks to control.

NUMBER AND RESOURCES.

The question has repeatedly been asked as to why the number of Federal reserve banks is fixed at 12, to which I reply that the number adopted is a compromise between the extreme suggestion of 50 on one hand and 3 on the other. The great central reserve city bankers advocate but 3 regional reserve banks, to be located, of course, in their central reserve cities, while a distinguished member of the other branch of Congress advocates 1 for each of the 48 States. The committee in fixing the number at 12 gave consideration to the amount of available capital of all the national banks, which aggregates \$1,046,012,580. Three competent actuaries have made suggestive divisions of the country into 12 regions, and there can be no possible doubt, if all the national banks go into the system, that the minimum capital can be secured in the weakest of the 12 districts. The New York bank will have approximately \$20,000,000 capital; the Boston bank more than \$10,000,000; the Chicago bank nearly \$11,000,000; the St. Louis bank \$9,000,000; the Cincinnati bank \$10,000,000; the Pennsylvania bank \$12,000,000; the Washington bank \$8,000,000, and, as previously stated, the smallest, "not weakest" bank in the system, located experimentally at New Orleans \$5,500,000. This, of course, is merely a suggestive division of the country; the actual division is to be made by the Federal reserve board after painstaking investigation.

The resources of the Federal reserve banks can only be approximated. Basing the calculation on the aggregate capital of the national banks, the Federal reserve banks will have a capital of \$104,000,000; about \$400,000,000 in reserve funds and, perhaps, \$200,000,000 of Government deposits, making a total of \$704,000,000, giving them an aggregate credit-extending capacity of great proportions. That such additional facilities are needed for the development of the country can not seriously be questioned. In this connection I shall ask leave to insert in my remarks at this point an Associated Press dispatch from Sackett's Harbor, N. Y., under date of September 5, 1913, containing the testimony of Frank A. Vanderlip, president of the National City Bank of New York City, who asserts that \$2,000,000,000 can be profitably invested within the next five years in developing the electrical industry of this country alone. There is room for unlimited investment of savings.

COULD USE BILLIONS.

SACKETT'S HARBOR, N. Y., September 5.

Eight million dollars a week for five years—\$2,000,000,000 in all—can profitably be invested in developing the electrical industry in this country, in the opinion of Frank A. Vanderlip, president of the National City Bank, of New York. Mr. Vanderlip so declared to-night in address—

ing representatives of the electrical industry in the United States, meeting at Association Island. He said in part:

"In making such an estimate one does not need to draw on one's imagination. Little more is needed than a grasp of present-day statistics, compared with those of 5 or 10 years ago, to give the basis for such an estimate."

LARGER USE OF ELECTRICAL POWER.

"When we think what is certain to be done in the way of electrification of steam railroad terminals and heavy mountain grades; when we reflect on the larger use of electrical energy for industrial power, in agricultural uses, and in continued growth of necessary interurban lines, we do not need to look further into the possible development of the industry to see a requirement for \$400,000,000 a year of new capital."

"That means an \$8,000,000 new capital investment every week for the next five years. It is such a capital requirement that you gentlemen are facing, and which must be successfully met if your energies are to have an adequate field of display. Can you get it?"

OTHER DEMANDS FOR CAPITAL.

"To get a full appreciation of the difficulties, you may well glance outside of your own field, however, and note that there will mature within that five-year period well over \$1,000,000,000 of steam railroad securities. The railroads in five years will need, say, \$4,000,000,000 for refunding and fresh capital. States and municipalities will absorb in the neighborhood of \$1,500,000,000 more, so with the \$2,000,000,000 your industry will need there should be provided between now and the end of 1918 between \$7,000,000,000 and \$8,000,000,000 for these three purposes alone, to say nothing of general industrial and other needs."

"These are bewildering figures. They sound more like astronomical mathematics than totals of round, hard-earned dollars. The raising of these sums, however, is the practical problem that financiers have directly in front of them."

FEDERAL RESERVE BOARD.

I do not desire to weary the House, Mr. Chairman, with too detailed a description of the provisions of this bill; therefore in the balance of my time I shall deal only with its several vital features. Overseeing the whole new system of Federal reserve banks, as a capstone of the scheme, is created a Federal reserve board, consisting of seven members. Three of them, the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, are members ex officio, and the other four members are to be appointed by the President of the United States for a term of eight years each. As set out in the report of the committee, the reasons for the selection of the two Treasury officials is self-evident. The Treasury Department not only is, but will continue to be, a fundamentally important factor in the financial organization of the country, while the Comptroller of the Currency, in charge of the national banking system, will be a necessary adjunct in the management of the reserve bank system proposed in this bill. The Secretary of Agriculture has been added because of the belief that conditions in the producing regions of the country would deserve special consideration at the hands of the Federal reserve board, and that the Secretary of Agriculture is the natural representative of these interests. It is further thought that the presence of this official on the reserve board will give its deliberations a broader character than if it were composed altogether of members primarily equipped for the technical details of banking. The bill provides that not more than two of the presidential appointees shall belong to the same political party, thus emphasizing the view of the committee that the board should be a nonpartisan institution.

NO CENTRAL BANK.

By not a few persons of intelligent observation and long experience the confident belief is entertained that no necessity exists for any central body of control. They contend that we might safely limit the operations of the new system to a given number of regional reserve banks with the function of divisional clearing-house associations and distinctively independent of one another. But the best expert and practical banking opinion insists that the first essential of banking and currency reform is a correlation of all the national banks at least, so as to render possible a quick mobilization of reserves at any threatened point in time of emergency. On this latter theory was based in large degree several currency plans considered by the Banking and Currency Committee of the House prior to the adoption by Congress of the Vreeland-Aldrich Act; and altogether based on this theory was the proposal of the Monetary Commission to establish a single reserve association, which in reality would have provided a central bank of banks. Indeed, in its final analysis this scheme of the Monetary Commission, more familiarly known as the Aldrich bill, falls short of being a central bank in the broad sense of the term only because it contains no provision which would authorize the transaction of business with the public. There was method in this omission, it being part of the general contrivance to avoid every semblance of competition with the great banks of the country.

I have observed, Mr. Chairman, that certain eminent bankers, appearing recently before a legislative committee of the other branch of Congress, have spoken consistently and vehemently in favor of a central bank; but if you will carefully examine the hearings had by the Banking and Currency Committee of this

House last winter you can not avoid the conclusion that these gentlemen do not mean exactly what they say. They do not want a real central bank. They simply want to establish a central banking institution which they may control and use for their own convenience, but to which the American people may not resort for any business purpose whatsoever. These gentlemen, when appearing before the Banking and Currency Committee of the House, were distinctly asked if they should be understood as advocating a national central bank with branches throughout the country, doing business with individuals, firms, and corporations, as well as with individual banks, whereupon they very promptly replied that they were simply advocating a central bank of banks. A central bank such as I have described, Mr. Chairman, or a central bank such as Andrew Jackson destroyed, is the very last thing that the great banks of this country would desire to see, for the reason that such an institution would necessarily import for them competition of the very sharp description. Hence, in the construction of the bill of the Monetary Commission, great pains were observed and much ingenuity exercised to avoid anything of this kind.

VICES AND DANGERS AVOIDED.

In the report of the Banking and Currency Committee of the House now before the Members we have in some detail set forth the objections of the committee to this Aldrich scheme, and in the construction of the bill now under consideration the committee very anxiously and carefully sought to avoid the vices and the dangers which are now generally recognized in the Aldrich plan. In that plan there was absolute lack of adequate governmental control; and while there was great pretense of protecting the interests of small banks, the very genius of the scheme and the involved nature of its mechanism made it certain that the practical operation of the system would inure to the advantage of the large financial institutions of the country. Moreover, the possibilities of inflation under this Aldrich scheme were so startling that the banking community of the country itself became alarmed; and the distinguished publicist whose name and fame were chiefly associated with the measure was practically driven from the public platform by the terrific exposure of this defect in the bill by a prominent banker of the West, addressing a society of political economists and showing that it involved expansion to the amount of six thousand millions before the regulating tax applied. Even James B. Forgan, of Chicago, and John Perrine, of California, strong advocates of the scheme, admitted that it provided "such vast credit-extending power as to be almost beyond belief and certainly far beyond requirements in any panic." Aside from its clumsy mechanism, its dangers of inflation, its peril to the independent banking system which the spirit of this Republic and the business habits of the American people have for 50 years sustained, the whole thing was literally saturated with monopolistic tendencies.

In the Federal reserve board, which the bill reported by your committee provides, there will not be discovered any of the defects which were essential features of the Aldrich bill. No capital stock is provided; no semblance of acquisitiveness prompts its operations; no banking incentive is behind, and no financial interest can pervert or control. It is an altruistic institution, a part of the Government itself, representing the American people, with powers such as no man would dare misuse. I do not ignore the fact that the batteries of the big bankers have been directed against this board or that the sharpest criticisms of this bill relate to the powers with which this Federal reserve board is vested; and yet, Mr. Chairman, there is scarcely a power enumerated in section 12 of this bill which has not been exercised by the Government for 50 years or, indeed, which has not been confided to one or two public functionaries.

NO EXTRAORDINARY POWERS.

Nearly every power conferred by this bill on the Federal reserve board, composed of seven members, has been for half a century vested by the national-bank act in the Secretary of the Treasury and the Comptroller of the Currency, to be exercised in the conduct and control of the national banking system. It does not seem necessary here and now to enumerate these powers; they relate to examination, regulation, publication, and control. Strictly speaking, the Federal reserve board performs no banking function; the banking business of the system is within the exclusive jurisdiction of the regional reserve banks, owned and operated by an aggregation of individual member banks. But two of the powers conferred by this bill upon the Federal reserve board have been brought in serious question or subjected to pungent criticism. One of these powers is the right of the board to "require, in time of emergency, Federal reserve banks to rediscount the discounted prime paper of other Federal

reserve banks." And it is a singular fact that the raging controversy which this provision has aroused was initiated by bankers who contributed thousands of dollars to fasten upon this country the wretched Aldrich scheme, which would have impounded the surplus funds of the entire banking community of America in the vaults of a single central bank, to be by it transferred at any time to any point for any purpose that might appeal to the sweet will or whim of the governing board of that institution. Here we provide, under the severest restrictions, a mobilization of banking strength "in time of emergency," by requiring a strong regional reserve bank to go to the temporary relief of another regional reserve bank in a plain business transaction, without risk, but actually with greater profit to the succoring bank than it might command under ordinary circumstances.

MOBILIZING RESERVES.

This power literally correlates the regional reserve bank system; it is a part of the process of mobilizing reserves. And yet gentlemen of the banking fraternity who have for five years persistently rolled this phrase on their tongues make this provision of the committee's bill an object of bitter attack. They were perfectly willing, under the Aldrich scheme, to confide this power to bankers, operating for gain, but are unwilling to lodge it with the Government of the United States to be used for patriotic purposes under a system devised for the good of the country, including the solvency of the banks themselves. As a matter of fact, Mr. Chairman, strictly safeguarded as we have it here, this power is neither dangerous nor extraordinary. It is essential to the system proposed and somewhat analogous to the power exercised for years by the Secretary of the Treasury alone, when, in time of emergency, he has withdrawn Government deposits at will from banks in one part of the country and transferred them to banks in another part of the country in an effort to cure a desperate situation, the difference being that, whereas the transfers have heretofore been made to the great money centers for the purpose of arresting stock-gambling panics, the transfers under this bill, if ever required at all, will be made to promote legitimate commercial transactions. Such transfers, you will note, are only required by this bill to be made in time of exigency. We believe that the power will not be invoked once in half a century, for the reason that if this bill should be enacted into law it will so withdraw the reserve funds of the country from stock speculative uses and apply them to commercial, industrial, and agricultural transactions, that we shall rarely ever again have bank panics in the United States.

SUSPENDING RESERVES.

The other power conferred by this bill upon the Federal reserve board which has been moderately criticized is the right given said board to suspend the reserve requirements against deposit liabilities. Yet, Mr. Chairman, a power akin to this has been exercised by the Comptroller of the Currency with respect to national banks for nearly 50 years. Under section 5191 of the national-bank act, the Comptroller is implicitly authorized to tolerate for a period of 30 days a violation of the reserve requirements of the act without applying any penalty. By this officer the power has sometimes been abused and violations have been tolerated for several years instead of for a single month. The penalty prescribed by the national-bank act for the offense indicated is so radical that it has not been applied in the whole history of the national banking system. But here we have committed the power to a board of seven men charged with the duty of prescribing and enforcing a reasonable penalty for violation of the law. Like the power of enforced rediscounts, this function will rarely, if ever, be exercised by the Federal reserve board. It is, however, important that the Federal reserve board should have this power. It was suggested by the fact that three times within 60 years the British Parliament found it necessary to sanction by law the action of the Bank of England in suspending specie payments in order to arrest panics in Great Britain.

"POLITICAL CONTROL."

But, Mr. Chairman, bitter as has been the criticism leveled at the powers of the Federal reserve board provided by this bill, they have not been comparable to the denunciation by big banking interests of what is termed the "political structure" of this board. It is contended that the banks should have at least a minority representation upon the Federal reserve board; and I frankly admit that the claim upon its face seems both reasonable and expedient. Indeed, the first tentative draft of this bill contained such a provision; but, after thorough consideration and full discussion, a different conclusion was reached. This Federal reserve board is distinctly a Government institution, and eminent bankers who were here in Washington last winter and spring contending for representation were met

with the challenge to cite one instance where private interests were represented on any Government board in this or any other civilized country. They could not answer.

As already pointed out, the associated banks will own and operate the regional reserve banks provided by this bill, which are made after a period of years the exclusive mediums of Government issues and subject to no severer examination nor greater control than national banks of the existing system in their relations to the Government. If it may be said that they have important responsibilities, it may likewise be said that they are given great privileges, holding the reserve funds of the country and the deposits of the Government, amounting in the aggregate to nearly \$600,000,000. The Federal reserve board, technically speaking, has no banking function. It is strictly a board of control, properly constituted of high Government officials, doing justice to the banks, but fairly and courageously representing the interests of the people. The danger which the banking community professes to see is not the real danger which I apprehend. The bankers seem to fear that men of their craft will be excluded; but the real peril of the provision is the possibility of too many bankers being included. Observe what I mean: The Secretary of the Treasury will be a member of this board, and nine times out of ten that functionary is a practical banker. The Comptroller of the Currency will be a member of this board, and nearly always that official is a practical banker. In addition to this, the bill requires that one of the four presidential appointees shall be a person of banking experience; so that we shall undoubtedly have ample banking representation on the board, and the talk of political control, in the last analysis, is the expression of a groundless conjecture.

A FUTILE OUTCRY.

No great reformation in any existing institution was ever accomplished except in the face of severe contention. The clatter which we have heard in certain quarters about the "unconstitutionality" of this proposed system and the "confiscatory" nature of the power conferred upon the Federal reserve board is merely part of a cunningly devised propaganda to force concessions in another direction and to coerce Congress into yielding on certain other points which vitally affect certain big banks with extensive stock-exchange connections. We have taken every reasonable precaution against asserting any power here that may be regarded as unconstitutional. We are not proposing to disturb any vested interest. There is nothing of a confiscatory nature in any of the powers to be exercised by the Federal reserve board. This talk takes us back to the predictions of disaster when the Interstate Commerce Commission was established. Then there was an outcry that Congress was about to "disturb the business interests" of the country; then we encountered the frantic contention that the Government was about to "seize private property."

Senator Hoar, of Massachusetts, said:

Here is a proposition which would be destructive to great business interests of the country, especially to the export business of the principal city of the State which I represent. I hope the public interest affected will have a full opportunity to be heard.

Senator Nelson W. Aldrich, of Rhode Island, said:

In order to cure evils which are apparent to the farmers of Illinois or Michigan, you propose to demoralize the whole commerce of the country; you propose to establish an arbitrary, unjust, unreasonable, impracticable rule.

Senator Orville H. Platt, of Connecticut, predicted that the passage of the Interstate Commerce bill—

would result in an immediate rate war by all the railroads of the United States, the evil consequences of which would be greater than any evil now existing under pooling contracts. It would ruthlessly demoralize business and be far-reaching in its injurious results.

Senator Leland Stanford, of California, declared:

If this bill shall become a law its consequences will be most disastrous to the various business interests of the country.

Senator Joseph E. Brown, of Georgia, said:

The fact that a few bad men have controlled great lines of railroads is no reason why Congress should seriously cripple the great railroad interests of the country and destroy the property invested in by hundreds of thousands of people. This bill will prevent the rapid and cheap transportation of commodities, retard the growth of our cities, and do immeasurable damages to our productive resources.

Gen. Charles H. Grosvenor, of Ohio, predicted that:

It will unsettle rates, disorganize the industries of the country, and thus force a reconstruction of systems of production. Meantime labor will suffer, farm products will lack a remunerative market, and uncertainty will discourage industry. It is a dangerous stride toward centralization of power in the hands of the few to the hindrance, vexation, and permanent injury of the many.

William C. Oates, of Alabama, said:

In Holland it is a capital felony to kill a stork, because the stork destroys the eels which bore through the dikes and inundate the country. To my mind this bill is a knot of eels which may bore through the dikes of safety and flood this country with trouble. I view it with grave apprehension.

Charles H. Allen, of Massachusetts, declared:

To pass this bill would be to put us at very great disadvantage, and while I am not prepared to go so far as some and see in imagination the yawning walls marking in desolate ruin the spot where once stood thriving and populous factories, yet I must say * * * that the result of any shrinking of values is quite likely to show itself first upon the poor people. * * * I must protest against the passage of this measure, destined as it is to work an injury against New England and New England interests.

Lewis Hanback, of Kansas, said:

My judgment * * * leads me to believe that the legislation proposed by the bill in question will be fatal to the best interests of my State, as well as to the whole country. I think it is safe to say * * * that these great lines of industry, the product of capital and the employers of labor, ought not to be interfered with, as they will be by the provisions of this bill.

I. Newton Evans, of Pennsylvania, said:

It is also of the utmost importance that we legislate so that the millions and millions of dollars invested and otherwise employed in the internal commerce of this vast country shall not be so deranged as to bring about a crisis in our financial affairs, which not only bankrupt many railroads, but, like the pebble on the smooth waters, its influence would be felt far and wide. Agriculture, commerce, manufactures, and, most of all, labor would suffer greatly by such a result.

The National Republican (Republican), of Washington, commented:

It is fair to suppose that Congress did not intend to wreck railways, to ruin communities, to destroy private property, to impoverish whole sections of the country, to break down manufacturing interests, to give foreign traders the advantage over home ones, to discriminate over one port in favor of another, to advance the interests of the Canadian railways, or to reenact the civil rights bill, yet it did all these things when it passed the bill entitled "A bill to regulate commerce."

The Chicago Journal (Republican) reflected newspaper opinion largely when it said:

The President should be urged to call Congress together at once that it may rescue the commercial interests of the country from impending disaster. Let the power that enacted the offending statute be given an opportunity to right the great wrong it has done—and the sooner the better.

THE CRITICS CRITICIZED.

And now, Mr. Chairman, in connection with this bill, we have the same outcry from interested quarters and through inspired newspaper comment. The critics, whether of one political party or another, accentuate objection to Government control and affect to stand aghast at the tremendous power confided to a political board. This criticism emanates at times from men who should be ashamed to project it; from gentlemen who stood upon this floor and upon the floor of another chamber five years ago and vehemently supported the Vreeland-Aldrich Act. Those who now affect consternation at the powers with which we propose to vest this Federal reserve board should look to their own records in currency legislation. When they complain that we give this Government board of seven public officials the arbitrary right of note issue, for very consistency's sake they should recollect that under the Vreeland-Aldrich Act they voted to confide this power in even more arbitrary degree to the Secretary of the Treasury alone, thus conferring upon a single political appointee of the President the tremendous responsibility, as well as the great power, of dispensing \$500,000,000 of currency and, within his sole discretion, determining the validity and sufficiency of \$650,000,000 of commercial paper and other securities.

Among other things, the Vreeland-Aldrich bill, section 2, dealing with the application of banks for currency, provides that:

The Comptroller of the Currency shall immediately transmit such application to the Secretary of the Treasury with such recommendation as he thinks proper, and if, in the judgment of the Secretary of the Treasury, business conditions in the locality demand additional circulation, and if he is satisfied that a lien in favor of the United States on the securities so deposited and on the assets of the banks composing the association will be amply sufficient for the protection of the United States, he shall direct an issue of additional circulating notes to the association on behalf of such bank, etc.

I beg these critics to note the language of the statute:

If in the judgment of the Secretary of the Treasury business conditions demand additional circulation:

And again:

If the Secretary of the Treasury be satisfied that the securities deposited are amply sufficient for the protection of the United States. Could anybody conceive of power more arbitrary or of centralization more complete? There is nothing comparable to it in this bill, for here we commit the power to a board of seven, having a trained and trusted representative at every point of origin, applying every precaution and going through every detail known to prudent banking processes.

When this extraordinary power was conferred by this House five years ago on a single official of the Government and objection was made by Mr. JAMES, now a Senator from Kentucky, the leading Republican member of the Banking and Currency Com-

mittee, Mr. BURTON, now a Senator from Ohio, exclaimed with much feeling and effect:

I say that for one I favor lodging authority with the Secretary of the Treasury and allowing him, under the great responsibilities of his position, to determine the amount of issues rather than to leave the decisions to the banks.

With how much more reason, Mr. Chairman, may we who stand for this currency bill insist now that this power shall be lodged with a Government board, composed of high and experienced men, four of them with long tenure of office and all of them, let us hope, keenly appreciating their great responsibilities and courageously determined to do their duty as representatives of the American people. There is no politics in this matter; there can be none. It is my earnest conviction, based upon long and serious reflection, that no man can conceive, as none has yet pointed out, how any part of this system can be perverted to political uses. In my judgment if the United States has ever had a President ingenious enough to do this evil thing, it has never had one desperate enough, and never will have one shameless enough, to thus betray the confidence of the Nation. I happened to be present when an eminent banker suggested such a possibility to the present occupant of the executive chair, and heard this banker vainly challenged to show how it might be done. I shall not soon forget the emphasis with which the President of the United States declared that no man would ever be found who would be willing to imperil his reputation or tarnish his fame by so flagrant a prostitution of his high office! It brought to mind the splendid declaration made on this floor by Congressman BURTON, of Ohio, five years ago in discussing this very topic, when he compacted the whole thing in a single sentence, exclaiming:

There are executive acts which are theoretically possible, but which the incumbents, with their weighty responsibilities, would never dare perform, because they would know that if their course was marked by favoritism or injustice they would be discredited while living and dishonored when dead.

The X ray of publicity is turned full upon the operations of this Federal reserve board. There can be nothing sinister about its transactions. Meeting with it at least four times a year, and perhaps oftener, will be a bankers' advisory council representing every regional reserve district in the system. This council will have access to the records of the board and is authorized to give advice and offer suggestions concerning its general policy. How could we have exercised greater caution in safeguarding the public interest?

BANKING REFORM AND THE FARMER.

For a brief period and in certain quarters this bill was assailed by those who professed to believe that it was written in the interest of the creditor class. I suspect, Mr. Chairman, that there are some folks who are incapable of accurately discriminating the real "creditor class" when it comes to the banking business. As a matter of fact, in the great volume of business transactions the "creditor class" is the people who loan money to banks. In this sense the banks themselves are distinctly debtors to their depositors notwithstanding the latter are many times borrowers of money and credit. But, for populist purposes, the "debtor class" has been craftily turned to mean everybody who borrows or desires to borrow money; and the attempt is made to have it appear that under this bill greater difficulty will be experienced by "the plain people" in negotiating loans than under the existing system.

A persistent and pernicious effort has been made to create the impression that this bill, in some unexplained way, discriminates against the American farmer. To cure these imaginary discriminations there have been suggested financial nostrums that would cause the judicious to grieve and which, if accepted, would involve the whole country in ruin. Presented in the interest of the farmer and in the name of Democracy, they would impoverish the former and eternally discredit the latter. Some of these suggestions have been prompted by an exuberant but utterly misdirected zeal; others by a pitiful ignorance of the subject, and others still have their inspiration in the perennial and ubiquitous demagoguery of a certain class of politicians. It would have been sheer foolishness, Mr. Chairman, for the proponents of this bill to have undertaken any discrimination against the American farmer, to whose favor a vast majority of Members here owe their political existence and whose interests they were commissioned to represent. And, sir, it would have been cowardly in the Banking and Currency Committee of the House had it sought to please the agricultural interests by partial legislation, hurtful to the banking and commercial interests of the United States. We have done neither of these things. We have sought to do exact justice to all classes; and any public man who would have us do otherwise affronts the

intelligence and disparages the patriotism of the American farmer no less than he outrages the sense of justice of the American merchant and banker. It is gratifying to report to the House that while in some directions there have been manifestations of selfishness and in others amusing rhetorical exhibitions in behalf of the people, the committee has had a clear perception of its duty and has yielded neither to greed nor to declamation. It has steered a straight course, right between Scylla and Charybdis.

The requirements of the American farmer for bank credit are not different from the needs of other members of the community. The farmer requires loanable capital to enable him to extend his agricultural operations as far as there is profit in them, and to take advantage of market conditions which call for the application of more wealth than he actually possesses. However, while thus essentially on the same basis as others in respect to loanable funds and his need of credit, the farmer is peculiar in the respect that he ordinarily requires a longer term of credit than do some other members of the community, and in most countries requires currency in the transaction of his business rather than book credit with the bank.

FARM LOANS.

The present bill is intended to render capital available to banks through the rediscount operation, and at this point I desire briefly to call attention to those phases of the bill which bear upon the farmer and his welfare and in regard to which it is probable that the agriculturist will be directly helped.

In section 14 of the bill we have provided for the rediscounting of paper possessing a maturity of not more than 90 days in one case and in another case paper possessing a maturity of not more than 120 days. In the same section we have provided for the making of acceptances by national banks and the rediscounting of those acceptances by Federal reserve banks.

There has been a great deal of misapprehension in many quarters with reference to the meaning of the 90-day provision in this paragraph. The claim has constantly been made that this 90-day provision would be of no service whatever to the farmer, because the farmer never bothers with so short a loan as 90 days. This, of course, is an entire misapprehension of the whole situation. The terms of the bill do not provide that the paper shall not be discounted if it runs more than 90 days, but merely that it shall not be discounted until it is within 90 days of maturity. In other words, the bill enables the banker who holds the farmer's paper to shorten the life of the farmer's paper by 90 days and to that extent get new funds with which to aid the farmer. Now, just what does this mean? Suppose that the loans of a farming community made by national banks will average 90 days, with a renewal for 90 days, or six months in all. It is evident that a bank which had loaned, let us say \$25,000, for four months would be able to present this paper at the end of the first 30 days of the life of the loan and to get a rediscount for the remaining 90 days. That is to say, it would be able to draw back the amount of the farmer's credit at the end of the first 30 days and to relend that sum to other people. When the time came for renewal the bank would, of course, have to be in position to pay its loan or rediscount to the Federal reserve bank if it extended the farmer's accommodation for another 90 days out of new funds that have come in meanwhile; but it could again rediscount at the end of another 30-day period. In other words, if the community were doing its banking upon a four months' period of credit the bank would be able to shorten this in practice to a 30-day period of credit. It is entirely conceivable that by this process it should practically treble the amount of banking capital which it could, if necessary, place at the disposal of the community.

Now, let us suppose that the country bank, as is no doubt frequently the case, does not have a steady run of loans such as would justify the use of the method just described. Let us suppose instead of that that the demand for loans is likely to be "bunched" in the late spring and then to slacken so that the funds of the banks are tied up on, let us say, six months' paper. Under the 120-day provision of this bill such banks would be able to take six months' paper as soon as it was two months old to a Federal reserve bank and rediscount it. In other words, funds that would ordinarily have been tied up for four months longer will now be actually available to meet such additional demands as may come to the bank in the course of the summer and early autumn. Here, again, it is evident that the loan period being practically cut down by two-thirds the loaning power of the bank is trebled, assuming that it is able to obtain from the Federal reserve bank the rediscounts for which it has the basis in the shape of paper growing out of agricultural transactions.

HANDLING FARM CROPS.

I have been constantly hearing that the proposed bill afforded no basis for accommodating the farmer who had raised his crops and who desired to get means that would enable him to carry them along pending improvement of prices. Nothing could be more unjust or further from the facts of the case than this. As a matter of fact, the bill makes ample provision for the handling of the great export crops of the country, such as cotton, wheat, corn, and the like. Not only does it provide for loans of the kind already referred to, but in the paragraph relating to acceptances it makes ample provision for enabling the owner or raiser of crops to retain the title to them while they are being disposed of abroad. Let us see how this works. If a cotton grower in the South, for example, needs funds, he may arrange with a bank near his home to grant him a specified credit of, say, \$50,000. In this event he would draw a bill of exchange or draft on the bank in question for, say, six months and would attach to it the documents showing shipment. The bank would accept this paper and he would then be in position to sell the bill practically anywhere. The credit would be based on an actual ownership of cotton protecting the actual amount of the bill and investors practically everywhere would feel entirely at liberty to purchase this paper freely because it had been guaranteed by the bank which accepted it. Everywhere in the country where there were idle funds there would be a demand for these bills. Not only Federal reserve banks, but other banks would constitute a market for such bills. When rediscounted there they would constitute a virtual extension of credit to these banks, enabling them to increase their loaning power tremendously and thereby to give to their customers accommodation which the latter could not otherwise have expected.

LOWER INTEREST TO THE FARMER.

The unquestionable effect of this new system would be to draw funds now idle in various parts of the country to those regions where they could be used to best advantage, and as a result to diminish the rate of interest prevailing in the communities which thus receive the additional capital through the use of the acceptance method. There is no reason why at the present time there should be variations in rates of interest from 3 per cent in New York City to 12 or 15 per cent in small towns in the cotton-growing regions. If a standard kind of paper were provided it should command exactly the same confidence and bear exactly the same rate of interest in one part of the country as in another. This would mean that acceptances based upon goods—protected by cotton in this instance—would constitute a standard kind of paper which would be available for rediscount at any Federal reserve bank, as well as purchasable by investors and banks everywhere throughout the country. The consequence would be, as already stated, a very great reduction in the rate of interest to the grower or factor who had produced cotton and merely required loanable funds as a basis for business.

It is true that the use of the acceptance principle is limited in this bill to those commodities and operations that are connected with exportation and importation. This limitation has been complained of by many of those who believe that its extension to domestic operations would be highly advantageous to industry and would be free from the dangers which others have predicted. Whatever opinion may be entertained on this head, however, it is certain that the cotton grower or the wheat shipper can not share it in any such proportion as can other commercial factors. The fact that so much of our cotton goes abroad and that we still ship grain in enormous quantities means that those who are concerned in the exportation of these items have been exceptionally favored through the restriction of the acceptance business to them so that whatever funds are ready to be employed in that line of paper will go directly and without interference into the channels afforded to them by the trade in these commodities.

I want to add an emphatic word upon the other phase of the subject to which I have already referred—the farmer's interest in getting not only accommodation under the terms of this bill, but his interest in getting it in the cheapest possible way. I have already indicated the reasons for thinking that the working of the discount portions of the bill will greatly reduce the farmer's interest burden and supply him with means for marketing his crops to advantage. From the standpoint of the mechanism employed by the farmer there is, however, much to be said in addition to what I have already pointed out. Today the farmer in many parts of the country wants his accommodation in the form of currency. This he can not get under the existing conditions without involving the bank in heavy expense and consequently necessitating the payment of a mate-

rially higher rate of interest by himself. The reason for the conditions to which I have thus referred is this:

Under the national-banking act the bank which wants \$100 in notes must buy \$100 in bonds and deposit them with the Treasury. Assuming that these bonds were bought at par, it cost \$100 in cash to get \$100 in notes, and the bank must furthermore place with the Treasury a 5 per cent redemption fund for the purpose of bearing the redemption of the notes when they are brought to the Treasury. I will not go into the details of the cost of issuing notes further at this point than barely to refer to these matters and to the additional outlay involved in getting the plates and paying the charge for transportation of paper necessitated by the present note system. The bank gets 2 per cent interest upon its bonds and whatever interest it can secure from the community by lending the notes. When allowance has been made for the expenses already mentioned and for the due share of administrative outlay involved in the process of conducting the bank, and presumably assigned to the loans made by the issue of notes, in proportion to their amount, as compared with the total loans of the bank, it is clear that the percentage of profit is very small where anything like a reasonable rate of interest to the borrower is charged. The borrower must, therefore, and is in practice required to pay a very high rate of interest to any bank which habitually makes its loans by issuing its own notes. Obviously, therefore, anything that will reduce the cost of this necessary instrument will reduce the charge for loans to the farmer.

Under the proposed bill it is clear that banks may obtain a supply of notes for customers who want their loans in this form by paying to the Federal reserve bank of the district in which they are situated such rate of rediscount as may be necessary to get the reserve bank to take their paper. As the reserve bank can then get the notes by segregating the borrower's paper to protect the accommodation thus secured, it is evident that there is no reason why the notes should cost the farmer anything more than the rate of rediscount fixed by the Federal reserve bank plus such commission as the local bank may charge for indorsing the borrower's paper and passing it on to the reserve bank. This change alone ought to reduce the cost of getting notes for bank loans by a very material proportion of its present amount. While no one can calculate the exact saving which will thus be made with precision, I should be inclined to estimate that through the elimination of bond security and the substitution of the new plan of issue there should be no good reason why the note loans made by banks in agricultural regions should run to a higher figure than perhaps 6 or 7 per cent as against the charge of 12 to 15 per cent that may now be found in many of the small towns of the West and South during the height of the season.

As previously stated, Mr. Chairman, we have not sought in this bill to help the farmer because he is a farmer, but to help the community which resorts to the banks for loans and to help the farmer as a necessary and important figure in that community. We have helped him as we have helped the merchant and manufacturer and other members of the body politic, by enabling him to secure, as we think, better and more abundant bank accommodation. But, in addition to this, we have removed the exceptional burdens which rest upon the rural borrower under the system of national bank-note issue which now prevails, and we have thereby placed him upon a footing of greater equality and of equity of treatment by making his credit instruments as reasonable in their expense to him as are those employed by the merchant and manufacturer. We have not attempted to exalt him and his interests above those of other elements in the community, but we have sought to give him what we believe he wanted—an open and fair share upon equal terms in the commercial credit of the country.

Exactly the same advantage, and in like degree, that will be afforded the farmers of the country under the rediscount provision of this bill will extend to every description of legitimate business and industry; hence I will not further consider this section of the measure.

BANK RESERVES.

Section 20 of the pending bill, Mr. Chairman, constitutes one of its vital features. It is the real point of attack by the big bankers of the central reserve cities. Recently at their Chicago conference and now before a standing committee at the other end of the Capitol these gentlemen enumerate various alterations which they would have made in this bill. But in real truth their fundamental and insuperable objection is to the reserve requirement. All other faultfinding is simply strategic. This is no conjecture of my own; I assert it as a fact which has been borne in upon me time and time again since the first print of this bill came from the press. I assert it as a fact and have conclusive proof of its verity. Not one of the bankers

who have recently testified before the Senate committee can controvert the statement.

The whole fight of the great bankers is to drive us from our firm resolve to break down the artificial connection between the banking business of this country and the stock speculative operations at the money centers. The Monetary Commission, with more discretion than courage, absolutely evaded the problem; but the Banking and Currency Committee of the House has gone to the very root of this gigantic evil and in this bill proposes to cut the cancer out. Under existing law we have permitted banks to pyramid credit upon credit and to call these credits reserves. It is a misnomer; they are not reserves. And when financial troubles come and the country banks call for their money with which to pay their creditors they find it all invested in stock-gambling operations. There is suspension of payment and the whole system breaks down under the strain, causing widespread confusion and almost inconceivable damage.

THE REAL FIGHT.

The avowed purpose of this bill is to cure this evil; to withdraw the reserve funds of the country from the congested money centers and to make them readily available for business uses in the various sections of the country to which they belong. This we propose to do cautiously, without any shock to the existing arrangement, graduating the operation to prevalent conditions and extending it over a period of 36 months. This affords ample time to the reserve and central reserve city banks to adjust themselves to the reserve requirements of the new system. Out of abundant precaution we have actually given them a longer time than the best practical bankers of the country have said was needed. But, Mr. Chairman, the plaint of these gentlemen is not as to time, but as to fact. They do not want existing arrangements disturbed; they desire to perpetuate a fictitious, unscientific system, sanctioned by law, but condemned by experience and bitterly offensive to the American people—a system which everybody knows encourages and promotes the worst description of stock gambling. The real opposition to this bill is not as to Government control, upon which we shall never yield; it is not as to the capital subscription required, which is precisely that of the Aldrich scheme unanimously indorsed by the American Bankers' Association; it is not as to the 5 per cent dividend allowed member banks, the exact limit prescribed in the Aldrich bill; it is not as to compulsory membership, which was provided in another way in the Aldrich scheme; it is not as to the bond-refunding proposition, infinitely simpler and less expensive than the Aldrich device. It is none of these things, Mr. Chairman, that vexes the big bankers. It is a loss of profits derived from a system which makes them the legal custodians of all the reserve funds of the country, \$240,000,000 of which funds on the 24th day of November, 1912, they had put into the maelstrom of Wall Street stock operations.

DISAGREEING CRITICS.

I distinctly am not appealing to the prejudice against great bankers. No man worthy to be a representative of the American people ought to deal with a problem of such magnitude without feeling profoundly the obligation to be fair and just to every interest involved. But so should the big bankers deal with us. They have assured us that the bill is workable; yet in another place they say it is not. The critics are not agreed among themselves even as to what the bill provides or as to what it means. Mr. James B. Forgan, the Nestor of American bankers, testified before the Senate committee last Friday that this measure would contract credits to the extent of \$1,800,000,000, whereas Mr. Chas. G. Dawes, an ex-Comptroller of the Currency, now president of a large bank in Mr. Forgan's own city, publicly asserted a week ago that the bill involves an enormous inflation. So in the East recently an eminent banker of New York City declared that under this bill there would be a frightful contraction of credit, whereas in the same city the foreign-exchange expert of one of the biggest banks there figured out for the president of the institution that possible expansion under the bill would reach the aggregate amount of nearly \$2,000,000,000.

And thus the conflict of opinion runs. As a matter of fact, Mr. Chairman, neither of these postulates is true. Certainly it is impossible that both of them can be true. It may be confidently asserted that there will not be one dollar of harmful contraction under this bill; and those who undertake to figure otherwise conveniently ignore the fact that we have released a considerable portion of existing bank reserve. Frankly, there can be expansion under the bill; and, according to Mr. Frank Vanderlip, of the National City Bank of New York, the country just now greatly needs credit expansion. He figures that \$2,000,000,000 can be used within the next five years in developing a single industry in America. But the committee has carefully provided against dangerous or undue expansion. If the

banks of the country will not exercise common prudence in the matter, it is within the power of the Federal reserve board to compel them to do so by laying a firm hand upon the rate of discount. Moreover, the gold-reserve requirement and the redemption facilities afforded by the bill will have a powerful tendency toward checking expansion. But I will not longer claim the attention of the House upon this particular phase of the subject. I desire briefly to demonstrate the entire feasibility of the scheme provided by this bill for shifting the reserves without contracting credit. The matter has been figured out by the best experts in the country. It has been gone over with extreme care and we confidently challenge criticism of the facts and figures presented.

PRESENT RESERVE REQUIREMENTS.

Section 22 of the bill provides for a revision of the existing reserves of national banking associations, which, under the present reserve system, are divided into three classes, (a) country banks, (b) reserve city banks, (c) central reserve city banks. Country banks are required to hold 6 per cent of their deposit liabilities in lawful money and 9 per cent in balances with other banks; reserve city banks are required to hold 12½ per cent of their deposits in lawful money and 12½ per cent in balances with other banks in central reserve cities; central reserve city banks are required to hold 25 per cent of their deposits (including those of other banks with them) in lawful money in their own vaults.

The aim of this measure is to transfer these reserves away from banks other than those to which they belong, so that ultimately bank reserves will be held partly in the vaults of the banks to which they belong, and partly in the regional reserve banks, the reserve banks taking the place of existing reserve city and central reserve city banks in their relation to member banks.

PROPOSED RESERVE REQUIREMENTS.

Carrying out this plan, it is provided (a) that 5 per cent of the outstanding deposits of all banks shall be carried in the new reserve banks; (b) 5 per cent of the deposits of present country banks to be carried in cash in their own vaults; (c) 2 per cent of the deposits of present country banks to be carried either in cash in their own vaults or as a balance with new reserve banks; (d) 9 per cent of the deposits of present reserve city and central reserve city banks to be carried in cash in their own vaults; (e) 4 per cent of the deposits of present reserve city and central reserve city banks to be carried either in cash in their own vaults or as balances with the new reserve banks.

It may be here explained that the "balances" spoken of can be obtained by rediscounting paper with the new reserve banks.

THE DEMONSTRATION.

From the foregoing it is clear that as some discretion is left to the banks about their reserves the exact position of those reserves at any given time can not be predicted. Maximum and minimum limits can, however, be fixed. This is done as follows:

At the date of June 4, 1913 (comptroller's last report), the present bank reserve in central reserve cities was \$409,601,424 held in cash.

At the same date, the reserve which would have been required under this bill would have been 9 per cent of net deposits then subject to reserve requirements in cash, and 9 per cent in balances with the new reserve banks, as follows:

To be held in cash	\$141,127,835
To be held as balances	141,127,835
Total	282,255,670

From this it is clear that if the balances under the new plan were established by taking actual money and putting it in the reserve banks the actual release of cash as compared with the present plan would be the difference between the total new reserve and the present reserve, while if the reserve balances were created by rediscounting the cash released under the new plan would be the difference between the cash required to be held under the new plan and the cash now actually held. That would signify:

Maximum release of cash	\$268,473,589
Minimum release of cash	127,345,754

At the same date mentioned above the banking reserve in reserve cities as held by the banks was:

Held in cash	\$250,383,926
Held in balances	232,799,679
Total	483,183,605

Under this bill these banks would have to hold in cash 9 per cent of their net deposits subject to reserve requirements and a

like amount in balances which would be for the reserve cities as a group:

Held in cash	\$175,128,701
Held in balances	175,128,701
Total	350,257,402

Comparing these figures with the present requirements as already given it is seen that the new plan might mean either a—

Maximum release of cash	\$75,255,225
Or a maximum contraction of cash	99,873,476

At the same date mentioned above the banking reserve in country banks was held as follows:

Held in cash	\$280,392,177
Held in balances	310,689,129
Total	600,081,306

Under this bill the cash required would be 5 per cent of their net deposits subject to reserve requirements and 7 per cent in balances (2 of this at the bank's discretion). This would mean:

To be held in cash	\$180,533,642
To be held in balances	252,747,100
Total	433,280,742

On the same principle as before this would mean a maximum release or contraction as follows:

Maximum release	\$108,858,535
Maximum contraction	143,888,563

Thus it appears that there would be a possible maximum contraction as follows:

Reserve city banks	\$99,973,476
Country banks	143,888,563
Total	243,862,041

Deduct central reserve city release	127,345,754
Net contraction	116,516,287

It is also evident that the result might work out as follows:

Released by central reserve city banks	\$268,473,589
Released by reserve city banks	75,255,225
Released by country banks	108,858,535
Total	452,587,349

It might reasonably be asked, Which of these results would probably be reached? Assume that the first (contraction) was the net result owing to banks fulfilling their reserve requirements by depositing cash in every instance. The Government balances which are now to be poured into trade channels through the new reserve banks will run from \$200,000,000 to \$250,000,000. Bearing in mind the fact that the capital of the new banks has to be raised in cash, it will be seen that independent of this capital the monetary situation would be left about the same as it is to-day, except that the new reserve banks would be in position to add their loaning power to that of the older banks. If we now assume that the transfer of reserves resulted in the extreme limit of expansion already referred to, it would be noted that the cash is released only on the assumption that the reserve requirements are met by rediscounting. If, however, the new reserve banks have to hold one-third in lawful money in order to make these discounts, it is clear that only two-thirds of \$452,587,349, or about \$300,000,000, will be released. Of this sum a certain part would be needed in bringing the reserves of State banks which may become members of the new associations up to the level which is required of them. How much this would be can not be positively asserted.

If it be asserted that this process will lead to inflation the answer to be made is that whether it will or not is a matter in the hands of the reserve banks, which have it in their power, by fixing their rate of discount suitably, to prevent the banks from creating reserve balances in excess of the required 5 per cent. If the reserve banks should do this, it would be found that the required 5 per cent referred to would be about \$356,000,000, while the amount which the banks at their option might or might not obtain in this way would be about \$213,000,000, the actual cash required to be held by them under the new plan being as follows:

Central reserve city banks	\$141,127,835
Reserve city banks	175,128,701
Country banks	180,533,642
Total	496,790,178

Add to this the amount which the reserve banks can at their option make it worth while for the other banks to hold in cash, or to deposit with them in cash, and we have a total of about \$710,000,000. The actual cash held to-day by the banks at home and in the redemption fund is about \$950,000,000. Something like \$240,000,000 would thus be released under the probable working out of the system, and this would be drawn upon for the other purposes already referred to.

COUNTRY BANKS UNDER THE BILL.

There has been a strenuous effort to prejudice the country banks against the bill, inspired, as I believe and have reason to assert, by banking institutions with close and extensive Wall Street affiliations. The propaganda was not prompted by any special solicitude for the country banks, but by chagrin over the prospect of being deprived by this bill of the reserve funds of the country banks. Mr. OWEN, the Senator from Oklahoma, in a letter which has since been made a Senate document, sharply pointed out the fallacy of the contention that country banks are offered no inducements to come into this system; so it would seem superfluous for me to present this aspect of the case here. However, I shall do so very briefly.

Let it be assumed that a bank of \$100,000 capital (no surplus) is the owner of \$75,000 in United States 2 per cent bonds and has outstanding \$75,000 of circulation. Let it also be assumed that this bank has total outstanding deposits of \$400,000. The bank is a country bank.

How will the new plan affect this institution? In the first place, the bank in question, if it has \$400,000 of deposits, must have on hand in its own vaults 6 per cent of that amount in cash, or \$24,000, and must have 9 per cent of that amount, or \$36,000, as a balance with the reserve city bank.

Under this bill this bank must have a reserve of 12 per cent instead of 15, of which 5 per cent, or \$20,000, must be in cash in the vaults, while \$20,000 must ultimately be placed with the reserve bank and \$8,000 may be kept either in the one place or in the other, when the whole measure has become operative at the end of three years.

As the bank has \$24,000 cash when it enters the system, it is \$4,000 ahead of the amount required to be held in its own vaults. It can draw for the remaining \$28,000 required of it upon its present reserve city correspondent, with which it holds \$36,000, sending the \$28,000 check to the new Federal reserve bank. After the transaction is over its reserves will be complete, and it will have \$4,000 in cash and \$8,000 in balances over and above what it needs to meet its reserve requirements.

The bank, however, must contribute \$10,000 to the capital stock of the Federal reserve bank which it has joined. If it pays this amount out of the \$12,000 surplus it will become the owner of \$10,000 stock in the new reserve bank and will still have \$2,000 surplus out of its former balances.

This bank was receiving probably 2 per cent upon the \$36,000 balances it carried, making in all \$720 a year. Assuming that the stock in the new reserve bank pays 5 per cent, it will yield an income of \$500 a year. The bank, moreover, has \$2,000 of free cash still remaining which it can loan after withdrawing it from its present correspondents—say, at 5 per cent, bringing in \$100 annually. Or if it were to use this \$2,000 as a reserve upon which to build up new loans it could lend about \$16,000 thereon, which at 5 per cent would yield it \$800. On this basis the changed situation of the bank might result in a loss of about \$120 a year or in a gain of \$580 or in anything between those two sums. The reasonable expectation would be that the bank would get a material increase in its revenue. Just how much would depend upon the extent of the loans it could make in response to demand in the community.

The bank would be able to exchange each year 5 per cent of its present \$75,000 of 2 per cent bonds, or \$3,750. If we assume that the bank sells the 3 per cent bonds it receives through this exchange at par, and with the proceeds pays off the notes now outstanding against them, the effect is simply to reduce its assets and liabilities by equal amounts, at the same time releasing it from the necessity of retaining the 5 per cent redemption fund in Washington which at once becomes available as a basis for reserve loans at home. This 5 per cent redemption fund would be on \$3,750 equivalent to about \$185. If this were loaned directly at 5 per cent it would yield an income of \$9.25. If the \$185 were used as a 12 per cent reserve against loans, about \$1,500 of loans could be made which at 5 per cent would yield \$75. This if taken in connection with the showing made above would reduce the loss to \$45 a year or would increase the gain to \$655, with corresponding changes in intermediate points between these two extremes. If the banks had no notes outstanding against the bonds which it converted and sold, it would get fluid funds equal to the amount of the bonds thus sold which could be loaned at 5 per cent instead of the 2 per cent now paid by the bonds. This would be a difference of 3 per cent per year in favor of the new plan on a principal of \$3,750. On the other hand, if the bank simply paid off its outstanding notes out of nonreserve money on hand (as in many cases it might) and held the new 3 per cent bonds as an investment it would profit to the extent of 1 per cent over the existing situation on a principal of \$3,750 a year or \$37.50 the first year, \$75 the second year, and so on. At the end of 20

years it would be 1 per cent ahead on its whole \$75,000 bonds, or \$750 annually. In this event it is clear that within three years the increased revenue from its bonds would offset any possible loss due to the sacrifice on the 2 per cent interest on reserves. Against this might fairly be set off the income, if any, that it might have made by loaning the cash used to cancel its outstanding bank notes.

Summarizing, it is safe to say that upon the narrowest possible basis likely to present itself in the case of this bank the institution would, if it paid up its whole reserves under the new plan in cash, fully clear itself and make an additional revenue of from \$200 to \$500. If instead of paying up its reserves in cash it got the reserve credit by rediscounting, it might profit to a very much greater degree; how much greater can not be estimated without knowing the rate of interest in the community and the extent to which it could obtain paper eligible for rediscount.

REFUNDING BONDS.

Retirement of the national-bank circulation, frequently redundant and never elastic, is regarded as one of the essentials of currency reform. During the 12 years that I have served as a member of the Banking and Currency Committee the universal testimony of banker and business man, text writer and political economist has favored this alteration in the existing system. All political parties are pledged to this reform, notably the Democratic Party, which has repeatedly declared for it. In its platform of 1896 it declared:

Congress alone has the power to coin and issue money, and President Jackson declared that this power could not be delegated to corporations or individuals. We therefore denounce the issuance of notes intended to circulate as money by national banks as in derogation of the Constitution, and we demand that all paper which is made a legal tender for public and private debts, or which is receivable for dues to the United States, shall be issued by the Government of the United States and shall be redeemable in coin.

Again, in 1900, the Democratic platform on the same subject declared that—

A permanent national-bank currency, secured by Government bonds, must have a permanent debt to rest upon, and if the bank currency is to increase the debt must also increase. The Republican currency scheme is therefore a scheme for fastening upon the taxpayers a perpetual and growing debt. We are opposed to this private corporation paper circulated as money but without legal-tender qualities and demand the retirement of the national-bank notes as fast as Government paper or silver certificates can be substituted for them.

This measure provides for the gradual retirement of national-bank circulation over a period of 20 years and the reversion of the right of note issue to the Government of the United States. Such an alteration in the existing system necessitates the refunding of United States 2 per cent bonds, which afford the basis of bank-note circulation. To my mind it needs no argument to determine that both the honor and the credit of the Government are involved in the proposition that whenever the Government withdraws the circulation privilege from its 2 per cent bonds it should reimburse the holders of its securities for the inevitable depreciation which will ensue. The refunding scheme which we have here provided contemplates this; and while it involves the assumption by the Government of a slightly increased interest charge, it is perfectly manifest that the Government has long ago received its compensation in the abnormally low rate at which it has been enabled for years to float its indebtedness under the existing system.

But aside from this, Mr. Chairman, the bill provides other compensations. It enables the Government to resume and exercise a function which for 50 years has been confided to private corporations, the value of which has been variously computed to be between 1½ and 2½ per centum on the amount of circulation outstanding. In addition to this the Government shares in the excess earnings of the regional reserve banks; and finally, but most important of all, this new system will provide a rediscount scheme so much less expensive than the existing bond-secured currency plan as to make certain a reduction in the interest charge upon commercial transactions with the banks; so that, from every practical point of view, as well as upon considerations of public honor, the 2 per cent Government bonds should be refunded into 3 per cents or paid by the Government at par with accrued interest. I am well aware that there are critics of this plan who are not mere cavilers; but we do not fear to subject our attitude on this question to the dispassionate judgment of the American people.

DIVISION OF EARNINGS.

The division of earnings provided by this bill for the Federal reserve banks will stand the test of fair disputation, albeit many of the bankers are insisting that the cumulative dividend provided should be increased from 5 to 6 per cent. The rate fixed by this bill is exactly the rate fixed by the Aldrich bill, which the bankers unanimously indorsed. But the contention is that the Aldrich bill did not shift reserves and thus deprive

the country banks of the 2 per cent interest which they have received upon their balances with correspondent banks. That is true. Neither did the Aldrich bill reduce country reserves from 15 to 12 per cent and other reserves from 25 to 18 per cent, nor did the Aldrich bill provide, in addition to a cumulative dividend, that the stockholding banks might receive 40 per cent of the excess earnings of the system. I have already pointed out that the interest to be derived by country banks from credit extensions based on the reserve-release clause of this bill will greatly more than compensate them for the loss of interest on their balances, to say nothing of the vastly superior advantages of a banking system which will never break down over a banking system which has repeatedly involved all the banks and the whole country in disaster.

NOTE ISSUES.

In this country there is sharp division of opinion upon the question of note issues, one school of thought contending that it is strictly a banking function and another that it is an essential function of government. In this bill we have provided that the Government shall issue the notes, but only upon application by the banks and through the banks. The controversy over this provision is entirely sentimental. The section as it stands constitutes a compromise; but there is not a single element of unsoundness in the provision. Behind the notes is a gold reserve of 33½ per cent, commercial security amounting to dollar for dollar, a first and paramount lien on all the assets of the reserve banks and, superimposed, the obligation of the United States. To those who advocate Government issue, it may be said that they have it here in terms, with discretion in the Federal reserve board to issue upon application or to withhold. To those who contend for bank issues, we may say that, in the practical operation of the system, you have it here; because only upon application of the bank can the Government issue. To those who affect, or sincerely entertain, solicitude for the Government's credit, it may be pointed out, as a practical fact, that the security behind the notes here provided is many times more than sufficient to protect the Government before the note holder would reach the Treasury counter. Whatever other objections may be urged to the system, not a critic of this bill—banker, business man, or specialist—has ever suggested that the note here provided is not as sound as gold itself. [Applause.]

CONCLUSION.

I will not, Mr. Chairman, weary Members with an explanation now of the minor details of this measure; these are fully set out in the printed report which accompanies the bill. We have made provision for foreign banking, designed to extend our foreign trade by furnishing quicker exchanges and affording infinitely better banking facilities in that field of enterprise. We have incorporated in the bill a savings-department clause, which will enable the national banks of the country to do business of this nature under authority of the statute rather than in disregard of the law. We have provided a more effective and less expensive method of domestic exchange and collection and also a system of examination and publicity which better safeguards the banking operations of the country.

The work of the Banking and Currency Committee has been tedious and laborious, dealing with a subject exceedingly complex and upon the details of which, if not upon the general principles involved, there are wide divergencies of opinion and varying degrees of antagonism. We have done the best we could. Without practical banking experience, disclaiming expert knowledge of the subject, I have tried as chairman of the committee to reconcile conflicting views, to compose all friction from whatever source arising, to embody in the bill the technical knowledge of the banker, the wisdom of the philosophers, and the rights of the people. We have not desired to approach or consider the question from the standpoint of party politics. It is too universal a problem for that. It is not a matter for party advantage. I have kept in constant contact and pleasant intercourse with the ranking minority member of the committee, giving him every successive reprint of the bill, affording all the information that he might desire, and inviting in good faith such suggestions as he might care to make. And now, Mr. Chairman, sure of our ground, yet conscious of human limitations, we submit this bill to the judgment of the House, challenging a fair consideration of its provisions and devoutly invoking the patriotic cooperation of our colleagues in what should be a great service to the country and a memorable achievement of the Sixty-third Congress. [Loud applause.]

Mr. HAYES. Mr. Chairman, within the limit of the time that I have allotted to myself and in justice to my colleagues who desire to speak on this subject it will be impossible for me to discuss this great, complex, and technical question as exhaustively as I would like.

I approach the discussion of this measure in no partisan spirit. I deeply regret the manner in which the majority of this House have seen fit to prepare this bill for our consideration. The manner of its preparation, first in secret conferences of the majority members of the Committee on Banking and Currency and then in a secret party caucus of the majority, tends to give to the measure a partisan aspect. I regard this as very unfortunate. This question is too big, too vastly important to all the people to become the football of politics. A banking and currency system is a great, complex, scientific, and business proposition. It has nothing whatever to do with politics and partisan politics should have nothing whatever to do with it. It would certainly be a great national calamity if legislation affecting this great subject is to be dictated not by experience and well-grounded principles but by the passions and excitement attending a national party convention, the effect of which would be that there would be a change in banking and currency laws and our fiscal policy generally whenever there should come a change of party administration.

In order that I may not contribute, even in a small degree, to that undesirable result I shall refuse to regard the bill under consideration as in any sense a partisan measure. I believe that the bill would be a better bill had it been prepared in a nonpartisan way by the Committee on Banking and Currency in the manner usual with most bills in this House; but that should not and will not influence my judgment upon one item of the measure. I propose to consider it strictly upon its merits.

And, Mr. Chairman, in order that my words may not be misinterpreted, I desire to say—and I say this on behalf of members of the minority of the committee—that we have received every courtesy at the hands of the chairman of the Committee on Banking and Currency, as well as from all other members. The chairman, at considerable trouble to himself, saw that we received the confidential reprints which were made from time to time in the consideration of the bill by the majority. I wish to say, too, that suggestions were invited from us before the bill went into the caucus of the majority. We made some suggestions, and it is only just to say that quite a number of those suggestions, or the substance of them, are incorporated in this bill.

Until very recently, with few exceptions, only two classes of people in this country have studied, publicly discussed, and proposed changes in our banking and currency system. The first and largest class has been made up of cranks and impractical inexperienced men who narrowly look upon all bankers as bogey men who thrive upon the commercial vitals of the public, whose activities are wholly inimical to the interests of the people, and upon all banks, and especially all banks of issue, as usurpers of the monetary and financial functions of the Government and instrumentalities by means of which the Shylocks of the land exact their tribute from those in financial need and distress and generally rob and oppress the people. Of this type the Greenbacker of a few years ago is a pronounced example. Quite common 25 years ago, these discoverers of the panacea for all our financial ills are not so numerous as they once were, though one provision of this bill is proof that there are still a large number of these erudite gentlemen left among us. In these later years they have been reinforced by a number of other impractical dreamers who want to make currency out of cotton, corn, cucumbers, watermelons, and other agricultural products and saddle upon the Government the burden of keeping this kind of primitive currency on a par with gold. It is well for this bill and the country that the majority of the Banking and Currency Committee turned their backs upon this proposition.

The second class of people, who in the past have discussed the banking and currency question with great assurance, was composed of men who had a book knowledge of the subject more or less superficial, not supplemented by any practical business or banking experience. These men generally became enamored of some foreign system and became advocates of the German, French, Canadian, or some other system for this country, or of one or more features of some of them, the effect of which would if adopted here be wholly revolutionary in character, and the principal effect of its adoption would probably be to demonstrate that the feature recommended was not at all adapted to our conditions.

Only recently have the large body of intelligent, practical, and experienced men of the country been giving careful thought and study to the solution of the great banking and currency problems which are calling for solution.

Any person studying this most important and complex subject should bear constantly in mind one fundamental and controlling fact, namely, every banking and currency system worthy the name is an evolution brought about by the efforts of the bank-

ers, legislators, and business men of the different countries to meet the commercial needs of the people. Unlike Minerva, who sprang miraculously and instantly perfect from the brain of Jove, no one of these systems came complete from the brain of any one man or set of men. All these systems of the world have gradually grown up from more imperfect beginnings to their present state of perfection and usefulness. Some of this growth has come through legislation in the first instance, but most of it has developed wholly independent of law. No one of these systems is in its important features a copy of another. The English system is very different from the German and the French quite different in most respects from either, while the Canadian system is radically different from all those above mentioned. Each of them, however, is adapted to the conditions, habits, traditions, sentiments, and business needs of the people whom it serves.

The great central banks of Europe as they exist to-day are likewise an evolution. The Bank of France, for example, was brought into being to assist the Government in its financial operations, chiefly by finding a market for its bonds or securities. From this beginning it has developed until its original function is comparatively unimportant, and it has gradually become the great conservator of the gold supply of France, the balance wheel of its financial machinery, and probably the soundest if not the largest financial institution in the world.

Let me, therefore, admonish all banking and currency reformers that we can not perfect our system by any radical revolutionary methods. We can not ruthlessly tear down and uproot everything we have in this country in the way of a banking and currency system and proceed to build a new structure from the foundation. Such a thing is impracticable; it is absolutely impossible, even if desirable, which, in my judgment, it certainly is not. We must recognize that we have evolved a long way from the financial chaos and weakness of 75 years ago. In most respects our national banking system is sound, financially and scientifically. The weak places need to be discovered and strengthened, those things that are unsound should be removed, and the system made as strong and perfect as possible. In order to do this it is not necessary to adopt bodily any part of any foreign system. In fact, I think it would be a great mistake to do this. The problem is to perfect our present system, not to make a new one; and in order to do this we do not necessarily need a central bank formulated on the plan of the German Reichsbank, the Bank of France, or the Bank of England, or, indeed, any other central bank. Neither is it necessary to insist upon the branch-bank system of Canada. We may, however, safely take the well-established underlying principles of any of these systems and adapt them so far as possible to our own conditions.

With these preliminary considerations in view, let us see what are the glaring defects in our system. I believe the principal ones to be these:

DEFECTS OF OUR SYSTEM.

First. The lack of elasticity in our currency and the rigidity of our laws in regard to reserves.

Second. Our system of independent banks with no control or reserve power anywhere and no union among the banks generally to enable them and each of them to get support and to replenish their cash and reserves in times of financial stress.

Third. The failure of the bankers and especially of the law-making powers of the several States, to properly distinguish between commercial banks and banking and investment banks and banking, is a source of great weakness and the cause of many of our troubles and disasters in the past. These two kinds of banking are very different in character and the laws controlling them should be different.

Fourth. Our foolish, slipshod, and ineffective inspection of banks under our national system, and the still more foolish and superficial inspection provided by most of the States, should at once be abolished and real business inspection for all banks provided.

These four weaknesses removed, and I am sure all who have given the subject any deep consideration will agree that at least our system would be much more nearly perfect than it is. In the course of my remarks I shall briefly discuss the subjects suggested by the headings above named, and especially with reference to the bill now before us, which undertakes to correct all these weaknesses.

OUR INELASTIC CURRENCY.

First, as to our inelastic currency system. The principal elements of our currency are four:

1. Gold, generally represented by gold certificates.
2. Silver, generally represented by silver certificates.
3. The Treasury notes or greenbacks.
4. The national-bank currency.

There can be no elasticity in gold or silver nor in the Treasury notes. Of necessity these elements in the currency can not be expanded nor contracted so as to respond to the varying needs of trade and commerce. And the same statement applies with equal force to the gold and silver certificates which only represent the coin deposited in the Treasury.

The only element in the currency that might be made elastic is the national-bank notes. But under existing law they are as rigid and fixed in amount as gold or silver, and they will always remain so as long as they are tied to United States bonds or any other fixed security. Instead of responding to the demands of commerce—increasing in volume when the demand for currency is greatest and diminishing almost to the vanishing point, as they should, when the demand is least—these bank notes actually increase when the demand is least, as a rule, and decrease when the demand for currency is greater. In the fall, which is the time for our great currency demand, the amount of bank notes in circulation generally decreases several million dollars each year, and in the spring, when there is no demand for money, the circulation has many times increased, sometimes as much as \$20,000,000 over the circulation in the fall. This is, of course, very unnatural and the results can but be evil, accentuating the shortage of currency in the fall and stimulating speculation in the spring.

THE PROPOSED REMEDY FOR INELASTICITY.

This bill undertakes to remove the present rigidity from our currency system by permitting the regional reserve banks provided for in the bill to issue currency based upon a gold reserve and the commercial assets of the country instead of upon bonds. The experience of other countries has demonstrated that such a currency is easily responsive to the varying commercial demands of the business community. This feature of the bill is largely an adaptation of the principles underlying the German currency system, the most important departure therefrom being the substitution of the 12 regional reserve banks for one central bank.

I am aware that the German system has been violently criticized in many quarters as unsound and something to be avoided. One high authority has charged it with carrying financial dynamite, feared by all Europe. Although there may be some foundation for these criticisms, they are not wholly justified by the facts. Since the adoption of her present currency system Germany has passed through one of the greatest periods of financial and industrial developments known to history, second only to the development along similar lines that during the same time has taken place in this country. As a result Germany's banks and financial institutions have been almost constantly taxed to their limit. Had not the present system permitted the largest use of credit in financing her great industrial and commercial undertakings many of them must have languished or have halted until more actual money could have been accumulated or otherwise provided. There is not a doubt that the German banking and currency system has played a very large and important part in her recent industrial and commercial progress.

I admit that it is yet to be absolutely proved that any part of such a system will work successfully here. It may turn out not to fit the commercial instincts and habits of our people. It has even been charged that there is little or no commercial paper in this country of the character which is described in the bill and therefore it can not be used as a basis for currency issues. Even if this be so, commercial paper of a character to satisfy the law can easily be created, and will be created if it is to the interest of the commercial and financial classes to use it as a basis for currency.

In spite of all these criticisms, I am firmly of the opinion that if the principles above referred to can be put into active operation they will work a vast improvement in our system. Personally I believe that it would be safer to make efforts at the reform of our system more strictly along the lines of our own financial evolution than by borrowing from some foreign system. I would prefer to see us legalize and enlarge the present clearing-house associations under proper governmental regulation so as to embrace all the banks, and intrust to such associations the duty of supplying to the people and the business interests the elastic currency which is needed, something after the manner of the Fowler bill, reported to this House some four or five years ago. I think reform along these lines would be more in harmony with the feelings, traditions, and habits of our people. The experience of 1907 makes me know that such a system properly created and regulated would work successfully. In this feeling of preference I am probably not sustained by the weight of financial authority in this country. And, anyhow, progress along this line being at this time impossible, I shall

support anything which promises to be an improvement on our present system, which in some respects is unscientific and thoroughly unsatisfactory.

AID OF NATIONAL BANKS NECESSARY TO SUCCESS OF NEW SYSTEM.

But the most perfect banking and currency system in the world is useless if you can not put it into operation. The system created by this bill, or by any bill, can not be put into operation in this country unless a large majority of national banks at least go into it. On its face it appears to be compulsory upon all national banks; but, of course, in the last analysis this is not so. The time has gone by when the Government can confiscate a man's property or compel him to employ his capital and talents in any business that he does not think for his interest to engage in, even if he is a banker. Gentlemen are very much mistaken if they think that many men will engage in the banking business for the compensation of 5 per cent on their capital. Good, absolutely safe bonds can be had that will yield 5 per cent, and all the holder need do is to cut off his coupons at the proper time and present them for collection.

It is likely, too, that the profits of the regional reserve banks proposed by this bill will for some time be prospective only. Many country banks, in the West at least, can loan their money at 7 and 8 per cent. Since they have little or no commercial paper of the kind designated in the bill, what incentive is offered in this bill for these country banks to put their money into the stock of the regional reserve banks at 5 per cent? Judging by the letters I have received, many of them will decline to do it, and will either surrender their national charters and reorganize under the State laws or go into liquidation.

Can the system be successfully inaugurated without these small national banks, or indeed without the cooperation of practically all the national banks? I doubt it. The failure of any large proportion of the national banks to go into the new system would weaken the proposed reserve banks to such an extent as to make them ineffective, and whether such banks reorganized under State laws or went into liquidation, they would in either case retire their circulation, thus producing an arbitrary and sudden contraction of the currency, which might prove to be disastrous. It is of the first importance, therefore, that the bill be made sufficiently liberal to induce the banks generally to come under its provisions. I fear the gentlemen of the majority have not given sufficient weight, in framing the bill, to this consideration. A country bank, for example, is to be allowed only 5 per cent on its money invested in the stock of the reserve bank, when it could loan it to its customers at 6 to 8 per cent. It is to be allowed no interest on a large percentage of its reserve which it must deposit in the reserve bank, while now it gets not less than 2 per cent on a much larger proportion of its reserve now carried in a reserve or central reserve city. I see nothing in the bill that, in my judgment, compensates these country banks for these two losses to their present business. I think, therefore, that the per cent of income allowed the holders of the stock should at least be increased to 6 per cent, and the proportion of profits to be allowed the banks, fixed by the bill at 40 per cent, should be materially increased. The banks in the reserve and central reserve cities will make larger use of the facilities provided by this bill than the country banks, and thus may make good any loss that they may sustain. They will therefore be more likely to come into the new system than the country banks. The latter, however, represent practically one-half of the national-bank stock of the country, and if they should generally refuse to come into the new system it would be greatly crippled, if its usefulness was not wholly destroyed.

It ought to be stated, as the chairman of the committee stated in his speech, that this proportion of interest, this rate of interest is the same as that proposed in the Aldrich bill, but in that case the banks were to be given many other advantages which this bill does not give to them.

FEDERAL RESERVE NOTES.

While I approve as sound in principle and fully justified by experience the secondary basis upon which it is proposed to rest the currency provided for in this bill, to wit, gold coin and the finest commercial assets of the country, I want to lose no time in condemning in the strongest terms one other feature of this proposed currency. And in what I wish to say upon this point I shall necessarily be obliged to discuss fundamentals—elementary principles—as understood by students of this subject.

This bill makes the Government of the United States primarily liable on the notes authorized by it. They are not to be the notes of the banks in any sense, but the notes—the obligations—of the Government. It is true that the bill provides for securing the Government against loss by taking good security for lending its credit to the banks, but that in no way

changes the fundamental character of the notes. They are still the notes of the Government and not of the banks. The transaction between the Government and the banks contemplated by the currency features of this bill is in no respect different from that which takes place when the Government takes security from the banks for the money which is now often deposited with them except in this: In the one case the Government takes security from the banks for lending its credit to them in the form of its notes, while in the other it takes security for money loaned to them. In neither case does the security change the fundamental character of the transaction.

And to whom, in the first instance, will the holders of these proposed notes look for payment? To the Government, of course, and not to the bank whose letter and serial number are found upon it as provided in the bill, and which, by the way, will mean nothing whatever to the ordinary holder. To illustrate, if, as an accommodation to you, I give you my note and you indorse it and discount it with some bank and get the money on it, when it is due, to whom will the bank present it for payment? To me, as the maker of the note, of course. If I do not pay, you may become secondarily liable by the protest of the note.

The fact that you may have secured me against loss in no way changes the relation of the several parties to the transaction. It is my note, and if I wish to protect my credit I must pay it when due or when it is presented to me for payment. That subsequently I may realize what I pay out of the security that you have given me in no way affects my liability to the holder of my note. Neither does the security provided for in this bill affect the liability of the Government on its notes.

But this bill specifically provides that these Government notes shall be redeemed by the Treasury of the United States, as well as through the several reserve banks. Until last year I had long supposed that greenbackism was dead and buried forever in this country. Although by the introduction of the reserve banks into the transaction there is in this bill a very ingenious attempt to cover up the nature of this feature and to minimize or remove its dangers, any careful analysis of the note feature of the bill will disclose the fact that this Government note provision in principle is a revival of greenbackism pure and simple. The bill provides for a possible issue of hundreds of millions of dollars of Government notes payable on demand, different in no respect in their fundamental character from the Treasury notes which were presented day after day at the Treasury up into the hundreds of millions, and gold demanded for them during the Cleveland administration. That these notes could be conveniently used for this purpose there is not a particle of doubt. With the memory of Cleveland's "round robin" experience only a few years behind us, I am greatly surprised that a majority of the Democrats of this House could be induced to consent to put the credit of the Government in such possible peril.

Mr. KORBLY. Will the gentleman yield?

Mr. HAYES. I do.

Mr. KORBLY. I believe the gentleman from California will not deliberately take the position that there is no distinction between greenbacks and these notes because the greenbacks flow according to the Government's needs, and these will come into existence according to the needs of commerce.

Mr. HAYES. My thought is this. That in this case the notes are not issued for the needs of the Government. They are issued for the accommodation of the banks, pure and simple. But that does not change the fundamental principle.

Mr. KORBLY. Is it not true they are issued so the banks may accommodate the people?

Mr. HAYES. Exactly; I admit that.

But, gentlemen say, the conditions are such now that nothing like this can happen. Such assurance, in view of the lessons of history, is wholly unwarranted, even foolish. Only six years ago, during the panic of 1907, all the banks in the country practically suspended payment. Why? Because they had no money to pay with. Under such conditions, how is the Government to realize on its security taken from the banks to get the gold to meet the demands made upon it? Or suppose the country suddenly plunged into war—and I am not optimistically foolish enough to suppose that war will not some time come. The cash and resources of the Government would necessarily be heavily taxed to finance a war; why saddle the Government with the wholly unnecessary burden of redeeming in gold notes which it has issued for the accommodation of the banks, when by every principle of sound finance the banks should issue the notes themselves, should be forced to keep themselves in a position to redeem them in gold, and not only relieve the Government of this unnecessary burden, but also from the mere danger of such a burden?

And even if there is no immediate danger that the Government credit may be impaired or menaced, the thing is wholly wrong in principle. A government is not like a bank. It has no quick assets; it is not in business; it has no way to get money except by taxation or the sale of its bonds. No government in the history of the world ever went extensively into the business of issuing its demand notes that it did not ultimately run up against trouble. Do gentlemen upon the other side of the aisle suppose that there is a commercial nation in the world except this that in a time of peace and great prosperity would think for a moment of issuing Government notes or promises to pay money on demand? Of course there is not.

And what is the necessity at this time for this remarkable performance? For 50 years the notes of the national banks of this country have been in circulation among the people. At present these notes aggregate nearly three-quarters of a billion dollars in amount. During the whole 50 years of their existence every one of these notes has been redeemed on demand. Why, then, this sudden distrust of bank-note currency? Because this bill proposes a different security behind the notes, but equally good—at least in the opinion of the makers of this measure good enough to secure the Government—why proceed to displace our bank-note circulation which, except for its lack of elasticity, has proved so thoroughly satisfactory? When this bill is to make the conditions surrounding this currency in every way safer and more satisfactory, what is the reason for this unexpected revolution? There is no reason except the necessity for satisfying and harmonizing the greenback contingent of the Democratic Party. But for this political necessity this greenback provision would never have found its way into the bill. I sympathize with my Democratic brethren, but my sympathy can not control my judgment. This provision should be so changed that the banks, not the Government, should be primarily liable on the notes.

For the consolation of the friends of this bill, I think it may be stated, and safely stated, that the note provision of this bill will not, for a long time at least, be invoked. The bill provides such rules in regard to the reserves that after it goes into effect there will be opportunity, as the chairman has stated, for quite an extension of credit, and I doubt if the note provision will be demanded at all, except in cases of great emergency. There is another reason why I believe this, and that is that the notes are to be taxed or an interest charge is to be levied upon the regional reserve banks whenever they are issued, whereas the member banks can make a checking deposit in the regional reserve banks upon which no interest charge will be made, and, as we all know, a checking account for most purposes is just as good as currency.

Mr. MOORE. Is not the Government to issue these notes to the banks on collateral, dollar for dollar?

Mr. HAYES. That is correct. I would not say that; it does not specifically, as I remember the bill, provide that in those words, but I think the bill provides ample security.

Mr. MOORE. The regional reserve bank may present to the Government certain commercial paper upon which the Government will issue its note, the note valued at par equally with the commercial paper. Does the gentleman consider that in the interest of the plain people or the interest of the banks?

Mr. HAYES. I consider any facility that permits an extension of credit to those in need of it to be not only of advantage to the banks but also to all the people. [Applause.]

Mr. KORBLY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from California yield to the gentleman from Indiana?

Mr. HAYES. I do.

Mr. KORBLY. I would like to direct the attention of the gentleman to one fact, and that is that the gentleman spoke a while ago about the ability of these Federal reserve banks, under the terms of the bill, creating a deposit credit with the bank, and in view of the fact that a tax might be levied, and will be levied, of not less than one-half of 1 per cent on every note that is used, the banks would very much prefer to create the deposit credit?

Mr. HAYES. Yes.

Mr. KORBLY. Does not the gentleman believe that on the other side of the question something may be said, due to the fact that when a note is once uttered by one of these banks it will stay out a considerable time over and above the mere lifetime of a simple deposit account; that a deposit account comes for collection more quickly than a note will, and that so long as a note is out, the holder of it is practically lending to the bank so much money without interest?

Mr. HAYES. The gentleman must bear in mind that the notes are not the notes of the bank, but that they are the notes

of the Government, and the bank itself that gets the accommodation must pay the interest.

Mr. KORBLY. Does the gentleman really seriously contend that they are not the notes of the bank also?

Mr. HAYES. I think they are secured by the bank, but they are not its notes.

Mr. KORBLY. Are they not the notes of the bank, secured by the Government?

Mr. HAYES. No; they are Government notes secured by the bank, which is an entirely different proposition.

Mr. KORBLY. But the notes have no vitality until they are uttered by the bank?

Mr. HAYES. The notes have no vitality until they are delivered by the United States to the Federal reserve agent, who is the chairman of the board of the bank.

Mr. KORBLY. They have no vitality as an instrument of commerce until they are uttered by the Federal reserve bank.

Mr. HAYES. That is true, but the foundation, the credit in the first place, is the credit of the Government, and not that of the bank.

Mr. KORBLY. The credit is the faith that is given to the character of the security, the property, the wealth that is behind it.

Mr. HAYES. Does the gentleman think that any man who receives one of these notes proposed by this bill will ever for a moment think of looking at the security that the bank has given for it? Of course not. He sees that it is a note of the Government of the United States, and if he wants to redeem it or get the gold or lawful money on it he can go to the Treasury and get it.

Mr. KORBLY. Perhaps the man who gives credit to the bank by leaving a deposit with it does not look to the character of the security that the bank has for the return of his deposit, but nevertheless he leaves it on the faith and credit that he has in that bank.

Mr. HAYES. Surely; but that does not affect the character of the transaction at all.

Mr. McKELLAR. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from California yield to the gentleman from Tennessee?

Mr. HAYES. I do.

Mr. McKELLAR. Is not the condition which the gentleman complains of in reference to these notes precisely the condition that exists in regard to national-bank currency to-day? Is not that redeemable by the Government, too?

Mr. HAYES. It may be. The Government has a 5 per cent deposit for that purpose, and if this bill had provided that this currency should be issued by the bank, that 5 per cent redemption fund should not only be continued, but I would increase it, or rather I would add to it a general fund, applicable to all these notes, whether put up by one bank or another. It should be raised by a tax on the notes and accumulated until it becomes adequate to insure the payment of every note on demand.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. HAYES. Certainly.

Mr. MADDEN. Of course, the Federal bank has no power to issue currency, has it? It can only apply to the Government of the United States for the issuance of that currency to the Federal reserve bank?

Mr. HAYES. Certainly.

Mr. MADDEN. Of course, the currency does not go into circulation until it is handed over to the Federal reserve bank and handed out to the people. But as a matter of fact it is the note of the United States Government?

Mr. HAYES. It is. There is no question about it. I do not see how there is any chance for any quibble on that subject.

BANK OR GOVERNMENT NOTES NOT MONEY.

But the proponents of the bill say in justification that the Government should issue all the "money" of the country. So it should. But whenever an individual or a government gives a promise to pay money that is proof positive that there is lacking money to pay obligations. Had there been and was there now no Government debt there would be no Treasury notes in existence to-day. If it was supposed that the Government would have the money necessary to loan these reserve banks whenever they wanted cash, do you suppose there would be a provision in the bill that the Government should lend the banks its credit in the shape of promises to pay money? Any school-boy ought to know that a thing can not be both conclusive evidence of the lack of money and money at the same time. Because a note or promise to pay money is sometimes made to serve one of the purposes of money, to wit, a medium of exchange, does not make it money any more than performing the

same function makes checks, drafts, and bills of exchange money. Money is something more than a medium of exchange. It must have not only intrinsic value, but it is, of course, that which measures the value of all other things.

I am speaking, of course, technically and scientifically. The law can make tobacco "lawful" money. It can make cucumbers "lawful" money. It can make a piece of paper "lawful" money; that is, make it a legal tender, but the statute never can on this or any other subject destroy the laws of nature; and no money statute can ever destroy the natural laws of trade and commerce any more than it can destroy the laws of nature, including human nature, and an attempt to do it will certainly bring bad results.

All students of currency and finance know that a bank note, so far from being money, is an evidence of debt—an instrument of credit absolutely no different in principle from a check or a certificate of deposit on a bank. A recognition of this undeniable fact will save gentlemen from any fallacies.

BANK RESERVES.

As to our reserve laws. In all other countries reserves are accumulated in times of easy money chiefly for use in times of stress, and in such times they are used very largely by the banks of other countries to meet the unusual demands of their customers. Not so here. They are accumulated to look at, perchance, to appear in the statement perhaps, to avoid impending bankruptcy of the bank itself perhaps, but never to be used for meeting new demands of customers.

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. HAYES. Yes.

Mr. J. M. C. SMITH. Will the gentleman be kind enough to explain what is the difference between a bank note and money?

Mr. HAYES. I have just explained that. Money has value. It has measuring power.

Mr. J. M. C. SMITH. Does it have intrinsic value?

Mr. HAYES. It has. Nothing can be money without it.

Mr. J. M. C. SMITH. What intrinsic value has a Treasury note?

Mr. HAYES. It has none. I made that distinction.

Mr. J. M. C. SMITH. Is not that money?

Mr. HAYES. That is made a legal tender and is legally money, but not scientifically, and I will tell the gentleman why. I will give him a concrete illustration, if he will pardon me. When I went to California for the first time, some 40 years ago, in 1872, those notes of the Government were at a 15 per cent discount. Why? Simply because the Government was unable to redeem them in gold. There was no other reason. When I went to California with my greenbacks I had to go to the banks and pay 15 per cent premium to get the gold that was the currency of that State. Why? Because the Government could not give me the gold for them. And let me tell you that when the Government of the United States passed the resumption act, which took effect in 1879, at the time that the bill first began to be considered by Congress there was a discount of about 8 or 10 per cent on greenbacks. Does the gentleman remember that that discount constantly got less and less as the time for resumption approached? And when the day came near, the rate of discount got to be three-fourths of 1 per cent, one-half, three-eighths, one-eighth; and when resumption day itself came, greenbacks were at par with gold. Why? Because the Government of the United States was then in a position where it could pay its notes in gold. That is what made them at par.

Five or six years ago when I was in Mexico you could take an American silver dollar and buy 2 pesos' worth of any kind of goods. The Government of Mexico put more silver into the Mexican dollar than the American Government put into the silver dollar of the United States. Why, then, will an American dollar buy twice as much goods in Mexico as the silver dollar of the Mexicans? Simply because the Government of the United States stands ready and is able to redeem that silver dollar in gold. That is what makes the difference.

Mr. J. M. C. SMITH. And is that intrinsic value?

Mr. HAYES. It certainly is. Gold in all the civilized countries of the world is the standard of intrinsic value.

Mr. J. M. C. SMITH. Is the silver in a silver dollar worth a dollar intrinsically?

Mr. HAYES. It is not; but the fact that the Government of the United States is able to redeem it and will redeem it on presentation and will exchange it for a dollar in gold makes it worth a dollar.

Mr. J. M. C. SMITH. And the gentleman calls that intrinsic value?

Mr. HAYES. I call that intrinsic value.

Mr. BARTLETT. Does the gentleman mean to say that the Government of the United States redeems silver dollars in gold?

Mr. HAYES. I do. That is the law at present. It is the

duty of the Secretary of the Treasury to maintain at a parity all forms of our currency.

Mr. BARTLETT. Oh!

Mr. HAYES. How is he to do it? He can do it in only one way, and that is to give a man who has a Government obligation any kind of currency in payment of it he wants.

Mr. PAYNE. I want to ask the gentleman, after the bill was passed in 1900, establishing the gold standard and requiring the Secretary of the Treasury to make all the money of the Government equal to a gold dollar, did not the Secretary of the Treasury issue an order, which exists to-day, that all forms of money coming into the Treasury shall be redeemed or exchanged for gold?

Mr. HAYES. Certainly. There is no question about it. That has been the uniform practice of the Treasury ever since. As I stated, the reason that every form of money in the Nation is as good as gold is because you can get gold for it. That makes it in a sense intrinsically valuable. If there is doubt about my note, as to whether I can pay it on demand, it will be subject to discount, but my ability to redeem it when it becomes due will make it valuable and as good as gold.

Mr. WINGO. Will the gentleman yield?

Mr. HAYES. Yes.

Mr. WINGO. I would be glad to have the gentleman define lawful money.

Mr. HAYES. The gentleman was probably not in the House when I did that a little while ago. I stated that lawful money was whatever was made legal tender by the law; but that does not affect the scientific discussion of this question.

Mr. SAMUEL W. SMITH. Mr. Chairman, will the gentleman yield?

Mr. HAYES. Certainly.

Mr. SAMUEL W. SMITH. I do not know as it fits in here; but is there any provision in this bill for protecting depositors?

Mr. HAYES. No.

Mr. SAMUEL W. SMITH. It is quite the custom throughout the country for banks to borrow money from the State or county treasurer, or school-district treasurer, and secure them. If it is proper and right to do that, why should there not be some provision in the bill to protect the ordinary depositor?

Mr. HAYES. The gentleman is not familiar evidently with recent history in one of the States, which is an answer to his question. The biggest bank in the State which guaranteed deposits has gone to the wall. The reason is that deposits when there is adequate guaranty of payment outside the bank itself will go to the bank that pays the highest rate of interest without reference to the banking methods it employs. It stimulates wildcat banking, and of course the result must be disastrous.

Mr. SAMUEL W. SMITH. Is it the judgment of the gentleman that there can be no provision whereby the ordinary depositor can be protected?

Mr. HAYES. I know of none; I should be glad if there could be.

I was stating, Mr. Chairman, when I was interrupted that in all countries excepting this reserves are used by the banks to meet unusual demands of their customers. In this country the law does not permit this. As soon as the reserve point is reached the law is that the banks can not use reserves for any new loans, but only to meet existing obligations.

This may be necessary under our system of independent banks, which, unlike those of England, for example, can not depend upon the Bank of England or any similar institution to replenish their reserves by rediscounting their paper or taking their securities and generally coming to their relief in times of stress.

That this bill, if the system it proposes can once be put into operation, will go very far to correct this weakness in our system, I have heard no one deny. In some quarters, however, the bill is severely criticized because it substitutes 12 regional reserve banks for the central bank with branches proposed by the late National Monetary Commission.

I am satisfied that our people have set their faces like steel against a central bank or any similar institution. They fear the danger of its falling into the hands of selfish and unscrupulous men, who will use the power thus acquired to their own enrichment and the oppression and impoverishment of the people. For the present, at least, we may therefore as well dismiss the thought of a central bank, by whatever name it may be designated, as a means for improving and strengthening our system. The people will not have it. For one, I am not sure but they are right. I very much doubt whether the central-bank idea as carried out in foreign countries is adapted to our conditions. France and Germany are countries but little larger than the State of California, from which I come, while England is but little more than one-third the size of California. A sys-

tem which works admirably in these little countries might be most unsatisfactory, if not a total failure, when applied to our vast extent of territory.

I believe that the people of the Pacific coast are almost a unit in desiring a system which will give us at least one reserve bank of our own, officered by men familiar with our section, and free to discharge its obligations to its member banks and take care of the business and commercial interests of our section, divorced, so far as government of the bank is concerned, from Wall Street influence or domination. They do not want to be absolutely dependent in times of financial distress upon the wisdom or generosity of the governor or directors of an eastern bank, central or otherwise. I know that other sections of the country feel the same way about it. This feeling may be all wrong and have no sound basis in fact, but in the interior and the West it is very general and strong, and must be reckoned with and considered in the framing of a currency bill.

FUNCTIONS PERFORMED BY CENTRAL BANKS.

And, after all, what functions do central banks perform? Principally the following:

1. They conserve and hold the metal supply of the country, so that its instruments of credit—its deposits and bank notes—may always have a substantial metallic basis to rest upon and so that this reserve may be readily drawn upon in times of need.
2. They create a place where other banks may rediscount their paper and so replenish their cash and reserves.
3. They act as fiscal agents of the Government.
4. They are made by law and custom the head of the commercial and banking system of the country, and so are able by reason of this position to be the controllers in large measure of its exchanges and commerce, dictating when necessary the rate of foreign exchange, and to some extent domestic exchange or rates of interest, and thus preventing the excessive export of gold.
5. They are generally given the exclusive right to issue notes or paper currency.
6. By their very bigness and the fact that they are supposed to be backed by the power of the Government they have a very powerful psychological influence upon the people, tending to quiet their fears in times of financial storm and thus prevent currency panics.

All these functions either are now performed by other instrumentalities in this country or can be performed by the regional reserve banks provided for in this bill.

The Federal Treasury is now holding and thus conserving the metal stocks of the country and issuing certificates upon them, exactly as the Bank of England issues its notes upon the gold in its vaults. The Treasury is supplemented in this activity by the banks. The greatest stock of gold in the world is held in our Federal Treasury—over \$1,250,000,000. No other country ever has much more than half this amount held in reserve. That the regional reserve banks can be made to perform admirably the other functions of a central bank no one will probably deny, unless possibly that of controlling the shipments of gold from and to foreign countries.

This may be a little more difficult to handle through several banks than it would be through one central bank. Still I conceive that the 12 banks provided by this bill under a central control will be able to handle the matter satisfactorily and possibly more in the public interest than a central bank operated wholly by private interests and free from Government control or supervision.

There is issued about \$90,000,000 of uncovered notes by the Bank of England, which is the amount of its stock in the form of a debt which the Government owes to it. In consideration of its not being obliged to pay that debt, the Government permits the bank to issue £18,500,000 of Bank of England notes without putting anything behind them. But aside from that the functions of the Bank of England are precisely those of our Government in issuing gold certificates.

I want to say, in this connection, that I approve the statement made by the chairman of the committee that this bill is an improvement on the bill suggested by the National Monetary Commission in this respect, that it does not give the control of the regional reserve banks to the banks who are to be its stockholders and patrons. [Applause.] No country in the world which has a great central bank gives the control of that central bank to the banks that patronize it. The Bank of England has no men upon its board of governors, as I understand, who are connected with any of the joint-stock banks in the Kingdom, and the laws of Germany give absolute control of the Reichsbank to the Government, but, like this bill, provide for an advisory board, and I have seen no trouble flowing from that

control. Hence that does not form, to my mind, any objection to this bill, but is, on the contrary, one of its merits.

The psychological effect upon the public on account of bigness in the case of the central institution will certainly not be greater than it will be in the case of 12 banks when the people understand that the 12 banks are so united in management and interest that for purposes of safety and soundness they are practically one institution.

For the reasons stated I believe that the 12 regional reserve banks will be more acceptable to the people whom I represent, and more satisfactory when in operation, than one central bank with branches.

DISTINCTION BETWEEN COMMERCIAL AND INVESTMENT BANKS.

To return now to the third weakness in our system—the failure of most of the State laws and of many of our bankers to recognize the difference between commercial banks and banking and investment banks and banking.

I think most bankers will agree that any bank the large proportion of whose deposits are payable on demand must keep the bulk of its assets in a liquid or easily convertible form, and to fail to do this is to court disaster. Most of our financial troubles in the recent past have been started by banks which did not observe this fundamental rule.

After many years' study of this subject and much reflection I am thoroughly convinced that we never can have a thoroughly satisfactory, strong, and safe banking and currency system in this country until the State laws recognize the fundamental difference between commercial banking and investment banking [applause] or until the bankers controlling the State banks recognize this difference and conduct their business in such a way that their demand or commercial deposits will not be loaned out on long time or invested in nonliquid loans or securities.

The statesmen who framed the law establishing the national banking system understood this distinction and its importance, and hence provided for strictly commercial banks, and prohibited such banks dealing in real estate mortgages or other nonliquid securities or loans. No commercial bank with deposits payable on demand, whether such bank be national or State, should be allowed to loan any large percentage of its money on real estate mortgages or on local industrial or other stocks and bonds not easily salable, and so convertible into cash. Any commercial bank having its deposits payable on demand, which has any large amount of these deposits invested in such loans, is a candidate for trouble, and trouble is pretty sure to overtake it when the first pinch comes. If it is a large bank, it becomes a financial menace in any community; the larger its deposits the larger the menace. There should, of course, be banks—investment banks—which can make loans on real estate and other more or less nonliquid though perfectly sound securities, but they should be conducted on something of the plan of the savings banks of California, whose deposits are divided into "time" and "ordinary" deposits. The time deposits need no legal attention; they take care of themselves; but as to ordinary deposits the bank may by resolution of its board at any time require a notice of not exceeding 60 days of intention of any depositor to withdraw the whole or any part of his "ordinary" deposit. In this way such a bank may legally protect itself in times of financial storm.

Yet, in spite of these elementary banking principles, from many sections and many elements of our population an insistent demand is made that we so modify the national banking law that national banks can lawfully loan their money on real estate and especially on farm mortgages.

If national banks are to loan on farm mortgages, then they must be allowed to conduct a savings-bank department and be permitted by the law to protect themselves like savings banks, when necessity demands it, by requiring sufficient notice of intention to withdraw such deposits. Only so can our national banks be kept safe and sound.

SAVINGS DEPARTMENTS.

For some years many national banks have received savings deposits, until now the number has reached nearly thirty-five hundred and the deposits aggregate nearly a billion dollars. This savings business is done entirely without authorization of law, and is permitted by the Comptroller of the Currency under indefinite limitations. The national banks also have complained because they were not allowed to engage freely in the savings-bank business. For that reason, they say, it has been hard for them to compete with the State banks and trust companies, who are allowed to do commercial, savings, and trust business all under the same organization. Section 27 of this bill is designed to remove this handicap as well as to afford enlarged facilities to the borrowing public in the rural sections. This section of

the bill permits loans of the savings department provided for therein on real estate and farm mortgages. It will be a great boon to the country districts and meets my hearty approval. At least one amendment, however, should be incorporated in the section. It is not made sufficiently clear that a bank which organizes a savings department must keep separate and distinct in each department the cash, securities, investments, and property belonging thereto. Unless the law is made clear and explicit in this regard such a savings department as is proposed by this bill might prove to be a menace to the national bank conducting it. This section should be amended by adding a paragraph like the following:

"It shall be the duty of every national bank having a savings department to maintain separate books of account for each of its departments and to segregate and keep separate and distinct in each such department the cash, securities, investments, and property thereto belonging; and each such department shall in the transaction of its business and the making of its investments be exclusively governed and controlled by the provisions of law and the regulations of the Federal reserve board or of the Comptroller of the Currency specifically made and provided with reference thereto."

With the addition of some such paragraph, I regard the section as one making a necessary and most valuable addition to the national banking system.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. HAYES. I do.

Mr. MOORE. This saving-bank feature is not compulsory upon the national banks? They may organize such a department?

Mr. HAYES. Yes; they may organize such a department.

Mr. MOORE. The gentleman approves of this feature of the bill?

Mr. HAYES. I do, heartily.

Mr. MOORE. The section provides for the complete separation of the commercial department of the bank from the savings-fund department?

Mr. HAYES. It does.

Mr. MOORE. In the event of the failure of the bank, what would be the effect on the savings funds?

Mr. HAYES. There would be no effect at all. The investments belonging to the savings department would be held in the first instance to meet the demands of the savings depositors.

Mr. MOORE. The savings deposits would not be mingled with the other funds?

Mr. HAYES. No; although I have suggested that that feature is not made sufficiently clear by the bill.

Mr. MOORE. In the event of a receivership, the funds in the savings bank would be treated in the same manner as those in the commercial branch of the bank?

Mr. HAYES. That is, they would be held to meet the demands of the depositors of that department of the bank.

Mr. MOORE. They would have no preference over the commercial side of the business?

Mr. HAYES. If there should be a surplus after the savings department is closed, of course that surplus, before it could be distributed to the stockholders, must be used to liquidate any deficiency that might exist in the commercial department, and the same would be true of any surplus of the commercial department if there should be a deficit in the savings department.

Mr. MOORE. Such by-laws as might be decided upon to regulate the savings institution would be arranged by the bank itself?

Mr. HAYES. Oh, no. The by-laws would have to be in conformity to the law and the regulations of the department.

Mr. MOORE. They would be subject, of course, to the approval of the comptroller?

Mr. HAYES. Yes; and the Federal reserve board.

Mr. HAUGEN. Will the gentleman yield?

Mr. HAYES. Yes.

Mr. HAUGEN. I wish to call the attention of the gentleman to the fact that his suggestion would incur an additional expense in bookkeeping, which might prove a hardship to the banks in the smaller towns. As the gentleman is aware, we have a number of national banks with small capital in the smaller towns, and it is necessary for them not to restrict their operations to commercial transactions, but they must necessarily do the business of the community where they are located.

Mr. HAYES. I think the gentleman has unnecessarily exaggerated the importance of that proposition. The expense will not be great, if anything.

Mr. HAUGEN. I think the gentleman is familiar with bookkeeping and banking.

Mr. HAYES. Yes; and the expense will not be great. If there is any expense, the advantage to the bank and to the community will be an ample reward for any extra labor or expense there may be.

Mr. HAUGEN. Many of the smaller banks are struggling hard to declare dividends of 8 or 10 per cent, and the burden of providing for an additional bookkeeper would be severely felt.

Mr. HAYES. I could read to the gentleman letters which I have received since this bill was printed—and I sent it out to all the banks in my district. If I had thought to bring them, I could read to him long letters praising this section in the most extravagant terms as the thing that the country banks have been long waiting for.

Mr. HAUGEN. Does the gentleman have reference to the privilege to loan money on real estate?

Mr. HAYES. I have reference to the savings-bank provision, section 27 of this bill. The permission in section 26 of the bill to loan on real estate is not so very important.

Mr. HAUGEN. That would be an advantage to some of the banks but not to the smaller banks.

Mr. HAYES. I must disagree with the gentleman.

Mr. CARTER. As I was passing through the Chamber a short time ago I heard the gentleman from California make a statement about some bank in a western State having failed and not having been able to pay its depositors. Was that the statement the gentleman made?

Mr. HAYES. I do not know that I made that statement. If I did I should correct it and say that I have understood from gentlemen from that State that the failure was a very bad one. Whether the bank paid its depositors or not I do not know.

Mr. CARTER. I presume the gentleman means the Columbia City Bank, in Oklahoma City?

Mr. HAYES. I think that is the name of the bank.

Mr. CARTER. I should like to put in the Record a statement of just what the condition of that bank was.

Mr. HAYES. The gentleman can put in the Record anything he desires to, but I do not care to yield to him at this time to make a speech.

Mr. WEAVER. Will the gentleman yield to me as a member of the committee?

Mr. HAYES. I certainly will.

Mr. BURKE of Pennsylvania. Mr. Chairman, I hope that the gentleman will speak loudly enough so that we can hear. I object to these whispered conversations.

Mr. WEAVER. Every dollar that the depositors had in that bank was immediately paid by the State, under its State banking law.

Mr. HAYES. I understand that.

Mr. CARTER. The deposits in that bank amounted to \$1,603,062.98, all of which were repaid.

Mr. HAYES. By the State?

Mr. CARTER. Out of the guaranty fund.

Mr. HAYES. Yes.

Mr. CARTER. On January 11, 1911, about \$1,000,000 of that amount had been refunded to the guaranty fund, and I think it has all been refunded since then.

Mr. HAYES. The gentleman will hardly contend, I think, that the system as it has worked out in his State has been such as to recommend it to the other States of the Union.

Mr. CARTER. There has been no loss to the depositors.

Mr. HAYES. Something like \$600,000, not to the depositors, but it came out of the guaranty fund.

Mr. CARTER. I say that much had been paid on January 30, 1911. My understanding is that since that it has all been refunded.

Mr. HAYES. The point is that the system stimulates unsafe banking and makes it the interest of the depositor to put his money in the bank that pays the highest rate of interest.

Mr. CARTER. That might be cured by not paying interest on deposits.

Mr. HAYES. This question is not involved in this discussion.

Mr. J. M. C. SMITH. I would like to ask the gentleman a question.

Mr. HAYES. I will yield to the gentleman.

Mr. J. M. C. SMITH. Is it not true that since the failure of the Columbia Bank of Oklahoma, Kansas, Nebraska, Texas, one of the Dakotas, Minnesota, and several other States have not enacted or passed a law for the guaranty of bank deposits?

Mr. HAYES. I think it is true.

Mr. KINKAID of Nebraska. Will the gentleman yield?

Mr. HAYES. Yes.

Mr. KINKAID of Nebraska. I want to say that Nebraska has a guaranty law, and it has been upheld by the Supreme Court.

Mr. STEENERSON. Does the gentleman from California intend to assert that Minnesota has such a law?

Mr. HAYES. I did not so understand it; no.

Mr. QUIN. Will the gentleman yield?

Mr. HAYES. Yes.

Mr. QUIN. The gentleman's suggestion is that it makes the three department chiefs mere figureheads.

Mr. HAYES. I will come to that in a moment. They should not be on the board at all, because they will be figureheads.

FEDERAL RESERVE BOARD.

Much criticism has been leveled at this bill because of the political character of the Federal reserve board, who are given by it almost absolute control of the Federal reserve banks and the currency proposed to be issued through them. An effort has been made to make this board nonpartisan by the provision in section 11 of the bill reading as follows:

Of the members thus appointed by the President not more than two shall be of the same political party.

While I regard this provision as most commendable and desirable, I think the character of the board could be vastly improved and the possibility of its becoming a political machine much lessened by striking from the bill the provision making the Secretary of Agriculture and the Comptroller of the Currency ex officio members. The reasons for this change are, briefly, as follows:

1. Both these officers are the political appointees of the President and hold their positions during his pleasure. They are therefore easily and naturally subject to political influence exerted by the administration of the party in power. The Secretary of the Treasury, who since he is the head of our financial system should probably be on the board, is in the same position with reference to possible political influence as the Secretary of Agriculture and the Comptroller of the Currency. Any President would always have as his appointee at least one of the appointed members of the board. The four members I have named would, under the provisions of the bill, be able absolutely to control the action of the board. Even if this was never done, the fact that it could easily be done would cause it to be generally charged by the enemies of the then existing administration that the board was being used for political purposes. The possibility of doing this, or the temptation to do it, should be as far as possible removed.

2. This reserve board are given most important, complex, and responsible duties to perform. In order to properly perform these duties the members should devote all their time to the work. But the Secretary of Agriculture has his hands full in managing one of the largest and most important executive departments of the Government. He should devote all his time and energies to his department. It seems plain that he could not be Secretary of Agriculture and at the same time a satisfactory member of the reserve board. The same is true of the Comptroller of the Currency, who is charged with the supervision of the whole national-banking system and who does have and should have his time fully occupied with those duties.

3. It follows from the above that neither the Secretary of Agriculture nor the Comptroller of the Currency could become thoroughly familiar at first hand with their duties as members of the board and would of necessity be unfamiliar with much of the detail of matters with which the board would have to deal. It seems likely that these two would seldom be active on the board except when questions relating to the policy of the administration in power were under consideration or matters more or less political were involved.

4. If this provision of the bill remains the President, in appointing a Secretary of Agriculture, would at least be obliged to consider his qualifications both as a member of this board and as the head of the Agricultural Department. Very few if any men would be found to possess the essential qualifications for both these positions. It might even be that his duties as member of the Federal reserve board would be regarded as more important than those pertaining to the position of Secretary of Agriculture, and so a man would be selected primarily not because he was a great agriculturist, but because he was a banker or a business man of large experience.

For these reasons it seems clear to me that neither the Secretary of Agriculture nor the Comptroller of the Currency should be on this board. I am aware that in this the majority members of the committee followed the precedents set by the Fowler bill of 1908, and the bill proposed by the more recent National Monetary Commission. In my judgment, even under the two plans proposed by these bills, these two officers should not have been made ex officio members of the national board in control of the banking and currency system, though in the two former bills there was a reason for this that does not exist under this bill. By the terms of both the former bills

the members of the national board were elected by the banks, and these three ex officio members were the only representatives the Government had on the board, while under the present bill all members of the board are appointed by the President and are Government officials, so that no ex officio representatives of the Government are needed.

If the gentlemen of the majority want to give the farmers representation on the Federal reserve board, let them not make to the farmers "a promise to the ear and break it to the hope" by putting an officer who is a representative of the agricultural interests on this board but who can not spend all his time in representing them; let the bill provide that one of the four men appointed on the board by the President shall be representative of the agriculturists of the country. Then the farmers would be getting something substantial and worth while. Under the bill as now drawn they are getting only the shadow, not the substance.

Mr. Chairman, there are many other provisions in this bill that I should be glad to discuss, and several other changes that I would like to suggest, but I have already occupied too much time. I trust that many, if not all, the changes that I have suggested, and others that will improve the bill, may be incorporated before it reaches its final stage and passes into a law. It is perhaps too much to expect that the bill can be so improved as to finally receive the support of all parties in this House, but I certainly hope that it may be so amended that, when it does finally receive the approval of this House, the vote by which that approval is recorded will not be along party lines. [Loud applause.]

Mr. UNDERWOOD. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee determined to rise; and the Speaker having resumed the chair, Mr. GOODWIN of Arkansas, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7837, the currency bill, and had come to no resolution thereon.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Baker, its Secretary, accompanied by the Sergeant at Arms of the Senate, Mr. Higgins, announced that the Senate had passed with amendments the bill (H. R. 3321) to reduce tariff duties and provide revenue for the Government, and for other purposes, had asked a conference with the House of Representatives on the bill and amendments, and had appointed Mr. SIMMONS, Mr. SHIVELY, Mr. WILLIAMS, Mr. JOHNSON, Mr. PENROSE, Mr. LODGE, and Mr. LA FOLLETTE as the conferees on the part of the Senate.

Mr. UNDERWOOD. Mr. Speaker, I desire to ask unanimous consent that it shall be in order to move to nonconcur in gross in the Senate amendments to the bill H. R. 3321, the tariff bill, agree to the committee of conference asked for by the Senate on the disagreeing votes of the two Houses, and that the House shall, without further delay, proceed to vote on the motion, and if the motion shall prevail the committee of conference shall be appointed without instructions, and said committee shall have authority to join with the Senate committee in renumbering the paragraphs of the sections of said bill when finally agreed upon.

The SPEAKER. The gentleman from Alabama asks unanimous consent that it shall be in order to move to nonconcur in gross in the Senate amendments to H. R. 3321, the tariff bill, agree to a committee of conference asked for by the Senate on the disagreeing votes of the two Houses; that the House shall without further delay proceed to vote on the motion, and if the motion shall prevail the committee of conference shall be appointed without instructions, and that it shall have authority to renumber the paragraphs and the sections of the bill when agreed upon. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, may I ask the gentleman from Alabama if he knows how many Senate amendments there are?

Mr. UNDERWOOD. There are several hundred.

Mr. MANN. I hold them in my hand and there are 676. That is a considerable number of amendments to disagree to in one bunch. Would not the gentleman be willing to let the House vote on some of the amendments which might be indicated on this or that side of the House?

Mr. UNDERWOOD. I will say candidly to the gentleman that what I have asked for is, as the gentleman recognizes, the language that was adopted in the rule by the House when the Payne tariff bill went to conference. So that we are following in the path of that side of the House.

Mr. MANN. The gentleman from Alabama has frequently said that the action of the Republican Congress on the Payne

bill has been repudiated by the people. It was denounced by that side of the House. Has the gentleman changed his views?

Mr. UNDERWOOD. Not at all, except this: That the people of the country did not want the Payne bill and were not in a hurry for it. The people of the country want this bill and are in a hurry for it.

Mr. MANN. Not up in Maine; the indications in Maine do not look that way. I shall have to object to a request to disagree to 676 Senate amendments without a chance of anybody in the House moving to agree to some amendments which ought to go in.

The SPEAKER. The gentleman from Illinois [Mr. MANN] objects.

Mr. UNDERWOOD. Mr. Speaker, I desire to give notice that I will introduce a rule to send the bill to conference, and hope it will be reported to the House at 11 o'clock to-morrow morning, and that we may have a vote on it and have a quorum present. Now, I ask unanimous consent that the Clerk may number the Senate amendments—

Mr. MANN. The Senate amendments are numbered.

Mr. UNDERWOOD. I think that was done by the clerks preparatory—

Mr. MANN. It is in the resolution which comes from the Senate. The Senate amendments are numbered, and it does not require any action.

Mr. UNDERWOOD. I did not know they had—

Mr. MANN. I wish the gentleman would ask unanimous consent to have the bill printed with Senate amendments. I think it could not be done without that, being on the Speaker's table.

Mr. UNDERWOOD. The engrossed copy is numbered. I am inclined to think it was numbered without the consent of the Senate—

Mr. MANN. Oh, no.

Mr. UNDERWOOD. The Clerk called my attention to it and asked me—

Mr. PAYNE. Mr. Speaker, do I understand the gentleman from Illinois that the Senate bill is printed with amendments in their proper place and numbered?

Mr. MANN. No.

Mr. PAYNE. I think that should be done. The bill ought to be printed with the amendments indicated in the text of the bill and numbered consecutively.

Mr. MANN. This is the resolution passed by the Senate:

Resolved, That the bill from the House of Representatives (H. R. 3321) entitled, etc., do pass with the following amendments.

And they are numbered. This is a communication which has just come from the Senate, not very fully stated by the clerk who brought it over.

Mr. PAYNE. I think the gentleman from Alabama ought to get consent to print the bill with the amendments in their order and numbered in their order.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent that 5,000 copies of the bill may be printed, with Senate amendments numbered in their proper order, and placed in the document room for use of the Members of the House.

Mr. MANN. That is the bill with Senate amendments?

Mr. UNDERWOOD. Yes.

The SPEAKER. The gentleman from Alabama asks unanimous consent that 5,000 copies of the tariff bill with Senate amendments be printed and placed in the document room and that the Clerk shall be authorized to number the Senate amendments consecutively in their proper place. Is there objection? [After a pause.] The Chair hears none.

The gentleman from Alabama announced that he expected to have a rule ready to send this bill to conference in the morning at 11 o'clock, and requested all gentlemen to be present.

Mr. STEENERSON. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. STEENERSON. Will there be any opportunity to present a motion to concur in Senate amendments before that?

The SPEAKER. The Chair can not tell what will be in the rule, but if the Chair should guess the Chair would guess there would not be.

Mr. STEENERSON. Mr. Speaker, I move to agree to Senate amendment, paragraph 4964, putting furs on the free list. I believe that is a preferential motion and I do not want to be cut off.

Mr. UNDERWOOD. Mr. Speaker, I make the point of order that the gentleman's motion is not in order at this time, as the bill is not before the House.

LEAVE OF ABSENCE.

By unanimous consent, Mr. SMITH of Maryland, was granted leave of absence for two days, on account of important business.

CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the currency bill.

The SPEAKER. The gentleman from Virginia [Mr. GLASS] moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, the currency bill. The question is on agreeing to that motion.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, the currency bill, with Mr. GARNER in the chair.

Mr. GLASS. Mr. Chairman, I yield 45 minutes to the gentleman from Indiana [Mr. KORBLY].

Mr. MURDOCK. Mr. Chairman, just one minute before the gentleman from Virginia yields. There has been one speech by a Democrat and one by a Republican, and does not the gentleman think that the Progressives ought to get in one speech on this proposition?

Mr. GLASS. I suppose the gentleman from Kansas can follow the gentleman from Indiana.

Mr. KORBLY. The suggestion of the gentleman from Kansas would come with more grace if he were a member of the committee.

Mr. MURDOCK. I realize that the gentleman from Indiana has the preference.

Mr. KORBLY. Mr. Chairman and gentlemen, the exhaustive and learned speech by the chairman of the committee [Mr. GLASS] makes it unnecessary that I should go into a detailed discussion of this bill and makes it unnecessary that anyone else should undertake to do so. I listened to the speech with great pleasure and profit, as I listened to the speech of my colleague from California [Mr. HAYES], who is a very learned man on this subject. I think the highest compliment that could be paid to the bill over and above the fact that he, as a member of the committee, did not vote against reporting the bill, and the fact that he expects to support it in the House, is the fact that with all his learning he can not point out other than a few unimportant defects in the bill.

If this bill be a partisan bill, it is none the less a good bill. I venture to say that if human ingenuity had set out deliberately to make banking laws bad, it could not have accomplished the work more fully and completely than it has been accomplished by the legislation of the Republican Party since the Civil War. There were some great blunders written into the national-bank act and they partook of the halo of the Civil War. It was often said, even in my time, that you must not say anything against the greenback, you must not say anything against the national-bank note, because they are an arm of the Government and helped to carry on the war. It might not be strange that people in the North would give reverence to such things, but what do you think of southern gentlemen who are now found making their obeisance in that direction?

The duty that confronts Congress at this time is to remove the legislative obstacles to good banking that have accumulated during 50 years. There is nothing for Congress to do but take away these obstacles to good banking, and these obstacles are the result of legislation at the hands of the Republican Party.

In order to find out what is wrong in our banking laws we must know what is right in banking.

There are certain defects in our banking laws and they may be classified as defects of control and defects of banking machinery.

You may have a very good automobile, a splendid machine, ready for use in the work it is intended to do, but put it in the hands of a chauffeur who does not know how to operate the machine, and what difficulties will arise on account of that fact the good Lord alone knows. Now, I say again, there are certain defects of machinery we have to meet and correct, and then there are certain defects concerning the control of this machine that go to the judgment and discretion of men who manage it.

The defect of machinery consists I think largely in the fact that we have an inelastic currency. Our currency is redundant at certain times of the year and at certain other times of the year it is very apt to be very scarce. Elasticity of currency means that there may be expansion of currency and contraction of currency. This we have not. Now it has been pointed out time and time again that there are about thirty-three hundred million dollars in currency provided for the people, and it has been pointed out that about fifteen hundred millions of this is im-

pounded in the bank vaults of the United States, where it is used as reserves, and the balance of it, whatever that may be—some say about one thousand eight hundred millions—is in the pockets of the people, in the money tills, in the Treasury of the United States, and in other places. When the people want currency in an unusual amount, as when they need it in the moving of the crops, they have no place now to get it except to go to the banks, and the banks have no place except to take it out of the bank reserve, and just as soon as the banks undertake to supply the needs of the people for currency that moment they begin to diminish their reserve below the legal requirement, and, as Mr. HAYES very clearly pointed out, they are then reduced to the necessity of violating the reserve laws of the United States or else refusing to extend credit to the merchants, farmers, or manufacturers who are entitled to credit and need it badly. It was some such defect of machinery as this in my opinion that brought on us the trouble in 1907. That year there was an abundant crop and that very abundance of crop got us into trouble because of our foolish reserve and currency laws.

The United States is the only civilized country on earth that has a fixed reserve. We have fixed the reserve in such a peculiar way as causes the reserve to pile up in the great money centers like New York City, and then when the reserves are wanted, not because the people want lawful money but because they want currency, the banks out West seek to get that currency which has been sent to New York, but they can not get it because it is held in New York as a reserve against discounts and loans to carry enormous trading and holding transactions on the New York Stock Exchange. I would like for Mr. HAYES and others to bear in mind this important distinction, that "money" that is lost on the New York Stock Exchange upon gambling transactions is not lost to the Nation. It involves merely a change of ownership from one person to another. It is not the destruction of wealth that causes evil to the whole people, such as flows from unwise loans.

We are prone to blame the bankers of New York for the very things that our foolish laws have put upon them and put upon the country. Not only this, but the bankers have been deprived of one of the most important instruments with which to serve the people by reason of the fact that they have not been clothed by law, or rather they have been by law deprived of the right to issue notes.

I do not overstate the case. Inelastic currency and fixed or rigid reserve requirements are the twin evils or defects of our banking machinery. For bear in mind that the right to issue a note by a man, by an individual, is an inherent right, a common-law right, and while corporations do not possess natural rights it is not difficult to see the need of this right for corporations engaged in banking.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN (Mr. CULLOR). Does the gentleman from Indiana yield to the gentleman from Texas?

Mr. KORBLY. Yes.

Mr. CALLAWAY. The gentleman says the banks of New York ought to have the right to issue notes?

Mr. KORBLY. I did not say the banks of New York.

Mr. CALLAWAY. The gentleman says we have deprived them of that right.

Mr. KORBLY. No. We have deprived the banks of the United States of the right to do it.

Mr. CALLAWAY. The gentleman thinks that they ought to be relieved of that restriction?

Mr. KORBLY. There ought to be an elastic currency, and if there were an elastic currency the people of the United States would not be dependent upon getting lawful money back from New York or any other place in order to meet their needs for currency.

Mr. CALLAWAY. Would bank issues give it to them?

Mr. KORBLY. Certainly.

In 1907 there was need of currency in the land for moving the crops, and the people had no way of getting it except from the banks and the banks had no way of supplying it except out of their reserves. The country banks had sent a large part of their reserves to New York, under our foolish banking laws, and then asked to have it returned to them.

It must be remembered that all money is currency, but all currency is not money. Under our laws to-day we practically are compelled to use reserve money for currency.

I say again, the people did not want lawful money for lawful money's sake. They wanted mere currency, and the New York banks had it invested in stock gambling transactions on the New York Stock Exchange and could not send it back as fast as needed in the West. That was nothing in the world but a currency stringency—a famine of currency. I say it

with some emphasis, if you please—it was a currency famine and not a credit famine.

What was the result? The result was a paralysis of the mechanism of exchange in the United States. Twenty-five thousand banks entered an immediate scramble for currency. An agony of fear seized the country and the foundations of credit were tested.

Confidence in banking is a double-edged sword. A depositor who gives the banker power to lend must have confidence that his funds are safe, and the banker who lends the funds of his depositor must have confidence that these funds are safe and will be wisely used and returned at the appointed time.

The result, if you please, was the same as was caused by the great railroad strike in Chicago in 1894, which I remember.

You not only have to exchange the ownership of the products of labor through the instrumentality of banking, but you have to move the products from one part of the earth's surface to another, from California to Maine, from Washington to Chicago, from Indianapolis to Boston. Every day, every hour, there is a movement of the products of labor, and when the great mechanism of transportation was paralyzed by that strike commerce was paralyzed, and when as a result of this great famine of currency the bankers took alarm—and they had a terrible alarm, a perfect spasm among themselves—the result was that 25,000 separate banks in the United States began to reach out for currency, always for currency. This very anxiety for currency engendered a fear that all was not well, and the banks suspended payments, not, however, without entering into an agreement to do so, for not one of them would have suspended without the moral support of the others in so doing.

Mr. HAYES. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. KORBLY. Yes.

Mr. HAYES. The gentleman speaks about the people wanting currency. I want to ask him if he does not think a good and sufficient deposit in the banks would answer every purpose just as well as currency?

Mr. KORBLY. The gentleman is in full agreement with me that we need an elastic currency. I recognize that the more highly organized our credit system is the less gold and currency is needed. I do not think that suffering when "money is scarce" has to do with the lack of gold or the lack of bank notes.

Mr. HAYES. Is it not true that in this country we have vastly more of the circulating medium than in any other country in the world?

Mr. KORBLY. Yes.

Mr. HAYES. So that primarily it is not elasticity of currency that we need, but elasticity of credit?

Mr. KORBLY. There is no such thing as "elasticity of credit."

Mr. HAYES. The reserve provision of this bill would at least afford extension of credit?

Mr. KORBLY. Yes. I will come to that presently, if I do not overstep my time. The reserve section of the bill diminishes an old legislative obstacle to liquid commercial banking.

The result of this famine of currency in 1907 was simply to precipitate a testing of the foundations of credit; and I say to the gentlemen of the House that an unnecessary testing of the foundations of credit is a dreadful thing and has dreadful consequences. I have believed continuously since that time that there was then no great abuse of credit. There was no destruction of wealth. The bankers had not loaned unwisely to such a great extent as to injure the people of the United States by the destruction of wealth. Nevertheless the result of that famine of currency precipitated a testing of the foundations of bank credit and brought on a paralysis of the mechanism of exchange—the machinery of commerce—and the consequences were lamentable, and the country has not yet fully recovered therefrom.

The gentleman from California [Mr. HAYES] speaks about the elasticity of credit. Let us consider for a few minutes the question as to whether there is any such thing as elasticity of credit.

The commercial bankers of the country can not lend anything that the depositors have not put in the banks. All of the deposits in the banks consist of the proceeds of the sale of products, the proceeds of the sale of commodities, the proceeds of the sale of wealth. A cotton grower of the South may sell several bales of cotton and draw upon the man to whom he sells and discount his drafts with his banker. The banker gives him credit for that amount. He has no immediate use for the whole of the proceeds of his sale, so he leaves it with the banker, and the banker is enabled to lend part of the proceeds of that sale to some merchant who may have to buy merchandise, but the banker can not lend anything to anybody unless somebody has

deposited with him the means to lend—and it is not money that is lent.

To say that the commercial banks can not lend anything that depositors have not placed in their keeping for that purpose is just another way of saying that the only limit to a commercial bank's ability to discount is the limit to good commercial paper that offers for discount. This is true for the reason that such paper springs from self-clearing transactions.

The banker deals in purchasing power lodged in his hands by one principal and borrowed by another, for a banker is a broker between two principals.

The great events of banking, the abundance or scarcity of its resources, its ability to assist trade, low or high rates of discount, panics and crises, are to be found not in banks and bankers, but in the state of the wealth of the country and in the effects which this wealth produces on the two principals whom the banker has brought together.

Mr. HAYES. Will the gentleman permit a question?

Mr. KORBLY. Yes.

Mr. HAYES. I should like to ask the gentleman if it is not true in the case he puts that the condition of the bank's reserve might be such, under the present law, that it would be impossible for the banker to give his customer credit.

Mr. KORBLY. Yes. I thoroughly agree with the gentleman on that.

Mr. HAYES. And is it not also true that in the panic of 1907 the primary cause was not the lack of currency? There was plenty of currency in the country, but the primary cause was the failure of the banks to give credit which otherwise their customers would have been entitled to.

Mr. KORBLY. There was, perhaps, plenty of currency in the country, but it was not in the right place. There is a great measure of truth in what the gentleman says. It is the duty of the banker to discount freely for his customer in a crisis or panic. The only limit to the ability of a banker to discount is the limit to good liquid commercial paper.

Mr. LINDBERGH. Is it not frequently the fact that, instead of depositing checks or money, parties give their notes and credit is given on the notes?

Mr. KORBLY. It is the same thing. There is no deposit in a commercial bank unless somebody has sold something, and the bank is not called on to pay any checks unless somebody has bought something. The resources of the bank are always the receipts from sales made by somebody, and its liabilities are always its necessity to pay bills for goods that somebody has bought.

No one borrows from a bank but to buy goods and no one deposits in a bank but in consequence of his having more goods than he can use and of having sold the surplus.

The possession of reserves in greater or less amount does not in the slightest degree increase the ability of the bank to lend, and that is the fundamental principle that is involved. Ah, my friends, the thing that is involved in the safety of banks is not large reserves but the state of the wealth of the country—that, and nothing else in the world than that.

It is what is happening to goods and merchandise and not what is happening to gold or lawful money and bank notes that causes high discounts. Diminishing reserves do not cause high discount rates.

Mr. WINGO. Will the gentleman yield for a question?

Mr. KORBLY. Yes.

Mr. WINGO. In that connection I should like to know if the gentleman thinks you can add to wealth by legislation?

Mr. KORBLY. Certainly not. You might just as well undertake to increase the population of a town by building more houses, or to increase the food in the land by increasing the number of meal tickets, or to increase the foreign trade by building more ships, as our ship-subsidy advocates would have us do. You can not make wealth by legislation.

Primarily what we need to import into America to-day is more wealth and not more gold to be used in transferring wealth from one ownership to another.

Mr. WINGO. In that connection does the gentleman intend to be understood as saying that the only trouble is a lack of wealth? Because if that is the trouble, we can not remedy it by legislation.

Mr. KORBLY. That is an important question. Verily, you can not regulate it by legislation.

Mr. ALEXANDER. Will the gentleman yield?

Mr. KORBLY. Yes; but I should like to answer this question before I get to others. The question which the gentleman has asked raises a most important question in banking, in my opinion.

The stock of gold the world over remains the same whether the Nation is bulging with prosperity or shrinking under the blight of poverty.

A scarcity of currency or a currency famine may exist under our national-bank laws at a time when wealth is very abundant; witness 1907.

A scarcity of wealth may exist under any banking law when currency is abundant.

The multiplication of bank notes or Government notes or the importation of gold will not avail the people if wealth is scarce.

The causes which act on banks relate to capital exclusively—to the influences of increasing or diminishing wealth. Banking is an agency between lenders and borrowers of wealth.

I said a while ago that the banker has to perform an important function for society, and the gentleman from California [Mr. HAYES] knows it better than anybody else, so far as we know from what has been said on the floor. The banker has to guarantee the depositor that the funds which he leaves with the banker will be wisely loaned and used so that when the payment time comes the man who borrowed the funds will be there with payment.

The depositor has no security for the safety of his debt but the solvency of the banker.

What wildcat schemes may not a banker have supported?

The banker is uneasy for the reason that his commercial paper may be worthless because the makers are insolvent.

A bank is strong or weak according as its banking is good or bad, according as its resources derived from the sale of goods are large or small, and according as those to whom it has lent have preserved or destroyed the commodities which they purchased with the bank's loans.

It is not enough to say that the banker must have a good security. If the banker lends the funds, his control of property goes to the man who borrows, who buys goods or merchandise. If the borrower buys automobiles and wine and has a good time, he will not have the wherewith to pay when the day of payment comes. If he borrows to make a crop, if he borrows to pay labor, so that there may be an abundant harvest as the result, he will most likely have the wherewithal to pay, and it is because the banker has the wisdom and the courage to know to whom to lend and for what purpose that we are to avoid disasters. This bill fully recognizes that fact and gives the remedy.

In the past one of the greatest troubles has been the failure of the banks to discriminate between savings-bank and commercial-bank functions, and one of the purposes of this bill is to segregate and divorce those two banking offices and to hold the commercial bank solely as a servitor of commerce and segregate the savings banks. The committee fully comprehends that savings are simply the surplus of product over and above what mankind needs for daily consumption and that the funds in commerce are those which he has for consumption to-day in order that he may produce additional wealth to take care of his wants to-morrow.

Mr. PLATT. I think the gentleman said the banks can not loan money until somebody had deposited money.

Mr. KORBLY. Certainly not.

Mr. PLATT. Suppose I go to a bank to borrow \$10,000, and I am credited in the bank. Do the deposits go to make up that \$10,000?

Mr. KORBLY. Yes.

Mr. PLATT. Are not the bankers loaning that \$10,000 without anything deposited?

Mr. KORBLY. No; you deposit your note. That, however, is not commercial paper and is not the kind of a loan that is contemplated in this bill. As I tried to make perfectly clear, this bill proposes that, so far as the commercial bank is concerned, it shall be permitted to serve commerce, and the kind of transaction the gentleman has just suggested is not included in strictly commercial banking.

Mr. PLATT. Is it not a fact that deposits in the bank are 90 per cent credit, and not actually put in the bank?

Mr. KORBLY. The banker deals not in money. The banker no more deals in money because he handles money than grocers or druggists deal in money because they handle money. The merchant has to have a little money in his till for change, and so does the banker. I lay down the principle that a bank's ability to discount for one of its customers is not related in any manner whatever to the reserve. There is no civilized country on earth that has a fixed reserve but the United States, and Mr. HAYES has made clear the fact that this defect in our banking machinery has contributed much if not more than anything else to our disasters in the past.

A bank deals in debts. It buys notes and bills of exchange, which are the instruments of commerce.

To understand the banker's profession we must know about bills and checks. We must know what they are and where they get them, and when they are abundant and when they are

scarce, and what makes them abundant and what makes them scarce. Checks and bills of exchange may do the same work that money does, and so will parole or verbal agreements do the same work; but oral agreements are less efficacious than bills and checks, because bills and checks are claim tickets or title deeds to money, or money's worth of wealth.

How do checks and bills come into existence? They are the offspring of sales. Every man who gives a check to a bank for deposit has previously sold something for which he received the check in payment. This check he takes to his banker to collect it for him, which the banker does, and credits him on the bank books with the proceeds. Now, when this man buys something, he draws a check, commanding the banker to pay his debt out of the proceeds of the check which the bank collected for him.

The banker's most characteristic quality is that he is only an intermediate agent. His sole action is to place the ownership of property in different hands.

Mr. MADDEN. Do I understand the gentleman to say in reply to the question of the gentleman from New York [Mr. PLATT] that this bill was intended to prevent the kind of transaction he suggested?

Mr. KORBLY. Yes; certainly. Only paper growing out of commercial transactions will be subject to rediscount under this bill.

Mr. MADDEN. Do I understand the gentleman to say that if I want to borrow \$1,000 or \$10,000 that under this bill I could not go to a bank and get it?

Mr. KORBLY. Could not go to what bank?

Mr. MADDEN. Could not go to a bank and borrow that?

Mr. KORBLY. This bill has for its purpose the control, the moral control, over banks that become members of the system. We have no system now and we propose to create a system, and we propose this system shall be under the control of these 12 banks which are under Government control and that there shall be an influence on the character of paper which member banks may discount. Member banks will not discount the kind of paper that is not rediscountable under the terms of this bill.

Mr. MADDEN. Does the gentleman wish the House to understand—

Mr. KORBLY. I wish the House to understand every proper inference that may be drawn from my statement.

Mr. MADDEN. The gentleman wishes the House to understand that if a man in business went to his bank in which he was a depositor and wanted \$10,000 to use in his business that under this bill he would not be able to get it?

Mr. KORBLY. Oh, no; the House does not so understand me. The gentleman may hug that delusion, but the House does not so understand me.

Mr. PLATT. Mr. Chairman—

The CHAIRMAN. Does the gentleman from Indiana yield?

Mr. KORBLY. I am consuming a great deal of my time in answering questions and not in making my argument; but I will yield with pleasure.

Mr. PLATT. Is it not a fact in the issuing of statements of the banks loans and deposits go up at the same time; that deposits are nearly all loans; that they fluctuate together always, and there is not any room for the latitude—

Mr. KORBLY. There is no truth in banking that is more important or more clear than the fact that what the bank has to loan is what the depositors leave with the banker. It is not money, it is not bank notes, but it is simply the purchasing power, the proceeds of sales.

Mr. PLATT. It is simply the right to draw out of the bank.

Mr. KORBLY. Let me read a paragraph from Adam Smith, the greatest of political economists:

If gold and silver should at any time fall short in a country which has wherewithal to purchase them, there are more expedients for supplying their place than of almost any other commodity. If the materials of manufacture are wanted, industry must stop. If provisions are wanted, the people must starve. But if money is wanted, barter will supply its place, though with a good deal of inconvenience. Buying and selling upon credit, and the different dealers compensating their credits with one another, once a month or once a year will supply it with less inconvenience. A well-regulated paper money will supply it not only without inconvenience, but in some cases with some advantages. Upon every account, therefore, the attention of government was never so unnecessarily employed as when directed to watch over the preservation or increase of money in any country.

The people of the United States are busy producing wealth, and by "wealth" I mean food, clothing, building material, and fuel, broadly defining it. And they are not only engaged in producing it, but they are also engaged in transporting it and exchanging it with each other; and the instruments of exchange are money and banking.

Money does two parts out of every hundred dollars of it, and banking does the balance of it without the use of money, except in so far as the things exchanged are valued in money. It is a

question of bookkeeping, a question of checks, a question of clearing houses; and I say that it is not for sensible men to argue that the people are unable to exchange their products because, forsooth, there is a little more or less gold in somebody's cellar.

A bank can not lend more to its customers because more gold or lawful money has been put in the bank's vault. Gold or lawful money is not lent. Gold or lawful money or bank notes are used in only two or three out of each one hundred dollars worth of business done.

Gold may be dug out of one hole and put into another; it may be moved from one place to another place, but will some philosopher tell a waiting and an anxious world how gold in one place instead of another will give the people of the Nation the food to satisfy their hunger or the clothing to protect them from the cold?

What do you think of the proposition, my friends, that when the people are hungry and want food we shall import gold instead of food? When the people are hungry and want food, if we have gold, we will export gold in order that we may bring food to our shores in its place. If the people are naked and want to be clothed against the elements, and we have gold and not clothing, we will export the gold in order to get the clothing. The last thing in the world they want when they are suffering is gold. What they want is food, clothing, building material, and fuel, the four great things that go to make up material civilization; and banking is nothing but the instrument of commerce by which these things are exchanged.

There is no relation whatever between the bank's reserves and the discount rate.

There is no relation whatever between the bank's reserves and its ability to discount.

This bill gets my support because it seeks to separate savings banking from commercial banking, and will exercise a controlling influence in holding commercial banks as the real servitors of commerce, to the end that the machinery of exchange will always do the work which it is intended to do.

My friend the chairman of the committee [Mr. GLASS] spoke about the 10-year period of recurring panics. There is no inherent necessity for these recurring panics. These recurring panics can not be stopped by legislation, because legislation will not save a people from the consequences of their own folly. [Applause.]

Panics spring from moral forces, and by moral forces they may be prevented. Bankers must themselves learn the lessons which they teach; they must consider the nature of the enterprises which they support, not their soundness only, for it must be admitted that as a whole they do not support unsound projects.

The entire history of the national banks is a flattering tribute to the character of the national bankers, in that they have not in any but a negligible way invested their bank funds in unsound paper—that is to say, in paper that was not certain to be paid ultimately. The percentage of losses to depositors in national banks growing out of the failure of national banks is surprisingly small.

The distinction, however, between losses to depositors due to the failure of banks and losses of the whole people due to the breaking down of the mechanism of exchange, as in 1907, must be borne in mind. The losses in the United States due to the collapse of the banking system is incalculably large.

The capacity of the capital in the Nation to execute or work out the projects supported by bankers within the time fixed therefor—that is to say, the turn-over period—and without temporary disaster is the all-important thing of which the commercial banker must assure himself.

Bankers ought to study political economy and learn the meaning of the word "savings." When they shall have come to a full knowledge of the fact that savings are the excess products over and above daily consumption, and that it is this excess alone which can be applied to new undertakings without pauperizing the money market, we shall have taken our longest and most important step to prevent panics. For upon the perception of this great natural law and rigorous obedience to its prescription depend the prevention of panics and crises, and there is no other remedy.

I believe that the rediscounting provisions of the present bill will impress this truth upon such of our bankers as need the lesson and will to this extent educate them in a fundamental principle of sound banking; nay, more, I believe these provisions of the bill will exert a restraining influence upon the bankers who realize this great truth yet are moved by the alluring promise of large profits to disregard its plain warning; for, once a banker comes to know that the rediscounting privilege is to be refused to paper of unliquid character, he will

naturally be anxious to confine his investments to paper which he will have no difficulty in rediscounting in time of trouble.

The legislature can prescribe certain rules and regulations, and that is the proper function of legislation. And in this bill we have prescribed those rules and regulations and created certain boards which are designed to exercise a controlling influence in the enforcement of those prescriptions.

We have created these 12 banks, partly in control of bankers, in conjunction with Government officers, and then we have practically put these 12 banks under the control of the Federal reserve board, which is altogether a Government office, and we propose that this board shall see to it that the prescriptions of Congress shall be obeyed.

We propose that commercial banks shall invest in commercial paper; and what is commercial paper but the instruments of commerce? Can the gentleman from California or the gentleman from Illinois conceive any piece of paper that may be rediscounted under the provisions of this bill by any one of these Federal reserve banks that does not involve the sale of goods, or of a loan which may come under the influence and control of the Federal reserve bank that does not involve a loan from the bank for the purpose of buying goods, and buying goods for a dynamic purpose, for making the crop, for manufacturing raw material, or for commerce, dealing in food and clothing and building material? If the bill fails to give this great psychological control, then I have made a mistake in giving it my support. We have a control now, and it is a psychological control. We have a control by New York banks and New York banking. We propose to break this. We not only propose to break it, but we propose to decentralize it. We propose to scatter it into 12 different sections of the United States. Then it will be a control within that particular section, subject always to the power of the Government. I do not for a minute contend, my friends, that there are any substitutes for honesty and courage and wisdom. If for any reason—and God grant it may never be so—these boards of control should lack the wisdom and the courage to do their duty, you would still be subject to all the disasters that now befall us, because of the fact that the control is not wisely exercised.

Mr. CALLAWAY. Will the gentleman yield?

Mr. KORBLY. In just a moment I will yield to the gentleman. I said a while ago that the banker must be wise and courageous and honest. He must know when to say no. He must know whether or not the loan shall be granted, and whether it is granted or not must depend upon the purpose for which it is to be used. What a disaster would befall mankind if it should turn out that the Panama Canal was uselessly dug. If the commercial banker, confusing the savings bank with the commercial bank, is tempted by the promises of great reward to take long chances and to sink a shaft in order to dig gold or coal out of the bowels of the earth, and he gets coal or gold in abundance—and better coal than gold because it is more useful—it will be well with him, because he will make big profits; but if the shaft is sunk and no coal is there, then all the food and all the clothing and all the property that have been worn out and the tools that have been destroyed in digging that hole are lost, and there will be nothing to replace them.

Confidence is easily shaken when once depositors begin to doubt whether the banker may not have intrusted his funds to people who have lost them.

When the winds and the rain and the storms and the flood and drought come along and destroy your crops you have a destruction of property. That sort of destruction of property is destruction by the elements due to natural causes and natural forces, and it is a great blow to society; but society sees it and is prepared for it and meets it with calmness and courage. And although the people who have sown do not reap, having once paid for their food by their labor, nevertheless they will use that which they have produced and saved in days gone by to get food from foreign countries. But when the banker loans unwisely and by reason of his lack of wisdom property is destroyed, then it is that the storm breaks, and then it is that a panic is upon us.

The failure of a few merchants or brokers or banks is enough to throw the financial world into a spasm. Then it is that men find out that there are too many meal tickets out for the number of meals in existence. There is a great hurry and a fear to find out who it is that is going to hold the bag. The foundations of credit are tested—payment is demanded all along the line. Credit is refused and agony rules the hour. Paralysis of commerce results, and when it is finally discovered who it is that has lost, the people go ahead by painful processes and try to make a reparation of the damage that has been done. They find that they have been living, not on income, but on principal.

Mr. KORBLY. Yes.

Mr. BURKE of Pennsylvania. The gentleman believes that a banker should have the right to lend an equal amount of money to two men having equal assets as long as the assets are good and will be legitimately acquired?

Mr. KORBLY. I will answer that yes; but it is pretty hard to say what I believe the bankers' rights are.

Mr. BURKE of Pennsylvania. Will the gentleman indicate why a man owning unencumbered real estate in one section of the country should not be entitled to the same privileges at the bank as a man owning real estate in another section of the country?

Mr. KORBLY. Oh, I am indifferent about that. The gentleman ought not to pursue that; I do not want to be impolite.

Mr. BURKE of Pennsylvania. I will put the question in another form.

Mr. KORBLY. That has nothing to do with the great thought that I am trying to develop.

Mr. BURKE of Pennsylvania. The gentleman is talking about the rights of the bankers to extend credits.

Mr. KORBLY. No; I am talking about the duty of Congress to make proper prescription so that we may have proper banking.

Mr. BURKE of Pennsylvania. To enlarge the credits of the country.

Mr. KORBLY. No; it is not to enlarge the credits; it is to control the lending or the investments of the country. It is a question of what to do with the wealth of the country to prevent its destruction in the building of unnecessary railroads that will not yield a return speedily. Not only must investment made through the bankers be safe, but it must be liquid; it must come back within a certain period; it should come back in the turn-over period, as, for instance, the crop-making period.

Mr. BURKE of Pennsylvania. But did not the gentleman contend for an enlarged volume of the currency and the availability of credits?

Mr. KORBLY. Not at all. I stated as clearly and as forcibly as I knew how that the banks would only lend that which the depositor leaves with them. If the storms and cyclones destroy crops, if earthquakes destroy cities, bankers will be less able to lend, no matter how much gold they have. They do not lend gold. They do not lend money. They lend purchasing power. Everyone who borrows from a commercial bank buys something with his borrowed fund. That which he buys is what he borrows from the bank.

Mr. BURKE of Pennsylvania. Why should a banker be allowed to lend thousands of dollars on real estate in the city—

Mr. KORBLY. I do not care to talk about that. If the gentleman wants to make that point against the bill, he can do so, but that has nothing to do with my subject, and I beg the gentleman to let me alone on that. I do not care to talk about it. It has nothing to do with what I am trying to bring before the House.

Mr. CALLAWAY. Will the gentleman yield?

Mr. KORBLY. I will yield to the gentleman from Texas.

Mr. CALLAWAY. The gentleman stated awhile ago that they had provided in this bill for a board of control, and he realized that we could not substitute for honor and that we could not substitute for wisdom, and that if the board failed to be wise and honest the whole superstructure would fall. I want to ask the gentleman if, in his judgment, provision has been made to secure the things he stated about commercial banking and the demands on commerce without that central board?

Mr. KORBLY. The lack of coordination is unquestionably a thing that has given us trouble. We have no system now. You can not have coordination, which means cooperation, without having some centralized authority. I for one distinctly am in favor of centralization with regard to some banking functions and decentralization with regard to every other function. In New York in 1829 the banks were coordinated through the medium of a safety fund for notes, and in that day discounting was done for notes only and not for deposit credits.

In 1834 Indiana went a step further than that and made the banks in the system mutually responsible for each other's debts, obligations, and undertakings, and coupled this with the power of mutual inspection through a board of control. The Federal reserve board in this bill we are discussing is somewhat modeled after the Indiana board. There was mutual inspection as well as mutual responsibility. That was the guaranty of deposits as well as the guaranty of notes. A banker now is apt to say, "I am wise and good enough to know when I have gone too far along these dangerous lines. I know when to stop, and you can trust me; but you can not trust CALLAWAY." CALLAWAY will say, "I am wise and good enough, and you can trust me; but

you can not trust HARDY." But as soon as CALLAWAY is made responsible for Mr. HARDY's conduct and Mr. HARDY is made responsible for Mr. CALLAWAY's, CALLAWAY will see that HARDY does not transgress the rules of sound banking and HARDY will see that CALLAWAY does not transgress. That is the way they worked it out in Indiana.

We propose to coordinate banks under this bill through the medium of the joint and several ownership of bank reserves—making these reserves available to each bank by processes of rediscount—and by giving the bankers as an association a voice and an influence in this rediscounting process, and by giving them a part in the inspection of each other's banks.

Mr. CALLAWAY. This is the question I want to ask: The gentleman is working for elasticity of currency to answer the demands of commerce.

Mr. KORBLY. Yes.

Mr. CALLAWAY. Could not this be accomplished without this central bureau? But I desire to find out whether this is real elasticity. I may say my suspenders are elastic, but are they elastic if I have to slip a buckle every time I want to have them a little longer or a little shorter? They have got to respond when the strain comes if they are really elastic. [Laughter.]

Mr. KORBLY. I will say to the gentleman he is an expert on galluses; I am not; but it would seem that if the galluses are equipped with buckles they are not elastic. I want to say to the gentleman I am of that school that believes we should not refuse to do anything because we can not do everything. These notes may not be all that you and I would like to have them, but they are so much better than anything we have had for 50 years that I welcome them with open arms.

Mr. CALLAWAY. They are better than we have had, but they are not what we ought to have.

Mr. KORBLY. You and I will help to make them better in time to come. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAYES. Mr. Chairman, I yield 45 minutes to the gentleman from Kansas [Mr. MURDOCK].

Mr. MURDOCK. Mr. Chairman, as an attempt to relieve the pressing and legitimate needs of business the pending measure has my approval. [Applause on the Democratic side.] It offers more than the present Republican leadership has offered or ever will, in my opinion. I recognize that in its initial stages as a law it may cause an embarrassing contraction. But this will come, not because the bill is radical, but because the changes it proposes are intricate, involved, and cumbersome; for the bill is not progressive, save in contrast to the reactionary proposals of the Republican Party leaders which have recently preceded it. It is not radical, and as a constructive measure for the correction of the most sinister of all the Nation's perils—the monopolistic control of credit—it is pathetically weak. Its deficiencies, as a measure, are not what it does, but what it refrains from doing; its faults are not in what it includes, but what it shamelessly excludes.

It is halting, halfway, timid, compromising. It essays to be remedial, and it is not. [Applause on the Republican side.] To a nation crying for relief it offers not a remedy but a palliative; it prescribes cocaine, not a cure. It is the shadow of a great national necessity, not the substance. It has changed some of the banking formulas by which the predatory powers prey upon the people; it has not challenged directly the malignant methods which put these powers beyond the reach of all feeble legislation.

In several of its features and as a well-intentioned effort to bring elasticity to the currency it invites indorsement. The measure seeks to give mobility to the reserves by concentrating them. This plan originated with the bankers, was adopted by the Republican Aldrich commission, has been taken over by the Democratic doctors of economy, and is believed generally to offer improvement. The measure places the central conventional control of reserve banks in the hands of the Government, a proposition which the bankers themselves very strenuously opposed until a guardian advisory committee of bankers was added to the central governmental board.

This addition weakened the original proposition, but as the amended governmental control stands, even though it prove feebly formal, it carries the promise of the ultimate actual control by the Government, and this promise alone warrants a supporting vote of the whole measure. Similarly the inclusion of citizens other than bankers in the management of the several reserve banks is meritorious. As a pure banking proposition those features of the measure which give to the national banks, through making them interdependent, an added degree of safety, while making more imperative rigid governmental control, seem

sound. A curious admixture of antagonistic money theories is found in that provision of the bill which creates currency. It is a device by which the citizen borrows currency of his Government, with the banker as a profit-taking intermediary, a device which will not allay but will further provoke that economic school which, in the matter of the currency, is in revolt against special privileges to the bankers. For those who protested against the rights of the banker to acquire loanable funds based on rigid, inflexible, low-interest Government bonds are not likely to remain quiescent under a plan which enables the banker to acquire the same loanable funds from the Government on flexible high-interest-bearing commercial paper of his own manufacture.

That battle will be fought out in the future. The school which holds that bank notes based on bank assets should be issued and redeemed by the bankers, as well as the school which protests against the Government issue and redemption of money with profit to the banker, a private and privileged profit for the performance of a public function, will see that that agitation will not die out, gentlemen may be certain.

For this measure will not quiet currency agitation; it will arouse it. As in the case of the successive railroad rate measures we have passed, as in the case of constructive legislation of many kinds, this halfway, compromising law in its turn will call for another law and later for another law amending it. This is, as other pretended remedial laws have been, the proverbial "step in the right direction," in the old hesitant, reluctant party legislative journey which has never had and never will have a destination. The truth is that the doctors of economy, the high priests of the Democratic and Republican Parties, are lost in a fog of special privilege. Seeing they see not, bearing they hear not, neither do they understand. Saturated through and through with the economic formulas used by special privilege, lost in the terms employed by special privilege, entangled in theories which grew out of the war necessities of the past and which are not competent to meet the needs of the present, they make the genius of democracy void because of their traditions.

The Republican leaders when last in power, maintaining political conditions which made all class advantage seem to them natural and normal, offered the country the Aldrich bill, which turned the money system of the country over to the big bankers under a 50-year franchise.

The Democratic leadership, given power, borrowed the bankers' plan which the Republican leadership adopted, but tempered it by lodging a conventional control of the money system in the Government.

With the real source of the Nation's trouble, the actual concentrated control of credit in New York City, the Republican leadership had then and has now no quarrel.

The Democratic leadership, long ostensibly at war with Wall Street, with the report of the bald, bare, damning facts of its own investigating committee before it, with the gigantic evil of the Money Trust identified, analyzed, and with specific and concrete remedy prescribed, the Democratic leadership now weakly avoids the real issue, side-steps the real evil, hesitates, backs and fills, and refuses battle with the greatest enemy of the Republic and its greatest menace.

But the great issue remains. And the great issue is this: Shall the country surrender to the Wall Street swindle? I tore the sheet of tabulations which I hold before the House from the report of the Money Trust investigation, made February 28 last. This sheet, designated as "Exhibit 134 B," shows the enormous concentration of money control in the United States through interlocking directorates. The table is not difficult to understand. In one column are printed the names of 100 men who serve as directors in five financial institutions of New York City. In another column are printed the names of 125 corporations with which these 100 directors are affiliated. The interrelation is thorough, the interdependence complete. The five institutions are (1) the house of J. P. Morgan & Co.; (2) the Guaranty Trust Co.; (3) Bankers' Trust Co.; (4) First National Bank; (5) National City Bank. These five concerns—two of which, the trust companies, are absolutely controlled by Morgan & Co.—have directors in five different interests, as follows:

In 34 banks and trust companies with resources of \$2,679,000,000.

In 10 insurance companies with assets of \$2,293,000,000.

In 32 transportation systems with capital stock and funded debt of \$11,784,000,000.

In 24 producing and trading companies with capital stock and funded debt of \$3,339,000,000.

In 12 public utilities companies with capital stock and funded debt of \$2,150,000,000.

That is, these five concerns are represented by directors in concerns which aggregate in value \$22,245,000,000—probably one-sixth of the wealth of the Nation.

These three banking concerns, the Morgan house, the First National, the City National, the two controlled trust companies, with Lee Higginson & Co., Kidder, Peabody & Co., and Kuhn, Loeb & Co., are the power in the United States. This is the invisible government. This is the plutocracy. This is the seat of privilege. This is the control of credit. This is the cancer on the body of the democracy.

The table of names and figures which make up Exhibit 134B is not a fanciful invention. It is a cold compilation of data. The demonstration that three concerns have in their hands the controlling wires which reach into most of the major concerns of the land is not a clever political argument. It is a carefully prepared public document. Gentlemen can not put this aside as merely some man's theory. Gentlemen must face this exhibit as a fact. Indeed it is the most alarming fact before the world to-day. The hope of humanity is in this Republic and in the processes through which this Republic is to develop and perfect the precious heritage of liberty. That portion of humanity the world around which never has had privileges, which has always been bent under the toll of ages, which has always had to earn its bread in the sweat of its brow never with a fair share of the wealth it has created, turns always with hope to America. The lure of freedom draws a million annually to our shores, and millions more would come who can not. For everywhere men who labor resent class and caste and privilege and selfish governmental control and inequality before the law.

America has set the ideal of freedom before the world, and America's duty to the world is to maintain it; not a hollow counterfeit, not a miserable sham image of it, but the ideal of freedom itself, to which the whole Nation, in full faith, may continue to aspire. Across the radiant world-wide hope in America has fallen the shadow of the money power. Prophets have warned of it for years; economists have analyzed it; the lawmakers now and again have feebly grappled with it; but it has never ceased to grow; it has never ceased to close its fingers tighter and tighter around the neck of the industrial life of the Nation. It has never ceased to take toll of everything and everybody, remorselessly levying most heavily upon the substance and vitality of the men and women and the children who toil. It has saturated the country with privilege till its poison is creeping everywhere, so that many men hopelessly think and speak in terms of privilege, and no inconsiderable number of people have come to believe in their hearts in the permanency of a benevolent money despotism.

Here on this sheet is the benevolent money despotism, not in fancy but in facts and figures, in names and places. We are face to face with it, not as a childish terror but as a sinister monster. If it were a painted devil merely, we could afford to palter, delay, dillydally, and compromise with it. But it is no figment of the imagination; it is real; and it and its problems and its menace must be faced. It is not faced in the Glass bill. It is evaded.

There was a day when it was a question which would survive—the democracy or the Biddle Bank. The day is here when it is a question of survival again; this time between the democracy and this confederation of financial freebooters.

These men have always been above and beyond the law. How long are they so to continue? No event in my time has been as illuminating as the panic of 1907. Times were prosperous. The railroads had offered them more than they could haul. Factories were working to the limit. Merchants reported increasing trade. The number of unemployed was at a minimum. Crops were abundant and realty values ascending. In domestic and foreign commerce we had reached the high point. In the months of October, November, and December of that year the excess of exports over imports ran over \$250,000,000. In the closing quarter of the year the crash came. Overnight the money barons of New York broke down the banking system and the next morning at his doorstep every American citizen found it there crumpled up like a broken toy balloon.

What followed proved to be one of the greatest tributes to the popular good sense that has come in this generation. It had been a period when the captains of industry had been much vaunted, when the financiers, big and little, had been credited with possessing extraordinary gifts of business clairvoyance. We had heard much mouthing by experts about credit being founded only in confidence, much wise homily about panics being born only of popular fear. Here was no lack of confidence. Here was no popular fear. But here was insolvency. If there was panic, it was among the bankers. It was not

among the people. And the situation was saved by no captain of industry and by no banker. It was saved by the people who, with the doors closed between themselves and their money, kept their heads. And the people knew who had wrecked the system. It was not difficult in those days for any doctor of economy to put his hand upon the sore spot. There had been talk of the need of an elastic currency before the trouble, and there has been talk of the need of elasticity since. But in the hard, cold day of accounting in October, 1907, there was precious little patience with banking theories. There was direct, clean-cut diagnosis of the case. The Nation knew the blame was on New York and the trouble concentration of money control and gambling. For a few hours at least the public man who spoke of the evils of concentrated control of credit and the menace of Wall Street and the money power was not known as a demagogue.

When the Knickerbocker Trust Co. closed its doors in 1907, the gambling saturnalia in New York was at its height. There was plenty of money in New York, apparently, for a high old time speculatively. The national banks of the town held in August, 1907, \$213,000,000 of the reserves of other banks and \$251,000,000 of their demand loans was on stocks and bonds. In the preceding January, business in the stock exchange had started briskly. In the first month 2,200,000 shares of common stock of the United States Steel had been sold, of which about one-fourth—551,000 shares—had actually changed hands. In March 3,500,000 shares of the same stock had been sold—one-fourth of it actually—the remainder gambled in. There was some talk of undigested securities. But that disturbed no one. The bankers of the country kept on pouring their money into New York and the money was tangled up in the game. When pay day came, and pay day always comes, even to gamblers, New York could not pay. The interior bankers cooled their heels at the door of the great bankers of New York and the country waited the pleasure of the Money Trust. And while the country was waiting it had for a few moments its first real view of the Money Trust and its first real look into the actual situation in Wall Street.

Mr. VAUGHAN. Mr. Chairman, I desire to ask the gentleman if he will yield to a question?

Mr. MURDOCK. I beg the gentleman's pardon, but I prefer not to yield. I have a three-hour speech to deliver in 45 minutes.

Mr. VAUGHAN. I desire to ask the gentleman if that was not during the reign of Theodore I?

Mr. MURDOCK. Oh, yes; and the Civil War took place during the administration of Abraham Lincoln, but I decline to yield. [Laughter.]

The two Morgan banks and the two Standard Oil banks, carrying large Government deposits, rushed to the rescue. The culminating scene was a well-known one in 1907 while the people were waiting for New York to let go of the country's impounded money. Now, so many have forgotten it that it will be well to recall it. It occurred around the loan stand, the only open market for the lending of money in the United States, in what Gov. Hughes's commission in 1909 referred to as "to-day probably the most important financial institution in the world"—the stock exchange. Here, at 2.20 p. m. on October 25, 1907, appeared Vernon Mann and Messrs. Rogers and Atterbury. They had commissions to loan twenty millions of Morgan money. They were the center of a struggling mob. The money was first offered in \$100,000 lots, and it was all taken up in 5 minutes, a loan every 15 seconds. Few brokers, in their madness to secure loans, stopped to consider money rates, which ran from 10 to 50 per cent. Vernon Mann placed \$3,000,000 at 50 per cent. By this addition and others the gamblers were set upon their feet again, Wall Street became solvent once more, and the country banks were paid.

The scene has passed from the memory of most men. The lesson it ought to have taught was not long regarded. A fairly quick recovery of good times sent most of us to sleep again. But the situation I have described and the scene which was its culmination was a stench in the nostrils of decent citizenship, a disgusting spectacle of debauch, differing only in degree from the "rough-house" of the frontier den. Legitimate business, production, labor, transportation, and all the factors of our marvelous industrial organization halted while an infamous group of chaffering gamblers withheld the money of the Nation in order to settle their differences, save the rake-off, and preserve the game.

The people knew in that hour that at the bottom of our troubles stood Wall Street and its practices. With the legitimate market for securities and honest registration of current values the Nation has no quarrel, but with the stock exchange as it is conducted the people are at war, for a considerable portion

of the people know that whatever Congress may do in the way of currency enactments, and however efficacious this law or that may be in theory, so long as the New York Stock Exchange goes on its nefarious way unchallenged there will come no permanent and effectual relief or actual remedy. The stock exchange "by out" is not a complex one. First of all, as an unincorporated association, a private club, it seeks and obtains immunity from law. The right to send out its quotations is sold to a single company. The right to use the telephone from the exchange, even by members, may be prohibited. If a member is insolvent his obligations to other members take precedence over the claims of a defrauded customer. Stocks not engraved at the shops of companies approved by the governing committee are not listed. Nothing in the form of profit escapes the stock exchange, however small. No competition is permitted in commissions between members. The uniform commission is one-eighth of 1 per cent for each \$100 of par value. He who charges more or less can be suspended, and upon a second offense is expelled. Stocks may be removed from the list, and have been to manipulate their value. The Wall Street gambling mechanism is simple, so is that of the roulette wheel.

Let us see the way of the gamblers. Customers of the exchange are not required to pay more than 10 per cent of the purchase price of securities. About 90 per cent of the trading is done on that basis. Take some of the well-known securities and compare actual trading with speculation in them. The Pujo committee, investigating the Money Trust, found that there has not been a year since January 1, 1906, that Reading's entire common stock was not sold at least twenty times over. One year it was sold forty-three times over. In one month six times over.

During the period investigated the number of shares transferred on the company's books (evidence of actual sale) averaged a little over 8 per cent of the total shares supposed to have been sold. In United States Steel for a similar period the number of shares transferred on the books was 25 per cent of shares sold; in Union Pacific Railway Co., 16 per cent; Amalgamated Copper Co., 20 per cent; Rock Island Co., 27 per cent; Erie Railroad, 30 per cent. Into this maelstrom of fictitious barter, where quotations are manipulated and actual values disappear, the money of the country in moments of redundancy is drawn, and then held often against the demands and needs of legitimate commerce. On November 1, 1912, 32 of the banks and trust companies of New York, members of the Clearing House Association, had for themselves and for their out-of-town correspondents outstanding loans on stock-exchange collateral amounting to \$766,795,000. This represents in part the sum required to carry stocks bought on margin on the New York Stock Exchange. But it is only in part. The calculation includes less than one-third the total number of banks and trust companies in New York City, although it takes in the important ones. Of this amount—that is, \$766,795,000—the sum of \$240,480,000 was loaned directly for the account of out-of-town banks. This on November 1, during the crop-moving period. Around this game of chance, presided over by the Money Trust, the gambling element in America has gathered. Into it they draw at times legitimate enterprises, and entangled with it and its devices are the great financial institutions of New York City, of which the clearing house is a composite, and masters of it are the great interdependent, interlocking interests which have consolidated banks, or the control of them, and which have subordinated to their will the management of insurance companies, railroads, and industrial and public-utility organizations.

The testimony before the Pujo committee demonstrated beyond any doubt the enormous concentration of money and credit. It was acknowledged by the men who have been foremost in effecting it. Members of the committee, Republicans and Democrats, with a single exception, pronounced it a menace. The Republicans made no recommendations of remedial legislation.

The Democrats did make such recommendations specifically and in terms. Why should these recommendations now be disregarded?

The committee located the evil and identified it. The committee laid the sore open to public view and pointed out the remedies. Why have these remedies been excluded from this bill?

The Democratic members of the committee made recommendations for three kinds of remedies—those applying to clearing houses, those applying to the stock exchange, and those applying to community of interests among financial institutions and certain practices of national banks.

The Democratic members of the committee recommended that national banks should not be permitted to be members of clear-

ing-house associations which are not bodies corporate of the States in which they are located.

There is no such provision in the Glass currency bill.

The committee recommended that smaller banks should not be excluded from membership in clearing houses.

There is no such provision in the Glass bill.

The committee also recommended the prohibition of periodical examinations by clearing-house committees of member banks, a device which makes it possible for the few members who constitute the governing committee to gain intimate knowledge of the private affairs and business of competing banks and the business community generally.

There is no such provision in the Glass bill.

The committee also recommended that clearing houses be prohibited from prescribing rates of interest or discount, rates of interest allowed on deposits, and rates of exchange.

There is no such provision in the Glass bill.

The foregoing provisions were designed to curb the control of the money barons as it is exercised over banks through the clearing house, which has in New York City enormous power and can use it, as it has used it, ruthlessly.

As to the stock exchange, the Pujo committee, pointing out that of the \$15,500,000,000 annual sale of stocks the greater part represents speculation more hurtful than gambling at the race track or the roulette table, and asserting that the facilities of the New York Stock Exchange are employed largely for transactions producing moral and economic waste and corruption, cited Congress to its power unconditionally to prohibit the mails, the interstate telegraph and telephone, the national banks, and all other instrumentalities under its control from being used in executing, negotiating, promoting, increasing, or otherwise aiding transactions on stock exchanges.

There are no such provisions in the Glass bill.

The Pujo committee did not propose to abolish the stock exchange, but it did determine to compel it to clean up its evil practices—first, to force it to incorporate and become responsible to the law; second, to compel the filing of statements of assets and liabilities by listed companies for public inspection; third, to compel the increase of marginal payment for stocks; fourth, to compel a prohibition of the execution of manipulated simultaneous orders to buy and sell the same security, orders proceeding from the same person for the purpose of creating an appearance of activity in the security; fifth, to compel prohibition of member's hypothecation of securities purchased and carried for the account of a customer for an amount greater than the unpaid portion of the purchase price; sixth, to compel prohibition of one member lending to another securities carried by the former for customers; seventh, to compel provision in charters of stock exchanges for the right of companies to list their securities and appeal to judicial review in case listing is refused; eighth, to compel the keeping of books of account by members showing actual transactions subject to governmental inspection.

The Democratic Members of the committee said: "Your committee therefore recommends that the use of the instrumentalities under the control of the Federal Government in aid of transactions on stock exchanges be prohibited by act of Congress only where such exchanges refuse to comply with the foregoing conditions."

With the exception of the elimination of "wash sales," now prohibited by State law, the stock exchange has not changed its methods. But the Glass bill takes no cognizance whatever of the stock exchange's delinquencies.

In the matter of the control of credit through defects in the banking system, the Democratic members of the Pujo committee made many recommendations, but their chief recommendation was that prohibiting interlocking directorates. Among other recommendations they insisted that two or more banks should not be permitted to consolidate without the approval of the Comptroller of the Currency.

There is no such provision in the Glass bill.

They also recommended that the transfer of any stock of a national bank to trustees for voting purposes, a device known as a "voting trust," be prohibited. It is one of the most common means of intercontrol in the system of the money barons.

There is no such provision in the Glass bill.

Another recommendation of the committee was that the stockholders of a national bank should be expressly prohibited from becoming associated as stockholders in any other corporation under agreement that the stock of such other corporation shall be always owned by the same persons who own the stock of the bank.

You will search the Glass bill in vain for such a prohibition.

Recommendation was also made that interstate corporations be prohibited from constituting any bank the sole fiscal agent to dispose of their security issues and also prohibited from depositing their funds with unsupervised, unregulated private bankers; that the Interstate Commerce Commission should be given supervision of the plans of railway reorganizations and of issues of railroad securities; that competitive bidding for railroad securities be invited; that a new method of reorganizing insolvent railroads be adopted. These are only indirectly banking problems, but the committee made other and specific banking-reform recommendations, among them one providing publicity of bank stockholders, another one insisting that national banks should be prohibited from directly or indirectly engaging in any promotion, guaranty, or underwriting involving the purchase, sale, public offering, or issue or other disposition of the securities of any corporation. This is one of the chief activities of those in the inner circle of the Money Trust.

There is no prohibition of this kind in the pending bill.

But it was in the matter of interlocking directorates that the Pujo committee gave greatest emphasis to its recommendations. Herein is the main secret of narrowing control. Here the personal equation in the community of interests becomes large and potential. The committee cited other countries and their customs. In Russia, no person is allowed to be a member of the board of management of more than one bank. In the National Bank of Belgium the governors and director can not be on the board of any other bank. In the Bank of England bankers, brokers, or directors of other banks operating in England are excluded as directors.

But the Glass bill contains no provision against interlocking directorates. And when such a provision was offered in the Democratic caucus it was voted out of the bill and referred to the Judiciary Committee for consideration as a matter not particularly relating to banking but to the trust question. Heaven save the mark!

The Money Trust exists. It controls credit. It has a strange hold on banking, insurance, transportation, investment. It can grant financial salvation to one and refuse it to the other. It can enrich one group at its whim and at its fancy impoverish another. It is the Nation's chief menace, the one great enemy of the democracy, the head and front of special privilege in the land. It is deep-rooted, defiant, malignant. No bread pill will cure it. No application of court-plaster will stay its blighting progress, its cancerous, noisome growth.

And yet the Democrats voted the prohibition of interlocking directorates out of the Glass bill and referred it to the Judiciary Committee for "careful consideration."

Mr. GLASS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Kansas yield to the gentleman from Virginia?

Mr. MURDOCK. Yes.

Mr. GLASS. The gentleman is mistaken.

Mr. MURDOCK. I understand the caucus did that very thing.

Mr. GLASS. It never was in the bill.

Mr. MURDOCK. It was never permitted to get in the bill.

Mr. GLASS. I think it should not have been in.

Mr. MURDOCK. I think it should have been, according to the recommendation of the Pujo report.

To those Democrats who think that the redistribution of reserves provided in the Glass bill will lessen the grasp of the Money Trust, who are innocent enough to believe that with the bulk of the business in this country in State and private institutions money will not accumulate in New York, I recommend this paragraph from the Democratic members' report on the Money Trust:

We are of the opinion that the existing law as to reserves and the alleged defects in our currency system—as to which we express no opinion at this time—have no appreciable effect on the concentration of control of banking resources here under discussion. These funds would in any event probably come to New York when they could be employed there to better advantage than in their respective localities.

The Pujo committee pointed out just how widespread is the custom of sending money to New York, not as deposits, not as reserves, but for loaning purposes on the Wall Street gamble, in these words:

It appears that on November 1, 1912, 32 of the New York banks had \$240,480,000 outstanding in stock-exchange loans that were placed there directly for their correspondents independently of the deposits of these correspondents. It does not appear what proportion of the \$483,373,000 of deposits of out-of-town banks that were then in those 32 New York banks were kept there on account of the 2 per cent interest that is allowed on them. They are attracted there because, as stated, New York City is the only public money market and because they can be utilized in stock-exchange speculation.

The Glass bill proposes to withdraw the out-of-town reserves from New York City. Its defenders declare that this will draw

the country's money away from the New York gamblers. The Pujo committee, which went to the bottom of this gambling curse, said it would not. The Pujo committee was right. The Glass bill in its present form, without the inclusion of the particular drastic corrective measures recommended in the Pujo report, will not cure the disease. For the disease is financial piracy, gambling, the seizure of wealth without making adequate return, accumulation of property without earning it. That has been immoral from the beginning of the world.

It is immoral still; and no local poultice providing elasticity in the currency will remove the cancer; no halfway measure can. In the recommendations of the Pujo committee the Democratic Party had declared war—war to the knife and knife to the hilt—on privilege. In the Glass bill the native hue of resolution is sicklied o'er, and before the first shot in the battle has been fired the Democratic Party is out in front under a white flag, with the enemy, arranging a compromise, cowering before the biggest single swindle under the sun.

As a currency bill seeking elasticity I wish the pending measure well, but I can not blind myself to its limitations. I believe that even its strongest feature—central Government control—will fall far short of its purpose. Two or three years will show, in all probability, that the governmental control is nominal and not real; that the personal equation as it is found in the bankers' advisory council will prove the dominating factor of the central board. And I believe that in the course of time the personal equation will also become dominant in the Federal reserve banks. I hope with all my heart that the Federal reserve banks created by this measure will bring facility and accommodation to the borrowers in the various districts. I hope the system devised will survive the perversion which private ambition and organized avarice will attempt upon it. But who can say that the 12 reserve bank boards will not eventually develop into as many iron-handed, arbitrary credit oligarchies, exercising their power of discount with favor and prejudice, helping friend, injuring foe, and responsive not to public weal or commercial necessity, but influenced by the dominant group in New York, still isolated, immune, irresponsible, uncontrolled, and above and beyond the law?

On the issue of money, under the provisions of the bill, violation is done to the tenets of each of the prominent schools on currency. Since the impeachment of our present bond-secured currency as being inelastic and unscientific became general, there has been a persistent propaganda for a pure asset currency—the issue of a bank note by a bank, the note to be redeemed by the bank and safety of issue to be obtained by provision for a heavy gold reserve. The pending bill halts midway between this school and another industrious group which contends that money should not be issued save by the Government and should not be extended to bankers to be employed for private profit.

The Glass currency bill provides that credit currency shall be issued on assets of the banks, but it provides that the currency shall be issued by the Government and shall not be issued by the banks, and that it shall be redeemed by the Government. This Glass adoption of half of the plan from one system of credit currency and half from another has some very striking results. In the Glass plan, the banker stands between the note-issuing Government and the note-borrowing citizen and takes his profit, and there is nothing in the Glass bill which restricts the profit of the member bank or the interest it may charge. In this transaction the banker steps in between the citizen who has credit to exchange for currency and the Government which has currency to exchange for credit, and conducts the trade, not only receiving a profit therefor, but supplying himself with new funds for further trades. This device is well known, and that it has been profitable for the banks needs no proof. The average annual dividend of national banks in the country is 11 per cent, the surplus and undivided profits are large, and bank stock is high. I append recent quotations of two Chicago banks as an illustration:

	Bid and asked, 1913.	Dividend, 1913.	Book value, 1913.
		Per cent.	
First National.....	425-428	17	308
Corn Exchange.....	410-415	16	314

If the present national banking act has been profitable to the banks, it is not difficult to see where the present measure will be equally so. At present the untaxed bank trades for currency small interest-bearing bonds, comparatively inflexible and fixed in value. The profit the bank makes is the interest

on the bonds and the interest on the currency it loans out after receiving it from the Government. Under the new plan the bank, still exempt from tax, will trade for currency high interest bearing commercial paper, the making of which is entirely within the bankers' hands. The profit the bank makes will be the interest on the commercial paper and on the currency received by the bank from the Government, upon which the bank will probably pay a very small interest, and this Government interest charge will be passed on to the citizen borrower. It will not appreciably reduce the profits of the banker.

The chief features of the new currency are these:

1. The issue, set in the first drafts of the bill at \$500,000,000, is unlimited.
2. The primary issue is to be increased as the present national bank notes are retired, at the annual rate of 5 per cent of the amount of present national bank notes outstanding.
3. The new notes are receivable for taxes, customs, and other public dues, purport to be obligations of the United States, and are redeemable in gold on demand by the United States.
4. They are issued by the central Federal reserve board to the Federal reserve banks in exchange for notes and bills which the banks have rediscounted of an amount equal to the sum of the notes applied for.
5. When the notes are out, the central Federal reserve board may call on the Federal reserve banks for additional security. The board may also require the Federal reserve banks to maintain a 5 per cent redemption fund against these notes, and this 5 per cent shall be included as part of the 33 1/4 per cent reserve which the Federal reserve banks are required to hold against notes paid out by them. The Federal reserve board will also establish the rate of interest to be charged to the Federal reserve banks for these notes.

The trying period of the new plan of money issue will be in the first few years after its inauguration. Its admixture of two systems, the exchange from the old bond-secured currency to the new, the complicated and cumbersome methods of issue, the retirement of old notes, and the attitude of the trading world to money that is strange, however good, may bring on conditions of serious contraction, little as the sponsors of the bill believe it. In the end, however, the greatest danger, as the business world becomes wonted to the system, will be the danger of inflation. But on the whole, and however halting the inauguration of the plan, it will prove a highly profitable one to the banks.

But aside from the banking profits made possible by the provisions of the measure, there is a matter of far greater import involved in the change of securities to serve as a basis of Government money. Is the enormous quantity of watered stock which has become an integral part of the business and investment and banking of the Nation to be covered into our money system? Is the fraud and deception and overcapitalization which has characterized so many of the great concerns to be hereafter the basis of money with the Government behind it?

In other words, is the tremendously powerful credit of the Government to be put to the task of adding value to properties that have not full value? With our intricate money system, our gold basis, our supply of silver maintained at a level far above its value, our greenbacks, the ever-present menace of the gambling game on Wall Street, and a tendency to inflation that is always with us, the proposition to put upon the credit of the Nation the burden of financial villainies which have marked the career of most of our larger concerns must make every thoughtful man pause.

It is true that the bill prohibits the loaning of money for speculation in securities, but that does not reach the case in point. These securities are in the credit world, whether advanced as collateral or not, and the man who owns them and is considered good at the bank can, does, and will borrow money, and his note will become the basis of Federal currency—as good as gold and redeemable in it.

It is a matter of regret that a rural credit system was not included in the measure. The opportunity for its adoption was excellent. Certainly delay is not defensible on the ground that the farmer has no need of it. The farmer has paid high prices for his money. He has offered the best security. During a half century or more his needs have been curiously ignored. Certainly he is as much entitled to governmental attention and service as the commercial world. This was the time to adopt the rural credit, not next year.

This measure is the product of the Democratic caucus. It was framed in secret, formed behind closed doors. The element which is most potent and most necessary in this Republic, pitiless publicity, was excluded from its making. Under constitutional guaranties the consideration of the measure should be here in the House of Representatives. But its consideration

was not here and will not be here. Behind the closed door of the Democratic caucus, with the people and their vigilance shut out and the representatives of the people shut in, the votes which made this measure what it was were cast. There the measure may have had or it may not have had real consideration. The public, which has a right to know and which can not know unless it knows first hand, will never know. But whatever its consideration in the caucus, its consideration here will be empty and perfunctory. Men will be bound by the caucus and the measure the caucus hands to the House will be the measure, line upon line, precept upon precept, the House will hand to the Senate. It will not be changed. In that stage of the bill's history the public was excluded. In this stage the public is admitted. In the hour when, in the bill's formative period, public opinion might have had its effect the doors were shut in the face of the people. Now, when the formative period has passed and the majority Members are gagged and bound head, hand, and foot by caucus rule, the doors are thrown open to the people.

But some of the Democrats say: "Our caucus is not secret, because we have a roll call if it is demanded, and the roll can be had by the public if it desires." But that does not admit the public. That does not open the doors. And roll calls are rarely demanded, for the caucus is made up of men all of one party, and when roll calls are demanded they are rarely, if ever, published. And, besides, there is one place for recorded votes here. It is not in the newspapers. It is not in the minutes of the caucus. The place for recorded votes here is in the Journals and CONGRESSIONAL RECORD. That is the only place for them. The Constitution provides for recorded votes. The public expects to find them in the journals and records of Congress, and the public has a right to demand that the recorded votes be placed there.

Mr. CRISP. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. MURDOCK. Yes.

Mr. CRISP. If we had an open caucus and the public were invited, would not the roll call then appear in the journal of the caucus and not in the CONGRESSIONAL RECORD?

Mr. MURDOCK. Yes; but it would be accessible to everyone; it would not be difficult of access.

Mr. GLASS. Just one moment. I know that the gentleman wants to be fair. I want to ask the gentleman if he does not know that it is a fact that there was not a single, solitary provision in the bill that did not appear in the newspapers, and not even a change in the matter of phraseology that was not reported in the papers?

Mr. MURDOCK. I will say to the gentleman that I have not read the newspapers with that care and do not know. But this bill should be considered here and not in secret caucus. The very essence of the Democracy is light. The greatest enemy the Democracy has is special privilege, and the readiest refuge special privilege has is secrecy.

This is a representative government. The very essence of representation is individual accountability. The representative is responsive and responsible to his people or he is not representative at all. He can not be servant to any other force save his people and remain, in his ability to serve his people, his own master.

The spirit of the democracy, the genius of the Republic, on this score, must, to survive, be a jealous spirit.

No man can serve two masters. No man can serve his people and the caucus. He will serve either the one or the other. He can not serve both. The secret caucus has no place in this Government. It is most intolerable when it is thrust between the people and their House of Representatives. It is utterly wrong. It is not good practice; it is not good legislation; it is not good government; and the day is coming when, before a storm of indignant public opinion, it is not going to be good politics. [Applause on the Republican side.]

I realize that there is a considerable group of men in the Democratic Party who are fighting to open up the Democratic caucus to the public. They have my heartiest commendation for their efforts. I congratulate them. The vote they cast in the Democratic caucus on April 8, 1913, is one of the most important votes of the present session. Fortunately, and unlike most of the votes in the caucus, it was a recorded vote and, under the rules of the caucus, is available to the public. The proceeding in the caucus was as follows when the question of open caucus came up April 8, 1913. The following resolution in caucus was offered by Mr. SHACKLEFORD:

Resolved, That this caucus shall be open to the press, to the President, to the Senators, and to the Cabinet officers, and that the President, the Senators, and the Cabinet officers may occupy seats upon the floor.

The following substitute resolution was offered by Mr. CARLIN:

Resolved, That hereafter all Democratic caucuses or conferences, when called either by the membership or by the chairman of the caucus, shall be open to the public.

Mr. HAY moved that both resolution and substitute be referred to a committee of three, to be appointed by the Chair, this committee to report later.

Mr. THOMAS moved that both resolution and substitute be tabled, which motion carried by a vote of 167 to 84.

Those who voted "nay"—that is, those who voted for the open caucus—were:

Abercrombie, Allen, Aswell, Bailey, Bathrick, Borchers, Bowdler, Brockson, Broussard, Brown of New York, Brumbaugh, Buchanan of Illinois, Bulkeley, Candler of Mississippi, Carlin, Casey, Collier, Connolly of Iowa, Cox, Crosser, Cuiop, Deltrick, Dershem, Dickinson, Donohoe, Doolittle, Dupré, Elder, FitzHenry, Floyd of Arkansas, Foster, Garrett of Texas, Gordon, Hammond, Hardy, Harrison of Mississippi, Harrison of New York, Hayden, Helvering, Henry, Hobson, Hoxworth, Keating, Kindel, Kinkead of New Jersey, Lazaro, Lee of Pennsylvania, L'Engle, Linthicum, Maguire of Nebraska, Morgan of Louisiana, Murray of Massachusetts, Murray of Oklahoma, Oldfield, Palmer, Pepper, Phelan, Quin, Rainey, Raker, Reilly of Connecticut, Roddenberry, Rubey, Rucker—

Mr. GLASS. Mr. Chairman, I would suggest to the gentleman that we would like to hear those names.

Mr. MURDOCK. I am hastening to get through, I will say to the gentleman. I continue reading the list:

Scully, Seldomridge, Shackelford, Sharp, Sims, Sisson, Smith of New York, Smith of Texas, Stephens of Mississippi, Stone, Stout, Stringer, Talcott of New York, Tavenner, Taylor of Arkansas, Taylor of Colorado, Thompson of Oklahoma, Walsh, White, and Wingo.

If the attendance were larger to-day, Mr. Chairman, I would ask unanimous consent to print without reading the names of the 167 Democrats who voted to table the resolution.

Mr. STEVENS of New Hampshire. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. MURDOCK. No; I regret I can not yield. I want to get these names in.

Mr. STEVENS of New Hampshire. I want to get my name in. I would be glad to have it in. [Laughter and applause.]

Mr. MURDOCK. That is a demonstration that a caucus ought not to be secret.

Mr. STEVENS of New Hampshire. I happened to become a Member of the House on April 8. At the last caucus on this currency bill I voted for open meetings.

Mr. MURDOCK. I congratulate the gentleman for taking that view as a member of the Democratic Party, and I hope he will keep it up. [Applause.]

Now, I was saying that if the attendance were larger to-day I would ask unanimous consent to print without reading the names of the 167 Democrats who voted to table the proposition for open caucuses. It will take too much time to read the names one by one. But I will read the names of those not voting in the caucus. The names of those not found in the vote against the Thomas motion, or in the list of those not voting, are the names of the 167 Democrats who voted for the Thomas motion to table the resolution and substitute.

I will read the names of those not voting. I would rather give the names, name by name, because this is unusual, and I will ask the gentleman from California [Mr. HAYES] to allow me seven minutes more.

Mr. HAYES. Mr. Chairman, I yield to the gentleman from Kansas seven minutes.

Mr. MURDOCK. I thank the gentleman. Now, Mr. Chairman, these are the gentlemen not voting:

Ansberry, Baltz, Barnhart, Booher, Bruckner, Burgess, Clayton, Covington, Dale, Doremus, Eagle, George, Godwin of North Carolina, Goodwin of Arkansas, Gray, Gregg, Griffin, Hamlin, Jacoway, Johnson of Kentucky, Konig, Lewis, McClellan, Mitchell, Morrison, Patten of New York, Peters, Pou, Richardson, Stanley, Stedman, Stephens of Nebraska, Stevens of New Hampshire, Sullivan, Sumners, Talbott of Maryland, and Taylor of New York.

Mr. BOOHER. Will the gentleman permit me to say that if I had been present I would have voted for a closed caucus?

Mr. MURDOCK. I regret to hear the gentleman say that, because I understood he was for an open caucus.

Mr. BOOHER. No.

Mr. MURDOCK. It grieves me to hear the gentleman take that position.

It ought to be a matter of nation-wide regret that more men did not on this occasion vote nay and for the open caucus.

Mr. CLARK of Florida. May I ask the gentleman one question?

Mr. MURDOCK. Certainly.

Mr. CLARK of Florida. Is it the purpose of the gentleman to publish in the Record the names of those who voted for a closed caucus?

Mr. MURDOCK. I did not feel free to publish the names of the gentlemen who voted for a closed caucus without reading them in the presence of the gentlemen themselves. I have not the time to read the list name by name.

Mr. CLARK of Florida. I hope the gentleman will print that list, because I am in favor of a secret caucus, and I want it so to appear.

Mr. MURDOCK. If the gentleman insists, I will print those names. Does the gentleman, who is a leader of the Democratic Party, insist that I place in the Record the names of those who voted in favor of a secret caucus?

Mr. CLARK of Florida. I am not a leader of the party.

Mr. MURDOCK. I had so supposed.

Mr. CLARK of Florida. I am in favor of a secret caucus, and I should like to have that fact appear in the Record.

Mr. GRAY. Will the gentleman yield?

Mr. MURDOCK. Yes.

Mr. GRAY. I should like to inquire if my name appears on the list of those who voted for an open caucus. I do not believe that it appears in the list. I voted for an open caucus twice before that time, and I have voted for an open caucus since that meeting, the last time being during the consideration of the pending currency bill by the caucus. At the time of the caucus alluded to by the gentleman from Kansas [Mr. MURDOCK] I was on my way from my home in Indiana to Washington to vote for an open caucus, and was resisting both fire and water to get here. I was able to overcome fire, but was delayed by water, which had flooded that section of the country, suspending all railway travel.

Mr. MURDOCK. I have the list before me, and I assure the gentleman that his name appears among those who voted for the open caucus. I am glad to see it there, and I hope he will bow his back and continue to make a fight for the open caucus; because if that little band of brave Democrats in that caucus will fight for the proposition, they will open up that caucus, and it will be a good thing for the country and a good thing for the Democratic Party.

Mr. BOOHER. If the gentleman from Kansas will permit me, I would advise him to speak for the public rather than the Democratic Party, because we will take care of ourselves.

Mr. MURDOCK. I suppose that is gratuitous. This is in the interest of good government, and I advise the gentleman to join the progressives in the Democratic Party to vote for the open caucus.

Mr. BOOHER. I have always been there. I do not have to join.

Mr. MURDOCK. In this matter of the caucus, and in other major questions, the Progressive Party stands opposed to the leadership and policies of the two old parties. The Progressives demand that the people, and the people alone, shall rule.

In the Republican Party the leadership believes in the system of the boss and the machine and the control of the many by the few. The alliance of that leadership with special privilege is not only natural, it is inevitable.

In the Democratic Party the leadership believes in the system which places the sovereignty of the state before the rights and needs of the people of the Nation, though the benefit to special privilege and the defeat of popular will through adherence to that doctrine is undeniable.

The Progressive Party believes in the direct rule of the people in State and Nation. It puts the public welfare in first place. It places national need before sectional advantage. In the problems of money, tariff, labor, judicial reform, conservation, the recall, industrial regulation, and legislative control the Progressive Party believes that wherever the law makes a favorite somewhere it makes also a victim.

Under this flag it joins battle with the two old parties all along the line.

THE RECALL.

The Progressive Party believes that the people should have the right to remove from office before the expiration of his term any public official who is corrupt or unfaithful.

The Republicans and the Democrats are opposed to this, as they are to the complete initiative and referendum, which the Progressives favor.

PRESIDENTIAL PRIMARIES.

The Progressive Party champions a governmentally controlled national primary for the nomination of presidential candidates. The Republican leadership of the Nation has violently and with sinister and indefensible tactics opposed this reform at every step, its culminating act—the theft of the Chicago convention of 1912—being characteristic of its inherent distrust of the rule of a popular majority. The Democratic Party, in full control of all branches of the Government, offers in this line nothing.

THE JUDICIARY.

The Progressive Party stands for judicial reform—it would give the people of the States the right of review of judicial opinion on constitutional questions. The Republicans and the Democrats are opposed to this.

SECRET CAUCUS AND COMMITTEE.

The Progressives are opposed to secret caucuses and are for open legislative committee meetings. They held the first open caucus ever held in Washington. The Republicans in the House, after the Progressives had paved the way, provisionally declared for the open caucus, but only after they had held a secret caucus in which they continued the Cannon system by empowering their leader, Mr. MANN, to name the committees. The Progressives named their committees in open caucus and by a committee. The Democrats maintain and defend the secret caucus and the closed committee.

CONSTITUTION.

The Progressives believe that constitutions, Congresses, and courts were made for the people, not the people for these. They believe therefore in the adoption of an easier method of changing the National Constitution to conform to the new conditions confronting the Nation, and have introduced in Congress a resolution which designs to accomplish this. This resolution, which provides among other things for a national constitutional convention once every 30 years, is now before the Judiciary Committee of the House. The Republicans are against it. So are the Democrats.

INDUSTRIAL COMMISSION.

The Progressives stand for the creation of a national commission which will have the power to curb extortionate practices of great industrial organizations to the end that evil aggregations shall not be permitted to prey upon the people and that honest business shall have a fair field for legitimate endeavor. The Republicans oppose this, as do the Democrats.

CONSERVATION.

The Progressives are for preserving to the people, against monopolistic manipulation for private profit, the natural resources of the country. Under recent Republican leadership concentration of these resources into the hands of a few was alarmingly threatened. Nearly half the standing timber of the country is to-day in the hands of 195 holders. Our coal lands are owned by comparatively few. Our phosphate deposits are trust owned. Our water-power sites are being absorbed by the system. Our mineral deposits are in the hands of gigantic combinations. Our railroads and telegraphs and telephones are consolidating. Over it all and through it all is an enormous waste—a waste that is sapping at the vitality of the Nation. Over it all and through it all is the device of an irresponsible few taking toll from the unprotected many. The Progressives would stop this. The Republican leaders are not concerned. The Democrats would leave the problem to the States.

LABOR.

The Progressives stand for advanced labor legislation that shall have all the power of the National Government behind it. The Progressive Party would bar from interstate commerce the products of child labor; it is for a minimum wage for women; for fully adequate workmen's compensation acts; for industrial insurance; and for all those industrial measures which will give the man who earns his bread in the sweat of his brow a just share of the wealth he creates. In their long lease of power, the Republican leaders, far from offering relief to labor, were notoriously arrogant in denying it by packing congressional committees against it. That leadership has not changed its attitude; nor will it change its attitude. The Democratic Party, enmeshed in the traditional doctrine of State rights, leaves the remedy to the States, which is equivalent to no remedy at all.

TARIFF.

The Progressive Party is not for a prohibitive protective tariff, but is for a protective tariff which will equalize conditions of competition at home and abroad for the manufacturer, for labor, and for the farmer, to the end that domestic industry shall not be weakened but strengthened for conquest of foreign markets, such tariff to be based on facts adduced by a scientific tariff commission and the tariff rates to be considered in Congress one schedule at a time. The Republican leaders are for a high protective tariff of the nature of the present Payne-Aldrich tariff law, as evidenced by the character of Republican amendments offered in the House to the Underwood bill, amendments seeking in nearly every instance to maintain the high Payne-Aldrich rates. The Republican leaders in a motion to recommit offered a weak tariff-commission proposition, which everybody present knew would go out on a point of order, as it did go out. No vote was taken upon it. The Progressives offered at the same time a tariff-commission plan in their motion to recommit

the bill, which was not subject to a point of order. A vote was taken upon it. No Republican in the House voted with the Progressives for it. On the tariff the Democrats are for a theoretical tariff-for-revenue bill. Their omnibus bill, framed in secret caucus, is now pending.

MONEY.

The Pujo committee proved that the control of credit in this country has been concentrated into six houses: Morgan & Co., the City National Bank, the First National Bank of New York, Kidder Peabody & Co., Lee Higginson & Co., and Kuhn, Loeb & Co. Three of these houses, through interlocking directorates and other devices of control, are affiliated with concerns which aggregate \$22,000,000,000, one-sixth the wealth of the whole Nation. The Democratic members of the Pujo committee offered concrete remedies for the abolition of this gigantic confederation of financial barons. The Glass currency bill adopts none of these proposals. It adopts a portion of the Aldrich plan and proposes merely to give the Nation a more elastic currency. It offers a shadow when the Nation is crying aloud for substance. The Democratic Party is taking the proverbial "step in the right direction."

The Republican leaders, with full knowledge of the concentration of credit control, when in power side-stepped the real problem and offered the Aldrich bill, which handed the credit system of the Nation over to the big bankers under a 50-year franchise. If restored to power, the Republican leaders will enact into law the Aldrich bill or something like it. The Progressive Party is for an elastic currency, but it believes in the rights of the many against the special advantages of the few, and it stands first for wiping out directly and without delay the gambling practices of Wall Street, which have vitiated the legitimate banking business of the country and have constituted one of the chief means by which credit has been controlled, special privilege enthroned, and equal opportunity denied.

These differences between the Progressive Party and its opponents, the Republican and Democratic Parties, are not fanciful. They are real. Through them all runs the demand by the Progressives for direct popular government and its denial by the old parties.

Mr. GLASS. If the gentleman will allow me, I should judge from the news from Maine that the Progressive Party is chiefly in favor of contraction. [Laughter.]

Mr. MURDOCK. I will say to the gentleman from Virginia that the Progressive Party has just got down to fighting weight. [Applause.]

Mr. HAYES. Mr. Chairman—

The CHAIRMAN. Does the gentleman from Kansas yield to the gentleman from California?

Mr. MURDOCK. I want to finish this up. The Progressive Party believes that the hour is here when this Nation must brutalize a predatory individualism which has overrun the democracy and outraged the spirit of equal opportunity. The Progressive Party puts the public welfare above public place or party success; it makes public service paramount; it proposes accomplishment, not promise; it seeks results; it has vision; it has faith in the people; and it has determined to open up in this country the door of equal opportunity which special privilege is closing—to open it to everyone and for all time to come. [Applause.]

I append the list of concerns which are controlled by the interlocking directorates of five banking houses, as shown in Exhibit 134B from the report on the Money Trust.

Concerns controlled by interlocking directorates of 5 banking houses.

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. CULLOP having taken the chair as Speaker pro tempore, a message from the Senate, by Mr. CROCKETT, announced that the Senate had passed without amendment the bill (H. R. 3406) to authorize the construction of a bridge across the Sabine River at Orange, Tex.

The message also announced that the President of the United States had approved and signed bill and joint resolution of the following titles on September 4, 1913:

S. 2319. An act authorizing the appointment of an ambassador to Spain; and

S. J. Res. 52. Joint resolution to authorize the appointment of Thomas Green Peyton as a cadet in the United States Military Academy.

CURRENCY.

The committee resumed its session.

Mr. GLASS. I yield 45 minutes to my colleague, the gentleman from Massachusetts [Mr. PHELAN].

Mr. PHELAN. Mr. Chairman, within seven months from the day on which President Wilson was inaugurated the Democratic Party in the House of Representatives will have fulfilled two pledges made in the Baltimore platform. This House has already passed a tariff bill. In the course of a few days it will have passed a banking and currency bill.

With almost three months yet remaining before the date set for a regular session of Congress the majority party in the House of Representatives will have kept its promises for tariff reform and for banking and currency legislation.

There was assurance from the day when it was first announced that there was to be a special session of Congress that a tariff bill would have a speedy passage through this House.

There was no such assurance with reference to a banking and currency bill. Indeed, it was freely predicted that it was hope-

less to attempt to pass such a bill even through the House. It was pointed out that the Republican Party, although recognizing for a quarter of a century that our banking and currency system was dangerously defective, was unable with all the force and power of its wonderful discipline and organization to enact into law any comprehensive plan for a sound and adequate system of banking and currency. How, then, could the Democratic Party, but just come into power, a party against whom the charge has been constantly and repeatedly made by its opponents that it is not a party of construction, hope to succeed where the Republican Party had failed; to accomplish a great constructive work which it had been beyond the power of the Republican Party to accomplish?

If the leaders of the party in power had to consider only the difficulties and the dangers in the way of successful legislation, they might with reason be excused from hesitation to attempt legislation of this kind; but there were two reasons which made it imperative for them to act: First, their party had made a solemn pledge in the Baltimore platform to enact banking and currency legislation, and, second, there was pressing necessity and urgent demand for such legislation arising out of the needs of our people. The Democratic Party had a responsibility to assume and assumed the responsibility without hesitation and without trepidation.

The subcommittee of the Banking and Currency Committee of the last Congress, through its hearings and inquiries and investigations, had done the preliminary work necessary for consideration of legislation at this special session and had paved the way for the drafting of a banking and currency bill. A bill was drafted and introduced into the House in June by the chairman of the Banking and Currency Committee and was referred to the Committee on Banking and Currency. The majority members of that committee have, since its reference, given it their concentrated and undivided study and consideration. As changed and amended by them it has received the enthusiastic support of a Democratic caucus and has been reported by the committee to this House.

From the moment that it was announced that a bill was being drafted down to the present moment reports have been constantly spread abroad of the most discouraging nature. Friction and almost hopeless lack of harmony have been attributed to those engaged in the formulation of the bill. But the bill was drafted and presented to the House.

During the progress of the bill through the committee the impression was created from the news articles, with their glaring headlines, that there was irreconcilable disagreement among the majority members. But by a vote of 11 to 3 the bill was reported favorably to a Democratic caucus.

While the bill was in caucus the newspapers contained accounts of violent attacks on the bill. Stories of widespread "insurgency" were spread broadcast. But the caucus passed the bill with only 9 dissenting votes.

I am not taking issue with any of the newspaper accounts. Indeed an admission as to the correctness and accuracy of all their accounts simply makes the point I have in mind more forcible. In spite of disagreement, of difference of opinion, and of opposition the bill has marched steadily onward. The more it has been studied, the more it has been explained, and the better it has been understood the weaker the opposition has become and the stronger and more numerous and more enthusiastic have become the forces behind it. In the caucus there was hardly a line in the bill but what occasioned some questioning, but the more thorough the scrutiny the better satisfied did those present at the caucus become that the bill was fundamentally sound and practicable. Even in the consideration of the bill in the full committee members of the opposition parties, with a single exception, refrained from voting against it. I submit that the latter action was taken because whatever responsibility the Democratic Party assumed in framing this bill—and it assumed responsibility because it was its plain duty to do so—the bill is not a partisan bill. Even those who have made the charge of partisanship against the bill have confined their charges to the manner in which the bill has been brought into this House and not to the substance of the bill. In its substance it is acknowledged that there is nothing of a partisan nature and that it appeals to men who seek to enact sound legislation irrespective of party.

Republican and Progressive Members of this body have frankly stated that they agree that the fundamentals of this bill are sound. Republicans and Progressives have indicated their intention to vote for the bill. It is only natural that they may be opposed to certain features. It is impossible to frame any bill which will satisfy everybody, and in the past it has been impossible to frame a banking and currency bill which would satisfy even a majority of the committee. Those who have had to do with the construction of this bill know too well

the difficulties of this complex, scientific problem to hope that this measure is by any means perfect.

They do maintain, however, that it is the result of careful study and painstaking investigation into the defects of our present national banking system and of a thorough consideration of the needs of the country in the establishment of a new system, and they contend that this bill, if enacted into law, will establish a banking structure founded on correct scientific and economic principles and adapted to the business, commercial, and agricultural interests of this Nation.

PRESENT NATIONAL BANKING SYSTEM.

In spite of the fact that our national banking system has had a longer term of active existence than any previous national or any State system in this country, it has long been recognized that it has serious defects.

Indeed, it is not surprising that the present national banking system has defects and has proved inadequate to supply the needs of the country when we consider the events leading up to the adoption of our present system and the purpose of the laws establishing this system.

Prof. Charles Franklin Dunbar, late professor of political economy in Harvard University, in an essay on "Economic science in America," written as long ago as 1876, says:

The General Government in 1846 made specie its only currency, and left the paper, the currency of the people in three-quarters of the States, to take care of itself. That this measure for the protection of the Treasury was judicious, supposing it to be settled that the paper was to remain free from all control, few are now disposed to deny; but it involved an abdication of power over the part of the circulation which was of immediate importance to the mass of the community and a confession of the insolubility of a great public question which hardly has its parallel.

The effect produced on our statesmen by thus drawing a line which left this whole subject in the exclusive province of State legislation was disastrous. From 1846 to 1862 the study or discussion of currency and finance formed no part of the training of men for national politics. In the legislatures of the States questions of this class were dealt with by men of inferior order, or by those who were only anxious to make their mark and go up into a broader field; but they had ceased to be national questions which could repay the political aspirants to national office for any considerable expenditure of time or thought. Congress had nothing to do with the currency, except to settle the weight and fineness of the coin, and Government finance resolved itself into paying all demands in gold from a Treasury which generally overflowed and borrowing upon easy credit in an exceptional case of difficulty. It is not surprising that when the War for the Union compelled the Government to deal comprehensively and at short notice with questions of finance and currency in their most threatening form and on a gigantic scale we had no leading man in public life who could speak upon them authoritatively or command general attention.

While Prof. Dunbar refers more particularly to legislation other than that upon which our present national banking system has been constructed, he does point out clearly, if severely, the unpreparedness of our legislators of those days to deal with these complex economic questions, and we all must agree that in the absence of consideration by our national legislators of such questions for so many years they could not be expected to establish a banking and currency system which should endure for 60 years without serious defects in that system. Moreover, it would task the capacity and wisdom of the ablest statesmen to perform this task under such conditions as existed during the Civil War. Indeed, it was the Civil War itself which made necessary the legislation which has given us our present banking system. This legislation did not have for its primary purpose the establishment of an enduring banking system. The framers of the bank acts of 1863 and 1864 had for their first object the provision of a paper currency of a uniform value throughout the United States, which should become the sole paper currency of the future, and the establishment of banks which would absorb by permanent investment a certain amount of United States bonds. The title of each act, "An act to provide a national currency secured by the pledge of United States stocks (or bonds) and to provide for the circulation and redemption thereof," clearly indicates the point of view from which these measures were enacted. What interested Congress and the public at the time was the issue of notes upon a secure basis and a market for United States bonds.

Whatever, also, may be said of the acts of 1863 and 1864 and the amendments thereof, it is a fact that they did establish a market for United States bonds and that during a most critical period in our history, and even up to the present date, they have given us a bank note with such security behind it that its soundness has never been questioned. These acts, furthermore, have rendered great service to the country "in the establishment of a class of remarkably sound banking institutions, giving to the community many of the benefits of free banking with the minimum of its risks."

For over a quarter of a century there has been more or less agitation of the defects in the national banking system, and there have been desultory attempts to obtain needed reform through legislation.

ESSENTIAL OBJECTS OF LEGISLATION.

It is not, however, until very recent years that any attempt has been made to give a thorough and comprehensive study to the question of banking and currency. The panic of 1907 did at last awaken our people to the inadequacy of our present laws and to the positive danger of our antiquated banking system and methods. The creation of a National Monetary Commission and its investigation and studies and reports are of such recent date that they need no comment. The work of this commission and the universal study and discussion of banking and currency for the past five years have brought us to a point where we have a well-defined knowledge of the defects of our present banking laws and of the true objects to be sought in legislation upon this subject.

Out of all the discussion and criticism and suggestions that have been made there is general agreement that our present banking system is inadequate and obsolete, and that there is pressing demand for legislation. It is, moreover, generally agreed that the patent defects in the system are, first, that our system of reserves is unscientific and not based upon sound banking principles, and, second, that our currency in the form of national bank notes is inelastic—that is, not responsive to present increase or diminution of demand—and, third, that there is no means for effective cooperation among the banks to protect their own or the public interests in times of stress and crisis. While these are not the only important defects, they are the defects which have received most popular attention. Any new system of banking must correct these defects; but if it is to supply the banking needs of a great agricultural, industrial, and commercial country like the United States, it must accomplish a great deal more.

In the report accompanying the bill submitted by your Committee on Banking and Currency we find stated on page 16 of that report the fundamental elements which the committee considers indispensable in any measure likely to prove satisfactory to the country.

1. Creation of a joint mechanism for the extension of credit to banks which possess sound assets and which desire to liquidate them for the purpose of meeting legitimate commercial, agricultural, and industrial demands on the part of their clientele.

2. Ultimate retirement of the present bond-secured currency, with suitable provision for the fulfillment of Government obligations to bondholders, coupled with the creation of a satisfactory flexible currency to take its place.

3. Provision for better extension of American banking facilities in foreign countries, to the end that our trade abroad may be enlarged and that American business men in foreign countries may obtain the accommodations they require in the conduct of their operations.

I believe it will make the subject easier of treatment if the objects sought to be secured through the proposed legislation be stated more in detail, as follows:

1. To establish some means for an effective cooperation among our banks for the protection of their own and the public interests, especially in times of stress and crisis.

2. To replace our present unsound rigid and dangerous system of reserves with a system more flexible and yet safe and secure.

3. To provide an elastic currency, responsive to present increase or diminution of demand.

4. To lay the foundation for a broad discount market similar to the discount markets abroad.

5. To permit and encourage the establishment of American banking institutions in foreign countries.

6. To put into circulation and to make available for use the large sums of money now locked up in the vaults of the Government.

GLASS BILL.

(1) UNIFICATION OF BANKS OF THE COUNTRY.

In order to lay the foundation for any adequate system of banking in this country it is necessary to provide an organization whereby the thousands of banks, National and State, can cooperate and coordinate. The bill before the House, accordingly, provides for a unification of our whole banking system.

The banks of the country are all grouped into 12 great divisions. State banks as well as national banks, by conforming to the regulations, may become members of the organization. In each district a Federal reserve bank is organized. The capital for this bank is supplied by the contributions of banks becoming members. Each member bank subscribes in cash an amount equal to 10 per cent of its own capital stock and is liable to an assessment equal to another 10 per cent. This liability for an amount equal to the amount actually paid in is a similar requirement to that of double liability upon stockholders in national banks under our present laws. It is altogether un-

likely that member banks will ever be called upon to subscribe in cash more than the original 10 per cent.

In addition to these 12 Federal reserve banks there is a Federal reserve board consisting of seven members—the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, ex officio members, and four other members to be named by the President of the United States, subject to confirmation by the Senate.

These four members are to be selected so that the four general geographical divisions of the country shall be represented upon the board. At least two of these four shall be of a different political party than the other members of the board. Thus country-wide representation on this board is secured and exclusive representation by one political party is prevented.

I can not in the brief time allowed me explain in detail all the various provisions respecting this organization. I shall, however, make a few observations upon matters upon which there has not in some quarters been a clear understanding.

The national banks remain independent and competitive banks. They continue to do business as they do to-day, without undue interference. They continue to do business with such customers as they desire. They make their own discount rates. If their discount rate is lowered in some places and on some occasions, it will be because the member (National or State) banks are aided in serving their patrons by the Federal reserve banks. Neither the Federal reserve banks nor the Federal reserve board interferes with their choice of their own directors. Indeed, they continue to do business very much as they do to-day, except that they and their customers receive the benefits which will be derived from this legislation.

The Federal reserve banks in general are not competitors of the National and State banks. The loans they make are made by a process of rediscounting to member banks. (By member banks is meant National or State banks holding stock in Federal reserve banks.) They make no loans and receive no deposits from individuals. The sole depositors, except in foreign countries, are the United States Government and the member banks. Each Federal reserve bank makes its own rate of discount, subject to review by the Federal reserve board. This power to review enables the Federal reserve board to establish a uniform rate of discount throughout the country if at any time advisable to prevent the outflow of gold from the United States or to secure an inflow of gold; it also enables the board to prevent abuse by too high a rate of discount, and also to prevent imprudent or dangerous expansion by too low a rate, although it is doubtful if either contingency often arises.

This provision as to the discount rate is infinitely superior to that contained in the Aldrich plan. Under the Aldrich plan the rate of discount was to be uniform throughout the country. Although to-day the rate of interest in different parts of the country differs because of locality, population, security, and a variety of economic reasons, the Aldrich plan would make the rate of discount of reserve banks uniform. As a result, if the rate were high enough in one section, it would inevitably be too high in another section; vice versa, if it were low enough to suit the needs of one section, it would be so low that it would enable banks in some sections to receive a splendid and undeserved profit by the rediscount of paper. Under the present bill the board can make the rate uniform if ever necessary or advisable, but there is no rigid requirement that it must be uniform.

Of the directorate of the reserve banks, the member banks select six out of the nine members; the other three are appointed by the Federal reserve board.

The Federal reserve board is a Government board, having a general supervision and control over the whole system. The board is not a bank. It does not do a banking business with anyone. It is a supervisory board.

Accordingly, we find that the banking business is done by those having familiarity with the technique, customs, and practices of banking. The national banks do their own business with substantial freedom. The reserve banks have a directorate, of which six members out of nine are chosen by the member banks.

The Federal reserve board is not controlled by the banks, and ought not to be. Its purpose is to serve the public and not the banks, and accordingly its members are appointed by the President of the United States, who represents the public interests of the whole Nation.

The foundation of the whole system rests upon sound principle. There is a unification of the banks of the country. The system provides that the bankers shall manage and conduct the banking business—that is, the business of deposits and loans—and in some measure have to do with the issue of notes, although the latter is a Government issue. The supreme over-

sight and control of the whole system, however, is vested in a board representing the public. Thus the bill renders unto the bankers what is the bankers', but positively and definitely secures to the public what belongs to the public.

The organization thus established unifies and coordinates the banks of the country in such a way that not only are present evils eradicated, but the whole banking system is broadened and liberalized and made adequate to supply the banking needs of this great agricultural, industrial, and commercial Nation.

(2) BANK RESERVES.

One of the most important reforms contained in the bill is that with reference to bank reserves. The present system of reserves is rigid, unsound, and dangerous.

The rigidity of our reserves has been a serious cause of trouble. In the United States the law requires a certain fixed reserve to be kept against deposits. Out of every \$100 of deposits the law requires country banks to keep a reserve of \$15—that is, 15 per cent; reserve city and central reserve city banks, \$25, or 25 per cent.

The law, moreover, forbids banks to make further loans while their reserves are below the legal requirements. Accordingly, when a bank's reserves are at the legal requirement or below the bank refuses to make further loans. When reserves become low in banks, the banks, because of legal requirements, contract their loans. Thus manufacturers or merchants or other borrowers, at the time they need loans from the banks, are unable to get these loans because of the existing laws which require a fixed reserve. Their failure to obtain loans immediately stops the progress of their business. In many instances it means business failure to solvent concerns. At just the time loans from banks are most needed the law prevents such loans from being made.

The danger of requiring a bank to keep a fixed reserve below which it shall not fall has been recognized in the great commercial nations of Europe, and in those countries, except in the case of bank notes, the law does not fix a reserve requirement. Reserves are maintained, but the amount of reserve is left to the discretion of the banks. It is hardly advisable, however, in this country, with its long-established fixed legal reserve, to do away entirely with these legal provisions. It is safe, and it is necessary, on the other hand, to loosen up in the rigidity of our reserve requirements. Depression and panic might often have been averted if it had not been for the rigidity of our reserves.

The bill does, therefore, relieve the rigidity of the present legal reserve requirements. In addition to lowering the reserve requirements—in country banks from 15 per cent to 12 per cent, and in reserve city and central reserve city banks from 25 per cent to 18 per cent—it has given the power, in section 12, subsection C, to the Federal reserve board to suspend temporarily reserve requirements with the proviso for a graduated tax upon the amounts by which reserves fall below the levels established in the bill. Thus a method is prescribed whereby banks may extend loans even when their reserves fall below the set limits and in this way give accommodation to borrowers in time of real need. Relief from our present rigidity is thus afforded under proper and necessary safeguards and a means furnished to prevent panic when a liberal extension of loans will prevent panic.

Another much-needed reform with reference to reserves is made by the bill. By allowing country banks to count deposit balances in reserve city banks and central reserve city banks as reserves, and by permitting reserve city banks to count as reserves deposit balances in central reserve cities, what has been termed pyramiding of reserves has been permitted. We are all more or less familiar with the meaning of the expression "pyramiding of reserves." While the law seems to require a reserve of 15 per cent for country banks, for example, the reserves actually held in cash may be by a process of deposit and redeposit amount to only 7.40+ per cent. In practice, banks have habitually counted as reserves deposit balances in correspondent banks. There has been a strong inducement for banks to carry reserves in reserve city and central reserve city banks, because these latter banks pay interest on such deposits at the rate of 2 per cent per annum, whereas if banks kept all their reserves in their own vaults the cash would lie idle and bring in no income. As a result the reserve and central reserve city banks have been carrying enormous deposits which have been counted as reserves by depositing banks. The concentration of reserves in New York City has been tremendous.

This practice of pyramiding reserves and the resultant concentration of reserve money in the central reserve cities, and in New York in particular, has brought about an evil in two important respects. First, this money has been largely loaned out on the stock exchange and has been thus diverted from the chan-

nels of trade, its proper place, to be used for speculative purposes. Second, in times of unusual demand or in times of distrust outside banks have drawn heavily on their deposits in New York. To meet the demand and to keep within the legal reserve requirements the New York banks have been obliged to contract loans or to call in loans. At times they have also been unable to supply the demands of the banks carrying deposits with them when these banks sought to draw upon these deposits. Without going into detail, the contraction of loans has frequently brought on serious business depression. Too often the limit went beyond business depression and the country has suffered from disastrous panics.

The trouble has been that under the law reserves have been diluted and reserves have been concentrated in New York City banks. The New York banks have received these reserves on deposit, not as trustees for the public to conserve reserves, but in order to obtain deposits from which to make loans for profit. Indeed, they have invited deposits from correspondent banks by paying 2 per cent interest on such deposits. Plainly they would not pay 2 per cent unless they intended to use the deposits thus received to make profits for themselves.

In the bill submitted by the committee all reserves are held either in a bank's own vaults or in its Federal reserve bank. Balances with reserve city and central reserve city banks can not be counted as reserves. In spite of the urgent, persistent, and violent demands of the big bankers, the committee has resolutely refused to yield on this vital principle. The committee is unalterably opposed to a continuation of the evil of allowing banks to count as reserves balances kept with other banks.

By allowing deposits in Federal reserve banks to be reckoned as reserves, there is no withdrawal of money from circulation. A portion of reserves is still available for use without the dangers of the present system.

The first duty of the Federal reserve banks is to protect reserves. The reserve banks must always operate on the safe side, so managing their business that depositing banks will have a reservoir from which to draw in order to make good depletion of their own reserves. As these Federal reserve banks are quasi public institutions, one of whose first duties to the public is the protection of reserves, and as they are under no such inducement to make profit as private banks are, they are compelled to assume an official responsibility such as private banks using reserve deposits to make loans for profit could not be asked or expected to assume. Apart then from other provisions tending to make reserves in Federal reserve banks safe, although still available for use, the very semipublic nature of the reserve banks gives security to bank reserves under the operation of this bill.

ELASTIC NOTE ISSUE.

Reserves are made more secure not only by the reserve sections of the proposed law, but also by other sections of the bill. The provisions for an issue of Federal reserve notes supply an additional amount of currency at such times and in such amounts as business requires. This additional amount of currency will relieve the pressure upon reserve money. Where now cash is demanded beyond the supply of bank notes, money available for reserves is necessarily used (unless banks suspend payments, as has happened) and reserves thus depleted. Under the operation of this bill, currency in the form of Federal reserve notes may be used and gold and other lawful money retained as reserves.

These notes not only serve to relieve the pressure upon reserves, but also supply a long-felt want by providing a currency as plentiful as the demand requires, and only as plentiful as the demand requires. For over a quarter of a century the need of a more elastic currency has been felt. To quote again from Prof. Dunbar, he says in his essay on *The National Banking System*:

The further objection that the system is not so constituted as to supply an elastic currency points to a defect in the working of the banking circulation in every section. This objection is indisputable if we give the word "elasticity" the meaning usually given it in banking discussions. If by elasticity we are to understand nothing more than mere capacity for growth under favoring conditions or variability, no doubt the bank circulation has varied and has had its periods of growth. It rose in its earlier period when the investments in bonds yielded a higher return; it ran down for a long series of years as the return upon bonds declined, and it rose again after the revulsion of 1893, when with the decline of bonds the return upon them advanced. But the elasticity of a currency is understood to mean something quite different from this tendency to vary over long periods. It means responsiveness to present increase or diminution of demand—the power of adaptation to the needs of the month, the week, or the day, whether rising or falling. A glance at the figures for any series of years, or for any period of marked changes in affairs, shows that the national bank circulation has never had this quality. How should it be elastic? Elasticity implies the operation of counter forces in currency as well as in a steel spring. That a currency may be responsive to demand it is necessary that the forces, tending respectively to expand or to restrict, should be forces at work in the daily business of the bank where it is brought into contact with the community by the stream of

loans, deposits, and payments. But under the national system at present the motives for extending issues are completely separated from real banking considerations, and such tendencies for the return of notes as exist are equally foreign to the relations between the issuing bank and the portion of the public which it serves.

It is plain that we can not obtain the responsiveness to demand mentioned by Prof. Dunbar under a system of issuing bank notes based upon United States bonds. Indeed, such a system has no economic basis. The amount of notes in existence depends upon the amount of Government indebtedness, since no more notes can be issued than there are bonds to secure these notes. The amount of currency in the form of notes necessary for use by the public has no relation at all to Government indebtedness, but does depend on the business and commercial needs of the country. As a result of our bank-note system at times we have had too great a supply of notes and at times we have had too small a supply.

The objection to the system, it is agreed by students of the subject, is that our bank-note issue has not been elastic; that is, "responsive to present increase or diminution of demand—the power of adaptation to the needs of the month, the week, or the day, whether rising or falling."

The Glass bill provides for an elastic currency in its provisions for Federal reserve notes and the ultimate retirement of our bond-secured bank notes. The Federal reserve notes are issued to Federal reserve banks by the Federal reserve board. They are Government notes, but have the essential advantages of bank notes. They are issued by the reserve board to the Federal reserve banks upon the deposit with the board of commercial paper to an amount at least equal in value to the value of the Federal reserve notes issued. The Federal reserve banks are furthermore required to keep a reserve against these notes of 33½ per cent in gold or lawful money.

As these notes are issued only upon the demand of the Federal reserve banks, the Federal reserve board can not of its own motion issue them to excess, assuming it should be so imprudent as to desire to do so. Since the Federal reserve banks can receive no profit on these notes except where there is public need of notes, and since the paper to secure these notes is based upon the activities of agriculture, industry, and commerce, the Federal reserve banks can hardly request an issue of notes beyond the demands of trade for this form of currency. The amount of issue is, therefore, determined by the needs of the country as expressed through the natural medium—the banks—but is subject to the regulation and control of the Government through the Federal reserve board.

Based upon commercial paper as security, these notes increase and decrease with the demands of commerce. As more currency is needed the want is supplied by the deposit of more commercial paper as security and the issuance of more notes. As all this paper is of short maturity, other commercial paper must in a short time be deposited as security in the place of the paper which matures. As business slackens the amount of commercial paper diminishes and Federal reserve banks will return Federal reserve notes to be destroyed instead of putting up new commercial paper as security.

There is, moreover, an important provision which will automatically redeem Federal reserve notes. Each note bears a distinctive letter and number indicating the reserve bank to which the note is issued. When these notes come into any other Federal reserve bank that bank shall not pay them out except under a penalty of 10 per cent per annum upon the face value of such notes. Accordingly, as fast as notes issued through one Federal reserve bank come into the possession of another reserve bank, the latter, since it can not use them, will redeem them and they must be paid by the reserve bank through which they were issued.

Thus there will be not only a constant issue of notes as needed, but also a constant redemption of them, which will contract the volume when a contraction is consistent with commercial demands.

Although these notes furnish a supply of currency in addition to the present volume of national-bank notes, the bill, by providing in section 19 for the redemption of United States 2 per cent bonds, contemplates the gradual reduction of national-bank notes outstanding, with the ultimate elimination of national-bank notes in 20 years.

REDISCOUNTS.

The commercial paper which is placed on deposit as security for Federal reserve notes by the Federal reserve banks is obtained by the reserve banks from member banks by a process of rediscounting.

A member bank which desires to increase its reserves or to obtain currency to supply its customers is enabled under section 14 of the bill, upon its indorsement, to rediscount bills and notes with the Federal reserve bank of which it is a member. There

are restrictions upon the kind of paper thus eligible for rediscount. The paper must be short-time paper. It must be sound and secure. In a general way it must be paper arising out of the activities of commerce.

As there has been some misapprehension by some who have read section 14 carelessly, with reference to the maturity of the paper eligible for rediscount, I desire to point out the meaning of the words "must have a maturity of not more than 90 days." This means that a note or bill to be eligible for rediscount can have no more than 90 days remaining to its maturity. The note when discounted by the member bank may have been a note with a maturity of six or nine months or even a greater period of time. When, however, the member bank takes this note to the reserve bank for rediscount there must be 90 days or less remaining to maturity.

The purpose of limitation on time is to have the commercial paper in the reserve bank maturing in a short time in order to keep the reserve bank's assets liquid. If the reserve bank loaned on a long-time paper, its assets would be tied up. If occasion arose for cash, the reserve bank could not get cash, as obligations would not be due. It is intended that the funds of reserve banks will be loaned; that cash will come back in a short time and be reloaned. Thus there will be a constant and a speedy turnover. The reserve bank will thereby always have cash or will be in a position where it will speedily get cash and will therefore be ready to meet sudden calls for cash by its members, for whom it is calculated to be a source of relief when they need relief.

The commercial paper, then, on which reserve banks loan, shall be short-time paper.

The paper is moreover gilt-edge paper, entirely safe. It first passes the scrutiny of the member bank making the original loan. It then passes the scrutiny of the reserve bank rediscounting. In addition it must have the indorsement of the member bank obtaining the rediscount.

The paper, bills or notes, is therefore excellent security.

This paper must therefore be commercial paper. Just what constitutes commercial paper it is impossible to define closely or strictly. The whole spirit of the bill and of this section is, however, that the funds of the reserve banks shall be applied to the activities of business; first, because the funds of the reserve banks consist in large part of public money and of reserves; and, second, because the funds of commercial banks, both from a scientific banking and a practical standpoint, should be applied to commercial purposes. The whole spirit of the bill is that the funds of the reserve banks should be applied to the activities of business, commerce, and agriculture. It is impossible to define in a specific way just what notes and bills shall be eligible for rediscount. It is clearly defied in the bill, however, that the funds of reserve banks shall not be diverted from the channels of production and distribution. In order that there might be a broad and adaptable construction put upon the terms contained in section 14, discretion as to their interpretation, in accordance with the spirit of the bill, is given the Federal reserve board. It is reasonable to believe that this board will exercise its discretion with wisdom and prudence.

It will be noticed that the paper subject to rediscount is the kind of paper which arises out of the needs of the farmer, the manufacturer, the merchant, and others engaged in agricultural, manufacturing, and commercial pursuits.

The sound and nonrigid system of reserves, the elastic note issue responsive to business demands, and the provisions whereby banks may rediscount their bills, notes, and other commercial paper, all contained in this bill, combine to eradicate most of the serious defects of our present system and, together with the organization operating to unify the banks of the country, establish in the United States the foundation for sound commercial banking.

DISCOUNT MARKET.

The discussion with reference to rediscounts naturally brings to mind the opportunity afforded through the bill for the establishment of a discount market in this country similar to the discount markets in modern European countries. Under subsection B of section 12 the Federal reserve banks are permitted to rediscount for one another. Herein is provided a means whereby funds in one part of the country for which there is no demand may be applied to that part of our country which is in need. A Federal reserve bank in the Southwest, for example, has a demand for the rediscounting of paper beyond its power of supply. At the same time a reserve bank in the East may have funds for which there is no immediate demand. Under such conditions the Federal reserve bank in the East may rediscount paper for the reserve bank in the Southwest. In this way the reserve bank in the East finds employment for its idle funds and the reserve bank in the Southwest is enabled to supply the demands of the people in that section of the

country. Furthermore section 15 permits Federal reserve banks to purchase and sell in the open market "prime bankers' bills and bills of exchange." Thus opportunity is given to a Federal reserve bank to dispose of commercial paper which it has rediscounted for a member bank to firms or individuals who may desire to invest money in commercial paper of the very best security. Such firms and individuals will in this way be enabled to get gilt-edge commercial paper, because such paper will have not only the signature of the original maker, but also the indorsements of the member bank and the Federal reserve bank through which the paper has passed.

Paper of such security from any and all parts of the country is not available to-day to the investor, and it is in some degrees because he can not get paper of such security that he confines his investment in commercial paper to that arising in the locality in which he lives, where he may know something of the character and standing of the individual borrower. I am but barely suggesting the possibilities for building up a broad discount market, but a careful study of sections 14 and 15, in connection with subsection B of section 12 and other parts of the bill, will demonstrate the splendid opportunity for the development of such a market in this country. Before leaving the subject, however, I must point out the importance of the additional privilege given to national banks under that paragraph of section 14 which permits national banks to accept drafts or bills of exchange involving the importation or exportation of goods when taken in connection with the paragraph which allows such acceptances to be rediscounted by Federal reserve banks. Under our national banking laws national banks are not permitted to accept drafts or bills of exchange. The failure of our present laws to permit such acceptances is not only a disadvantage to the banks, but, what is of much more importance, involves the country in a distinct economic loss. I shall only suggest the vast importance of this whole question of acceptances by quoting from the admirable treatise on "Bank acceptances" by Prof. Lawrence Merton Jacobs:

The weakness of our banking system as compared with the system of Europe may very certainly be attributed in part to the omission of the bank act to permit bank acceptances. It is a weakness, furthermore, which involves the country in serious economic loss. Without a national discount market, the great majority of our merchants and manufacturers are compelled to confine their borrowings to American capital, either through the discounting of their paper with their local banks or through its sale to note brokers. All but the strongest and largest are practically excluded from the benefits of foreign competition for their paper. Aside from the great concerns with international ramifications, which are able to arrange their own credits abroad, our merchants and manufacturers are not benefited by low foreign discount rates, except in so far as note brokers, who make it a practice to borrow in Europe with commercial paper as collateral, are better able to finance their purchases. What is more, they receive relatively little advantage from an accumulation of funds in New York banks. Low call-loan rates have an indirect rather than a direct effect on the rate which the mercantile community has to pay for money. Low call rates, in other words, are an indication more especially of stagnation in the stock market than of a lack of demand for accommodation from merchants and manufacturers. Such rates do not act as a stimulus to trade in a general way any more than high call rates act as an immediate check to overexpansion.

It is not only in our domestic trade that the country suffers through the want of a discount market. Without bank acceptances we are at a distinct disadvantage in connection with our foreign trade. Our importers, unable to open credit with their banks, as is done abroad, are not in a position to finance their purchases upon as favorable a basis as the importers in other countries, as English cotton spinners, for example. The English spinner about to purchase cotton in America arranges for his bank to accept 60 or 90 days' sight bills drawn on it by the American shipper. The latter draws his bills on the English bank and attaches the documents covering the shipment, such as the bills of lading, insurance certificates, invoices, etc. He then sells them to a New York bank, thereby receiving immediate payment for his cotton. The New York bank forwards the bills to its London correspondent, which presents them for acceptance to the bank upon which they were drawn. Upon the acceptance of the bills the documents are delivered to the accepting bank, which then turns them over to the spinner upon whatever arrangement has previously been made. The accepted bills are discounted by the New York bank in London and the proceeds placed to its credit there. The New York bank can afford to pay a high rate for such bills, as they are drawn on prime bankers, rendering certain their ultimate payment. The purchase of the bills does not, moreover, necessitate any outlay of money, as against the credit to be received through the discount of the bills the New York bank can immediately sell its checks on London. * * * As a result of the inability of our banks to finance imports through the acceptance of time bills American importers are then, made dependent to a large extent upon London and are required to pay London a considerable annual tribute in the way of acceptance commissions. This practice not only adds to the importance of London and militates against the development of New York as a financial center, but it at the same time works serious injury to our export trade.

It would require the quotation of the entire treatise of Prof. Jacobs to get an adequate conception of the advantages supplied by the sections referred to not only to the importer and exporter, but to the producer in this country as well. I hope, however, I have given some suggestions of the great benefit which will be derived from the operation of the paragraphs in the bill to which I have referred.

FOREIGN BRANCHES FOR NATIONAL BANKS.

The bill, furthermore, seeks to develop our foreign trade by its provisions contained in section 28 and in subsection E of

section 15. To-day there is not a single United States national bank in a foreign country. Our present banking laws do not permit either the establishment of national banks or branches of such banks in foreign countries. Section 28 provides for the establishment of branches of national banks possessing the required capital. Supplementary to this provision subsection E of section 15 permits Federal reserve banks to open and maintain banking accounts and to establish agencies for certain purposes in foreign countries. This great step forward in our national banking system in its relation to the development of our foreign trade is too evident to require explanation. I am, moreover, too much limited in time to attempt to elaborate on this subject.

PUBLIC FUNDS PUT INTO CIRCULATION.

In accordance with the spirit of the bill in affording all reasonable aid to the development of the production and commerce of the country the funds of the Government are put into circulation and into use. At the present time there is something like \$150,000,000 in the Public Treasury. This amount often rises above \$250,000,000. All these funds when locked up in our Treasury vaults are kept out of circulation. When this proposed legislation is enacted into law all these vast sums will be deposited in the various Federal reserve banks, and hence be available for use.

I have endeavored to state only in the most general way the conditions which have given rise to the need for banking and currency legislation, the defects of our present laws, the essential objects which new laws ought to attempt to obtain, and explain the structure by which and the manner in which the bill now before the House proposes to eradicate present defects and to secure the desired objects.

CRITICISM OF GLASS BILL.

It is admitted that the majority of the Members of this House are satisfied that the purpose of the bill is a good one; that it will accomplish its purpose; and that it is based on sound economic principle. It has the support not only of the Democratic Party, but also of many of the Republican Party and many of the Progressive Party, who have avowed their purpose of voting for it. There is, however, sufficient adverse criticism so that it ought not be passed over without comment, nor ought the suggestions accompanying much of this criticism be rejected without consideration. The committee has carefully and fully considered every objection and every suggestion which has come to its attention. I shall not attempt to discuss all these objections and suggestions made with reference to the bill, but I do desire to comment on a few of them.

OBJECTION TO GOVERNMENTAL CONTROL.

The point of attack of the opponents of the bill for a long time has been the principle of Government control embodied in the bill. The so-called big bankers of the country, few in number but great in power and influence, strenuously and vigorously opposed governmental control. They maintained that it was the bankers' money which was involved, their money which was invested, and that, therefore, the control of the banking organization from top to bottom should be with the bankers. That they were especially insistent and persistent in their demands was likely due to the fact that the so-called Aldrich plan gave them the control they sought.

If the bankers had considered the proposition from an unprejudiced point of view they would have remembered that the deposits of the people of this country far exceed the money invested by the bankers in the capital of banks. The total investment in capital stock of all the 7,473 national banks in the country amounted to \$1,056,919,792 on June 4, 1913. The total amount of deposits on the same date was approximately \$6,000,000,000. Thus for every dollar invested in capital there were \$4 of deposits. Furthermore, as against the \$105,000,000 which the national banks of the country would invest, under the Glass bill, in capital stock of the Federal reserve banks, the Government would put on deposit in these same banks some \$200,000,000 or \$300,000,000. I shall not confuse this proposition by going into the question as to the amount of reserve money—kept in reserve for the purpose of protecting the public—which will be deposited in the Federal reserve banks. From the figures already given it is clearly evident that the people of the United States have a far greater financial investment in the national banks than the stockholders of those banks, and that the Government alone will put more money into the Federal reserve banks than will the national banks combined. Not alone have the depositors a deep concern in the management of the banking system of the country, but, also, the borrowers have a vital concern in the administration of the business of banking. The whole agricultural, industrial, and commercial organization of the country is dependent upon the banks. The entire business of the country is conducted in a large measure upon loans

obtained at the banks. Control of the banking of the country means the control of the business of the country. If there is to be a unification of the banks of the United States, control of any central bank or of any commission or board by means of which this unification is secured can not from any point of view be safely intrusted to a small class of men having a selfish purpose to serve. The Aldrich plan did give such control to the bankers of the country, and, while it was represented that this control was distributed so that it would not be concentrated in the hands of a few, the inevitable result would have been that the few most powerful and influential bankers of the country would have controlled the entire banking organization of the country, and, through this organization, the business of the country. Even without a central organization their control over the business of this country is to-day so extensive and so vast that it is a constant source of alarm and danger.

National banks exist because the National Government has given them a charter to exist. The Government permits them to exist in order that they may serve the public. Under no condition should such power be vested in the banks that the public may be made to serve them. If the banks are to serve the public they must be under public control. The safety and well-being of every individual in the United States demands that the control of the Federal reserve board should be governmental control.

OBJECTIONS TO RESERVE PROVISIONS.

If there is any provision of the bill to which the bankers more vigorously protest than against that of governmental control it is the provision with reference to reserves. The big bankers are especially antagonistic to the reserve provisions of the bill.

Such country bankers as oppose the reserve sections base their objections upon the loss of interest on such portions of their reserves as consist in balances due from reserve or central reserve city banks. Such objections find their source in the selfish interest of the banker. He objects because, as he asserts, he will lose interest on deposits. Since the present pyramiding of reserves—that is, allowing reserves to consist of balances in other banks—is a recognized evil, the banker's selfish interest ought not to be allowed and has not been allowed by the committee in the framing of this bill to prevent the eradication of this evil. Indeed, I am confident that the country banker, upon reflection, would be sufficiently public spirited to subordinate his selfish interests to the public welfare.

The bill eradicates the evil by permitting only reserves actually held in the vaults of national banks or balances in the quasi public reserve bank to be counted as reserves. The country banker, moreover, has no good cause for complaint. Under the Glass bill the law would require a reserve in the case of country banks of only 12 per cent. Since the requirement would permit the bank to loan \$88 out of every \$100 deposited with it, is it unfair to the banker or unreasonable to insist that he must keep \$12 out of the \$100 for the protection of the man doing business with him, even though he can not earn anything on that \$12?

The Glass bill, however, does not prevent the country banker from getting a return on part of that \$12, for in section 7 of the bill the earnings of the Federal reserve banks, after the payment of dividends on stock and a deduction for a surplus fund, are divided in such a way that 40 per cent of these earnings is divided proportionately among depositing banks. Thus the country banks will still receive earnings on the portions of their reserves carried as deposit balances.

The reduction of reserve requirements in the case of country banks from 15 per cent to 12 per cent, moreover, gives the country banks 3 per cent more funds with which to make loans, and thus profits. The release of this 3 per cent, now required to be kept as a reserve, will more than compensate the banker for the loss of interest on his deposit balances, which he now counts as reserve. Take, for example, the case of a bank with \$1,000,000 deposits. At present the country bank must keep a reserve against this deposit of \$150,000, of which \$90,000 may consist of balances due from other banks. The payment of 2 per cent interest on this \$90,000 would amount to \$1,800 per annum. Under the Glass bill, with \$150,000 as a reserve fund, the same bank could carry deposits of \$1,250,000, since \$150,000 is 12 per cent of \$1,250,000. Inasmuch as deposits and loans go hand in hand, and one is largely created by the other, the bank's loaning power is thus increased by \$250,000. The interest charge upon this additional \$250,000 loaned out by the bank would bring in a profit greatly in excess of the \$1,800 which the bank under present law receives as interest on deposits.

In addition to the advantages accruing to the country banker above mentioned, he is the recipient of the many other benefits

to be derived from membership in this system, which I shall not undertake to demonstrate now.

It is the big banker, however, who seriously objects to the reserve provisions of this bill. Indeed, I believe that outside of governmental control, this is the one section of the bill to which the big bankers are most antagonistic. The reserve provisions of the Glass bill will result in the withdrawal of some hundreds of millions of dollars of reserves from the central reserve cities and a subsequent loss of deposits from which the central reserve banks are making profit, unless outside banks for one reason or another continue to carry large balances with central reserve cities.

I desire to point out, in passing, that this withdrawal of reserves is not sudden or violent, as the whole process is extended over a period of three years. The big bankers in the central reserve cities are desperately fighting to retain these tremendous deposits, and are exerting all their power and influence as well as their ingenuity to change the bill in order to enable them to retain these deposits.

They should not prevail. Their profit, their selfish interests, must be subordinated to the general well-being of the people of the country. As I have pointed out, the practice of pyramiding reserves, while it has been a source of profit to the big bankers, has been the cancer in our banking system, and the cancer should be cut out, and all cut out. To accede to the demands of the big bankers that a portion of the reserves of other banks be left with them is to compromise on a vital point.

The point raised that there would be a hardship on outside banks in not being permitted to count deposit balances with other banks as reserves, for the reason that outside banks would be obliged to keep such balances in the big cities of the country for exchange purposes, has no basis because under the bill in the last paragraph of section 17 it is arranged that the Federal reserve banks shall take care of all exchanges among member banks, and shall do it without charge.

REFUNDING OF BONDS.

The committee recognized that the big bankers in New York, Chicago, and St. Louis would fight, and fight desperately, on this question of reserves. They appreciated fully the tremendous power that bankers can exert to influence public opinion. They foresaw that the adroit and skillful tactics of endeavoring to cast discredit on the bill by attacking other parts of the bill might be resorted to in order to secure some concessions to the bankers on reserves. But the committee steadfastly refused to yield on this vital point, and the evil entire has been eradicated.

That the bankers would attempt to discredit the bill by attacking other portions of it has been well evidenced by their attack on the section relating to the refunding of bonds. Even after this section in its present form was printed and reported in the newspapers the big bankers vigorously attacked it.

The price of United States 2 per cent bonds fell below par. When it was charged that this was the result of a preconceived plan of the bankers they vehemently and indignantly denied the charge. They published interviews in the newspapers condemning the committee for its proposed method of refunding these bonds. They claimed the section involved a breach of good faith and a repudiation of the solemn promises of the United States Government. The refunding section did nothing of the sort. The Government in these bonds promised to pay these bonds on or after a certain date, to pay 2 per cent interest upon them while outstanding, and to permit the circulation of bank notes by the banks upon these bonds as security. The refunding provisions of the bill did not repudiate a single promise in the bonds contained, including the promise as to circulation. They even gave something additional, as they set a date upon which the bonds should be paid. In spite of the patent facts, the bankers for weeks continued their publicity campaign of opposition to these refunding provisions.

And yet in Chicago, at the recent meeting of the American Bankers' Association, this association, in its resolutions and in its numerous suggestions for changes in the bill now before this House, did not suggest a change in a single line of the refunding section of the bill. Why not? If it were open to attack in a single word, the bankers' association would have suggested a change. The only fair inference to be drawn is that, from the point of view of the banker at least, this section is not open to attack.

Why, then, a few weeks ago, was there such violent objection to this refunding section, accompanied by such dire predictions as to the serious depression in the price of 2 per cent bonds and the consequent danger of loss of public confidence in national bank notes unless there was a purpose to frighten the people of the country and arouse their opposition to the bill?

I can refer only briefly to other objections raised to this bill.

AMOUNT OF STOCK SUBSCRIPTION.

The bankers are now urging that the subscriptions of banks coming into the system be reduced; that instead of a 20 per cent subscription, of which 10 per cent shall be paid in, the subscription be made 10 per cent, of which 5 per cent shall be paid in. The Aldrich bill had exactly the same requirements as to a 20 per cent subscription, of which 10 per cent should be paid in, as this bill has and the bankers were in hearty accord with the Aldrich bill. Many of them advocated just these subscriptions on the ground that the central bank provided for under the Aldrich plan should have a large capital. Yet these same bankers would cut the proposed subscription in halves, although this bill provides for 12 banks instead of 1. To be consistent the bankers ought to be more insistent that the subscription of member banks should be 10 per cent actually paid in under a plan providing for 12 banks than under a plan providing for a single bank. When the bankers make suggestions based on such inexplicable inconsistency, how can anyone know when to put faith in their suggestions?

QUESTION AS TO BANKS COMING INTO SYSTEM.

It has been threatened so often by opponents of this bill that scarcely any of the banks of the country will come into this proposed organization that, without going into the merits of the question as to whether or not the banks ought to come into the system, I desire to point out one fact which must have escaped the notice of those who are with such assurance predicting what the banks are going to do. These opponents assert that the banks never will contribute an amount of subscription equal to 10 per cent of their own capital stock. If all the national banks of the country come into the system, their total stock subscriptions actually paid in will amount to \$105,000,000. If all the national banks stay out of the system, they will lose the circulation privilege attaching to their bonds. As there are approximately \$700,000,000 of 2 per cent bonds outstanding, and as these bonds without the circulation privilege would be worth less than \$75 on the \$100, the national banks would lose by the operation over \$225,000,000. And yet there are men who pretend to understand this subject who still assert that the banks will prefer to lose \$225,000,000 through the depreciation of their bonds, and stay out of the system, than to join in the system and invest \$105,000,000 at 5 per cent.

BENEFITS TO BANKS.

In considering suggestions and recommendations which have been offered the committee has acted upon these without prejudice. Its sole desire has been to make the bill as good as it possibly could be made. If it has rejected recommendations made by the bankers, it has done so through no desire to deal unfairly with the banks of the country. While the object of the bill is to promote the development of the business of the country rather than to serve the banks, yet the banks will receive many advantages tending to their development under the provisions of the bill.

In discussing the opposition which some bankers have shown to the reserve section of the bill, I pointed out that the legal reserves had been reduced in the case of reserve city and central reserve city banks from 25 per cent to 18 per cent, and in the case of country banks from 15 per cent to 12 per cent. I further explained how this reduction in the legal reserves afforded the country banks an opportunity to expand their loans with an equal amount of reserves to have a greater loaning power and to profit by this opportunity for expansion. A similar opportunity is offered the reserve city and central reserve city banks by the reduction in their reserves.

The larger banks of the country are, furthermore, given the right, which up to the present time has been denied them, of establishing branches in foreign countries. This country has an enormous foreign trade, and through this authority to establish foreign branches banks with a capitalization of a million dollars or more have opened up to them a field for development the possibilities of which, I believe, they do not yet realize.

The permission given by the bill to the banks to accept bills of exchange based on the import and export of goods is another great advantage to the banks. Taken in connection with the permission to establish foreign branches it means that our importers and our exporters shall no longer be dependent upon London, and that they shall be freed from the annual tribute which they have been required to pay London bankers. It will greatly aid our financial centers and will remove the most serious obstacle in the way of the proper development of New York City as a world-wide financial center.

Another additional privilege which has been given the banks is that which enables them to do a savings-bank business and to make loans on real-estate mortgages. The further permission to loan out of the funds of the commercial department of na-

tional banks on improved farm land furnishes another means to the banks of supplying the demands for mortgage loans in agricultural districts and thereby an extension of the bank's business.

Banks big and little will appreciate the advantage which is provided by the bill to rediscount their commercial paper. At the present time many banks, no matter how hard pressed they may be for cash, are very much averse to seeking relief by rediscounting their paper with other banks. Such rediscounting has been looked upon as a sign of weakness, and the banks very properly have felt that the confidence of the public has been an asset of first importance which they would not lose by any such sign of apparent weakness. With the enactment of this bill into law rediscounting will be regarded, as it should be, as an ordinary and proper part of a bank's business. The Federal reserve banks, since their business will be a business of rediscounting, will furnish the banks a place where this rediscounting may be done. In times of stress, when a bank needs cash, it can obtain it by a simple process of rediscounting its paper with the Federal reserve banks. Many a bank will thus be enabled to get relief in time of serious need. Moreover, if a bank desires to expand its business, it may do so far beyond its present capacity by this rediscounting process. Suppose, for instance, a bank has \$1,000,000 in deposits and \$120,000 in reserves. Under such conditions the bank can not further extend its loans because of the legal-reserve requirements. Under such circumstances, by taking \$12,000 of its paper to the Federal reserve banks and rediscounting it, it can increase its reserves by \$12,000. An increase in its reserves of \$12,000 increases its loaning power by \$100,000. By this very simple process the bank is enabled to increase its loans and extend its accommodations to its patrons.

The establishment of this new system will bring about stability in the business of the country and in the banking of the country as well. We need no longer stand in the dread of an approaching panic. Indeed, it is not too much to hope that we shall avoid many a serious business depression which would occur with a continuance of our present banking system. The distinct aid which will be given business and commerce by this legislation and the healthy development of the business and commerce of the Nation resulting will inure to the benefit of the banks, for the banks prosper with the general prosperity of the country.

In spite, then, of the objections which some bankers—and the big bankers in particular—urge against this bill, the bill will directly benefit the banks of the country; and, once the system is established, I am confident that the banks will heartily cooperate in its successful administration.

BENEFITS TO THE FARMER.

Since it is the primary purpose of this proposed legislation to serve the agricultural, industrial, and commercial needs of the country, I should like, before concluding, to point out briefly what this legislation will mean to the farmer, the manufacturer, the merchant, and others engaged in the field of production and distribution.

If there is any one class of our citizens which lacks proper banking facilities it is that class engaged in agricultural pursuits. More than half of our people live in the rural districts. There is more capital invested in agriculture than is invested either in the manufacturing business or in the railroad business. There is, therefore, no class in the country to which it is more important to direct our attention in this kind of legislation than to the farmer. It is particularly unfortunate, therefore, that under our present banking system there has been such a woeful lack of banking facilities afforded the farmer.

There has been a scarcity of banks in the rural districts; there has been a scarcity of money and currency in the rural districts. When the farmer in the spring has sought to borrow money he has been obliged to pay a high rate of interest. When he has desired to obtain a loan on mortgage he has likewise found money scarce and has been obliged to pay a high rate for his loan. In the fall, in the crop-moving season, the rural districts have all been at a distinct disadvantage because of the scarcity of currency. At such times they have been dependent upon the financial centers for the means with which to move the crops. The need of the rural districts in crop-moving season illustrates fully the need of an elastic currency. At this particular time currency is needed and it is needed in abundance. When the season of crop moving is ended the need for currency ceases. What is needed is a means of exchange for a short period, and when the period ends the need for the medium of exchange ends. The rural districts can not avail themselves of that form of currency which so largely supplies the needs of thickly settled communities—namely, bank checks—but must

have what is commonly called money. This bill provides for just the kind of currency needed. The banks can obtain an abundant supply of Federal reserve notes by a simple process of rediscounting their commercial paper which the Federal reserve bank deposits with the Federal reserve board to obtain Federal reserve notes. These Federal reserve notes are circulated to serve the purpose of a medium of exchange while the crops are being moved. When the crops are moved and exchanges cease there is no longer need for the extra amount of notes, and they are redeemed and go out of existence. Thus the need of the farmer is supplied by the elastic currency provided for in this bill.

The power given to national banks to loan out of their commercial departments on improved farm lands, and the further power given the national banks to establish savings departments and make loans on real-estate mortgages for long periods of time will benefit the farmer, because it furnishes him an additional place to go to borrow money upon mortgages and ought to enable him to borrow money at better rates than at present. The savings departments of these banks, too, will furnish a depository for his savings and will encourage the saving of small amounts of money, thus promoting thrift in the rural districts.

As a producer, whose products are exported in such enormous quantities, the farmer will receive direct benefits from the opportunities afforded by the bill for the development of our foreign trade through the permission given our national banks to deal in acceptances and to establish foreign branches.

The development of a market whereby bills and notes from all parts of the country will be available to the investors in the financial districts, a subject which I have touched upon in discussing rediscounts, will furnish much needed funds for the agricultural communities and will tend to equalize interest rates throughout the country and ought to lower the rate of interest which the farmer is obliged to pay for what he borrows.

I have not attempted to discuss with any elaboration all the benefits which will accrue to the farmer from this legislation, but a careful study of the bill will demonstrate the great service which the enactment of this bill into law will render the great agricultural communities.

BENEFITS TO THE BUSINESS MAN.

The enactment of this bill will likewise prove of great benefit to the manufacturer, the merchant, and the wage earner. Since business is in a large measure done on credit obtained at the banks, the manufacturer and the merchant are vitally concerned in the facilities and the accommodations furnished by the banks. Our present banking system has been defective in not providing these facilities and accommodations satisfactorily, especially in times of stress and trouble. Whenever there has been any unusual demand upon the banks they have been obliged to contract their loans. When reserves become low they refuse to lend, as the law forbids them to extend loans when their reserves fall below the legal requirement. A contraction of loans strikes the manufacturer and the merchant hard. A continuation of credit is necessary for a continuation of business. An inability to obtain loans means a cessation of business. In many cases a failure to obtain credit means business failure. Often prosperous and solvent business men have failed because of a sudden contraction of loans. Not only business depression but panics have been brought on through the inability of the banks to extend credit.

The defects of our present system, which are responsible for depressions and panics, have been pointed out again and again. I have already endeavored to explain how these defects will be eradicated by this legislation. When bank reserves are low the Federal reserve banks furnish a reservoir upon which banks can draw to build up their reserves and thus extend their loans and serve the needs of their customers. The system of note issue will supply a currency promptly and amply in time of need. Other provisions of the bill, as I have already explained, combine to establish a system whereby the banks can at all times supply the needed accommodation to business. The manufacturer and merchant will no longer depend for the continuance of their business upon the condition of bank reserves in New York City. They may be reasonably secure that they are free from the disastrous consequences of panic. A stability in business will be established such as is not possible under our present laws.

The manufacturer and the merchant, too, will benefit by the permission given our national banks to accept bills and drafts, and through the development of our foreign trade by establishment of branch banks in foreign countries. In South America, in particular the deficiency, which has most of all handicapped

us in our competition with the European, will be supplied by the establishment in that continent of American banks.

BENEFIT TO THE WAGE EARNER.

Of all classes in the community none is so seriously affected by the defects in our banking laws as the wage earner. The national banking system, as we have seen, has been not only inadequate to supply the needs of business and commercial expansion, but also responsible for depression and panic. Business depression and panic have meant for the wage earner loss of work and the consequent inability to purchase the ordinary necessities of life. Indeed, in the panic of 1907 in some cases, even though he worked, he could not get cash for his labor. Following the suspension of cash payments in 1907 there were instances where employers who had ample deposits in the banks could not draw cash with which to pay their employees.

Any interference with the processes of production causes more distress to the wage earner than to anybody else. The average wage earner has no opportunity to provide against loss of employment. His weekly wages are consumed each week in supplying food, clothing, and shelter for his family. If so fortunate as to receive good wages, he employs any balance beyond the demands for actual necessities to give his family some of the comforts or perhaps his children additional educational advantages. He has not had the opportunity to put by funds for future needs. His wants must be supplied by cash, and to get cash he must have employment. Loss of employment for him means distress and hardship.

The establishment of an adequate system of banking, such as is provided for in this bill, giving stability to business, diminishing the frequency of business depression, and preventing panic, means steadier work and better wages.

The enactment into law of this bill, I confidently hope, will mark an epoch in the financial history of this Nation. It will certainly evidence a recognition on the part of our legislators that we can no longer ignore sound economic principle and continue to prosper. Repeatedly in our currency legislation alone we have defied the fundamental principles of political economy, and still we have prospered. We have prospered because we have had almost boundless natural resources.

In our youth, because of these vast natural resources, our economic errors have not stopped our progress. But now that we are older and find our resources, though abundant, less adequate to supply our needs, we are becoming aware that our mistakes are costly and that if we are to develop and prosper we must investigate and apply to our legislation the laws of economic science.

This bill represents a conscientious effort to apply these laws to banking and currency legislation. Its endeavor is an endeavor to establish our banking and currency upon a sound basis and to provide a banking and currency system which will contribute its share in the economic use and development of the natural resources with which this Nation has been so bountifully blessed.

Mr. HAYES. Mr. Chairman, I yield 30 minutes to the gentleman from Missouri [Mr. DYER].

Mr. DYER. Mr. Chairman, since I have been a Member of Congress there has been no legislation considered that has been of such vital interest to the people I represent as is this currency bill. The tariff bill which was passed by the House in the early part of this session is, of course, of great consequence to a great manufacturing district such as I represent, but at the foundation of manufacturing business of all kinds is finances. No business of any great consequence can prosper unless there be a sound, stable, and elastic currency. The people of my district have given to the banking and currency bill more consideration, perhaps, than they have to any legislation for many years. On July 26 last, after many conferences, discussions, and considerations, representatives of all of the National and State banks and trust companies in my city and district united in voicing their opposition to certain portions of this bill. Their views as expressed were presented in writing to the Committee on Banking and Currency of both the House and the Senate. Since their views were presented to the said committees some changes, in line with their suggestions, have been made, but some of the most important recommendations that they made to the committees have not received favorable consideration by either of the committees or by the Democratic caucus of the House. It is along the lines of the suggestions and recommendations of the bankers and financial institutions of my district, and which meet with my approval, that I desire to invite your attention. Before doing so, however, I want to voice my disapproval of the methods by which this bill was prepared. In the first place it was considered for weeks by the Democratic members of the Banking and Currency Committee of

this House in secret and without even the minority members being admitted. Then the Democratic caucus, in secret also, considered this bill for some two weeks. It would appear to the business men and bankers of our country that this question ought not to be a partisan one, but that the best thought and all the help possible should be brought to its intelligent consideration. The Democratic Members of this House, however, seemed to be of the opinion that all the wisdom and intelligence necessary for the enactment of a proper law on this subject rested within them. In view of the way that this bill has been written and agreed to, binding the majority Members substantially to vote for it, I realize the improbability of the minority securing the adoption of any important amendments to it. However, Mr. Chairman, I can not satisfy myself by merely voting in opposition to certain provisions of this bill. I feel that I ought to, nevertheless, present to this House my views in opposition to it.

There are located in my district 16 National and State banks and 8 trust companies, with a combined capital stock of \$39,500,000. This bank stock has a value of \$97,559,238.03. The last report of these banks and trust companies showed total deposits of \$289,982,552.92. Their combined total resources amounts to the sum of \$366,652,995.56. This vast amount of money is under the control, direction, and management of as splendid and patriotic a class of men as can be found engaged in the banking business in any place in the world. These banks and trust companies have prospered and grown under their management, and that of their predecessors. There is no place in the country that can point with greater pride to its splendid financial institutions than we, nor can any point to greater progress in that direction.

St. Louis was not brought into the Union until 1803, did not fairly commence to grow till 1818, and it was nothing more than a frontier trading post and garrison town when it was incorporated as a city in 1822. It was nearly two centuries and a quarter after the brilliant but ill-fated expedition of De Soto before any systematic effort was made for the settlement of the valley of the upper Mississippi. It was more than 80 years after the explorations of La Salle that made known the wondrous wealth of the Mississippi Valley before the first trading post at St. Louis was founded.

When the present site of the city of St. Louis was first occupied by white settlers as a trading post, in February, 1764, the currency in use among the Indians was mainly wampum, peag, or wampum-peag, as it was variously called. It consisted of dark purple and white beads made out of shells or stone and pierced for stringing. Although the city of St. Louis, in 1816, boasted of having a business capital of nearly \$1,000,000, it had not had the advantages of a bank, but in September of that year the first bank was opened for business, and located in the district that I represent. It was called the Bank of St. Louis. Thus it will be seen that in less than a century my district has come to be one of the greatest, if not the greatest, financial and business district in the United States. Naturally, therefore, I, and the people that I represent, can not come to the support of this bill unless it embodies what is necessary to preserve, protect, and further develop these great institutions. I speak not alone for the bankers but for the thousands of stockholders and depositors in these institutions.

Mr. Chairman, I am not a banker, and I prefer to be guided to a large extent by the views of the bankers, the commercial interests, and the people of my district, whom I know and can trust, on what is for the best interests of the whole people as regards needed changes in the banking and currency laws. I prefer the views and judgment of men who have given deep study to this question and who have had practical and long experience with banking and financial affairs. I also believe that the Members of this House can read with interest and benefit the views of the banking interests of my district on this bill referred to above. Here is what they have to say about it:

The banking and currency bill now before Congress has commendable features and some serious defects. For the first time in the history of the effort to bring about banking and currency reform both the legislative and administrative branches of the Government have publicly announced a determination to revise the banking and currency laws. Their sincerity is unquestioned, determination recognized, necessity for action imperative.

In considering the measure only fundamentals will be dealt with. Minor details will doubtless be taken care of before the measure will be submitted for vote. These fundamentals may be divided as follows:

Federal supervision and control.

Character of note issue.

Admission of State banks and trust companies to membership.

Reserve banks limited in number.

Reserves to be carried by member banks.

Providing for retirement of 2 per cent bonds.

Collection of transit items at par by reserve banks.

Permit members to have foreign branches.

Bank acceptances and rediscounts, domestic and foreign.

Mobilization of Government deposits and bank reserves.

FEDERAL SUPERVISION AND CONTROL.

More than 137 years ago the people of this continent rebelled against taxation or contribution without representation. For the Democratic Party to announce that they would first create by process of law a series of Federal reserve banks and by a coercive measure force the national banks of the country to obligate themselves to become liable for 20 per cent and immediately contribute 10 per cent of their capital (over \$100,000,000) and from 5 to 10 per cent of their reserve (aggregating a total of more than \$400,000,000), failure to do so within one year after date obliging them to retire from the national banking system, is a "force bill" pure and simple. Argument has been presented to the administrative and legislative branches of the Government showing this coercion to be extremely obnoxious to manhood and citizenship and that it should not be forced upon the several hundred thousand people of this country who own stock in the national banking system, which has been of such great benefit to the people at large during the past 50 years. There is no objection to governmental supervision and regulation with representation.

It has been recommended that the board be increased from 7 to 11, the four additional members to be selected from a list of nominees; each reserve bank in the 12 sections of the country to name one candidate eligible for membership on the reserve board; submit same to the President of the United States; and out of the 12 he to select the additional four members. If the Government fears to name four men from the nominees thus selected, why should not the bankers and business men be afraid to turn over this corporation with cash assets of more than \$500,000,000, and which will absolutely control the destiny of the Nation's finances, to a politically appointed board, even though they be the appointees of the President of the United States? The stockholders of the Central Banks of France, Germany, England, and Canada are trusted with the management of the respective banks. Why, therefore, can not our stockholder banks have 4 out of 11 directors? It is cited that the Supreme Court is appointed by the President. The situation is quite different, as will be seen from the following:

1. The supreme judges are appointed for life, to pass upon legal questions only, and in practically all cases they have precedent after precedent to guide them in their interpretation of the law. They review the acts of the lower courts, and take months and sometimes years to render a decision.

2. The men selected have been trained for a specific profession and, through force of circumstances, no President ever has appointed an obscure or inexperienced lawyer to the Supreme Bench.

3. They are appointed for life and thus not subject to the whims of ever-changing political power. In the minds of the people they hold the highest position in the world.

4. There is no analogy between a political appointment on the reserve board and the selection of a member of the Supreme Bench.

The Interstate Commerce Commission is cited, which is an admission of weakness in the position taken by the framers of the bill, as—

1. The Interstate Commerce Commission regulates and corrects abuses. They are given no opportunity to divert the assets of a railroad company from their ownership.

2. They can not divert the assets of one railroad to help out another railroad in financial distress; nor can they appoint railroad managers.

We feel quite sure this serious fundamental defect in the bill will be corrected before its final passage.

Why could not the same general result be obtained by an insertion of the following provisions:

1. Any national bank becoming a stockholder in a reserve bank will immediately be relieved of all tax on its outstanding national bank currency secured by 2 per cent Government bonds; and all tax on national bank currency secured by Government 3 per cent or 4 per cent bonds be reduced to one-half of 1 per cent; and all cost of printing and supplying said currency be hereafter borne by the Government. This would immediately strengthen the market price of all Government bonds and penalize those national banks that failed to join the new system.

2. Any national bank association now organized which shall not, within one year after the passage of this act, become a member of a Federal reserve bank, under the provisions hereinbefore stated, may continue to do business under the existing laws governing national banks.

3. Nothing in this act will prohibit national banks that have not become members of the reserve bank in their district from keeping their outstanding national bank circulation at the date of the enactment of this act, but such national banks shall not be permitted to increase such note issue.

NOTE ISSUES.

No nation with banking and currency laws worthy of consideration has currency issued by the Government. France, Germany, and England are generally recognized as having the most practical and workable banking and currency systems in the world. In each of these countries the currency is issued by banks under governmental supervision and regulation, and in no case by the Government. The reasons for this position are manifest:

(a) No nation should permit currency to be issued by a quasi public bank, unless absolutely sure such notes were good beyond a question of doubt.

(b) The bill, as framed, will make the currency to be issued far superior to the notes of any other nation, provided the change in the reserve of gold be increased from 33½ per cent to 50 per cent. This ought to put the notes beyond any possibility of doubt, even in the mind of the most pessimistic and skeptical.

These notes should be issued by the Federal reserve bank in each locality, under the direct supervision and regulation of the Federal reserve board.

There should be no limitation to the note issue, with a 50 per cent reserve as above outlined. The view expressed by the currency commission of the American Bankers' Association on this subject is worthy of serious consideration. It is economically sound; will create a check upon the overissue of notes; will force, in times of financial redundancy, an automatic retirement of any surplus notes; and, in times of grave necessity, provide an emergency currency that will avoid the disgraceful necessity of repudiation experienced during the panic of 1907. History proves the acute stage of a panic never runs over 90 days. Therefore the cost to each bank of meeting such temporary conditions in great emergencies is not worth considering. The recommendation of the American Bankers' Association currency commission on this subject is as follows:

"As a brake, to prevent overexpansion, it is suggested that if the reserve held against all liabilities, including that upon Federal re-

serve Treasury notes, should fall below 50 per cent a tax shall be imposed upon the deficiency at the rate of 1½ per cent for each 2½ per cent deficiency. For instance, if the reserve falls below 50 per cent and not below 47½ per cent, the tax would be at the rate of 1½ per cent per annum. If the reserve shall fall to 40 per cent, the tax would be at the rate of 6 per cent per annum.

When the reserve approached 33½ per cent, the specified minimum, the tax would be at the rate of 10½ per cent per annum.

An abundance of circulating medium for the convenient transaction of business is important, but for the maintenance of a sound and healthy financial condition it is vital that the volume of currency, while ample, should not be excessive and redundant. The change suggested is with a view to providing a way by which, under the supervision of the Federal reserve board, the proposed notes may be safely issued whenever needed to serve the convenience of the people and their redemption and retirement forced as rapidly as the need for their use is satisfied. The suggested restriction that a Federal reserve bank or its branches may pay out only the notes bearing its designating number puts it in the position of seeking to pay out notes bearing its own designating number, while all other Federal reserve banks and their branches unite in the effort to force their redemption. The net result would be that the volume of currency outstanding would be exactly that required by the conveniences of the public. The volume will constantly vary with the varying business need.

Such a currency would be almost inconceivably strong as the joint obligation of all the Federal reserve banks with a prior lien on all their gold or other lawful money and commercial assets upon the double liability of the stockholders.

In operation its automatic adjustment of volume to business needs would resemble the currency of Canada, which is by many regarded the best in the world.

No human knowledge can foretell the extent of the growth of our business and the correspondingly increased requirements for currency. It is therefore suggested that the commercial welfare of the country would be best safeguarded, not by an arbitrary limitation of the amount of such notes, but by authorizing the issue of any amount needed, provided they are made absolutely safe and their immediate redemption assured by the maintenance of a proportion of reserve of gold and lawful money as stipulated.

ADMISSION OF STATE BANKS AND TRUST COMPANIES TO MEMBERSHIP.

The bill as drafted was evidently based upon the national banking system, with the intention of permitting State banks and trust companies to become members of the new Federal banks. It was clearly the intention to give State banks and trust companies the right to become stockholder members under the terms of their respective charters, with all prerogatives and privileges of the national banking system, if they would become subscribers to the stock of the Federal banks and undergo the same supervision and examinations as national banks, but the framers of the bill failed to provide for the admission of State banks and trust companies, preserving all conditions of their respective charters at its inception, and also failed to allow State banks and trust companies to be recognized as reserve agents for all other member banks in their respective localities as long as they were members of the Federal reserve banks. When it is contemplated that there are over 17,000 State banks and trust companies in the United States, more than twice the number of national banks, it will be recognized that no homogeneous banking system can be successfully inaugurated unless the door is opened for these State banks and trust companies to enter on precisely the same terms as national banks. As an inducement to national and State banks and trust companies to join the law should be so amended that national and State banks and trust companies, members of reserve banks, will be recognized as reserve banks for all banks (whether State or national) and trust companies in reserve cities and in country banks. Then, too, member banks should not only be required to carry reserves against all their demand deposits but also against time deposits maturing within 45 days. The bill as now framed failing to provide for State banks and trust companies entering at the very beginning of the Federal reserve banking system is an oversight and undoubtedly will be corrected before same is submitted for final passage by Congress.

RESERVE BANKS LIMITED IN NUMBER.

The bill now provides for not less than 12 reserve banks. It is recommended that the bill be changed so as to read "not more than 12 reserve banks." The number of reserve banks should be confined to the minimum, as every reserve bank decreases the mobilization of funds, and thus decreases the strength of the whole system. It is manifest, if all reserves were carried as one unit, it would be an infinitely greater and stronger system than if carried in 3, 5, or 12 units. To divide the reserve among 12 separate banks, while a great improvement over the existing system, is by no means ideal. It is contrary to the systems of France, Germany, and England, which have been so signally successful.

When one reserve bank loans to another, as it will doubtless have to do in times of necessity, the lending bank will simply have to deplete its reserve to take care of the borrowing bank. The arbitrary provision in the bill—section 12 (b), page 18—"to require a Federal bank to rediscount the paper of any other Federal reserve bank"—is a power entirely too drastic and mandatory to give to any board over the officers of a financial institution in which no member of the board has one dollar invested. Therefore the words "to require a Federal bank to rediscount the paper of any other Federal reserve bank" should be stricken from that section.

It seems hardly possible that any set of men sitting in Washington should be granted the power to force a bank in Wyoming to discount for a bank in New York, or that directors of a bank in New York or directors of a bank in Missouri should be forced by a board sitting in Washington to discount the paper of a bank in Arizona. Common sense, business judgment, patriotism, and citizenship will regulate discounts between reserve banks, not mandatory or coercive "force-bill" laws.

BANK RESERVES.

The adjustment of the reserves to be carried by what is known as the country banks and by banks in reserve cities must be made before it can be hoped or expected to make the system a success. Unfortunately the bill increases the reserve to be carried by the country bank from 6 per cent to 10 per cent. This would mean withdrawal from circulation and use—in fact, make absolutely useless for the necessities of agricultural interests, manufacturing industries, and commercial establishments—more than \$100,000,000. It is recommended that the reserve be fixed as follows:

Central reserve cities to be required to carry 10 per cent in vaults, 10 per cent in reserve bank.

Reserve cities be required to carry 6 per cent in vaults, 6 per cent in reserve bank, 6 per cent counted as reserve when with stockholder members of reserve bank.

Country banks be required to carry 5 per cent in vaults, 3 per cent in reserve bank, 7 per cent on deposit in banks that are stockholders in reserve banks.

It is quite clear the framers of the bill had in mind decreasing the centralization of deposits in New York City. In the first place, it is a great mistake and really a misfortune for anyone interested in the development of the Nation to endeavor to accomplish such an end. New York is the natural financial center of the United States—always has been and always will be; any drastic law attempting to stop the flow of money to New York will be a failure. Every American citizen is, or should be, proud of New York, its greatness, its stability; and with the changes above suggested we may confidently look forward to making New York not only the financial center of the United States (as it is now and has been for more than a century) but the financial center of the world.

The provision to constantly change bank examiners, never allowing the same examiner to make successive examinations for a particular bank, is a serious mistake. Frequent examinations by one examiner give familiarity with names of borrowers and greater opportunities to know the values of the securities and the standing of respective note makers. In many large centers throughout the United States the banks, at their own expense, employ a corps of clearing house bank examiners. Experience has proven beyond question of doubt that it would be a serious blunder to change examiners every time a bank is examined.

We feel quite certain this provision will be changed before the bill becomes a law.

The above suggestions should not be regarded in any other light than that of the friendliest criticism. The bill has many good features which are worthy of commendation. They may be enumerated as follows:

RETIREMENT OF 2 PER CENT GOVERNMENT BONDS.

Inadequate though the provisions be for the retirement of the 2 per cent bonds, it is a proper acknowledgment by the Government of the obligation to retire the issue, originally sold under implied conditions, since violated, and the price of which has been fictitiously maintained. If bonds were issued by a private corporation and the same promises implied and violated, the credit of such corporation would be ruined. For instance, the national banking system was inaugurated more than 50 years ago to enable the Government to fund its enormous debt and create a market for its bonds. The inducements to organize national banks were threefold:

- (a) Patriotism.
- (b) Profit to national banks on notes secured exclusively by Government bonds.
- (c) Profit to national banks to be derived from deposits of the Government without interest, such deposits to be secured exclusively by Government bonds.

The Government for more than 20 years has enjoyed an extraordinarily low rate of interest on its indebtedness secured by the 2 per cent bonds, maintained fictitiously through the operation of the national bank act, by compelling the use of such bonds for national bank circulation; and also requiring such bonds to be exclusively used as security for Government deposits without interest for more than 50 years, a precedent so long established that were it a contract between private individuals or private corporations would be almost accepted as a legal obligation; certainly a most sacred moral obligation.

Within the last 60 days a tentative form of banking and currency bill was announced through the public press. In the first draft of the bill some provision was made to take care of the 2 per cent Government bonds. Later—June 21—a second draft was prepared and published leaving out all provisions for protecting the 2 per cent bonds, which bill was published broadcast over the country.

This last publication, coupled with the demand upon the part of the Government for 2 per cent interest on Government deposits, contrary to all previous rulings for a period of 50 years, thereby taking away all profit on owning Government bonds to secure Government deposits and placing such bonds on a 2 per cent investment basis; and the further announcement that "other bonds" to the extent of 30 per cent would be acceptable as security for Government deposits, have been largely responsible for the drop in market price of the 2 per cent bonds until the depreciation on such bonds has aggregated more than \$25,000,000 within 30 days.

The interest the Government will receive on its present deposits with national banks during the year 1913 will not exceed \$1,500,000. These are unfortunate facts.

We believe it to be the solemn duty of the Government at the earliest possible date to prevent a further decline of these securities, as it discredits the unequalled, unexampled, and unparalleled credit of this Nation. The Government should immediately purchase and retire \$25,000,000 to \$50,000,000 of these bonds at par with the money now idle in the Treasury, and also forego interest on Government deposits secured by the 2 per cent bonds.

We believe this is one of the highest moral obligations the Government is confronted with to-day, not only to maintain its credit at the high standard it has enjoyed the last 40 years, but also to protect the holders of these bonds who purchased them under a 40-year precedent that they were good exclusively for national bank circulation, and under a 50-year precedent that they were exclusively good for Government deposits without interest, particularly as the new banking and currency bill will prohibit the further issuance of national banking currency.

In addition to this, we urgently recommend that the bill provide for the Government to assume a definite obligation to retire the 2 per cent bonds at the rate of not less than \$3,000,000 per month, or \$36,000,000 per year, until every 2 per cent bond is paid off.

As these bonds are retired an equal amount of national banking circulation should also be retired, and the notes of the reserve banks could be automatically expanded to cover the amount monthly retired if the commerce of the country so required.

TRANSIT ITEMS AT PAR.

A tremendous tax upon the industry of the Nation is now levied upon every farmer, merchant, and manufacturer from Maine to California in charging for collecting what is known as out-of-town checks. This charge in the aggregate is enormous. Taken as a whole throughout the United States it annually runs into several hundred thousand dollars; it is not only a wasteful expense, but it keeps in float unavailable for use credits variously estimated from \$50,000,000 to \$100,000,000.

Under this bill all such checks would be received at par from member banks by the reserve bank in the district, and the bank depositing same, if a member of the reserve bank, would receive immediate credit, and

could carry such credit as part of its reserve with the reserve bank. This will, in many instances, decrease the aggregate amount of deposits of banks, but it will have a wholesome effect in eliminating the "double-header" "reciprocal-balance" deposits. The greatest saving to the commerce of the country will be the elimination of these collection charges; there will also be a great saving to the banks in making collections, plus the use of such credits, which are (under the present system) in transit.

The Federal reserve bank in each district can give the same service as now given by the banks in general at about 15 per cent of the present cost. The so-called country bank and the banks in reserve cities will not lose by this change, because if they make collections for reserve banks they will be paid for same, as is now the custom in collecting for individual banks. The expense of such collections will be minimized by the consolidation of collections on each different city or town, and will be borne by such Federal reserve bank as a legitimate item of expense.

No doubt when the bill is finally drafted provision will be made by which only the collections of banks that are stockholders of some reserve bank will be acceptable at par, banks outside the reserve-bank system being penalized by a charge for such collections, thus making it attractive to be a member bank.

The provision allowing banks to have foreign branches is a most excellent one. It puts a bank in a position to protect itself any time by securing credits abroad, as well as granting such acceptances to its customers. This privilege, however, should be confined to banks with a capital of at least \$1,000,000 and a surplus of not less than \$200,000, as it is clearly manifest it would not be proper to allow small banks to establish branches in foreign countries the expense of which, coupled with the danger of their operation, might discredit the whole system.

REDISCOUNTS, ETC.

A notion seems to permeate the banking system of the United States that for a bank in one of the larger centers to borrow money or "accept" for solvent customers their obligations maturing in 60 or 90 days is a reflection upon its standing. Such a notion is unjustified. In France, England, and Germany it is a source of great accommodation to solvent borrowers, as well as a source of profit to the "accepting banks," to have such a system in vogue. Introduced in our banking system, while not an innovation, it will be of value.

GOVERNMENT DEPOSITS.

This is another most commendable feature of the bill. It makes available the money of the Government (which after all belongs to the people) for commercial use. Under the present Treasury system the more stringent money becomes the greater the withdrawal of currency from circulation through the invidious operation of the Treasury system. During the panic of 1907, the subtreasury of the United States declined to accept checks for customs and revenue stamps, etc., demanding cash. The cash, when received, was locked up in the vaults and made useless for the purposes for which it was intended; it therefore aggravated, intensified, and promoted the panic rather than aided in the restoration of confidence.

As the Government is to secure all the net profits on the Federal reserve banks over and above 5 per cent paid the banks that invest in the stock of the reserve banks, there is no reason why the Government should expect any interest on its deposits when the member bank gets no interest on its reserve deposits.

MOBILIZATION OF RESERVES.

While one general bank would be so much better, where all reserves might be mobilized, still the bill providing, as it does, for not less than 12 Federal reserve banks, making it possible to mobilize one-half the surplus money of the Nation in 12 units rather than 26,000 units, must be acknowledged even by the most critical and skeptical as being a step in the right direction, and when it is fully understood that during the time of great calamity or fear brought about through panic all reserve rules may be suspended by the Federal reserve board, then it must be acknowledged that these Federal reserve banks would be institutions that would not only stem the tide, but eliminate the fundamental causes of all panics—fear in the mind of the public that they can not get currency for their deposits when they seek same.

Respectfully submitted by the undersigned committee with the approval of all national and State banks and trust companies in St. Louis, who compose the entire active membership of the St. Louis Clearing House Association.

ST. LOUIS, Mo., July 26, 1913.

There is no denying the fact that the United States should have an ample and a liberal currency. We have in this country some 25,000 banks. Every one of these banks should be made as valuable and useful as possible in its locality. Because of the great area of the United States, the greatly increasing business, taxation, and growth of population, circulation should be substantially increased. The population of the United States is now approximately 100,000,000, and is increasing at the rate of 1½ to 2 per cent per annum. Within 10 years the population will be close upon 125,000,000. To provide for this increase in population there should be an increase in our circulation of two to three billions of dollars. At present there is in the United States \$3,600,000,000 of money. Very little increase can be expected through the coinage of gold. The entire gold production of the United States is only about \$90,000,000 and of the world less than \$480,000,000. Commerce and arts use some \$200,000,000 of this, and India absorbs about \$100,000,000 more. The best authorities claim that of the present new production of gold only about one-fifth of it goes into money.

Mr. Chairman, it might be well at this point to call to the attention of the committee a circulation statement of the Treasury Department of date September 2, 1913. It is of special and important interest at this point and in connection with this bill. It is as follows:

	General stock of money in the United States.		Held in Treasury as assets of the Government. ¹		Money in circulation.			
	Aug. 1, 1913.	Sept. 2, 1913.	Aug. 1, 1913.	Sept. 2, 1913.	Aug. 1, 1913.	Sept. 2, 1913.	Sept. 3, 1912.	Jan. 1, 1879.
Gold coin (including bullion in Treasury)	\$1,872,993,458	\$1,881,440,176	\$174,725,676	\$174,031,112	\$606,015,613	\$605,566,895	\$611,699,353	\$96,262,850
Gold certificates ²			91,691,755	95,822,940	1,000,560,414	1,006,019,229	948,650,439	21,189,280

¹ This statement of money held in the Treasury as assets of the Government does not include deposits of public money in national-bank depositaries to the credit of the Treasurer of the United States, amounting to \$54,400,654.15. For a full statement of assets see Public debt statement.

² For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury and is not included in the amount of money held as assets of the Government.

³ Includes \$33,190,000 currency certificates, act June 8, 1872.

Population of continental United States September 2, 1913, estimated at 97,618,000; circulation per capita, \$34.48.

Mr. Chairman, there are many features of this bill that I heartily indorse, and which I believe will be a great improvement. Public opinion is well fixed that the existing monetary banking and financial system is not fairly abreast of the time. The industry and commerce of our country have advanced so rapidly since the last currency law was enacted that it does not meet the present-day needs. From the beginning of civilization the medium of exchange, money, has been one of the most vital of public utilities, and its importance increases with the progress of civilization. An equitable financial system is absolutely necessary for the general welfare of the people.

However, Mr. Chairman, I am unalterably opposed to anything which savors of political influence having any connection with our banking system. It was politics that ruined the first and second United States banks, and, in my judgment, if the seven wisest men in the country were selected for the positions proposed in this bill, they could not fail to be influenced in their actions, either by political considerations or locality interests. The bill does not provide that these men shall be technical banking men, or even that they shall have had a banking or business

experience, with the single exception that it does provide that one of its members shall have had banking experience. Nothing could be more preposterous than to compel a national bank to invest 20 per cent of its capital in the stock of such an organization as a regional bank and then give to a board in Washington the final determination as to the management of the bank in which its money is invested and in which a portion of its reserves are deposited. But assuming that the best obtainable board is selected, they could not properly decide the important and delicate questions which would be put up to them for solution. No body of men could do that, even if they were not subjected to party pressure and to locality interests.

It must be assumed that the chairman of the board of directors as designated and appointed by the Federal reserve board will be the principal executive officer of the Federal reserve bank, and as he is subject to removal by the Federal reserve board without notice, he will be directly under the domination and control of that board. This, with the power to remove the three directors representing the public interests, places the management of the Federal reserve banks directly under the

domination and control of the Federal reserve board, a politically appointed body.

Mr. BALTZ. Will the gentleman yield?

Mr. DYER. Certainly.

Mr. BALTZ. As I understand it the President appoints, with the advice and consent of the Senate. Is not that the fact?

Mr. DYER. That is true of the four members other than the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency.

Mr. BALTZ. They are not appointed unless confirmed by the United States Senate.

Mr. DYER. Oh, yes; I will say to my colleague from Illinois, that is true, of course. But the President of the United States and a majority of the Senate are to-day unfortunately, or fortunately—I do not know what you might term it—of one political faith. I am very glad of that, however, because it gives the administration an opportunity to enact its policies into law, so that the people may learn what is for their best interests. Shortly a Democratic tariff law will be on the statutes. This will be followed by a new currency law. I think the tariff law will be a failure and that the people will return to the sound doctrine of protection. I likewise feel that this currency bill, as written, if enacted into a law, will not bring the relief expected of it by the administration. I believe that the President, having been elected by the people of this country to administer the great office of President of the United States should have, however, the support of the legislative branch of the Government, so that he may have every opportunity to convince the people, if he can, whether they were wise in placing the Democratic Party in power in this Government.

Mr. Chairman, the American Bankers' Association held a conference in the city of Chicago on the 22d and 23d of August for the purpose of further considering this bill, and to make such suggestions and recommendations as in their judgment they thought proper and wise to the Congress. To this conference the State bankers' associations and all the clearing-house associations in the country were asked to send representatives. They did so, and probably there has never been held in this country a more representative gathering of bankers than this one. It adopted certain recommendations and sent to Washington a committee consisting, I believe, of seven of its members to represent the whole country and to bring to the attention of Congress the views of this conference.

The Committee on Banking and Currency of the Senate gave these gentlemen an opportunity to present their views, and same has been published for the information of Members of Congress. I would like to call to your special attention these hearings and what these splendid representatives of the banking interests of the United States had to say with reference to needed changes in the bill. I can not do that, however, in my limited time. I will therefore touch briefly upon one of their recommendations, which was that there should be no compulsion in requiring the national banks to join reserve associations in a year, and that they should have representation on the Federal board of control.

Mr. Festus J. Wade, president of one of our great trust companies, as well as the president of a national bank, of St. Louis, and a member of this special committee to bring the views of the American Bankers' Association, as well as that of the State bankers and clearing-house associations of the country to the attention of Congress, in a statement before the Banking and Currency Committee of the Senate on September 2 last, said in part:

Let us look at the facts as they exist. The writer of this bill assumed that the burden of creating Federal reserve banks should rest upon the banks of the country and not upon any other class of commerce of the Nation. We are asked to contribute more than \$100,000,000 in capital which does not belong to us as bankers; we are asked to contribute one-half of the reserves that we now hold in our vaults in order that this new institution may be a success. We make no objection to that onerous condition. But we can not conceive that it can be right that we should be called upon to put up this vast sum of money without representation.

Banking is composed primarily of, first, integrity; second, experience and judgment of credit; and, third, wisdom that is called upon to pass upon the credit commerce of the Nation in order that our funds might be loaned. In the minds of the public we are loaners of money, but, as a matter of fact, we are the greatest borrowers of money of any class of business men in this or any other nation.

Every deposit we have is a loan, an obligation on the part of the institution that takes the deposit not only to pay that loan back as the ordinary borrower does, but be required at a moment's notice to pay same to the clearing-house associations we are connected with to meet extraordinary demands at times when there is trouble, and also at times when everything is placid. The bankers have not asked to buy the stock of the reserve banks. I have yet to find one banker who seeks to increase his proportion of stock, and I have yet to find one who would willingly subscribe for stock of such a bank if others could be found to take it. Why should not the commerce of a nation, the merchant and manufacturer and capitalist invest in this stock and create this great bank if it is essential to the development of this Government? Still, we make no complaint. We are willing to accept the provisions of the bill if reduced 10 per cent; we are willing to

hand over to you 10 per cent of the capital of each bank that many of us have labored for years to accumulate; we are perfectly willing to turn over to you one-half of our reserve money; we are willing now, as we have always been in the history of this country, to stand shoulder to shoulder in its development; but we believe, gentlemen, that your business as the administrators of this great Nation is no different than in the administration of an ordinary corporation, and we do not think any of you would have the temerity of going before the public with a prospectus to accumulate, by subscription to the stock of a banking corporation, more than half a billion dollars and announce in the start to the people of this Nation who you expected to subscribe this vast sum should not have representation on the board of directors.

I have not the slightest fear that the President of the United States will not name men of integrity. I am absolutely confident of that fact, at least, in his judgment, and I believe when that board is named they will be men of such eminence and of such recognized integrity that every thinking banker will approve them; but the question, gentlemen, is whether each man so appointed will bring to that board the necessary banking experience, the necessary credit experience, the necessary wisdom for the inauguration of this great system at its inception. So I do not approach this proposition with any fear of political control or of its ever getting into the hands of men who are not entitled to the plaudits of the Nation. But I have great doubt about the administration of a board composed of three Cabinet officers, every hour of whose time is taken up from almost daylight to midnight with their respective duties as Cabinet officers, and four other men whom we do not know. We do not ask to name the men; we do not ask that they shall be bankers, but we do believe that on that board we should have men of experience in banking and in credits. The whole success of the proposition lies therein.

Again, to many of us, and I admit I am one, this bill is repulsive. It is a forced measure, a forced bill, the like of which was never put upon the statute books of any nation, where you say to men in the national banking system:

"You must prescribe to this doctrine; take this stock; give up 10 per cent of your capital and 50 per cent of your reserve money or you must go out of business or out of the national banking system."

Gentlemen, that does not appear to me to be the spirit of the American people; it does not appear to me to be in accord with Democratic principles. It appears to me to be entirely unnecessary. There ought to be, and I am sure there is, enough wisdom and ability in this committee and the committee of the House to draft a bill that will not compel us to come in, but, by the advantages and privileges you offer us, that will force us to knock at the door to get in, and we believe if this bill should become a law it would be a reflection on the Congress of the United States to say to the national banking fraternity of the United States:

"You must prescribe to this doctrine or give up the business that you have accumulated in a lifetime."

I am not speaking as a national banker, although I happen to be one in an infinitesimal way. I am on this commission representing the State bankers and the trust companies, originally the only man on the commission in that capacity. I have urged for six years that you never can have a homogeneous banking system in this Nation until you admit the State banks and trust companies into the general system.

You come along with the proposition to our brother, the national banker, and you say:

"You must either do this or retire from business, liquidate your establishment, or go into the State system."

I plead with you, gentlemen, as a State banker, as one that is extremely desirous of going into the national system, no matter what rules you put around it, provided it is not a forced bill; and I want to call your attention to the fact that as this bill is framed at present, in my judgment, if it were passed to-day it would be absolutely inoperative to-morrow. You have discouraged those gentlemen who have developed that national system up to its present state of perfection; you have them feeling as though they are no longer to be considered in the class of citizens who are worthy of representation.

One hundred and thirty-seven years ago, gentlemen, the foundation of this Government was based upon the fact that the older country would not give representation for taxation, or forced contributions. This is distinctly a step backward. In no sense is it a step in the line of progress of the Nation.

You have provided for not less than 12 reserve banks.

I want to call your attention to a few statistics here, in which I believe I can point out to you a lurking danger in this whole movement if you will allow the bill to stand as it is at present.

In the six New England States, under your law, there could only be two regional reserve banks. In those six New England States there are 463 banks, and 10 per cent of those banks—just one-tenth of them—if they declined to come into this system, New England would be reduced to one, because your bill requires that no reserve bank can be established with less than \$5,000,000 of capital. If you apply that doctrine to the 20 per cent proposition, then you could only have one bank in the six New England States, if they all came in. But I am relying on you to adopt the suggestion that 10 per cent is adequate, and 10 per cent is sufficient, and that in the last analysis 10 per cent will be introduced.

In the Eastern States—New York, New Jersey, Pennsylvania, Delaware, Maryland—and the District of Columbia there are 1,650 banks. I could name one-tenth of the national banks that would not go into your system, and those great States would only have two reserve banks.

In the Southern States you have 1,483 banks, and I could name 148 of the more important banks who, if they did not go into the system, you would have throughout the entire South only one reserve bank.

In the Middle States there are 1,257 banks; and if 125 banks I could name, or one-tenth of them, were to withdraw and decline to come in and take out State charters, it would leave the Middle West without a reserve bank.

Splendid arguments have been presented by Mr. Wade and his associates representing these banking associations to show that 12 Federal reserve banks are too many, and that there is grave danger to the Government in its attempt to secure enough banks to take the capital stock of these 12 reserve banks, as required by this bill. It would be much better, in my judgment, to start with less Federal reserve banks—say, five—and increase them if it is found to be for the best interests of the country. I greatly fear that the administration will find serious trouble in putting this proposed law into effect. Instead of bringing great

benefit and good to the country, I fear that it will bring unrest, distrust, and do our banks and the people generally a great injustice.

Mr. Chairman, the bill under consideration affects not only the bankers of the country, but it affects the stockholders, of whom there are some 7,000 in the banks and trust companies in my district; also the thrifty and industrious members of the cities and communities who supply the bank deposits; and the borrowers, who need money for carrying on their business at times. One class of these people is dependent upon the other for prosperity and success. There are several other important amendments that I would recommend to this bill. I have not the time to go over all of them in detail. One of them is that the Federal reserve board should be increased in membership from 7 to 11, the 4 additional members to be selected from the stockholders of the Federal reserve banks. The central banks of France, Germany, and England trust the management to its stockholders. Why should we not do likewise?

It is another serious question whether or not currency should be issued by the Government or whether we should adopt the methods used in France, Germany, and England, where the currency is issued by the banks under Government supervision and regulation.

Then the State banks and trust companies, of which there are some 17,000, are not fully satisfied with that portion of this bill pertaining to them. I know that to be particularly true as regards 17 of these institutions, which are located in my district. However, I will not take the time of the committee now to present the objections that I have to that part of the bill referring to State banks and trust companies. At the proper time I will present amendments such as I believe are for the best interests of the country, not only as affects the State banks and trust companies but as affects other features of this bill to which I have referred, as well as to those which I have not had time to even touch upon.

Mr. Chairman, I recognize that the distinguished chairman of this committee, as well as his associates, have endeavored to bring to the House the best possible bill on the subject of the currency. They have no doubt labored hard and in earnest. The chairman of the committee this morning presented ably and well his ideas and the ideas of his party upon this question. I have great respect for him and his ability, but I am satisfied in my own mind that this bill should not be enacted into law. I do not believe it is or will be for the best interests of the country, but that it will destroy business and bring more harm than possible good. I sincerely hope that amendments to this bill can and will be agreed to before it becomes a law—such amendments as will perfect it and make it so worthy of our support that when the vote comes to passing it in this House it will receive the support of the whole membership. [Applause on the Republican side.]

Mr. GLASS. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, and had come to no resolution thereon.

RECESS.

Mr. GLASS. Mr. Speaker, I ask unanimous consent that the House take a recess until 8 o'clock this evening.

The SPEAKER. The gentleman from Virginia asks unanimous consent that the House take a recess until 8 o'clock. Is there objection?

There was no objection; accordingly (at 6 o'clock and 3 minutes p. m.) the House took a recess until 8 o'clock p. m.

EVENING SESSION.

The recess having expired, the House was called to order by the Speaker.

Mr. WILLIS. Mr. Speaker, I ask unanimous consent to address the House for one minute.

The SPEAKER. The gentleman from Ohio asks unanimous consent to address the House for one minute. Is there objection?

There was no objection.

ONE HUNDREDTH ANNIVERSARY OF THE BATTLE OF LAKE ERIE.

Mr. WILLIS. Mr. Speaker, in the discussion of this important bill it has probably escaped the attention of the House

that to-day is the one hundredth anniversary of the Battle of Lake Erie. That was probably the greatest event in the second war for independence, a war which meant so much for the people of this Nation.

Another great event of that war was the successful defense of Fort Stephenson by that gallant son of Kentucky, Maj. Croghan, and his brave little band of patriots.

The 2d day of last month the people of the county of Sandusky and the city of Fremont, a city which occupies the site of old Fort Stephenson, held a patriotic celebration under the leadership of Col. Webb Hayes. The chief event of that celebration was an eloquent historical address on the War of 1812 by my colleague, Hon. S. D. FESS. I ask unanimous consent to extend my remarks in the RECORD by publishing that inspiring address.

The SPEAKER. The gentleman from Ohio asks unanimous consent to extend his remarks in the RECORD by publishing an address by Prof. Fess. Is there objection?

There was no objection.

The address is as follows:

"Mr. Chairman, Col. Webb C. Hayes, and ladies and gentlemen; I accepted your invitation to make this address with a peculiar interest, and I assure you it gives me an unusual pleasure to be here. For years I have been scolding at the average citizen for his wicked indifference toward the preservation of the tablets of our history. We are so young as a nation that we can not realize any interest in holding to the past. In some parts of the country, as in New England, the citizenship have awakened to this duty. Only a short time ago, when the commercial call was about to raze the Old South Church in Boston to make way for a handsome modern office building, the citizenship of that New England city was aroused and readily responded to the call to complete plans whereby such a consummation would be made an impossibility.

"A few days ago I stood on the famous estate of Gen. Washington, at Mount Vernon, and allowed my mind to rest upon the tardiness of State and Nation and people to preserve this, the most famous spot in America, which was not finally accomplished until an invalid southern girl gave herself to the task. It is now perpetually assured. But not so with Monticello, Montpelier, The Hermitage, and so forth.

"In the midst of such vicious neglect, what a tonic one receives to come face to face with the magnificent work of such organizations as the Ohio Archaeology Society, the Colonial Dames, the Daughters of the American Revolution, the Daughters of 1812, and kindred associations!

"I have known something of these activities in the past, and especially in this most fertile section of Ohio, historically speaking; hence my delight in being enabled to come. I desire to congratulate this community first upon its position in history and, second, in having such leaders as Col. Hayes and others to direct you.

"SIGNIFICANCE OF FREMONT AND LOCALITY.

"Most places are satisfied with but a single historical event, but in your case you have a succession of events that will pass as first in rank. Here we have the wondrous activities between the French and English as well as the Indian in the final determination of national control. The tablets dating back to 1745, then 1754 to 1763, refer us to one of the most historically significant struggles on the continent. History refers to this struggle as the French and Indian War. In Europe it is known as the Seven Years' War, although it lasted nine years—1754 to 1763.

"From 1688 to 1815 12 wars were waged between England and France for supremacy upon the sea. During these one hundred and twenty-seven years fifty-four of them were spent in actual fighting. One of these dozen wars was our French and Indian, in which Fremont and vicinity played so prominent a place. All along the shores of lakes, and especially at the mouths of the various rivers, the French took the precaution to plant leaden plates with inscriptions, to make sure of their title in case of a contest. When the dispute was transferred from forum to field, which caused this place to be overrun by French and Indians and finally secured to the English by the closing of the war scenes on the Plains of Abraham, the first distinctive step to the building of the modern state of democracy was taken.

"While history dismisses the event by stating the English took possession of the North American Continent, it does not express the full meaning of the results. The final struggle which closed at Quebec was more than a contest between two nations for the control of a continent. It was a contest between two most distinctive systems of government. On the one hand the contention was the establishment of an ecclesiasticism, on the other the building of an Anglo-Saxon democracy.

On the one hand it demanded a union of church and state, on the other the American tripod of free state, free church, and free school. Had France won in 1763, this new world would have become the chief home of a French ecclesiastical dynasty. Instead it was reserved as the virgin soil in which were planted the seeds of liberty in government, based upon freedom in church, school, and state, and which within the short period of one hundred and fifty years has become the riddle of the world. Little did our ancestry think of what the future held. They could not believe that by 1913 this planting would produce a nation of one hundred millions of people, a population two and one-half times that of the mother country, ten times that of her largest colony—United Colonies of Australia—sixteen times that of Canada, and more than all the other English-speaking peoples of the world combined. No wonder that Salisbury in an outburst of oratory said upon one occasion, 'Had it not been for the unwise policy of an English King the capital of the British Empire in all probability would to-day be on the North American Continent.' No wonder that in 1878 W. E. Gladstone, eulogizing the achievements of the two nations, shouted, 'O brave mother, O braver daughter, you have done more in one year than we in eight! You have passed us in a canter.' When a citizen in 1913 contemplates the meaning of that contest one hundred and fifty years ago and then remembers this was a part of the battle ground, and there 'old Betsy,' a real participant in the struggle, it has a new significance.

"THE REVOLUTIONARY WAR.

"But the significance of this place will not be confined to fighting the French in the Seven Years' War or the Indians led by Pontiac in 1763. The records indicate that here at this very place were held during the Revolutionary War perhaps as many as 2,000 prisoners, and 'old Betsy' had a part in that greater struggle. The war that closed in 1763 by the treaty of Paris decided America as the chief theater of an Anglo-Saxon democracy. However, under the mother country it had certain effete customs which were unwelcome by the American pioneer who braved the sea and faced death that he might be free from many of these customs. Some of these people left England for the Continent, others remained to fight the battles on native soil with Pym, Hampden, and Cromwell, while others embarked on the unknown sea in search of the New World. Arbitrary government, taxation without representation, and so forth, are usually detailed as the cause of the War of the Revolution. That is true, but is not the whole truth. England recognized in a way the feudal system with its corollary customs of primogeniture and entailed estates. She had secured the latter two customs in Virginia and Pennsylvania. England also believed then as she does now in hereditary government; that some men are born to rule, others to serve. We denied it and took our stand upon the principle that the right to govern must come from the consent of the governed. The George III idea was that the head of the nation both ruled and reigned, while we held the head of the Nation was the servant of all the people. This was a fundamental principle first established by us as the most significant step in self-government ever taken. England believed in the life tenure in office, while our slogan was short terms and quick and decisive responsibility. While it is true the ostensible cause of the Revolutionary War was no taxation without representation, or, better, no legislation without representation, the real result of that war was to give full play to the new democracy planted years before, free from the effete customs of continental Europe or the mother country. In that world-wide significant struggle this part of the country was an interesting field.

"SECOND WAR OF INDEPENDENCE.

"No citizen of our day can know the utter contempt in which England held the colonies the first two decades of our national life, and the consequent humility of our representatives at her court. A perusal of the writings of Franklin, and especially John Adams, as well as Jefferson, will shed some light on this treatment. The conduct of Citizen Genet reflects the regard France had for us as a national entity in the countries of the world. The contempt with which England refused to remove her forts, and which was not fully done until after the Jay treaty of 1796, as well as the X Y Z mission of France, in 1798, and the miserable conduct of Minister Merry, all show with what small respect our Nation was regarded in Europe. The episode of the Carolina was not to be unexpected, as well as the famous orders in Council of England and the Berlin and Milan decrees of France, which forced us to declare the emman as 2,000 prisoners, and 'old Betsy' had a part in that bargo of 1807. Europe was using the new Republic as a handy man to have around to be treated as a football, if desirable.

"The administration wisely attempted to avoid war until the jingoes declared Madison could not be kicked into a war. Eng-

land became so arrogant, having impressed at least 5,000 American seamen into the British service upon the monstrous doctrine 'Once an Englishman always an Englishman,' augmented by the ruling that one speaking the English language is an Englishman until he could prove he was not, and that by documentary evidence, that to further submit seemed dishonor, and war was declared in June, 1812. It is not my purpose to detail this struggle. Our school children are familiar with the brilliant performances upon the sea, and no less familiar with our disasters and, in one instance, dishonor upon the land. As has been said here, on this very spot took place the one distinct land operation that redeemed the American name. Crogan and Fort Stephenson—the name and fame are household furniture of these peoples here. It would be but a repetition of the most familiar item of your history for me to detail the operations here one hundred years ago to-day. A mere mention of the spectacular defense of this historic spot by that gallant boy, just past his majority, and his brave band of 160, who repulsed the English regulars, under the ignoble Proctor, is sufficient on this occasion, which is designed to call up the larger results on the world's struggles, in which this place was one of the chief battle grounds, and which in turn became the chief gateway of the current of progress which virtually has enveloped the world; for this battle in this second war of independence made possible the victory on Lake Erie, which we are celebrating this year.

"This Perry's victory in turn made possible the victories on the Thames and the second naval triumph on Champlain. Notwithstanding the British attack on Washington and the burning of the Capitol, the young Republic gathered new strength from the triumph at Lundys Lane and the numerous engagements on the sea, which forced peace the latter part of December, 1814, although the one most spectacular of all engagements, that of New Orleans, was fought several days after the treaty, on January 8, 1815.

"From the time of this war, although our distinguished commissioners did not secure a reversal of the contention on the main points of issue, the new Republic was henceforth looked upon in Europe as a growing giant, demanding an immediate recognition. Our Navy had won its plaudits and was the topic of enthusiastic comment both in Europe and America. Our diplomacy, as represented by J. Q. Adams, Henry Clay, and others less distinguished, had won great respect. Our domestic enterprises along manufacturing and commercial lines were gaining by leaps and bounds. Henceforth our representatives were received in all European courts with marked deference and respect. The ending of this war was the beginning of the Nation's development. From that day to 1860 we had one unbroken triumph in material progress, save a short, unhappy difference with Mexico.

"At this time and here it would probably be out of order for me to rehearse the events which drove us into the most gigantic war known to man. Suffice it to say, as the French and Indian War was a struggle between two systems of government, and the Revolutionary War was a struggle for a larger political liberty, and the War of 1812 was a struggle for the recognition of national rights, the Civil War, the greatest of all, was a struggle between two civilizations, differentiated by natural differences over which law and legislation had little effect. And as the region of Sandusky played a part in all the early wars, so Fremont played a distinct part in this greatest of wars. The Nation recognized that part by placing at its head one of its citizens, who had won his rank in that war for human rights.

"This greatest of all wars which placed 2,000,000 soldiers in the field to battle as Greek against Greek at the staggering outlay of over one thousand million dollars, at the cost of lives to the number of 600,000 ended at last with two decisive results, viz, the freedom of a race and, what was a thousand times of greater importance, the preservation of the Union. The first result was inevitable. The civilization of the nineteenth century had pronounced against slavery and its day was at hand. Had it not come as the result of war it would have come as the result of an awakened national conscience. But the perpetuity of the Union was not at all an assured fact. Only an American could believe it possible. Europe expressed her conviction in its impossible continuance through Macaulay, De Toqueville, Gladstone, and others. Even the great English Commoner proclaimed that Jefferson Davis had given to the world a second republic that would rival the first.

"It is not for the present historian to estimate the importance of this result of the Civil War. It must be left to the future discriminating interpreter of great events who to properly estimate the importance to history must view the event in its influence, not upon our country alone but upon the Governments of the world. When the war ended, assuring the stability of American self-government, Democracy's cause took on new life,

and the places where it was planted received new fertilizing impulses, and what were up to that time vague semblances of republican government became dynamic forces regnant with order. Here and there throughout the world mutterings of unrest under arbitrary rule became distinctive demands. It took possession of Italy. It startled every Government in Europe, the last to show it most was Portugal. It changed in a night's time monarchical Brazil into a Republic. It has covered the seas with its fragrant bloom in the United Colonies of Australia, New Zealand, Hawaii, and has touched on the Empire of South Africa. It awakened Russia, and has even revolutionized the yellow race in its influence upon Japan, and last, but not least, China, which on February 12, 1912, passed from the control of the Manchu dynasty, under which the Celestial Empire had continued for over four thousand years, to that of the national assembly, and thus wrote the page of American influence in the Far East.

"THE PRESENT STANDING."

"In 1813 the entire country was composed of but 18 States. The population of the entire United States was little more than that of the single city of Greater New York to-day, while the wealth of the Nation, as estimates were then made, was less than that of New York City to-day. In that day we had no standing in the councils of the nations; to-day no serious world problem is proposed which does not enlist our opinions. Our influence is not confined to the interests of our own people, but, as signified by the expansive meaning of the Monroe doctrine, we have assumed and maintained the guardianship of the liberties and welfare of the western world. We have even gone beyond this realm. When the call of Cuba was finally heard, for the mere sake of humanity we responded when we were morally certain the response meant war, and with firm hand we bade Spain either to modify her inhuman policy or leave the work of governing the people of Cuba to other hands. We accepted the choice of Spain, the arbitrament of the sword, and as a consequence have assumed not only the task of preserving order in Cuba, but the far greater duty of modernizing the peoples of the Philippines by introducing the common-school methods, and by the orderly processes of evolution have witnessed within a decade the sure evidences of a transformed people, a changed civilization through education, to be brought about within a few generations. This duty has been performed at a frightful sacrifice to us.

All good citizens are hoping that the unhappy country of Mexico will be able to stop the atrocities of rival leadership without interference from without, for we can not brook interference on the part of Europe, at whatever cost. The Nation will hardly surrender the Monroe doctrine. If it maintains this principle, it is then morally and legally obligated to protect life and property of citizens of other countries. On this occasion I would not have this people believe I extol war simply because the historic incident we celebrate has its interest in war, nor because in our observations upon the growth of democratic government we have referred to the specific results of specific wars.

"While the fruits of war in these respects are marked, the fruits of peace are even more so. Soon after the treaty of peace that closed the war in which Col. Croghan won his fame, another treaty was signed between our Nation and Great Britain, which neutralized the waters of the Great Lakes by limiting the size of the defensive vessels to be maintained upon these waters, beyond which neither nation could go. This single line of agreement has made the Great Lakes as well as the boundary line between us and Britain and her possessions here in the New World a line of friendship which has been maintained unbroken for 96 years. Had it not been for this provision these waters would to-day be frowned upon by mighty battleships, which would have inevitably clashed in 1860-1865 when English-built ships were supplied to the Confederacy.

"What has been done on the Lakes, and has been the dream of some statesmen of this and other countries, may be done for the waters of the sea, when all the powers may join in the establishment of the court of arbitral justice, which is an American suggestion. While this is but a dream, and may never assume any nearer reality than a dream, the immediate past is a partial justification of the dream. The Hague conference was a real achievement for peace, if in no other way than to allow representatives of the twenty-six nations, including all the first-class powers, to sit under the same roof and dispassionately discuss plans of maintaining peace among the nations represented. But it achieved something more substantial in the establishment of The Hague tribunal, which, by the way, was an American suggestion. The first case to be submitted to the court was the dispute between Germany and Venezuela at the initiation of our own country. The second Hague conference gave

more promise, in that, instead of twenty-six nations, forty-four were represented. It also adopted three additional resolutions, viz, strengthened The Hague tribunal by requiring any disputant opening warfare against another nation until the willing party had a chance to be heard before the tribunal; second, it adopted the Drago doctrine, which denies to a nation the right to employ war methods to collect a debt until after the case is heard by the tribunal; third, it recommended the establishment of the court of arbitral justice.

"To an American the activities leading to these conferences and the work in the conferences are most pleasing. This Nation distinctively stands for peace. Our bringing together at Portsmouth the peace commissioners of Russia and Japan is but an incident in the efforts of our Nation to reduce war. The work of the famous international peace conferences was begun by Elihu Burritt as far back as the forties. This Nation was the first to give this work governmental recognition when President McKinley requested Secretary John Hay to represent the Nation officially in the conference held at Boston. We are equally active in the work of the Interparliamentary Union.

"The almost five hundred various peace associations organized in the United States among the churches, the colleges, the schools, the civic organizations, the commercial bodies indicate the awakening among us. This should be our position. If ever peace is to be established in the world permanently, we must take the initiative. Our geographical situation, our vast wealth of resource, our rank among the nations of the world all point to this fact. This does not mean we must abandon a naval program. Probably the surest guaranty of peace is the concentration of the war power in the hands of the peaceful nations, to command the peace of the world. We must always maintain a sufficient armament to police the seas, but it does not mean we must enter the insane competition of Europe to surpass all nations in the building of dreadnoughts. Our greatness will never be measured by the size of the Army, nor the number of battleships. It will not even be measured by the acreage of our farms, the output of our mines or our factories, nor the miles of railroads. While all these are useful and the fruits of peace, yet they do not symbolize our real greatness. Greatness nationally as individually can not be measured by the bushel, nor by the yardstick, nor even can it be estimated by the dollar mark. The real greatness of a nation consists in the men and women of the nation. Its measure is the amount of character disseminated among its people. The agencies of this greatness will be largely found in the homes, the schools, the churches, the civic organizations, the numerous other agencies making for a finer sense of justice of man with man in all his activities, business, professional, social, and all that make up his everyday life.

"Show me a nation that seeks this high standard and dedicates its powers of wealth and influence to this end, and I will show you a nation happy, prosperous, powerful, and the guiding, if not the dominant, power in the family of nations. God has wonderfully blessed the people of this country in many ways. The opportunity is before us. Our responsibility is clear. I believe we will fully meet every reasonable obligation placed upon us, always remembering that our greatest problems are from within our body politic, not from without. This argues the more that our national prosperity and happiness must be found within the dominion of a sublime manhood and a pure womanhood. Ladies and gentlemen, I thank you and bid you good-by."

THE CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837—the currency bill.

The SPEAKER. The gentleman from Virginia moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837—the currency bill.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. GARNER in the chair.

Mr. HAYES. Mr. Chairman, I yield one hour to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Speaker, the President of the United States, in the performance of his constitutional duty to recommend to the consideration of Congress such measures as he shall deem necessary or expedient, in a message delivered by him in person at a joint session of the two Houses on June 23 last recommended and urged the consideration of legislation relating to banking and currency. I listened with great interest and close attention to what the President said on that occasion

and was impressed with and attracted by the President's happy faculty of expression, the elegance of his diction, and the pleasing manner of his delivery. The President, while evincing the earnestness of his desire that Congress shall act on these questions at this session of Congress, couched his recommendations in the most general terms, only becoming the leastwise specific when he gave the reasons why, in his opinion, banking and currency legislation was, to use his words, "absolutely imperative" at this time.

Some people have been pleased to criticize the President because it has seemed to him wise and proper to address the Houses of Congress in person, touching matters of legislation; and curious and widely differing views have been expressed in criticism of this procedure. I can neither sympathize with nor join in such criticism. I do not venture an opinion as to whether the practice that the President has adopted in this regard will be found or considered wise, useful, or mutually agreeable to the Congress and to the President in the future. I am glad to be able to say that I have thoroughly enjoyed these occasions, that to me they have been impressive in their simple dignity, and while I have been but little in harmony with many of the views which the President has expressed, the manner of their delivery has seemed to me pleasing and appropriate.

It is the President's duty to make recommendations to Congress. It is the duty of Congress to give proper consideration to such recommendations. I have, as one Member of the House, given careful consideration to the recommendations which the President has made and have arrived at a very definite conclusion with regard to them. I can not fully agree with the President as to the "absolutely imperative" necessity for currency legislation at this time, but I am of the opinion that it is the part of wisdom to enact a law at this session dealing with the banking and currency problems, provided we can pass a bill which will be workable, which will remedy the acknowledged and manifest defects of our present system, and give us a plan as sound as the present system and automatically responsive to the needs of trade and business.

LEGISLATION ADVISABLE.

While I thus agree with the President to the extent of believing banking and currency legislation advisable, and stand ready, as I believe the majority of the Members on this side of the aisle do, to assist in the enactment of legislation, though our assistance up to this time has not been sought to any appreciable extent, I must most emphatically dissent from the views expressed by the President in the reasons he gives as the basis of his opinion that banking and currency legislation is "absolutely imperative" at this time. The President said that an improved banking and currency system was necessary to allow the business men of the country to "make use of the freedom of enterprise and of individual initiative which we are about to bestow upon them." Said he: "We are about to set them free; we must not leave them without the tools of action when they are free. We are about to set them free by removing the trammels of the protective tariff." This, and more along the same line in his choice phraseology, the President said as indicating the basis, as he conceived it, of the necessity and the demand for currency legislation.

If I were compelled to accept the President's declared view of the reasons urging or necessitating immediate action in regard to banking and currency, in order to agree as to the advisability of such action I should be compelled to repudiate the entire proposition and insist that no immediate action is, under the circumstances, advisable. The President weakened his entire argument for speedy currency legislation by basing it on specious and fallacious grounds. The President should have known—and, no doubt, does—that without regard to differences of opinion on tariff or other questions, those who have given the matter consideration in Congress, in the fields of finance and economics, and in the business world have for years agreed that our national banking and currency system, while safe and sane, was not fully adequate to meet the constantly increasing needs and expanding requirements of the country.

With all its faults our national banking system is one of the most impressive monuments to the capacity for constructive statesmanship of the founders and supporters of the Republican Party. Born of the exigencies of war, it has expanded and grown to serve with honor and credit, if not with perfect satisfaction, the multiplying necessities of the most marvelous and fundamentally sound period of growth, development, and expansion ever witnessed in all the tides of time. It has become so fixed and accepted an element of our national life that every plan seriously considered contemplates building upon it and proposes an extension and coordination of the system.

BANKING AND CURRENCY AGITATION HELPFUL.

At first dimly and confusedly, but gradually more clearly, the faults and the shortcomings of our system have come to be understood. For a decade and more there has been a constant and practically uninterrupted discussion and agitation of the manifold questions involved in its improvement. In five Congresses, covering a period of 10 years last past, something over 500 bills have been introduced dealing with the questions of banking and currency. Many of these bills have been considered by the appropriate committees, some of them at great length, in great detail, and with exceeding earnestness. Around some of these measures has raged a fierce storm of contending opinion. To their consideration some of the best-informed men who have sat in this House have given much earnest study, time, and attention, but with the exception of the so-called Vreeland-Aldrich Emergency Currency Act, which became a law May 30, 1908, no measure of considerable importance has secured sufficient support to find a place on the statute books.

But this agitation and discussion has by no means been in vain, for out of it has come a better understanding and a large measure of agreement. In his address to Congress on the currency question the President said:

The country has sought and seen its path in this matter within the last few years, sees it more clearly now than it ever saw it before.

By the provisions of sections 17, 18, and 19 of the act of May 30, 1908, to which I have referred, the National Monetary Commission, composed of earnest, painstaking, and efficient men then serving or who had served in the House or Senate and of both political parties was created. It is not necessary for me to go into detail with regard to the labors and activities of this commission. They are understood and appreciated by all students of banking and currency questions. The information they obtained, the data they secured, the works which were written and compiled under their direction constitute a library on banking and currency law and practice which, for scope and reliability, has no counterpart. In due time the National Monetary Commission reported and presented their views in the form of a proposal of legislation.

It is unquestionably unfortunate that the recommendations of the National Monetary Commission and the bill formulated by it was popularly given the name of the chairman of the committee, Hon. Nelson W. Aldrich. At that time, rightfully or wrongfully, Senator Aldrich, as he was painted, was not popular, and it was very easy for those who had never read the recommendations of the Monetary Commission, who could not understand them if they had, nor, for that matter, any other sane bill on the subject, to appeal to the prejudices of a large class of the people by the simple process of denouncing the "Aldrich plan." As in the majority of cases, neither the denouncer nor the denouncee knew much of anything about the plan, or any other plan, the denouncing process was a very simple one.

PREJUDICE AGAINST "ALDRICH BILL."

Our Democratic friends, taking advantage of this frame of mind on the part of a considerable number of people, proceeded to deliver themselves in their national platform as follows:

We oppose the so-called Aldrich bill for the establishment of a central bank.

The National Monetary Commission plan did not contemplate a "central bank" as that term is ordinarily understood, but by condemning that plan as the "Aldrich plan" on the ground that it provided for a central bank they hoped to—and they probably did—fall heir to all the combined support which prejudice against a central bank and against the name of Aldrich could muster. In the same way they secured some votes by their commendation in their platform of the policy of giving publicity to all indorsements on which the President makes recommendation for Federal judgeships, a policy which they proceeded to repudiate in both branches of Congress at the first opportunity which presented itself.

I did not have the opportunity to carefully examine the National Monetary Commission's plan for currency legislation in detail until recently, when I have given it such examination as time has permitted in connection with consideration of the measure now before us. I make no claim to being a currency expert. I have had little to do with banks and less to do with bankers, except as an occasional borrower, and therefore I do not pretend to be as well qualified to pass judgment as to matters of detail in legislation of this character as those who have had practical experience. There are some features of the National Monetary Commission's plan which do not appeal to my judgment, and there are some features of the plan now presented which I like better.

PLAN PROPOSED NOT NEW.

Out of this simultaneous consideration of the bill now before us, indorsed by the President and approved by Democratic King Caucus, and the National Monetary Commission or Aldrich bill, so called, several dominating facts present themselves.

First. That the Democratic bill borrows the ideas and largely the phraseology of the Aldrich or Monetary Commission bill.

Second. That in attempting to so modify the Monetary Commission plan of organization so as to escape being criticized for adopting what they have condemned as a "central bank," they have abandoned the plan of a nonpartisan central organization with limited powers and decentralized by its local associations and adopted a plan for a partisan central organization of vast powers and centralizing tendencies.

Third. That most of the changes that have been made in the bill since it was first informally launched and later introduced by the gentleman from Virginia [Mr. GLASS] have tended to bring the measure more nearly in harmony with the Aldrich plan, which was condemned by the Democrats at Baltimore.

I do not mention this either in criticism or approval, but merely as an interesting fact illustrating the lack of frankness and the inconsistency of those charged with responsibility for the bill. It is true that all the features of this bill are not from the Monetary Commission bill—some came from other less reliable sources. There are some real and important differences between the two measures, some of which are an improvement, some of which certainly are not.

LACK OF NOVELTY A VIRTUE.

I do not wish to be understood as intending to discredit the measure now before us because of the fact that its provisions are, many of them, neither new nor novel; that fact is its greatest virtue. The years of consideration and discussion of banking and currency questions in and out of Congress, the investigations and recommendations of the National Monetary Commission, and our long experience with the actual operations of the national banking law have led to a general agreement with regard to the faults of our present system, the objects to be sought and secured through future legislation, and the manner in which these objects can best be obtained.

It is agreed that the principal fault of our present currency system is the lack of elasticity, of responsiveness to the needs of trade and commerce, both in issue and retirement of notes. The greatest failing of our national banking system lies in the scattered character of reserves, the difficulty of marshaling them against local financial attack or combining them to meet general assaults against credits, the lack of a wide rediscount market, and the difficulties in the way of foreign banking.

CLEARING THE SITUATION.

A few years ago some of the plans proposed contemplated an entire reorganization of our banking and currency system from the ground up, but as time passed practically everybody came to realize that our system of great numbers of independent banks was probably a wise one under our conditions. At any rate it has come to be generally agreed that we must perfect and add to our present system rather than attempt to make it over. The question of how to secure proper co-operation among our banks and a proper basis for currency issues was developed to a considerable extent in connection with the consideration of the Vreeland-Aldrich emergency currency act, and it was further and very largely illuminated through the labors of the National Monetary Commission.

We have therefore reached a condition not uncommon in legislation in which successive stages of discussion and suggestion have largely cleared the way for him who is eventually called upon to write a statute, so that a judicious use of the legislative shears and paste pot may to a considerable degree relieve the draftsman from the severe labors and profound study of original creation. It is true that in such a case there is always abundant room for grievous error, and I shall take occasion later to call attention to some of the grievous errors which I believe the gentlemen have fallen into in drafting or, shall I say, in preparing this bill.

WHO WROTE THE GLASS BILL?

I understand that in and out of the Democratic caucus certain gentlemen have been making themselves disagreeable by asking: "Who wrote the Glass bill?" So far as I am informed these inquiring gentlemen have received no satisfactory answer. No doubt this important and interesting question will float down the ages unanswered along with the riddle of the Sphinx and the query, "Who hit Billy Patterson?" I am sure I shall not be unkind enough to charge it to any friend of mine.

If I may, I would suggest to my Democratic friends an inquiry of more pith and moment; it would be: Who suggested

some of its provisions? An old and familiar saying might, in this connection, be paraphrased as follows:

Allow me to but whisper into a receptive ear the plan of legislation and I care not whose hand guides the pen which writes the law.

We have heard much of late in regard to "insidious lobbies" which are claimed to make stormy the passage of measures launched upon the legislative seas. How about the influence which may hover about the quiet places where legislative keels are laid down, where the form and fashion of the craft is planned, its capacity and motive power determined? Are such influences in the nature of a lobby, and are they "insidious"? That they are vastly more potent than efforts to change the form, fashion, or features of the craft after launching is self-evident. If open opposition and frank effort to amend may be termed "insidious," what must be the proper term to apply to the secret, covert, or private lobbying which may influence the framing of legislation? Would not an inquiry as to what influences were active and potent in the genesis of the legislation be more illuminating than a mere query, "Who wrote the bill?"

WHY THIS PARTISANSHIP?

In view of the situation which I have endeavored to outline, the widespread and long-continued realization of the shortcomings of our present system, the quite universal agreement that a remedy must be found in grafting and pruning rather than in uprooting and replanting, the one extraordinary fact, in the present situation, is the apparent determination, acquiesced in if not suggested by the President, that these questions should be considered in a purely partisan manner. I was somewhat surprised this afternoon to hear the gentleman from Virginia [Mr. GLASS] say that the banking and currency question was entirely nonpartisan. In view of what has occurred, no one would dream that anyone on the Democratic side held such an opinion. The President, in his address to which I have referred, gave partisan reasons, with which he must realize the majority of the American people do not agree, why a banking and currency bill should be passed.

The next the public heard of the matter was that a small coterie of gentlemen, just who they all were still remains a mystery, were engaged in drafting a bill. There were rumors of conferences between some of the gentlemen and the President, and of secret meetings, and finally a tentative bill; then more secret conferences, and finally the bill bearing the name of the gentleman from Virginia [Mr. GLASS]. The Democratic members of the Banking and Currency Committee then proceeded to consider such a bill in secret, without hearings and without seeking advice or information from anyone outside this combine. Not only were the doors closed against the general public and against the press, but they were barred against the Republican members of the committee which Congress had appointed to consider these questions.

I desire to emphasize this feature of the situation, for it furnishes an exceedingly enlightening and illuminating view of the very tart and caustic manner in which certain gentlemen whose names are prominently connected with this legislation have answered those who have called attention to the fact that some features of the bill threaten a partisan control of our currency and banking system. Gentlemen who approve the secret, caucus-bound, and purely partisan manner in which this legislation has been handled are scarcely warranted in flying into a passion and getting sarcastic over the suggestion that legislation thus inaugurated, which contains provisions under which partisan control would be inevitable, might not be in the interest of, or satisfactory to, the people of the country.

THE REAL REASONS FOR LEGISLATION.

Before I begin a discussion of the proposed legislation I desire to give a little attention to the reasons why, in my opinion, the enactment of banking and currency legislation of the proper kind is advisable at this time. First, all on this side of the center aisle are pledged by our platforms to take up these subjects speedily. We Republicans are pledged to definite action. Ours is the only party which, in its last platform, announced a definite program, which it did in the statement that the party "is committed to the progressive development of our banking and currency system." On the contrary, the Democrats, probably realizing that if they won their tenure would be brief, but alive to the fact that it is imperative to unleash and prepare the lifeboats when they take charge of the ship of state, made no promises beyond a suggestion of temporary and local relief. If the President can spur his party into action that will afford not only temporary relief but permanent benefit, we are not only willing, we are pledged, to assist.

But there are other and compelling reasons for currency legislation at this time; reasons based upon the facts of legislation which the President had in mind when he said action

in regard to banking and currency is "absolutely imperative," but reasons far different from these the President gave. The President tells us he sees "freedom from restraint" in the tariff legislation of his party, and he wants fresh currency to feed the spirit of freedom. I also see freedom from restraint in the Democratic tariff legislation, but the freedom I see, and which I view with alarm, is the freedom granted foreigners to displace American-made goods with foreign-made goods, the freedom to reduce the value of American products by the wholesale importation of foreign products. The President views ahead "a period of expansion and of new enterprise freshly conceived," and he wants more currency to make this expansion "rapid and facile of easy accomplishment." The President comes very near talking like a greenbacker at that point of his address. I also see "a period of expansion and new enterprise freshly conceived," but, to my view, the expansion is to be that of foreign products and productions in our markets, an expansion of foreign fields and foreign factories at the expense of ours. [Applause on the Republican side.]

NOT TO PROMOTE NEW, BUT TO SAVE OLD ENTERPRISES.

I agree with the President that the passage of the Democratic tariff bill emphasizes the importance of currency legislation, not, however, for the purpose of giving our people the benefit of "new opportunities," for there will be none they can enjoy, but rather in the hope it may help to fortify our people in the period of adversity, the day of those "readjustments" to which the President referred. Our people will not need new currency or banking facilities for "new enterprise," for there will be none that is gainful, but for the purpose of aiding, if possible, in saving their present enterprises, in keeping them going so as to furnish the people employment.

No one wants disaster to follow your tariff legislation. Those who fear it most and who are the hardest hit by it are among those who most fervently pray that, through some dispensation of Providence, the blow may be light, the injury neither severe nor permanent. They know that if such is to be the case it must be almost providential in its character, for their judgment tells them that in the ordinary sequence of cause and effect the blow must be heavy and its effect continuous. If, however, there is anything that can be done that holds out the slightest promise of relief from the loss and hardship that your tariff legislation has brought and will bring, we will all, with one accord, declare "By all means let us have it." If an improved banking and currency system will temper the force, dull the cutting edge, or soften the blow of the disaster that threatens through your tariff legislation, we stand ready as one man to aid you in securing it "if it takes all summer." [Applause on the Republican side.]

A PARTISAN BANKING AND CURRENCY SYSTEM.

I have already called attention to the very considerable degree of agreement as to many of the essential provisions that a banking and currency bill should contain. There is not, perhaps, a corresponding consensus of opinion as to what such legislation should not contain. I am very well satisfied, however, that all will agree that our banking and currency system should not be partisan; that to provide for a plan under partisan control, or which might easily become the instrument of political maneuvering and advantage, would not only be a grievous mistake, it would be a crime against our institutions and against the prosperity and welfare of our people.

In expressing the opinion that the plan of a Federal reserve board and regional reserve banks, provided in the Glass bill, is a partisan plan; that it will result in a partisan banking system, and in one that will invite and develop all of the evils of partisan control of currency issue and of banking business, I desire to disavow the opinion that the framers of the bill deliberately created a partisan system.

I do not believe there is anyone charged with responsibility in this matter who desires or would knowingly aid in establishing a system which would or could be made an instrument of political and partisan advantage. All must realize the danger to our institutions, the menace to the prosperity of the country, which such a system would present.

PUBLIC SUPERVISION VERSUS PARTISAN CONTROL.

Unfortunately, however, some gentlemen do not seem to clearly recognize the difference between public control, in the interest of all the people, and partisan control, which in a matter of this kind would eventually be harmful to all the people. Of all the great Governments in the world ours is, in the executive branch, the most essentially partisan—a fact recognized in the familiar phrase that this is a Government of parties. In no other great nation is the "chief of state," as the French phrase it, apparently in grim recognition of the possibility of change in his title, a partisan. Partisan ministers come and go; the chief of state—king, emperor,

president—may or may not be in harmony with their policies, but he remains for his term of life or limited tenure, as the case may be, the chief of state, in theory, at least, measurably free from partisan bias.

The American President, on the contrary, is recognized by the country and often proclaims himself the titular if not the actual head of his party, bound to assume responsibility for the carrying out of its pledges and promises in legislation and in administration. Our present Chief Executive is no exception, but rather a shining example of this rule and practice of our national life. He has referred to himself as one "called to the leadership of the Nation"; and while I have no manner of doubt that he fully realizes the responsibility of that leadership, I am but giving expression to what is one of the most patent of current facts when I affirm that he exercises that leadership as the head of a party, working by and through that party to the accomplishment of his purposes.

Every appointment made by the President of the United States, except it be to a judicial or semijudicial position, in which case the tenure is ordinarily for life and the duties nonpartisan, carries with it a certain party or partisan obligation—an obligation, it is true, which should in no wise conflict with the fair and faithful discharge of official duty. On the contrary, such responsibility properly recognized strengthens the will and determination for faithful service in recognition of the fact "that he serves his party best who serves his country best."

OUR PRESIDENTS PARTISANS.

The fact is that under our form of government our Presidents are partisans. They are expected to and do invite partisans to their Cabinet and nominate them for official positions, except where the mandate of the law or the long-established tradition of judicial service compels or constrains them to do otherwise. The President who in the recent past most departed from this rule, if one may judge from the outcome, seems to have had an experience not calculated to encourage nonpartisanship.

I do not desire to be understood as suggesting that the partisan character of our Government is unfortunate or seriously objectionable. It has its conspicuous merits as well as its serious drawbacks. It is imperative, however, that in our legislation we recognize the character of our institutions to the end that our people may reap the benefits flowing from party and partisan responsibility and escape the dangers and pitfalls that a failure to recognize the character of our Government are likely to lead us into.

MONETARY COMMISSION VERSUS GLASS PLAN.

The National Monetary Commission proposed a central association whose domestic operations, except as to dealings in home and foreign public securities, were confined exclusively to transactions with the National Government and subscribing banks. The reserve association thus provided for was not therefore a central bank in the sense in which that term is used with reference to the great central banks of England, France, Germany, or the first and second banks of the United States.

The privileges of this association in its relation to the National Government and its power and influence over subscribing banks and finances of the country generally were much more limited than those the Federal reserve board created by the Glass bill would hold and exercise. Furthermore, the plan of organization contained in the Monetary Commission bill was such that the subscribing banks, especially the smaller banks and all banks outside the large centers, by virtue of their influence in and through the local association, under the arrangement which gave them representation in excess of their proportion of capital, would exert a constant and increasing influence against centralized control. The bill before us, however, is so framed as to lodge vast and dangerous control in the Federal reserve board and to constantly tend toward an increase of that central control.

In the Monetary Commission plan the controlling forces of the local associations would largely influence and control the national reserve association. Under the plan before us the Federal reserve board will, by and through the reserve banks and branches, dominate the subscribing banks. The commission plan would tend to decentralization of control, or, rather, to equality of control; the Glass plan will tend to centralization and inequality of control.

NO SPECIAL PRIVILEGES.

It is urged against the Monetary Commission plan that it was a plan which, while granting certain valuable privileges, did not provide for sufficient public control. There is something in the latter part of that statement, though not nearly so much as the critics of the plan would have us believe. As to the

question of privileges, I dissent utterly with the theory that in framing banking and currency legislation we are called upon to—must or should—grant privileges to anyone in the sense that we are giving opportunities to one class of citizens we withhold from another, or that we are conferring privileges on one class at the expense of another. If we could only legislate touching banking and currency on that basis, I for one should not consider it wise to legislate at all.

In this country we have free banking. Anyone who has the means may invest in bank stock, anyone who desires and has the means may become a stockholder in a bank. Anyone who has some means and the character and experience which commands him to the confidence of the community may become a banker as readily as he may become a "butcher, a baker, or a candlestick maker." The way is as free and open as it is to any position of trust and responsibility in political or business life. This is as it should be.

REGULATION NECESSARY.

Owing to the position of trust and responsibility which a banker occupies toward the public it becomes necessary, in the interest of the public, to pass laws regulating banking. We also pass laws regulating the insurance business. We pass laws regulating the meat-packing and other forms of industry, all for the protection and benefit of the public. Incidentally we may, and often do, benefit honest folks engaged in these industries, but not, if we are wise, to the detriment of the public. Legislative bodies pass laws regulating the practice of medicine and law; not everyone may feel of the public pulse and prescribe physic or appear on behalf of clients in court for a fee; but everyone may who is qualified, and some do who are not.

This regulation, while it is advantageous to the honest and qualified doctors and lawyers, is not for their benefit but for the protection of the public. And so it is, or should be, with regard to our banking and currency laws. Our duty is to regulate the banking business for the protection and accommodation of the public. If our laws do not permit or encourage the establishment of proper facilities or afford proper protection to the public, we have failed in our duty. If our legislation confers any benefits or privileges not open to all who are qualified to perform the service required or which are granted to the detriment of the public, we have misjudged or been derelict in the performance of our duty.

From what I have said I think I have made it reasonably clear that, in my opinion, any legislation which proposes privileges not necessary to or consistent with the public welfare is bad to that extent. In certain important respects the bankers might enjoy privileges and advantages under the Glass plan which they would not have under the Monetary Commission plan. For instance, the Glass plan makes the Government directly responsible for the notes issued; the commission plan places no such responsibility on the Government—the banks are alone responsible. The Glass plan also contemplates giving the stockholders a larger return on their stock and less to the Government than the commission plan and gives the reserve banks authority to do business with individuals and corporations which the other plan prohibits. So far as these things are unnecessary to good and sufficient service and protection of the people they are objectionable.

GOVERNMENT CONTROL.

Returning from these reflections on the question of privileges and advantages to the question of public control and the criticism that the Monetary Commission plan did not make sufficient provision for such control, a sufficient answer is that further Government control could easily be provided for under that plan without otherwise interfering with its features of organization, but if that plan left something to be desired, as it did in this regard, the bill now before us marks the swinging of the pendulum to the very opposite extreme. The Glass plan not only contemplates placing the entire control over the issue of currency in the hands of officials appointed by the President, it will give them control over more than half a billion of dollars belonging to individuals.

In order that we may intelligently judge as to whether the control of the Federal reserve board provided in the Glass bill is partisan, and improperly so, it is necessary that we give consideration to the character and extent of the power, authority, and control of the board over the issue of currency, and, through the Federal reserve banks, over the banks and the credit of the country.

It is necessary to do this, for all will agree that appointees of the President may, and often do, perform services which do not involve or invite partisanship, and, further, there are many classes of public or semipublic service the duties of which are in no wise incompatible with a lively sense of partisan respon-

sibility. The question is, Are these duties of that class, and does their performance involve or invite partisanship?

PRESIDENT'S POWER.

The Federal reserve board of seven under the Glass bill are all appointees of the President. Three of them—the Secretaries of the Treasury and of Agriculture and the Comptroller of the Currency—are all certain to be of the President's party, and expected to be reasonably strict partisans. This is, of course, assuming that a recent, not particularly happy, experience under a different policy is not to be repeated. Of the four remaining members, in response to an insistent public demand, it has been grudgingly agreed not more than two shall be of the same political party—only one need be experienced in banking. All are removable by the President, who also designates which of them shall be manager and vice manager. The manager is to be the "active executive officer," subject to the supervision of the Secretary of the Treasury, which official has his powers further enlarged by being given general direction of the increased powers conferred on the office of the Comptroller of the Currency by this act.

It will be seen that there is no limitation on the exercise of the power of appointment with respect to five of the seven members of the board, including the manager, the vice manager, and the vice chairman, in the person of the Comptroller of the Currency. Last, but not least, but, in fact, greatest of all, the President appoints the Secretary of the Treasury, who is chairman of the board, supervisor of the manager, and director of the vice chairman the Comptroller of the Currency. In fact, the Secretary of the Treasury is the Pooh-Bah of the Glass system. He comes very near being the whole show.

And the Secretary who really appreciated his position could repeat the refrain of the Lone Survivor of the Nancy Bell:

For I am the cook, and the captain bold,
And the mate of the *Nancy* brig,
And the boatswain tight, and the midshipmite,
And the crew of the captain's gig.

[Applause and laughter on the Republican side.]

Mr. GLASS. May I interrupt the gentleman?

Mr. MONDELL. In just a moment.

Under the Glass bill the office of the Comptroller of the Currency under the Pooh-Bah, the Secretary of the Treasury, would come nearer being a central bank than anything ever proposed or contemplated by the Monetary Commission. In fact, it would be a partisan Government central bank.

Now I will yield to the gentleman.

Mr. GLASS. I would like to ask the gentleman from Wyoming if he did not vote to make the Secretary of the Treasury the sole dispenser of \$500,000,000 of currency under the Vreeland-Aldrich bill and the sole judge of the security which the Government shall ask.

Mr. MONDELL. A very different proposition, as I could show. The gentleman was not fair at all—

Mr. GLASS. In other words that was your Pooh-Bah and not my Pooh-Bah. [Applause on the Democratic side.] I would like to ask my friend another question.

Mr. MONDELL. Well, the gentleman understands I have but an hour and I have a speech which will take me more than an hour. The gentleman was reasonably fair in most of his statements to-day, but he was exceedingly unfair, as everybody knows, in regard to his statement of the powers of the Secretary of the Treasury under the Vreeland-Aldrich bill.

Mr. GLASS. I read the statute itself.

Mr. MONDELL. But he read one provision of the statute only.

Mr. GLASS. That is the provision in point.

Mr. MONDELL. We are none so young but what we have heard gentlemen read some extract taken from its context that might give a very erroneous impression, and that is what the gentleman from Virginia did.

Mr. GLASS. Will the gentleman point out wherein I misrepresented the law?

Mr. MONDELL. If I had the time I could.

Mr. GLASS. I will give the gentleman time to do so.

Mr. MONDELL. That was an emergency bill intended to operate only for a short time and it has operated so well in preventing panic that I am not sure that the rumors we have heard in the last few days are not true that you are going to propose before you get through a continuation of that law, and before I get through I will have a few words to say on that point. We are hearing rumors recently that the moment you got away from a caucus-bound House in desperation the gentlemen at the other end of the Capitol may propose to extend the terms of the Vreeland-Aldrich emergency currency bill.

Mr. GLASS. Will the gentleman permit another interruption right there?

Mr. MONDELL. I can not now because I have consumed over half of my time and I have not said anything like half what I desire to about the gentleman's bill. I protested against limiting time for discussion of the bill, but the gentleman and his party put on the gag.

POWERS OF FEDERAL RESERVE BOARD.

Having called attention to the practically unlimited authority of the President over the appointment and continuance in office of the Federal reserve board, let us examine for a moment the powers of the board thus created by presidential appointment and constantly under presidential control. Some of them are as follows:

Power to appoint outright three of the nine directors of each Federal reserve bank, one of which number is to be chairman of the board of directors and the "official representative" of the Federal reserve board under the title "Federal reserve agent." Unless the person appointed to this position in each Federal reserve bank were a mere cipher and entirely lacking in force and character he would entirely dominate the bank in his dual capacity of executive officer of the local reserve bank and representative of the central reserve board.

Power to remove, in their discretion, three of the directors of Federal reserve banks chosen by the banks. This power, together with the power to appoint outright three of the nine directors, gives the Federal reserve board control over the reserve banks through controlling the tenure of office of six out of nine of the directors.

The power to suspend the operations of any one or all of the Federal reserve banks and appoint receivers for them.

The power to fix the compensation of the chairman of the board of directors and Federal reserve agent for each bank, and to permit or refuse to allow the payment of any compensation to other directors of the reserve banks outside of necessary expenses attending meeting—the reserve bank to pay such compensation.

The power to compel one Federal reserve bank to rediscount for another Federal reserve bank.

The power to define commercial paper admissible for rediscount at Federal reserve banks and to fix the amount of such paper of certain maturities which may be rediscounted.

The power to control note issue and to grant or refuse to grant the application of Federal reserve banks for currency.

The power to accept or reject the application of a State bank for membership in a Federal reserve bank. This provision destroys the principle of free banking. It is true the Democratic caucus adopted an amendment which I assume was intended to remedy this fault. I doubt if it does.

The power to summarily remove the chairman of the board of directors and to suspend all other officials of Federal reserve banks without stating cause therefor, and for cause stated in writing to require the removal, with the approval of the President, of any or all officers of Federal reserve banks.

The power to require the writing off of all of the assets of Federal reserve banks they deem of doubtful or worthless character.

The power to authorize Federal reserve banks, under its rules and regulations, to carry on open market operations with firms, corporations, or individuals.

The power to exercise the functions of a clearing house or allow or require reserve banks to exercise such functions.

The power to review and approve or disapprove the rates of discount fixed from time to time by the Federal reserve banks.

The power to grant to or withhold from Federal reserve banks the right to do a foreign banking business.

The power, in conjunction with the Secretary of the Treasury, to apportion the funds of the Government, in their discretion, among the Federal reserve banks, and the power to charge interest or not, as they see fit, on such deposits.

The power to increase and decrease the number of reserve and central reserve cities.

The power to exempt the savings department of national banking associations from any and all restrictions upon kinds and classes of business.

The power to define the conditions under which certain classes of securities may be purchased by savings-bank departments.

The power to suspend for 30 days at a time indefinitely any and every reserve requirement except as to reserve notes.

VIRTUALLY A CENTRAL BANK.

These are by no means all of the powers of the Federal reserve board, as they do not include a wide variety of powers of regulation, control, and examination over Federal reserve banks or member banks, but the powers herein enumerated are sufficiently broad and sweeping to make it very clear that the Federal reserve board under this bill is an organization

of vastly wider power, authority, and control over currency, over the banks within the national system, and over the credits and business of the country—foreign and domestic—than the reserve association contemplated by the Monetary Commission bill. Not only its power, authority, and control vast, but it is of a character which in practical operation would tend to increase and centralize. On the contrary, the authority and control of the reserve association under the Monetary Commission plan would be constantly checked and minimized by the influence of the local associations.

The gentleman from Virginia [Mr. GLASS] said that the powers of the central board were no greater than they should be, because it was simply a governmental board of supervision. If that was all it was, then there need be no criticism, and there would be no criticism of the appointment as contemplated in the bill. But the Federal reserve board is infinitely more than that. It will be the most powerful banking institution in all the world, and it will have not only the supervision but it will have largely the control and management of the banking and the credits of this country.

In this bill we have presented to us the vastly edifying spectacle of a party denouncing the Monetary Commission plan of organization because, they said, it contemplated a central bank and then coming forward with a different plan based on the same idea, providing for a central organization under partisan control, with wider and more centralized power than the Monetary Commission ever dreamed of. In your frantic efforts to escape the bogey man of a central bank, which you yourselves have conjured up, you have come perilously near establishing in the office of the Comptroller of the Currency, under the Secretary of the Treasury, the most powerful banking institution in the world.

Having considered the method of appointment of the Federal reserve board and the character and extent of its powers, it ought not to be difficult to arrive at a conclusion as to whether the board would be likely to be partisan, whether or no the character of its duties, activities, and responsibilities are such as could be safely trusted or properly executed in partisan hands—whether or no those duties, activities, and responsibilities are of a character to tempt the exercise of partisanship.

OUR BANKS AT ONE TIME POLITICAL.

We are not without experience in this country in the matter of politics and partisanship in connection with banks. Everyone at all familiar with banking in this country before the establishment of the national banking system knows that in the days when legislatures chartered banks the banks were expected to be political. A Federalist legislature chartered a Federalist bank, and a Democratic legislature granted charters to those who held their political views. Nothing else was expected in those days than that the banks should be political, and that a man should go for accommodations to a bank controlled by men of his political faith, if there was one available. We never had an entirely nonpartisan banking system until the Republican Party established our present system. Are we to return to a partisan banking system under the Democratic Party?

FIRST AND SECOND UNITED STATES BANKS.

At the time the attempt was made to secure a renewal of the charter of the first United States Bank in 1811—while there was little in the character or operation of that bank which justified any claim of political control—Senator Crawford, of Georgia, called attention to the fact that in the eyes and the language of the opposition it was a hydra, a cerberus, a gorgon, a vulture, a viper.

There is no more instructive period of our history than that between 1830 and 1836, which witnessed the fierce contest over the attempt to secure a recharter for the second United States Bank. That contest, involving as it did some of the greatest characters in American history—Andrew Jackson, Webster, Clay, Calhoun, Benton, and a large number of lesser lights—was the leading issue in a presidential election, witnessed the passage in the Senate of resolutions censuring President Jackson and the long and bitter contest over the expunging of that resolution.

In his effort to crush the bank President Jackson displaced one Secretary of the Treasury and summarily removed another, took action with regard to Government deposits in direct violation of law, and in many ways used to the utmost every resource of his administration, every available instrument of his imperious will. The institution which caused all this turmoil did not approach the power or afford a fraction of the temptation to or opportunity for political manipulation that the Federal reserve board under the Glass bill does. The bank in its operations was immeasurably freer from any action or policy having a political slant or bias than the Federal reserve

board and the reserve banks under it could ever hope to be under the partisan control contemplated.

BOARD HAS TOO MUCH POWER.

The Glass bill gives the Federal reserve board too much power, no matter how it shall be constituted. The provision under which the board has discretion to exclude a State banking institution, no matter how sound, how honestly and ably managed, from participation in the Federal system needs no argument to condemn it. It is in violation of every principle of our institutions. Certain of the powers of the board are peculiarly objectionable in their scope if the board is under control which might be tempted to use these powers for political advantage.

THE RIGHTS OF STOCKHOLDERS AND DEPOSITORS.

But, outside the questions which relate to the dangers which threaten our country and our credit under a partisan banking and currency system, there is a question of morals. Framers of this bill were not sufficiently confident of the wisdom of its provisions that they were willing to make participation in it voluntary so far as the national banks are concerned—a threat of the loss of their charters was considered necessary to secure the success of this force act—loss of charter means loss of prestige, and, under the terms of the bill, a heavy loss in depreciation of the 2 per cent bonds, held as the basis of circulation, and therefore the national banks must come under the act unless to do so threatens immediate and permanent loss.

Having thus dragooned, or attempted to dragoon, over 7,000 national banks into the system compelling them to contribute over a hundred million in cash to the capital stock of the reserve banks and become liable for as much more and to contribute from four to five hundred millions in reserves, the stockholders are calmly told that they are to have no participation whatever in the central governing institution, with its enormous powers, and they find on examination of the bill that in practice they will have little or nothing to say in the management or control of the reserve banks.

REGULATION VERSUS MANAGEMENT.

The gentlemen will, no doubt, wax heatedly vociferous and flamboyantly eloquent in their declarations that this is the people's affair; that the people, through their Government, alone have the right to control the issue of currency and supervise the business of banking. The gentlemen may as well save themselves that kind of effort, for they will fool nobody whose opinion is worth while, at least not for long. There is no one who disputes the right and the duty of the Government to supervise, so far as is necessary for the benefit and protection of all the people, the issue of credit notes and the business of banking. The people pretty clearly understand nowadays that control through a Government bureau, by political appointees, is not synonymous with control by the people and for the people. Neither do people of ordinary intelligence confuse regulation and management. We regulate the railroads, we do not manage them. We regulate the packing of meats, we do not appoint the men who run the business.

WAIVING RESPONSIBILITY.

Oh, but some trusting brother will say, these people can depend upon the good faith and judgment of the men who are appointed by the President. Well, Republicans might have confidence in the appointees of a Republican administration, Democrats in the appointees of a Democratic administration, but Progressives might not have any confidence in either. Men who are responsible for the management of other people's money, as well as their own, are hardly warranted, in any event, in putting such funds entirely beyond their control. In my opinion, neither the officers of a national bank nor a majority of the stockholders would be warranted in the absolute waiver of all voice or influence in an institution of which they become a part, which this bill contemplates, no matter who was to manage it.

It is no argument to say that much of the control of foreign central banks is in the hands of the appointees of Presidents, Kings, and Emperors; that is true only to a limited extent, and I have already called attention to the nonpolitical character of these chiefs of States. Furthermore, gentlemen who harangue against central banks are barred, or ought to be, from inveighing against a central-bank system with one breath and in the very next defending their plan on the ground of its resemblance to foreign central-bank systems.

ADEQUATE GOVERNMENT SUPERVISION.

There unquestionably should be such representation through appointees of the President as is necessary to insure proper supervision in the interests of the people. Such appointees should represent various shades of political opinion and the business rather than the political life of the Nation. The

Monetary Commission plan provided that the Secretaries of the Treasury, of Agriculture, of Commerce and Labor, and the Comptroller of the Currency should be ex officio members, and that the President should appoint the governor of the board of directors of the National Reserve Association—perhaps not a sufficient representation. This plan goes to the other extreme, while its wide latitude of initiation and discretion tempts partisan manipulation in the apportionment of funds, in compelling rediscounts for localities desiring to hold commodities for a rise, in supplying or withholding currency, in defining paper admissible for discount, in admitting or excluding State banks. It denies participation in management to the millions of stockholders and depositors and proposes the establishment of an unrepresentative and partisan banking system.

DENYING THE PEOPLE REPRESENTATION.

Assuming, for the sake of argument, that it would be possible under the Glass bill for the management to be entirely nonpartisan at all times and of a high order of efficiency, that management would be under no responsibility in a fiduciary capacity to those whose money and credit, in the form of stock or deposits, was in the keeping of the member banks. It would not be likely to be in close touch with the business of the country. If a national system of banking cooperation—and that is what is or should be sought under this legislation—is successful, practically every commercial bank in the country would eventually be connected with the system; thus the moneys and credits of all the people would, in a very important sense, be involved in and affected by the organization of the reserve board and reserve banks.

I assume the Government is not to attempt the impossible task of selecting and vouching for the officials of all the banks of the country and substituting an official for the personal judgment of those locally charged with responsibility to stockholders and depositors. This being so, to deny bank officers and stockholders representation or participation in a far-reaching centralized control of banking and credits amounts to denying participation to the people themselves.

THE SPEAKER'S VIEW OF IT.

In an interview given out some days ago Speaker CLARK is quoted as follows with regard to the reserve board:

A President's fame will rest largely on the justice, wisdom, and patriotism with which the Federal reserve board uses its great powers and discharges its important duties. Consequently, as any President desires the good of the people and is jealous of his own fame, he will appoint men only of ability, character, and patriotism on the Federal reserve board, and then keep close watch on them to the end that all the people may be treated impartially and that our prosperity may increase.

It is a thing incredible that any President will ever be so base or regard his own good name so lightly as to abuse the stupendous trust committed to his keeping by the Glass-Owen currency bill.

It seems to me that in this statement the Speaker unwittingly suggests the strongest argument against the proposed plan when he refers to the "stupendous trust committed to his (the President's) keeping," and when he insists that the President would "keep close watch on them (the board) to the end that all our people will be treated impartially." I am surprised that so good a Democrat and so good a patriot as the Speaker should take the view that it is wise or necessary to add to the present tremendous power of the presidential office a further "stupendous trust" which he can only hope to properly fulfill by keeping a "close watch" on his appointees.

There are certain powers lodged in the "stupendous trust" that should not be placed in the hands of any man or body of men, no matter how wise; and as to those powers and that discretion necessary to the working of a successful system, no one man—no few men of one mind or way of thinking—no matter how wise and patriotic, should be given the exclusive control.

MIGHT WORK WITH AMENDMENTS.

In emphasizing the partisan centralized and nonrepresentative control provided for in the proposed Federal reserve board and in comparing it with the Monetary Commission plan of organization, I do not desire to be understood as insisting that this plan of organization shall be abandoned and the Monetary Commission plan adopted. I do, however, believe that the Monetary Commission plan would require fewer changes to make it a workable and a satisfactory plan, in the interest of all the people, than will be required to bring the plan before us into a form that would produce satisfactory results in the running of the years.

The Glass plan without a curtailment of the powers of the Federal reserve board, a limitation of the operations of the reserve banks to transactions with the Government and among themselves and with member banks, and without some provision for representation by the people through their local bank-

ing institutions in the management of the board and reserve bank is, of course, impossible. With amendments curing those defects the Glass plan would probably be workable. At any rate, I am sure that the majority of people have no disposition to quarrel or split hairs over the detail of organization.

THE FEDERAL ADVISORY COUNCIL.

The amendment to the original Glass bill providing for a Federal advisory council was adopted in recognition of the faults in the plan of organization to which I have referred, and is an attempt to cure or at least palliate them. Unfortunately, the plan is not founded on correct principles, and in practice would probably create friction without accomplishing beneficial results.

This proposition is borrowed from the German Central Bank. It is curious how our Democratic friends, while professing horror at the idea of a central bank, fly to monarchical central banks for argument in defense of their plan and for ideas and suggestions for its improvement.

The Federal advisory council would, under the plan now proposed, have no power, authority, or jurisdiction which a voluntary association which might be organized by the banks would not have; therefore it amounts to no more than a declaration that associations or committees representing the banks may make suggestions or recommendations to the high and mighty Federal reserve board. Are we to understand that but for this provision the board would not be supposed to hear or heed petitions or recommendations?

The people should be recognized and given representation through the banks on the Federal reserve board; no such makeshift or pretense as the advisory council will do.

CURRENCY ISSUE.

I have called attention to the fact that the President, in his address of June 23, delivered at a joint session of the two Houses of Congress, avoided specifications relative to the character of the currency legislation he desired. He did, however, make some general observations relative to what we should seek to accomplish. Speaking of currency, he said:

We must have a currency not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting credits of every-day transactions, the normal ebb and flow of personal and corporate dealings.

I do not recall having seen or heard a clearer or a sounder statement relative to currency issues, and it is greatly to be regretted that in drafting and amending the Glass bill the members of the President's party charged with that responsibility did not evolve a plan in harmony with his recommendation. It becomes our duty, therefore, to help correct the blunders of the President's advisers in this matter and endeavor to bring their bill into harmony with the President's declaration.

Instead of providing a currency elastic and responsive to expanding and contracting credit and to the normal ebb and flow of business they have provided for a currency which is expansive only after a curious system of circumlocution at the will and pleasure—one might almost be justified in saying the whim—of the Federal reserve board.

The amendment to the Glass bill, adopted by the committee and approved by the caucus, providing for the redemption of reserve notes, remedied in a way a fatal defect of the original bill; but assuming that the plan of redemption provided for will work satisfactorily, the fact remains that the process of circumlocution under which notes are to be issued, the grave danger of conscious or unconscious partisan bias or warping of judgment on the part of the Federal reserve board and the management of the reserve banks, as it is proposed they shall be constituted, renders the plan of issue likely to be anything rather than readily responsive to sound credit. The absolute discretion of the reserve board in the issuance of reserve notes is highly objectionable. If it worked well, it would be because it was better in practice than in principle.

TAXING RESERVE NOTES.

The provision authorizing the Federal reserve board to charge the reserve banks interest on note issues is either pure buncombe or the work of a befuddled mind. The Government is in any event to secure the major portion of the earnings of the banks above 5 per cent. As the banks will, if the system works at all, earn over 5 per cent, what the Government gained in interest on notes it would lose in earnings.

Such an interest charge is not necessary or useful for the purpose of calling in circulation, for the redemption provisions will do that; but it would operate to discourage reserve banks from rediscounting for member banks at times when they most needed funds, thus putting a further obstacle in the way of ready response to the needs of the country.

NOTES SHOULD NOT BE GOVERNMENT OBLIGATIONS.

Personally I believe it to be a mistake to provide for credit notes or credit currency which shall be obligations of the United States. I know of no good purpose to be served by so doing. It is proper and essential that adequate provision be made to maintain the soundness of such notes, but that can be done without making them Government obligations. As the soundness of these notes rests upon the reserves and the credits behind them, upon provisions for their prompt and the fund for their certain redemption, nothing is gained by the Government assuming obligation for them; and in time of war much embarrassment might result therefrom. The insistence upon making these notes Government obligations is based upon a wholly mistaken and erroneous idea of what they are, of their character and functions. There seems to be a large number of people, whose minds are clear on other subjects, who can not understand the difference between money and credit notes.

It is the function of the Government to coin money and, acting as a money warehouse and auditing agent for all the people, issue certificates in lieu of stored coin and bullion. Our Government may also and has issued fiat money to meet an emergency, but Government issue of or responsibility for circulating credit notes is an economic error. The making of credit notes a legal tender in the payment of Government obligations, other than those specifically payable in coin, or of sums due the Government is simply a matter of convenience. It is true it gives currency to the notes thus recognized, but the object of the provision is primarily to serve the convenience of the people and of the Government. It would be even more convenient if the checks of all responsible persons were by right recognized and receivable at the customhouse. The only objection to it is that the Government has no means of keeping track of the credit of individuals.

OUR LARGE PER CAPITA CIRCULATION.

We should not lose sight of the fact that we have in circulation in this country, in coin and coin certificates, representing coin in the Treasury, and in United States notes, a total, in round numbers, of \$2,480,000,000, amounting to about \$26 per capita. As this does not include the national-bank notes, which alone of our circulating medium are affected by this bill, we would still have, under this legislation, if it retired all the national-bank notes, a larger per capita circulation, mostly in actual money or its representative in the form of certificates, than any other people on earth, except perhaps the people of France.

As this bill does not, however, contemplate the immediate withdrawal of bank notes, but, rather, their gradual redemption through a period of 20 years, we would still have a per capita circulation of \$34 after this legislation was enacted, and the notes immediately necessary, if any, would be of such amount as might be required to meet, as President Wilson phrases it, "the expanding * * * credits of everyday transactions." If the issues which we provide for are to be of the character described by the President, they need not and should not be Government obligations, though their issue should of course be under such Government supervision as will insure their soundness.

The framers of the Glass bill did not have as good example to follow in the currency recommendations of the Monetary Commission as they had in its plan of organization, and they certainly have improved on the provision for redemption contained in the Monetary Commission plan. The bill should relieve the Government from obligation for note issues, and it is imperative that some such simple plan as the Monetary Commission bill provided should be adopted for the emission of notes.

RESERVES.

In the President's address to which I have referred he said "our banking laws must mobilize reserves." Unfortunately the bill presented, which is supposed to have the President's approval, at least in a general way, does not satisfactorily accomplish this purpose. Perhaps the greatest fault of our national banking system is that it does not admit of the mobilizing of reserves. While the legislation before us improves this situation somewhat, it lacks much of realizing the condition the President had in mind. This to a certain extent is inseparable from the plan of organization which has been adopted.

Under the Monetary Commission plan reserves could be readily and effectively mobilized and utilized to the utmost, to meet a local situation of stringency or lack of confidence, or to fortify where most needed against a wide extended failure of credit or threat of financial panic. The creation of twelve or more regional reserve banks by this bill renders the plan about one-twelfth as effective in mobilizing reserves as the Monetary Commission plan. I am not altogether certain that there are

not some compensating advantages, but viewing the matter in the light of effective mobilization of reserves alone, the commission plan was vastly the more effective of the two.

FEAR OF CENTRALIZATION.

The trouble with the Democratic brethren is that, while they see the necessity of having reserves fluid and available for concentration in order to render them readily effective, they are in such mortal terror of the "Money Trust" they have conjured up that they scatter and divide reserves permanently and still hope to effectively mobilize them.

I come from a good way west and share the belief of many of our people, and eastern and southern people for that matter, that New York and, to a lesser degree, other large centers have heretofore held our reserves for speculative trading when our people needed them for legitimate business.

Our bankers claimed in 1907 they could not get what belonged to them, much less accommodation on good paper. We want to cure that sort of thing, and I suppose that is what gentlemen had in mind when they divided their central bank into 12 parts, not to count the Federal reserve board.

Assuming that fear of concentration justifies the creation of 12 or more reserve banks, we must admit that we handicap ourselves vastly in securing mobility and effectiveness in the use of reserves. We talk about mobility and provide for immobility, for crystallization, of reserves.

After all, does it matter so much where reserves are or how much concentrated, if their use for improper purposes is prohibited and they are available to be drawn upon when needed? One great reservoir, or a few large reservoirs, supplying many communities can be safely drawn upon and reduced to a much smaller volume than the combined volume necessary to insure safety if each community has its own reservoir. The real problem is to see that the large reservoir or reservoirs are properly constructed and guarded and the supply pipes in good order.

One thing is certain; if the reserve requirements now in the bill are essential for the creation and maintenance of 12 regional banks, then it is imperative that the number of regional banks be reduced in order that the reserve requirements may be reduced, otherwise the bill will produce in its first operations a serious stringency in the money market. This feature of the bill has been somewhat improved by amendment, but is still far from perfect.

THE RESERVE REQUIREMENTS AND THE COUNTRY BANKS.

The reserve requirements of the bill are most burdensome on the country banks and would, in my opinion, make it impossible for the average country bank to join the system. Our banking system has developed in actual practice along the natural lines of trade and business. For reasons which are well understood successful and well-managed country banks ordinarily carry a considerable portion of their reserves other than that required to be carried in their own vaults in the banks in reserve cities with which in the ordinary course of business they are most naturally and intimately associated. The maintenance of such reserve accounts is essential to the business of these banks in the accommodation of their customers. Under this bill country banks must retain in their own vaults within 1 per cent of the amount now required to be so held, and the balance of the required reserve at home or with the reserve banks.

Of course, if it is contemplated that the reserve banks and their branches are to usurp the relation which now exists between the country banks and the larger banks in reserve and central reserve cities—in other words, if the reserve banks are expected to and should become active rivals of the subscribing banks in the general field of banking business, there might in the course of time be less urgent necessity for the country banks to maintain their present relations with their city correspondents. But nothing of that kind should or can occur if the reserve banks are properly limited in their field of activity. Therefore the fact remains that the reserve requirements of the bill are objectionable to the country banks in this respect.

Under this bill the country banks would have 10 per cent of their capital in reserve banks earning not to exceed 5 per cent; perhaps less. Twelve per cent of all deposits, at least, would be tied up, earning nothing; and in addition there would be the necessity of maintaining reserves, as at present, with city correspondents. All this would reduce the earning capacity of the country banks without benefiting anyone.

OTHER HANDICAPS FOR COUNTRY BANKS.

If it be urged that in course of time the country banks would not find the necessity so urgent as at present for reserves with their city correspondents, the answer is that such a condition could only arise in case the reserve banks came to perform all the services now performed by the city banks for their country

correspondents. That could not occur, even under this bill, for many reasons.

It is true the reserve banks would furnish a wider discount market, but much of the accommodation that the country banks require they could obtain more promptly and with less formality from their city correspondents. This is particularly true as paper offered for rediscount at the reserve banks must meet technical statutory requirements which many country banks would find it difficult to comply with as regards much of their perfectly good paper.

There may be some good argument for the provision of the bill which prohibits exchange collection charges. I am not sufficiently familiar with banking business to express an opinion as to the reasonableness of such charges or how large an item they constitute. I do know that country banks feel that they are entitled to make a charge for such services; that it is a legitimate charge for a real service.

The country bank with good city connections is the backbone of our banking system, and a most important influence in our business affairs. Any legislation on banking and currency which lays burdens or withholds privileges to an extent that tends to discourage these banks from coming into, or would render it inadvisable for them to remain in, the national system foredooms that system to merited failure.

THE 2 PER CENT BONDS.

A good deal has been said at one time and another with regard to the provisions and lack of provisions in the Glass bill in the various stages of its incubation affecting the 2 per cent bonds now available as a basis for circulation. Passing over the period during which the bill sometimes had and sometimes had not provisions with regard to these bonds and coming down to the provisions now in the bill, it may be said that their adequacy to protect present holders from loss depends in the first instance upon whether or no practically all of the national banks shall go into the new system. If any considerable number of them should elect to remain out and thus lose the circulation privilege for their bonds, the bonds would undoubtedly depreciate in value without regard to the provisions or in spite of the provisions of the bill.

In view of this condition of affairs gentlemen who claim to see no threat in the pending legislation against the 2 percents or anything in the legislation which, in the ordinary course of business, is calculated to reduce the market value of these bonds, must be very obtuse or very confiding. I will guarantee that none of them if they were making investments would, under the circumstances, think of investing in 2 per cent bonds. Everybody knows that money is worth more than 2 per cent per annum in this country—lots of people are paying 10 per cent on loans—so that it is perfectly childish, puerile, and ridiculous for gentlemen to say that there is no reason why 2 per cent bonds should depreciate in value when there is a proposition before the country being seriously considered to take from these bonds the circulating privilege, which alone maintains them at par or anywhere near it.

Not only is there this legislative threat, but various gentlemen high in the councils of the Democratic Party have advocated action with regard to the 2 percents frankly confiscatory of their value. The Hon. HOKE SMITH, Senator from Georgia, in an address delivered before the legislature of his State July 18 last, proclaimed that he "took no stock in the proposition that the Government should take action which would insure returns at par to the holders of 2 per cent bonds." This Democratic statesman would issue \$750,000,000 irredeemable Treasury notes and compel the holders of 2 per cent bonds to take them in exchange for their bonds. If Government obligations can be met so easily as all that, why should we stop at seven hundred and fifty million; why not make it a billion, or two billion, and stop all this waste of gray matter and expenditure of real thought in an effort to secure a sound and elastic currency? Why labor and try to think these hot days when there are so many printing presses handy?

THE ALDRICH PLAN FOR THE 2 PERCENTS.

It is something of a joke on the Democratic brethren who wilt their collars and rend their garments these hot days denouncing the "Aldrich plan" when we recall that the Aldrich plan, so called, provided for the payment of the 2 percents without additional expense to the Government, while the plan they propose will increase the interest charge on these bonds seven and a half millions annually.

There is another feature of the so-called Aldrich plan which our Democratic brethren from the South and West have evidently overlooked in their frenzied denunciation of it. It was proposed to have the National Reserve Association fix, from time to time, a uniform rate of discount for the entire country. There

is a difference of opinion as to whether this could be made effective, but if it could it would tend to greatly reduce the interest rate in the West and South, where it is now high. The National Monetary Commission was willing to make the effort for the benefit of the South and West. The Glass plan assumes we of the West and South are to continue to pay higher rates of interest than the North and East.

REDISCOUNTS.

One of the greatest needs of the country is wider and more certainly available facilities for converting liquid bank assets into circulating, or debt liquidating, media. A real and available rediscount market—in fact some of our banks need to be educated to the use of such facilities. The provisions of this bill in this regard are, I think, in the main excellent. I hope that it may develop that the provisions in regard to rediscounting may safely be made more adaptable to certain kinds of country credits, though I am of the opinion that a fair interpretation of the rediscount provisions will bring within them practically all convertible agricultural assets.

OTHER PROVISIONS AND SOME OMISSIONS.

There are many other provisions of the bill I should like to refer to, but time will not permit. The measure contains many good provisions, but needs much amendment to perfect it. One of the most curious features of the legislation lie in its omissions. The last Democratic platform contained the following:

We condemn the present methods of depositing Government funds in a few favored banks largely situated in or controlled by Wall Street in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, national and State, without discrimination as to locality, upon approved securities, and subject to call by the Government.

Evidently our Democratic friends have concluded that "the present methods of depositing Government funds" are not objectionable. If so, they owe us an apology—or do they intend that this method should be continued "in return for political favors?" At any rate they continue the system they so virtuously condemned. Another thing, our Democratic friends have for some time past been much disturbed about the "Money Trust" and the control of the money market by combination of ownership and interlocking directorates. The much condemned Aldrich plan had a provision denying representation to institutions so controlled, but our Democratic friends so lately and, in my opinion, so properly disturbed over money control fail utterly to provide any remedy. When I was a boy and lived on the Mississippi River they had steamboats that used up so much steam tooting in the face of danger that they had none left to make headway against it. Our Democratic friends are that way; they get so out of breath shouting about dangerous conditions they have no will or power left to remedy them.

REASONS FOR BEING THANKFUL.

Before I close I want to make a few observations which I had in mind to make at the beginning of my remarks. The Democratic Party has reason to be profoundly thankful for many things. It has reason to be thankful that although a minority party it has, by grace of an unfortunate temporary split in the Republican Party, full control of the affairs of government.

The Democratic Party have further reason to be profoundly thankful that, in the consideration of this banking and currency question, it is the fortunate heir and beneficiary of the illumination and elucidation which the subject has received in the last few years, largely at the hands of Republicans.

Furthermore, you have reason to be profoundly thankful for the attitude of the American people toward your efforts. Realizing as the people do how much investigation, research, and discussion have done to clarify the situation—the country is assuming that if you are not entirely lacking in judgment and the power to assimilate ideas you will have no great difficulty in putting into concrete form the crystallized consensus of public opinion on the subject, particularly if you will listen to words of wisdom from Republican sources.

Of course the people take no stock in the notion that the currency laws should be amended because your tariff bill is going to give them new opportunities requiring the use of new banking and currency facilities. Rather they take the view that the evils, present and threatened by your tariff legislation, may perhaps be minimized through currency legislation. They are therefore more inclined to trust you with the job than their lively recollection of your checkered record with regard to currency and coinage would perhaps warrant.

The country will now accept and make the best of legislation on this subject that it does not wholly approve. When a party has an opportunity to legislate in the presence of such a state of public mind and opinion, it is wise if it acts, and if in acting it carefully considers opinions offered in good faith

and does not assume an air of hostility and suspicion toward every suggestion made. So far as we are concerned we are willing to give you full credit if you succeed in getting a sound and workable bill, and will only fail in support of your propositions to the extent that, in our opinion, they are fundamentally indefensible and unquestionably harmful.

IS THE GOOD WORK TO BE ABANDONED AFTER ALL?

Very recently we have heard many covert suggestions and some open declarations that after all the labor and travail with which this measure has been brought forth, after all the pain of its delivery and the incessant and solicitous ministrations of its numerous and exalted midwives and nurses, it is to be deserted and abandoned utterly. It is also said that in the stead of this offspring of Democracy, whose legitimacy though denied by some has been vouched for by the head of the party, there is to be adopted a creature of questionable parentage but bearing a close family resemblance to the Vreeland-Aldrich emergency currency act. Is it possible that Dame Democracy will permit so shameful a desertion and so questionable an adoption as this?

I will not venture to say, for I do not know, how many post offices and other jobs still remain to be handed out. If the cohesive force of patronage pap is spent and is no longer effective, then I shall expect the discordant factions of Democracy to resolve into their original elements of greenbackers, fiatists, and silver-coinage and gold-standard men and fall utterly to agree on any real constructive legislation. As I love my country and desire her prosperity, I hope the power of patronage, which has wrought such evils in tariff legislation, may in some measure be justified by compelling proper and needed currency legislation. We stand ready to help. [Applause.]

I am sorry that I can not in the time allotted me complete my speech. I fear that this hurried statement does not give a very clear idea of my attitude toward many features of the bill. Possibly in the moment that I have left I can somewhat illustrate how I feel about the measure by referring to a little incident. Away back yonder in the range days in my State Jack Moore was foreman of the "O bar K," on the Cheyenne River, just on the other side of the Black Hills. Jack was not only a good cowman but Jack was also a good sport, and it grieved his Missouri soul that the "O bar K" had not found in all its saddle string in one long summer a cayuse that could win a single one of the many races with which the boys had enlivened the round-ups; and so, when, booted and spurred, he started to market with the beef herd in the fall he announced to the boys that he proposed to buy some critter down where he sold the cattle that would pass for a cow pony and that would restore the luster of the "O bar K." While the proposition did involve a departure from sporting virtue, the boys were agreeable to it.

Now, while Jack was a good cowman, he was no sort of a match for the slick "hoss traders" down at Kansas City, and the smooth and perky animal for which he bartered most of his summer's wages after the nine days' drive back to the ranch was about as weary and ornery a looking critter as ever came over the trail. More than that, the night of his arrival he got mixed up in a fight with a range stallion, after which little episode his condition absolutely baffled description, and this was his condition in the gray dawn of the next morning when the boys gathered around the corral to examine the new purchase, and Jack stood by, rope in hand, waiting for the judgment of the fellows on the purchase he had made.

"Mizzou" Hines was the spokesman, and he spoke in this wise. He said, "Jack, I 'low when them slick fellers down there put that critter over on ye ye thought ye was gettin' something, and ye wuz. I won't say, seein' he's got four legs and a haid, that ye can't make some kind of a hoss out of him, but take it from me, as a friend, Jack, he'll need a power of fixin'." [Laughter and applause.]

Mr. GLASS. Mr. Chairman, I yield 30 minutes to the gentleman from Ohio [Mr. BATHRICK].

Mr. BATHRICK. Mr. Chairman and gentlemen of the House, after some little acrimony that has been displayed in the discussion of this subject heretofore I trust that my discourse will be considered more pleasant.

We have in the pending bill a little touch of farm credit, but I think we will all agree that it does not go far enough. I believe it is understood that, without doubt, there will be presented to this House during the next session a complete and sufficient farm-credit measure. What form that will take I do not know. I have my opinion as to what it should be and I will attempt to promulgate it. But I am certain of one thing now, and that is that it will be totally impossible and comparatively useless for any of us to attempt to hitch an efficient amendment upon this banking and currency bill.

During the discussion of the parcel post, we all remember, there were amendments and various bills and ideas presented by Members of the House that required nearly 20 minutes to read, and no man in the House aside from the authors had even heard of them. No committee had considered them. They did not come before the House in that official capacity and manner. I trust we will not attempt to graft a farm-credit bill upon this currency measure in any such manner as that.

Mr. Chairman, on June 30, 1912, the total amount of money in the United States was \$3,648,870,650.

The national banks alone loaned \$5,953,904,431 for that year. The total loan is over twice this amount. In other words, we lend in a year's business about three times as much money as we have. Nothing could better illustrate the necessity of commercial credit in all our industries.

Without credit the commerce of the world would falter, production and distribution would become inadequate, and our social and economic status would relapse to a condition of semibarbarism.

The commerce of the cities has fixed a cost of credit that agriculture can not pay. The turning of his active capital but once each year; his lack of credit, social connections, and distance from the money market; his smaller profit in proportion to investment and the fear of debt, superinduced by the necessity of carrying impossible obligations; the small ratio of active capital to his fixed capital, are reasons why the farmer has not fully profited by the great scheme of commercial credit. The merchant and the manufacturer, turning their capital every three or four months, can use short-time credit. They are "constant customers" of and are "acquainted" at the bank. The bank knows their limitations better than it knows the farmer's. The bank can make more money on short-time loans than on long-time loans, and thus the short-time loans get the money.

The farmer needs better short and long time loan facilities. If he is out of debt, he can get seasonable loans on short-time terms better than the farmer with an impossible mortgage. It is to this latter class mainly that we should first give our attention.

LONG-TERM MORTGAGES WOULD HELP SHORT-TIME CREDITS.

Everybody in a community knows that a five-year mortgage of one-half the value of a farm is impossible. The banker knows it and hesitates to grant the short-time loan. If we can, then, arrange for long-time terms upon farm-land mortgage loans which the farmer can meet, which do not consume absolutely his yearly returns, his credit will pick up with the banker on the short-time loans, and we will have done much to cure the ills of the whole situation.

For many years we have expended large sums through our Federal and State Agricultural Departments to encourage and instruct the farmers in advanced methods of agriculture, but while European countries have for over a half century recognized that with the knowledge of how to do a thing must also go the money with which to do it, this country has taken no steps, except by some legislation in various States limiting the interest rate, that would assist agriculture in this direction. This limitation upon the interest rate is a sign that we have long since recognized the necessity of curbing the selfishness of money lenders.

All of our States limit the legal rate to from 6 to 8 per cent, but permit by contract a rate of interest as high as 12 per cent. Eleven of our States do not restrict the contract limit, permitting any rate that the exigencies of the borrower and the avarice of the lender may agree to. Everywhere to the regular interest rate is usually added a commission and various charges for expense which, all told, brings the average annual cost of farm loans in this country to over 8 per cent.

CONDITIONS DEMAND RELIEF FOR CONSUMER.

The 1910 statistics report a mortgage indebtedness upon ten- and farms of \$1,320,000,000 and upon farm-home farms of \$1,726,172,851, bringing the total of reported farm-land mortgage indebtedness to \$3,460,172,851. The annual interest charge levied against our farms, which must, in the last analysis, be a cost added to their products, amounts to over \$7 per capita for the entire population of the United States. Consumption must take care of this charge, and this means \$7 for every man, woman, and child in the United States added each year to the cost of farm produce.

Upon the farmer directly falls this burden with the most depressing results and discouraging influences, but the city dweller pays as well. The effects are not lost upon our young people who at the threshold of life come to determine their future avocation, and I believe this to be among the principal reasons why so many of our young men leave the farm for city occupations and intrude their competition upon the labor of our urban communities.

The facts plainly indicate that agriculture in proportion to our population and as related to progress in other industries is waning.

This is well illustrated by the increase of farm tenancy. In 1880, 25.6 per cent of all our farms were operated by tenants; in 1890, 28.4 per cent; in 1900, 35.3 per cent; and in 1910, 37.1 per cent. This shows a steady and positive increase of tenantry. It is not entirely beyond conjecture, using these figures as a basis, to foresee a possible situation of tenantry in this country not far removed from the baneful influence which the British Empire is proceeding to eliminate in Ireland with an expenditure of public funds gathered by the taxing power, already amounting to over one-third of a billion dollars.

Since 1910 the farm-home owners have increased only 0.8 per cent, while the farm tenants have increased 16.3 per cent. The farm homes mortgaged in 1890 were 23.2 per cent of the whole; in 1900, 31.6 per cent; in 1910, 33.6 per cent. This shows a steady and absolute increase of mortgages upon the farm homes. I mean by "farm homes" those farms where the owner resides upon and operates them.

The mortgage debt on farm homes in the United States in 1890 was \$1,085,915,860; in 1910, \$1,726,172,851. It is true that the mortgage debt of 1910 is a smaller percentage of the value of the property than the debt of 1890, but with this vastly increased mortgage indebtedness the productive acreage has not kept pace, and production, not sale value, is the means by which farm debts are paid. Owing to the increase of population and the consequent advance of price of products, farm land has vastly increased in sale value, but the debt per farm bears a much greater ratio to the number of acres with which to pay this debt than it did in 1890. To illustrate: In 1890 the improved acres per farm of farm homes averaged 72.2 per cent of the whole. In 1910 the improved acres per farm averaged 75.1 per cent, an increase in 20 years of only 2.9 per cent of improved acreage, while in the last 10 years alone the increased mortgage per farm is 39.8 per cent. The average debt per farm in 1890 was \$1,224, while the average debt per farm in 1910 was \$1,715, and the average acreage per farm dropped from 146.2 acres in 1900 to 138.1 acres in 1910. It is palpable that this increase of 39.8 per cent of debt per farm can not be taken care of with an increase of 2.9 per cent of productive acreage and a decreased total acreage per farm. No matter how valuable an acre of land may become as a selling proposition, it will not produce more dollars than when it was worth very much less.

The encroachment of the cities, the failure of full production because of labor scarcity and other reasons have in some States shown startling examples of the decrease in productive acreage. There are 16,000 fewer improved productive acres now in the State of Ohio than there were 20 years ago.

From 1890 to 1909 the increase in acreage of all cereals, which are relatively the most important food products derived from the farm, was 3.5 per cent, but the increase in production, rated in bushels, which determines food value, was only 1.7 per cent. Between 1900 and 1910 the rate of increase of population in the United States and consequent increased consumption was considerably greater than in the previous decades, indicating increased consumption against decreasing production.

The increase of population since 1890 in the cities is nearly 100 per cent, while the increase of population in the country is only about 20 per cent.

No student of our sociological and economic conditions can look upon this latter fact with equanimity, and they can plainly see in it possibilities fraught with increasing danger, not only to the prosperity of the country, but to the preservation of a well-ordered republican form of government.

Mr. SLOAN. Will the gentleman yield?

Mr. BATHRICK. I will, although my time is short.

Mr. SLOAN. Has the gentleman any figures showing relative amount of bank stock held by live rural communities in this country, by men who live on the farm?

Mr. BATHRICK. I have not, but can show that much more than half of the farmers not only do not own bank stock but have difficulty in paying their debts.

Mr. SLOAN. I would like to ask the gentleman—

Mr. BATHRICK. I do not like to have the gentleman use my time. I think I have made answer to all the questions the gentleman has in mind in my speech, and if he will have the kindness to read it he will find them. I have tried to show that this is a work for the good of the whole country and that there is a necessity for it.

Mr. SLOAN. I would like to say to the gentleman that where I live the farmers own most of the bank stock.

Mr. BATHRICK. I am glad to hear it; and probably the bankers own most of the mortgages.

Our farms are our great food storehouses and the homes of a great citizenship unequalled for loyalty to government by any nation upon the earth. Our immigrants are constantly complicating the heterogeneous character of our cities' population and increasing the difficulties of government. To our farms we must turn this tide of immigration and look to them not only for our food, but for the best soil where the principles of free government will flourish.

If all this be true, then the matter of bringing about better credit facilities for the farmer and decreasing his interest rate is one which must be dealt with as speedily and in as practical a manner as possible that the thing may be done and results not dissipated by quibbling. It is, whatever may be the plan accepted, a condition which wise statesmanship will not permit to drift and forever drift along because of abstract theories of governmental philosophy, or because of the opposition of selfish interests. The demand is imperative, the alarm has long been sounded. It is the disease of dry-rot afflicting our body politic. The quicker the remedy is applied the better, and we must not trust to the tardy Old World scheme of self-help. The disease was mainly contracted from the infection of human selfishness, largely disseminated by avaricious money lenders. The question will be, Shall we turn the case over to money lenders to cure, or, the whole people being involved, will they take charge of the cure for themselves?

A great deal has been said about cooperation, and in a degree I am in favor of it, but I beg to point out that this Nation within itself is the most powerful and successful example of cooperation the world has ever produced. The Nation as a body can do this thing better than it will be done if trusted to scattered integral parts.

WHAT OTHER COUNTRIES HAVE DONE.

Over one-half century ago some of the States of Europe were confronted with the rather sudden necessity of taking care of a similar but more aggravated agricultural situation. They had permitted their money lenders and trades people to prey upon the necessities of agriculture until, almost before they had realized it, they found themselves face to face with possible famine.

Mr. SAMUEL W. SMITH. Will the gentleman state what country started this farm-credit system?

Mr. BATHRICK. It was started first by State aid in the countries of France, Germany, Austria, Russia, and Belgium.

Mr. SAMUEL W. SMITH. When was it started?

Mr. BATHRICK. First about 1848, I believe.

In Austria, France, Russia, and the Balkan States, and practically everywhere, the taxing power of the people was called upon to provide funds with which to cure the conditions. Actual subsidies or gifts were distributed to both private and Government owned or controlled banks at a very low rate of interest or none, to be reloaned at a higher rate of interest to farmers. Various cooperative plans were originated by men of high ideals and encouraged by those who would rather take care of the farmer's money and make a profit upon it themselves than see the Government loan the money to the farmer and make a profit for the whole people. The result of it is that, while a system of cooperation sprang up and grew until it became an elaborate farm-credit organization, embodying in Germany some 17,000 small credit banks, with various central associations, it required from 50 to 60 years to bring it to its present condition of utility. That it is an effective assistance to agriculture now there can be no doubt, but can we or need we wait a half century for its kind to unfold in this country? That it is equally effective politically in an undesirable way is also true. The money is pyramided from the farmers to the apex cooperative bank, thence into the great banks of the big money centers to serve as an important adjunct to every nefarious use of the people's money in high finance.

As an example of the tardiness of a self-help plan, dragging its weary way along through the years, it may be stated that Ireland, in 1894, instituted a cooperative farm-credit plan and, after 15 years of operation, the total amount loaned the last year was only \$275,000.

Great Britain has been flooded with a propaganda of education—and she has been nearer to the star cooperative country of the world, Germany—and she instituted cooperative farm banking associations, but there are now only about 100 of them, with an outstanding loan of less than \$100,000.

France instituted a cooperative credit plan in 1857, Austria-Hungary in 1864, Russia in 1861, Italy and Belgium in 1864; and these cooperative societies, left entirely to the propaganda of self-help, after 50 years do not yet meet the demand.

As differentiated somewhat from the short-time-credit associations in Europe there are land-mortgage banks conducted with private capital, and some conducted under direct ownership of

the Government with funds provided by the Government, which take care of the land-mortgage loans.

METHODS PROPOSED FOR THE UNITED STATES.

Several methods for application in this country have been proposed, and no doubt there will be others; but the question will settle down finally to whether we shall do it by a system of State aid, employing its enormous profit for the good of the whole people, or whether we shall delegate the power and turn over the profit to a system of private banks.

One plan is proposed whereby private capital of any class of citizens, not necessarily farmers, shall organize local rural banks, which in turn shall organize State rural banks and which shall pyramid the whole system into a so-called national rural bank. Such a system would be in direct conflict to the purpose of this new banking bill, wherein we endeavor to decentralize the people's money and disseminate it, under Government control, where it is most needed, instead of permitting it to be used for the aggrandizement of our monopoly builders.

MY BILL.

I have proposed that the Government of the United States shall borrow money by the issue of registered bonds at a rate of interest not to exceed 3 or 3½ per cent and lend the money at a rate not in excess of 4½ per cent to the farmers upon the security of farm-land mortgages.

In making this proposition I have attempted no innovation, but it is simply an adaptation of a tried and proven practical plan in operation in other countries, to the needs of the United States.

It will be worth while in this connection to call attention to those countries which have already met with unqualified success through my plan.

Mr. McKENZIE. Will the gentleman yield?

Mr. BATHRICK. Yes; only for a short question.

Mr. McKENZIE. Does the gentleman contemplate any plan of aid to the home builders in town?

Mr. BATHRICK. Land is the best credit basis in the world. Everybody agrees to that proposition; but there is another qualification, the productive quality of the land, that character of the land which gives the man who owns land something to pay with. If we consider lending money on land, we should begin with land of a productive character, and that is the farmer's land.

Mr. YOUNG of North Dakota. Has the gentleman any draft of a bill on this subject?

Mr. BATHRICK. I introduced a tentative bill in the last Congress and also in this session for the purpose of helping my propaganda of education on the subject. I will introduce another bill for consideration of the committee very soon.

STATE AID IN FOREIGN COUNTRIES.

In 1894 New Zealand passed a law empowering the Government to borrow money and lend it to farmers. This law has been in operation now for nearly 18 years, and up to 1912 it had loaned over \$55,000,000 on land mortgages on approximately 60 per cent of the value of the farms. The loans run from 17 to 36½ years on an amortized plan, whereby certain fixed sums were paid semiannually. These fixed sums included the interest upon the debt, with a margin which each year reduced the principal.

When this law was put into operation in New Zealand borrowers were paying over 8 per cent annual interest, with costs added, but after the enactment of the law the interest rates rapidly fell to 4 and 4½ per cent. Private money lenders were then willing to lend money at that rate. The postmasters and other officials are used as agents of the loan department, and receive and transmit loans, blank applications, and so forth.

That those unfamiliar with the facts may understand that New Zealand, in progress of Government, practically leads the world, it may be stated that her newspapers compare favorably with any country; that she has a larger college attendance in proportion to population than the United States, Great Britain, or France; that she owns her railroads, telephones, telegraphs, and express companies; that she established postal savings banks in 1867; put into operation the income tax in 1891; instituted a national provident fund adopted by England and Canada; a mothers' pension law adopted by many of our States; land settlement loans adopted since by Canada, Australia, and many other countries; has an employers' liability and workmen's compensation law, which we long since should have had; has a land registration system adopted by some of our States; is far ahead of us in the matter of good public highways and has been the object of commendation by our best students of political economy for many years.

In Australia, which, if we take out West Virginia, is as large as the United States, there are six States, in each of which the Government borrows money and loans it at a profit.

Their maximum term of loan is 36½ years and the interest asked is never over 5 per cent.

In these States of Australia the population is sparse and widely scattered and conditions fairly represent the most difficult which would be encountered by the same plan in the United States. In the Province of Victoria, since 1896 up to 1910, \$14,500,000 was loaned at a maximum interest not more than 5 per cent, but usually 4½ per cent. Out of the total number of loans outstanding in 1910 only 10 farmers out of 3,331 were in arrears, the amount involved being only \$500.

In Tasmania the Government-guaranteed securities were issued and the money loaned at the rate of 4 per cent, and no losses have been sustained, although the loans were made on very small amounts, often as low as \$125.

Over \$50,000,000 has been raised upon Government securities in New South Wales and loaned since 1902. This act was originally intended for an emergency act for the farmers suffering from drought, but developed into general application. Loans were made upon as high as 66 per cent of the value of the land, and the interest rate to borrowers was 4 per cent.

In these States private money lenders attempted to circumvent the law when a sale was made by forcing the buyer of a farm to agree to borrow money of them at their specified rate of interest, but in 1910 an act was passed practically annulling such contracts.

In Queensland a loan fund has been appropriated by Parliament and also borrowed upon bonds. In 1910, 2,300 loans were granted.

In South Africa, by the act of 1912, the Land & Agricultural Bank of South Africa was established, taking over the assets of the Agricultural Bank of the Transvaal and the land and agricultural loan funds of Orange Free State and Natal. This bank possesses a loan fund provided by Government resources of various kinds, which may be voted by Parliament. It is controlled by a board of five men, who are appointed by the Governor General.

In Norway in 1887 a mortgage bank endowed by the State was established, and this money was appropriated from the tax fund.

Money is being loaned to farmers there at an interest rate as low as 4 per cent on terms running as long as 40 years, payable semiannually by amortization. The Government pays the salaries and wages of all employees of this bank.

In France the Crédit Foncier was organized in 1852 and at the outset was subsidized to the extent of 10,000,000 francs, which was afterwards increased to 60,000,000 francs. France has loaned its district agricultural credit banks more than 100,000,000 francs. The Crédit Foncier, aside from this endowment, enjoys the privilege of conducting a lottery, which seems to be an important assistance for the flotation of its bonds or debentures. This bank loans money at a rate of 4½ per cent on long-time loans.

Many of the communes in Germany sell bonds upon the communal credit and lend the money on mortgages.

In the report to the British Board of Agriculture on the subject of agricultural credit, by J. R. Cahill, which was presented to both Houses of Parliament of Great Britain, the following facts are gleaned:

The Altenburg Bank was given extended scope under State guaranty in 1818 and 1837. State guaranty from the time of their foundation was possessed by the banks in Hanover, Cassel, Wiesbaden, Meiningen, Oldenburg, Sondershausen, and Hesse, but in the case of Hanover its guaranty did not extend to a large sum. Six of these institutions exist in Prussia.

In 1866 the Kingdom of Hanover, the Electorate of Hesse-Nassau, and the Duchy of Hesse were annexed to the Kingdom of Prussia, and each of these possessed institutions under the guaranty of the State. Because of adverse Prussian policy these institutions were transformed into institutions under the guaranty of the union of the communes of the Provinces in the case of the Hanover Bank and into institutions under the guaranty of the unions of the administrative districts in the case of Cassel and Wiesbaden banks.

The liabilities of the banks at Dusseldorf and at Munster were guaranteed by the communes of the Provinces. The bank at Sigmaringen fulfills the function of a mortgage-credit institution and is under the guaranty of the communes.

The Bavarian Agricultural Bank was practically founded and capitalized by the State, the State having advanced \$1,500,000, part of which pays 3 per cent interest and part of which pays to the State no interest at all.

The management in most cases is wholly or partly elected by the assembly or council of the public authority guaranteeing the liabilities of the bank.

The Gofha Bank is a State institution, guaranteed and supervised by the State, but it possesses separate legal status and management.

In Bautzen the communal assembly exercises supervisory authority subject to the final revision of the State.

In Weisbaden, Cassel, Hanover, Rhine Province, and Westphalia supervision lies with the assemblies of the respective administrative districts or Provinces.

All the shares of the Hessian Public Mortgage Bank, established in 1902, are held by the State communes and public savings banks, and the State guarantees its bonds.

The banks in Munster and Dusseldorf do not issue their own bonds, but bonds of the Provinces in which each is situated.

This report further says: "In aiming at profits beyond the payment of expenses, although in fact considerable sums are usually allocated to public purposes, as the result of their operations they grant loans more cheaply than the joint-stock mortgage banks."

In 1895 the Prussian minister of finance established a State-endowed Central Cooperative Credit Bank, which loaned money to farmers' cooperative credit societies, the fund being provided from the State's public moneys.

The bank began its operation with a capital of \$750,000, provided by the State from bonds bearing 3 per cent interest. Other sums from the same source followed. In 1907 the sums advanced to 53 cooperative unions amounted to about \$165,000,000.

Up to 1851 the Hanover Mortgage Credit Bank was restricted by law not to lend money in certain ways in competition to private associations, but at that time this restriction was removed. This instance is only one of many where private money lenders resented the intrusion of Government upon their profits.

In Switzerland there are 11 banks under cantonal guaranty. Nearly all of these banks turn over their profits to the State for public purposes. Local or district revenue authorities assist in collection of interest and other payments. The banks are managed usually by a special committee appointed by the State. In other cases the committee is wholly or partly elected by the department or public authority guaranteeing the liabilities of the bank.

In Denmark special State aid is given in the following manner: Cooperative credit societies are exempted from stamp duties and court fees. State refunds the expense of making their loans; State guarantees 4 per cent interest on their obligations and payment of organization's expenses up to the amount of \$2,680. Government's control is exercised in selection of the president of each society and one of the auditors and in making or approval of by-laws. The annual subsidy and other kinds of subvention given by the State in Denmark has shown a marked improvement in agricultural success. Eighty-nine per cent of the farmers own their own land, a larger per cent than in any other country. Denmark exported in 1908 at the rate of \$9 per acre for every farm, which is equalled by no other country. It appears to be a direct result of cheap money with the collateral result of smaller farms, more farmer home owners, and better cultivation.

Aside from State aid given throughout the whole world for the purposes of assisting farm credit it has been given in other ways for the purpose of conserving agriculture and in carrying out a far-sighted policy of taking care of food supplies.

Tenantry in Ireland had become such a menace to the peace and prosperity of the island that the British Government was obliged to institute measures for assistance. Up to 1911 Great Britain had advanced \$331,000,000 to farm tenants for the purpose of acquiring their farms in fee simple. They will return these sums and wipe out their debt in a period approximating 68½ years. The Government has appropriated \$25,000,000 for the purpose of erecting 34,000 cottages for farm laborers. This policy of agricultural conservation is expected to require an outlay on the part of the British Government of over \$1,000,000,000 which in time will be returned by the farmers at a profit to the Crown.

The Province of New Brunswick in Canada is purchasing large tracts of land with public money, cutting these into smaller tracts, building farm homes, fences, and ditches, and selling the farms on advantageous terms to farmers. Canada is doing much in the matter of direct State aid to encourage immigration to her large areas of farm lands. She maintains agents in the United States, paying them a commission for every man, woman, and child induced to emigrate to the Dominion. She builds roads, guarantees railroad bonds, builds public highways, schoolhouses, and carries out many projects of internal improvement which some of our people of the United States, who cling to abstract theories of government,

are prone to condemn, while Canada is getting our farm citizens at the rate of about 100,000 per year. From 1906 to 1912, 674,305 citizens of the United States emigrated to Canada, taking with them an estimated wealth per capita of \$1,150.

In the last 15 years 99,508 homestead entries have been made in western Canada by former United States citizens, and in the meantime our shrewd money lenders have been persistently and industriously looking for 8 per cent victims.

Our Government had better pay more attention to the future of our food supply and less to our 8 per cent patriots.

STATE AID IN THE UNITED STATES.

Under the act of June 17, 1902, the Government of the United States appropriated all the money received from sale of public lands in 16 Western States for the purpose of building irrigation works. Various sums were expended in this manner to a total of \$16,933,643.78. All of this was public money which indirectly was loaned to the farmers. There were many settlers upon these tracts thus irrigated, and many afterwards came, and to these a charge per acre for the use of the water was made sufficient to repay the money the Government expended. It is an exact parallel with my proposition—to borrow money and lend it to the farmers generally in this country at a fair rate of interest, with the exception that I do not propose to tax the people of the United States to procure the loan fund.

By the act of June 30, 1906, the Secretary of the Treasury was empowered to issue certificates of indebtedness bearing interest at the rate of 3 per cent up to the sum of \$20,000,000 for the purpose of furthering irrigation projects. This money was intended to be indirectly loaned to the farmer and borrowed upon the equivalent of Government bonds.

The Federal act of March 4, 1907, authorized the Philippine Government to guarantee for 25 years a yearly income of 4 per cent upon capital invested in agricultural banks by private parties for the purpose of encouraging loans to the farmers. Capital hesitated and did not engage in the business.

On June 18, 1907, on the advice of the Attorney General of the United States as to the constitutionality of the procedure, the Philippine Government established a government agricultural bank with a capital of government funds and officered by government officials. It began operation in 1908. The report of the minister of finance and justice in 1908 states "It seems beyond question that these banks will prove an important feature in the restoration and promotion of agriculture in the Philippine Islands." In another report in 1910 he states one of the good results already accomplished consists in the "decrease of usury in the Provinces."

Since 1850 we have given the railroads as primary and indemnity grants 158,294,870 acres of land. It is extremely doubtful that we would have the great West with us now if these roads had not been built. It was a means to an end, but had the Government built these roads itself the end would have been better. It is an illuminating example of the folly of turning over a great Government policy to be carried out by private interests.

The Government is now in the business of delivering our mail, and it is still fresh in our memories how we were obliged to wrest from the star-route private interests this great Government function.

Year by year we appropriate large sums for the direct benefit of a few in many ways, that none of our great resources and utilities shall languish; and the greatest of all these is agriculture.

So it is quite apparent that the plan I propose is not very much of an innovation; that it is simply taking up and extending a plan found beneficent and profitable in almost every country of the world, including our own.

Many of the Provinces, States, communes, and countries that have put this plan into execution have used the profit—and there has always been a profit—for the purpose of decreasing taxation and for accomplishing some good to the whole people.

22,600 MILES OF GOOD ROADS—NOT ONE CENT TAXATION—FIVE YEARS' PROFIT FROM FARM CREDIT.

If the Government of the United States were to adopt my plan reducing the interest rate upon our farm-land mortgages, lending only on about one-half of the total, or upon that portion of this debt which lies upon our farm homes, approximating \$1,700,000,000, in five years, after deducting all expenses, borrowing money at 3 per cent and lending it at 4½ per cent, the profit would amount, in round numbers, to \$136,000,000. With this sum, allowing \$6,000 cost per mile, 22,600 miles of roads could be constructed.

This would give us a good road from Miami, Fla., up the Atlantic coast to Augusta, Me.; from Boston via Cleveland, Chicago, and Minneapolis to Seattle; from Seattle down the Pacific coast via San Francisco and Los Angeles to San Diego, thence eastward to Austin, Tex., thence to New Orleans and to Jacksonville, Fla.; a good road from New Orleans along the Mississippi to St. Paul; two central trunk lines westward again via Denver and Salt Lake City to the Pacific coast; one from the Great Lakes to Mobile, Ala.; and between these lines roads connecting the most important cities of the country. Between these, still, the map would look as if handfuls of jackstraws had been fastened to it.

Mr. PLATT. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BATHRICK. I regret I can not yield.

Mr. PLATT. I was going to ask if these trunk lines were to be for the benefit of the farmer or the automobile owners throughout the country?

Mr. BATHRICK. I am simply showing how to get the money available for improving these roads and tax no one a penny. I am not making any suggestion as to where the roads shall be built or how. I shall not suggest any road plan in my bill.

The Government can do this for the people without taxation, or the Government can let private interests get rich on these profits. Which?

The good roads thus described are but a light touch of the whole plan for the future.

If enacted into law, my farm-credit bill will provide a road fund in less than 40 years of a billion dollars and a hundred thousand miles, instead of the 22,600 miles of roads described, can be built.

That those who are skeptical may verify my figures I insert below a table showing the profit of the first five years upon \$1,700,000,000 on an amortized loan running out in 18½ years, with attached explanation.

Number interest-paying period.	Amount of semiannual payment.	Semiannual interest due to Government.	Amount paid in to apply on principal.	Balance due on principal.	Semiannual Government interest cost.	Amount to reloan for each 6 months.	Interest on reloan balance entire period.	Compound interest accumulation.
1.....	\$68,000,000	\$38,250,000	\$29,750,000	\$1,670,250,000	\$25,500,000	\$42,500,000	\$8,008,250
2.....	68,000,000	37,580,625	30,419,375	1,639,830,625	25,500,000	43,456,250	7,822,120	\$956,250
3.....	68,000,000	36,896,189	31,103,811	1,608,726,814	25,500,000	44,434,015	6,998,355	977,765
4.....	68,000,000	36,196,353	31,803,647	1,576,923,169	25,500,000	45,433,780	6,133,560	999,765
5.....	68,000,000	35,480,771	32,519,229	1,544,403,938	25,500,000	46,456,040	5,226,300	1,022,260
6.....	68,000,000	34,749,098	33,250,912	1,511,153,025	25,500,000	47,501,300	4,275,115	1,045,260
7.....	68,000,000	34,000,943	33,999,057	1,477,153,969	25,500,000	48,570,079	3,278,478	1,068,779
8.....	68,000,000	33,334,964	34,665,036	1,442,488,933	25,500,000	49,662,905	2,204,830	1,092,826
9.....	68,000,000	32,656,000	35,344,000	1,406,944,933	25,500,000	50,765,320	1,142,219	1,102,415
10.....	68,000,000	31,656,260	36,343,740	1,370,601,193	25,500,000	51,907,539
Total.....	680,000,000	350,571,213	255,000,000	45,687,228

RECAPITULATION.

Interest paid to Government.....	\$350,571,213
Interest on reloan, entire period.....	45,687,228
Compound interest accumulation.....	1,102,415
Total amount received by Government.....	397,360,856
Total interest cost to Government.....	255,000,000
Gross profit to Government.....	142,360,856

These computations are based, as stated above, on a loan of \$1,700,000,000 (the farm-home mortgage debt) semiannual pay-

ments of \$4 on each \$100 of the debt, or \$68,000,000 on the whole. The interest rate is 4½ per cent, or half-yearly rate of 2½ per cent, to borrower. It is assumed that the Government borrows the money on bonds bearing 3 per cent interest, payable semiannually. The natural margin is thus 1½ per cent.

The net interest and principal receipts are reloaned.

The profit for the whole term which pays out in 18½ years would be \$773,670,000. A lower rate of interest to the borrower, smaller semiannual payments, and longer paying-out term would considerably increase this amount of profit.

This table can only be taken as a prospectus; but, after liberal allowance for all conditions of practice, the profits are astounding.

The result to the mortgage debtor would be that instead of the usual 6 to 8 per cent interest in this term of years, requiring him to pay altogether more than twice the amount that he borrowed, the debt is extinguished and he would pay by this method of gradual reduction of the principal and consequent annual decrease of the interest \$148 on each \$100 of his debt which would thus be canceled.

In the same term at 6 per cent interest by the old plan, in order to cancel the debt at the end of the term, he would have paid \$211 on each \$100 owed.

HOW PROFIT CAN BE GAINED.

The profit to the Government from this system would depend upon the reinvestment of the sinking fund and profits. Surely, no one will contend that this fund should not be reinvested for at least a part of the term of the loan-fund bonds. The redeemable period of bonds should be optional with the Government after the first few years and their ultimate redeemable date be for a term approximating the series of mortgages they represent. The total outstanding bonds should bear as close a relation as possible to the sum accruing to the Government from the mortgages. It is not presumable that the mortgage debt will cease after the present mortgages are all liquidated. In other words, it is a running business where a balance is maintained between assets and liabilities.

Against invested profits, good-road bonds could be issued covering one term of profits to procure cash with which to build roads, depending upon another term of profits funded in cash or quick assets, like municipal bonds, to liquidate them. The same system may be used with reference to the loan-fund bonds. For as long as we have been a government we have issued new bonds with which to liquidate old bonds. All Governments of the world have done this, and if this method should be pursued, by my proposed land-mortgage plan, every 45 years, or less, after any series, the profit would be sufficient to liquidate the original loan-fund bonds. In the record of experience of other countries having long been operating this system, applications with adequate security have been more than sufficient to afford places for reloan.

WHAT IS THE DANGER OF LOSS?

This question could safely and briefly be answered by the statement that land is the basis of all security. To this may be added that farm land is productive land as distinguished from land which is not productive and which is not used for farming purposes. The productive character of the land is a general safeguard against loss in that, while there is a fixity of value attached to land, it is greatly enhanced by the ability of the land to produce cash returns, which will eventually liquidate the debt, and no conception of security can conjure anything safer upon which to make a loan.

But it will be interesting to know the results of actual experience.

New Zealand began to borrow money and lend it to her farmers in 1894, having, therefore, been engaged in the business about 18 years.

Mr. SAMUEL W. SMITH. Do they loan at 4½ per cent?

Mr. BATHRICK. Their rate usually is 5 per cent, but if the borrower pays at the exact time it is due he pays 4½ per cent.

For the last 16 years it has been lending to farmers it has loaned about \$55,000,000, and its net profit, after deducting all expenses, is, reducing pounds, shillings, and pence approximately to dollars, \$16,398,000. This is about \$28 for every \$100 loaned, and my estimate on a 4 per cent interest loan running 17½ years is that the profit to the Government of the United States would be a trifle over \$27 for each \$100 loaned. Thus the actual experience in New Zealand seems to safely confirm my estimate. In the year ending March 31, 1911, New Zealand had outstanding \$25,000,000, and her net profits are given in her yearbook for that year as \$302,500, which is approximately \$1.25 for each \$100. This multiplied by the 18½ years would again be very close to verifying my estimate. New Zealand has borrowed money on bonds at 3 and 3½ per cent and has most generally loaned it at 4½ per cent.

During the 16 years of the active operation of the plan in New Zealand there were only 41 foreclosures out of 16,005 loans. The cost of management was 75 cents on each \$500 loaned. I am of the opinion that our cost of management, in proportion to the larger sum we would lend, would be less than this.

The official yearbook of Australia shows that one Province had loaned for the four years from 1907 to 1910, inclusive, \$35,150,000, and had made a profit of \$826,095. The loan fund was borrowed at 3 per cent interest and loaned to the farmers

at 4½ per cent. Some of these loans called for 5 per cent, but if the payments were made on the date due interest was to be 4½ per cent.

The report from the Philippine Islands of the Government agricultural bank in 1910 on the outstanding debt, \$257,450, showed the profit to be \$31,477.18.

In Switzerland there are 11 banks operating under cantonal guaranty, which have always shown a profit.

The Bavarian Mortgage Exchange Bank, loaning on mortgages at 4½ per cent, has paid over 12 per cent dividends each year since 1890. In 1911 it paid 13 per cent.

The Bavarian Union and Rhenish Mortgage Banks have paid at least 9 per cent dividends per annum during the 10 years from 1900 to 1909. Nearly all of the mortgage banks in Germany, whose business is especially that of lending money on farm mortgages at a low rate of interest, pay in excess of 7 per cent dividends. And in nearly all the countries where the subvention of the State has forced the interest rate to as low as 4½ per cent private companies have entered the business and are paying satisfactory dividends from the profits made on lending money at that rate.

The most noted example in the world of a private land-mortgage banking institution, possessing in some few features legislative privileges from the State, is the Prussian Central Land Joint Stock Co. of Germany, whose principal business is that of lending money upon farm-land mortgages. This bank issues bonds based upon mortgages and appears to be very well satisfied with its profit on the margin between the interest it pays and the interest it exacts upon loans, which is about one-fourth of 1 per cent, but its fees for the preliminary granting of the loan are between 2 and 3 per cent. It was founded in 1870. From 1870 to 1879 it paid 9½ per cent; in 1880, 8½ per cent; in 1890, 10 per cent; and in 1911, 9½ per cent dividend—and in neither of the interim years less than 8 per cent. In 1903, the Nassau district mortgage credit bank turned over to the Government as part of the revenues of the district about \$150,000. This being a Government bank, the Government revenue officials of the district receive applications, pass judgment thereon, and receive and pay money on behalf of the bank.

Eight of our 48 States are loaning public-school funds upon farm-land mortgages. During 22 years, in which Idaho has loaned money to farmers, only six foreclosures have taken place, and no loss is reported. North Dakota has never lost a cent, and the result is practically the same in all the other States which had outstanding on farm mortgages in the year 1911 a little over \$25,000,000.

It has been suggested that the loss on farm-land mortgages has been minimized because of limited territory in those countries where the system has been in operation. This assumption will hardly hold good. A management in the center of a territory not over 100 miles square, desiring to loan money on land mortgages, would necessarily have to depend upon agents for appraisal, title examination, and other inspection. There can be no reason, this being true, why agencies employed by a central management in a territory two or three thousand miles square would not be as reliable and the business conducted as safely. Australia is nearly as large in area as the United States. Large sums of eastern money is sent West and South in this country to find high interest. This money is loaned by agents. Some of our large insurance companies lend exclusively on farm-land mortgages through their agents, and boast of their security. One of these lends at an average of 6½ per cent.

Nothing works quite so well as we hope, but the results of experience have been astonishing and highly pleasing. At any rate, the profits are sufficient to attract the capital of the shrewdest bankers throughout the world.

OPERATION.

As to general operation, it must be remembered that we would be dealing largely with men who already have mortgages upon their farms and who, in all probability, at the first period permitted them in their contract would transfer their mortgages from the present holders to the Government. Undoubtedly title was cleared before the mortgage could be placed upon these farms, and on this class of loans a satisfactory abstract of title could be very easily and cheaply brought up to date. Other mortgages would scarcely present greater difficulties.

A system of land registration is now in operation in six States of the Union which adds security and simplicity to dealings in land. After the showing of the land-mortgage business of this country as now carried on the lack of a registration system will not invalidate my plan, but the plan will hasten general adoption of a better registration system.

We have in the State of Ohio and contiguous territory 18 post-office inspectors. If each of these were placed in the center

of a given equal territory covering the entire State of Ohio, they would have to travel but 24 miles in any direction in order to attend to any business required of them to operate my plan. There are 2,538 rural carriers in the State of Ohio, who cover 60,000 miles of rural roads every day of the year, and are, in the main, well posted as to the people upon and contiguous to their routes. There are in the State of Ohio 2,459 postmasters, who, if each were located in a territory of an equal number of square miles, would be obliged to travel but 2 miles in each direction in order to attend to any business the Government might require of them. Then there are United States marshals, revenue collectors—with more to come when the income-tax measure becomes a law—and district attorneys and land agents, all told, many thousands, some of whom are not overburdened in the performance of their duties and could be well employed to help in this work. Taking the present Government force, the country is alive with Federal officials upon whom there would be imposed no hardship if they were required to assist in carrying out this scheme.

Again, there are county auditors, treasurers, appraisers, township supervisors, and trustees, who, for a small fee, would provide safe means of investigation. If necessary, 10 land-mortgage agents can be placed in each State as inspectors to work in conjunction with other public officials, but no tried system requires this.

IS IT CLASS LEGISLATION?

Almost invariably a cry of class legislation is raised against any measure which some people do not want.

The Canadian minister of immigration, Sir Arthur Hawks, says:

It would be difficult for those whose dividends are founded on Government guarantees and subsidies to oppose application in Canada of a principle that is operated in the United Kingdom, Australia, and New Zealand. The Government factor in the use of public credit is an object to be achieved, and not the incidental advantage that may alight on an individual here and there.

It would, indeed, appear inconsistent for a stockholder or official of any of our railroads having been the recipient of favors from this Government to call this proposed measure class legislation. We have given the railroads millions of acres of land, and have guaranteed their bonds, that the steel ribbons might link the West with the East and the produce of the vast areas of the western farms could be transported to feed the residents of the cities. That these railroads have been a prominent factor in the progress and greatness of our Nation, no one can deny. Were we able to do so, who would be willing to tear up the tracks between Chicago and the Pacific and take back our 158,000,000 acres of land?

We are depositing public money in a great many banks and have collected all the way from no interest up to 2 per cent. Is it class legislation to lend money to farmers at $4\frac{1}{2}$ per cent and not class legislation to permit the use of our public funds by the banks at 2 per cent? The people of our country have, for a great many years, been taxed to pay the interest upon bonds employed as a basis of bank currency circulation. The bankers have purchased these bonds, received the interest thereon and an equal amount of money which they have loaned to the people at profitable rates. No individual in the United States has been permitted this privilege. Is this class legislation, or was it a great Government policy designed to get into circulation the necessary medium of exchange? The necessity for a proper system of currency is no greater than the necessity to conserve our food supplies.

We have appropriated many millions of dollars annually through our Agricultural Department to encourage and assist agriculture. This was not done through paternalistic motives, but in order to support a farseeing policy of transcendent importance to the whole people regardless of classes.

In bringing into cultivation our deserts by an extensive system of irrigation fostered by Government subsidy and guarantees we have simply attempted to carry out this wise economic policy, against which no statesman has declaimed. We have already decided that Government money loaned the Philippine farmers is a wise procedure, and the practice there of years gives sufficient confirmation. Surely we have no less interest in the American farmer than in our "little brown brothers" of the Philippine Islands. Surely we have no less reason to aid the farmer here at home than we have in our transitory possession of the Orient.

State aid in nearly all of the countries in the world has been the beginning of the greatest assistance to the lowering of the interest rate and a consequent improvement and benefit to agriculture, and State aid is the sustaining factor in the system now. Without it in 10 years the money lenders would again have the farmer by the throat. Every one of our States has found it necessary to limit the greed of money lenders, and there

seems to be no reason why the Federal Government should not go further in the matter. A law lending money to farmers at $4\frac{1}{2}$ per cent would be no more obnoxious to the money lenders than a law reducing the legal rate to $4\frac{1}{2}$ per cent, except that in my proposition the profits would accrue to the benefit of the whole people and in the other to the benefit of the lenders. With these facts plainly before the people of this country the farmer will be fully justified in looking with suspicion upon any individual or the officials of any organization who seek to create a system of farm credit in the hands of those who intend to use it for personal aggrandizement.

THE INITIATIVE.

As to the destruction of the initiative, every public man should understand that the farmers of this country are not dull, driven oxen, nor "man of the hoe," nor peasants. If the farmers would not accept money at $4\frac{1}{2}$ per cent for fear that it would destroy their initiative, why has it not destroyed the initiative of the banks that accept it at 2 per cent? What is the difference between a 2 per cent initiative and a $4\frac{1}{2}$ per cent initiative?

The initiative is the mental power required to begin things—to start something.

The American farmer has "started" things often enough. He has fed our population, broken our prairies, made fertile our deserts, hewn down our forests, helped furnish the supplies and the backbone on the firing line in our wars, and yet some people seem to fear that if we reduced the mortgage interest rate that these people, who never knew what it was to falter nor to hesitate when progress was to be achieved, would lose their initiative and lie down and do nothing. To do something for our farmers in the matter of these mortgages, that those in debt can easily see daylight instead of perpetual darkness, that those who are not in debt will dare to borrow money and improve and extend their farms, will encourage thrift, stimulate the initiative, and arouse a comatose hope in the hearts of those who have more energy, determination, and progress to their weight than any other class of people on earth—the farmer.

WOULD THE GOVERNMENT BE "GOING INTO THE BANKING BUSINESS"?

From some distant corner of the universe a voice ejaculates, "The Government should not go into the banking business. Government should give no subsidies."

My plan does not propose that the Government shall go into the banking business nor that it shall give subsidy. Far from being a subsidy to the farmer, it is a gift to the whole people of the United States of an enormous direct profit which is to be expended for their benefit by the construction of good roads. The plan does not put the Government into the banking business any more than is Jones in the banking business when he borrows from Smith at 3 per cent and loans the money to Brown at a profit. That is all the Government would do, except the result would be in one case that the whole people would get the profit, the interest rate would be lowered, while in the other case Jones would get the profit and would raise the interest rate as high as he could.

There is no reason why the general banking interests of the country should oppose the plan.

In New Zealand, while a certain class of the banking interests fought the plan in 1894, they are now of the opinion that a lower rate of interest on farm mortgages stimulated business and that their profits have been in no wise curtailed, and I can not be induced to believe at the present time that the legitimate banking interests of this country will follow the lead of a small coterie of high financiers in opposing this beneficent measure, and who would prefer a plan pyramiding the farmer's money into private hands until it finally reached their control.

The issue of bonds equal to the entire amount of the outstanding farm land mortgage indebtedness would, in no sense, produce an inflation, which subject is another favorite resort of certain interests, when they desire to oppose any plan that will prevent their restriction and general control of money. There are about \$19,000,000,000 of railroad securities outstanding in this country which have produced no appreciable inflation, and these, with all the other industrial and Government bonds, give faint color to the statement that these proposed land-mortgage registered bonds would produce a species of inflation.

France bought her railroads with bonds to the extent of billions of dollars and there was no inflation. As to the market for the bonds, based upon farm mortgages, with the Government acting as guarantor and trustee, they would be presented as the safest class of securities the world has ever known. If issued in small denominations and offered to the general public we would be periodically paying interest back to ourselves, and every semiannual payment period would mark a dissemination

of funds that would stimulate commerce throughout the entire country.

One or two more thoughts which bear upon the subject and I will conclude.

There is no constitutional prohibition against the plan. The Attorney General of the United States at the time the Philippine Government Agricultural Bank, to which I referred to herein, was organized gave an extended opinion reviewing all precedents deciding that this Government bank conflicted with no constitutional provision of the United States.

From some obscure part of the gloom I have heard a rather indefinite allusion to socialism. That objection was raised in New Zealand when State aid was proposed. But it was discovered that after the law was in force, instead of encouraging socialism, it was a powerful incentive toward individualism. The average man who owns a farm and is prosperous is not lying awake nights inventing some new form of government or planning to overthrow the one we have, and this system would operate to create a more extensive ownership among individuals. It would assist many thousands to the enjoyment of home and plenty, and whatever name it takes it is none the less good. In other countries thrifty men from the cities have been aided to move their families into the country and have farm homes, and the retired farmers have been better able to sell to other farmers and move into city homes. The plan has been beneficent in every aspect. It has increased loyalty to government and has made the producers feel that government meant something which was real and substantial.

Better farm credit and better roads are the two most important factors of the "back-to-the-farm" movement. Each makes for better social and industrial communal conditions in the country. Each gives corresponding benefit to the city.

WHAT IS THE FUNDAMENTAL OF THE CASE?

No one will contend that our Constitution intends to prohibit the expression of government for the good of the people through any channel. Conservation of our public-food supply should become a public policy.

The fundamental is that a great economic policy designed to benefit the people must be carried out by the representatives of the people. It is folly to turn a Government policy into the hands of private interests and give them power to make as much profit by it and through it as they can. If we commit such a folly, we shall surely be obliged to use Government power to limit their profits, for greed and selfishness exist in the breasts of all men. If we must make laws to curb the greed of private interests to whose mercies we have foolishly delegated this policy, it is enough proof that it should not be in their hands at all.

Besides, there is a peculiarity of this farm credit—food-supply policy. It is the peculiarity of money and its relation to all industries.

Money is a great public utility. Its relation to all products of our industries is different from that of any of the products. No product is essential to the success of all industries, but money is. Although credit is an important factor in all, there could be no credit without the final redemption, which requires money. Therefore, all the civilized countries on earth have found it necessary to control money. No country permits private persons to manufacture money, and every country places restrictions upon those who handle the people's money. Ever since civilization began private interest has sought to control money. Its peculiar relation to all industries has given those who controlled it power over our industries, and all of them have felt the tyranny of the avarice of those who hold this control.

Human energy and thrift directed in all the channels of commerce has been enslaved, subjugated, and lashed into obedience to the money power. In order to stifle an industry you have but to refuse it credit or make the cost prohibitive, and it will die.

The cost of credit to agriculture has been almost prohibitive, and has for a century run so close to absorption of all profits that those who sold the credit made more profit than those who produced the farm products. Food is the greatest of all our necessities, yet an almost criminal Government neglect has permitted it to carry the greatest burden of money cost.

All our industries include all the hopes and prosperity of all the people. This should be a Government of all the people. Then why is it that the key to all industry, the one thing that all the people must have in order to be prosperous by their own thrift, is given into the hands of a few greedy citizens, with which to lock or unlock opportunity, as they will? I have no quarrel with the theory that the largest measure of liberty, the greatest scope of action should be given to private initiative. I agree that everyone should be permitted to follow any honest course in the pursuit of happiness, but if all are to be equal before the law, to engage in industries of any character chosen,

it is bad government to turn the thing which governs all industry, which is essential to all thrift, over to the control of a few with which to oppress the many.

Mr. KONOP. Mr. Chairman, I do not know whether I can add to or detract from this discussion. I am no banker nor do I have a dollar invested in any bank. All I know about the currency and banking business is what I have learned from these discussions here and from reading works on currency and banking.

The banking and currency question is a difficult one. Men in finance do not agree on this important question, and it is no wonder that there are so many views expressed here. I have been diligently reading texts on money and banking and currency. I have read articles written by prominent bankers, and these great financial economic writers and bankers do not agree. But there is one thing that practically all agree to, and that is that our banking and currency system is lacking. That there is something radically wrong with our currency system is admitted by all.

We are told that our currency is too rigid; that it needs elasticity; that it contracts when it should expand and expands when it should contract. The President in his message of June 23, in which he urged immediate currency legislation, used these words:

We must have a currency, not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting credits of every-day transactions, the normal flow and ebb of personal and corporate dealings. Our banking laws must mobilize reserves; must not permit the concentration anywhere within a few hands of the monetary resources of the country or their use for speculative purposes in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of the system of banking and of issue which our new laws are to set up must be public, not private, must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative.

Practically all writers on finance hold our defective currency system directly responsible for the panics of 1873, 1893, and 1907. The issue of the clearing-house certificates during the panic of 1907, which in a measure added elasticity to the currency, relieved conditions. Had it not been for the patriotic action of bankers then we would now be in the worst panic in our history. We have learned a lesson that should not be forgotten. The time for action is now. We should not wait for a recurrence of conditions as in 1907. If by passing a currency bill at this session we can stop panics, then the time for discussing and passing a currency bill is now. As we are avoiding the direful curse of war, so we should avoid the horrible panics. A panic saps out the very life of a nation. It paralyzes commerce, destroys industry, and throws men out of work, depriving them of opportunity to earn a living. It affects every walk in life. It causes a mother's heart to bleed at thoughts of hungry mouths which can not be fed. Humanity and justice cry out against a panic. Gentlemen, if we can prevent a panic for a week, or even for a day, by the passage of this bill, we should pass it now.

The honorable gentleman from New York, Mr. Vreeland, a Republican of the Sixty-second Congress, who I believe knew more about banking and currency than anyone else in that Congress, in his speech of February 6, 1912, said:

Mr. Chairman, I stand here to say that in the opinion of all intelligent men who have studied the question, both here and abroad, these money panics are entirely due to a defective banking and currency system and to nothing else. If that is so, is it not almost a crime for the Congress of the United States to wait a moment longer than necessary before putting upon the statute books a system which will safely carry the business of this great country? I believe these panics have caused greater losses and suffering to the people of the United States than all the wars in which we have been engaged, barring alone the loss of life and limb.

What right have I to say that these money panics are due to a defective banking and currency system? I say it, Mr. Chairman, because when we turn to every other great nation on the face of the earth, our competitors for the trade and commerce of the world, with their longer experience and, as I believe, with the sounder principles upon which their banking and currency systems rest, we find that no one of them has had a money panic for more than 50 years.

Am I not justified then in saying that when we, the greatest and richest in our resources of all the nations of the earth, when we alone have these disastrous and devastating money panics on an average once every 10 years, am I not right in saying it is due to a defective banking and currency system?

We have had money panics in 1873, 1894, 1893, and 1907. We have had semipanics at the commencement of the crop-moving season in many other years, when credit was strained almost to the breaking point, ruinous rates of interest prevailed, and it only needed an incident like the closing of some great bank or business house to start a panic throughout the country.

It remained for the panic of 1907 to convince the American people that panics are due to a bad banking and currency system. There was no possible excuse for it, except the breaking down of our system. It came in the midst of peace and plenty. It came when there was nothing within the country or without to alarm our people. At no time in our history had business of all kinds been more active and prosperous. Everywhere the railroads were unable to carry the freight offered them, factories were running more than full time, wage earners were all employed at high wages. It came like a bolt out of a clear sky to most of our people.

Mr. Chairman, let us look at this question and the conditions as they exist in an elementary way. Money is the medium of exchange. Money is an absolute necessity. It is as essential to the existence of human society to-day as the blood is essential to give life to the body. In all the exchanges to-day money is necessary, and as one author puts it "at the present time money figures either potentially or actually, on one side or the other, of every exchange." It figures actually when it is used in the exchange and potentially when credit is used. Credit is promise to pay money. It is money's representative.

We must have money and its representative, credit. Without it mankind can not exist. If money is such a necessity, we ought to have the best money, such money as the people have confidence in at all times; and we should have enough of it to supply our commercial needs at all times. Horace White, in *Political Science Quarterly*, says:

All the reasons which exist for having any kind of money are reasons for having a good kind. It is the agreement of mankind which makes it good; and when we disagree about the definition of the dollar, we are plunged in doubts and fears, confidence and credit are impaired, enterprise is chilled, business partakes of the nature of gambling, labor is deprived of its just reward, and civilization sinks to a lower stage. All these conditions have been within the Nation's recent experience.

Credit is a representative of money. In the modern business world, credit plays a most important part. As a medium of exchange it is swifter and more convenient than money, which it represents. It performs the same service as money, and does it with greater speed.

The basis of all credit is confidence. Confidence in the promisor's ability to pay in money. Confidence in the promisor's character, honesty, and business ability. When this confidence exists, the use of credit increases and the need of actual money lessens. The demand for money always varies in proportion to the use of credit. The use of credit then supplies the elasticity which is so much desired in the currency of the country.

The value of money as well as other commodities depends upon its utility. The need of money and its supply regulate its value. Everyone knows that the use of credit lessens the value of money because it lessens the demand for money. If there is an increase of the supply of credit, the demand for money lessens. Correspondingly, money becomes cheaper and prices go higher. If the supply of credit lessens, the demand for money increases. Money goes up and prices go down. What we need then is a correct supply of currency and proper adjustment of credits. In the fall, when the farmer begins to market his yearly product, he wants cash. He wants money or credit money. Checks and notes will not fill this need for currency. Currency necessarily moves from the eastern centers, and under present conditions money gets tight in the East and is liable to cause an unnatural break in prices. Interest goes way up and there is great loss to the business man of the East and unnaturally low prices to the farmers of the West. In the winter and spring the great need for currency in the agricultural districts ceases and currency moves to the eastern centers. This rigidity in our currency annually causes losses from where it is withdrawn and where it goes. When the farmers of the West market their products the lack of sufficient currency there unnaturally lowers the price of his products; and the withdrawal of the currency from the business centers of the East tightens up the money market for the business man and interest rates soar way up. These fluctuations of prices and interest rates are caused by the rigidity of our currency and lack of a proper credit system. It is high time, then, that we, the representatives of the people of the country, give the country an elastic currency and stop these losses.

We need currency and good currency to supply our needs of exchange under all and varying circumstances, and for nothing else. Many of our citizens misunderstand the use of money. They think that the possession of money denotes wealth. Many of our citizens hoard money. Millions of dollars of our currency is thus deprived of its function of being a medium of exchange. The possession of money is not wealth. The notion that money is wealth is a false notion. In the sixteenth and seventeenth centuries men and nations believed that a great supply of money—that is, of the precious metals—was wealth. During those periods we read of conquests for gold and silver. Commerce, agriculture, science, and industry all suffered at the expense of world searches for the precious metals. But to-day the civilized world recognizes that gold and silver are no longer regarded as the most useful forms of wealth. The wealth of America to-day is not measured by its possession of gold and silver, but it is measured by its great harvest fields, its great hives of industry. The withdrawal of so much currency from its use by hoarding has certainly something to do with causing a currency stringency. When currency is needed most, when

money gets tight and business is becoming paralyzed, the hoarding increases.

Wherein do the bankers and banks come in? The banks of the country, you might say, are the arteries through which the life blood—currency—flows. In our great, complex system of business and commerce the banks perform a function as great as currency itself. We can not get along without them. The banks of the country are, you might say, the constructive forces of the country. Who can picture a business man doing business, a manufacturer paying labor, a contractor paying for supplies, a farmer wintering, and so forth, without the aid of the bank?

Yet, Mr. Chairman, there is something radically wrong with our banking system. I say this not in a spirit of criticism of bankers. Not at all. Defective as our system is, the American banker has been a patriot in time of approaching crisis. Because of this defective system he has undoubtedly suffered many losses and stood much adverse criticism.

We have to-day a system of isolated banks. There is not that full and complete cooperation among the banks of the country to give our currency a free flow through the channels of commerce. We have a cooperation among the banks, but it is a voluntary one and one which results from private arrangement. There is also a lack of cooperation between the Government and the banks. The Government is to-day dealing at arm's length with the banks of its own creation. The Government to-day charters the bank, thereby permitting it to deal with its citizens; the Government examines the bank and pronounces to its citizens that it is solvent and worthy of patronage. But when the Government becomes a patron of this institution of its own creation, of this institution which it pronounces solvent and worthy of patronage, it asks for additional security to that of the ordinary depositor and makes itself a preferred creditor besides.

Under such a lack of cooperation on the part of the Government and among the banks, how can currency flow freely and serve the people freely as a medium of exchange? How can our currency be elastic? And especially in times of currency stringency, when free cooperation among the banks and cooperation on the part of the Government would relieve the situation, we find each individual bank drawing in its resources and piling up its reserves. We have banking laws on our statute books to-day providing a certain amount of cash reserve. Each bank is keeping this reserve in its vaults under a penalty. We deny the use of this reserve at any time. In time of currency stringency or panic, when a part of this reserve could be used to relieve in part, at least, the stringency, there is no law permitting this relief.

We have the enormous sum of \$800,000,000 locked up in the safes of the national banks of the country. This huge sum is idle and useless. Not even in times of currency stringency is this available to relieve the condition. This bill will make at least a part of these great reserves useful, and that alone will give relief. In England the reserves are about one-fifth of ours, and yet by a proper use of them money panics are lacking there.

These are some of the conditions that prevail under our currency and banking system to-day, and now what about a remedy? It is a very easy matter to find fault, but it is a hard matter to suggest practical remedies. To make a radical change would be unwise and dangerous. We can not suddenly plunge into any system now in use in other countries, but we have to move slowly and remedy some of the evils now and improve as time goes on.

Briefly stated, what is the plan proposed under this bill? Under it the continental United States will be divided into at least 12 districts, with a Federal reserve bank in each district. Every national bank will be a stockholder in the Federal reserve bank to an amount equal to 20 per cent of its capital stock, one-fourth of which is to be paid in in cash immediately, one-fourth in 60 days, and the balance—10 per cent—to remain a liability of the member bank. This Federal reserve bank will serve as a clearing house for discounting and rediscounting of notes, bills of exchange, and other credit paper. This will insure a systematic, regulated cooperation between the banks of the country in the matter of handling credit paper. It will destroy the great banking monopoly of the East which has been making unjust exactions from the bankers of the country. It will enable the currency of the country to flow naturally through the channels of commerce and prevent the so-called "tightening up" of money.

The national banks of this country will not subscribe for stock in Federal reserve banks without profit to them. They will receive a cumulative dividend of 5 per cent on their investment and receive 40 per cent of the surplus profits after expenses are paid. The Government funds will be deposited in

Federal reserve banks, and the Government will receive the remaining 60 per cent of the surplus profits. The banks will get a dividend on their stock and their sharing in the surplus profits will insure conservative banking and the success of the Federal reserve banks. The Government's share of the profits will pay for Government control and supervision and something for the use of Government funds.

Under this bill the reserves to be held by country national banks are reduced to 12 per cent, and those of city national banks to 18 per cent. This is a step in the right direction. These reserves have been piled up in the vaults of the banks, and were of no service to the business and commerce of the country. This reduction in the requirement of reserves will certainly help in relieving any stringency in the currency.

It is also provided under this bill that national banks shall be permitted to make loans on farm lands. This will be a great benefit to the farmer. The time for such loans is limited to 12 months. This is indeed a short period, but when we consider that the purpose of this legislation is not to provide for farm credits, but mainly to provide elasticity of the currency, it is necessary that investments be in liquid assets and on short-time paper. It is wiser for the present to wait for the commission which has been investigating the question of farm credits abroad to make its report. We will then have much more useful and practical information on the subject. I hope that at the next session of Congress proper legislation will be enacted providing a substantial credit system for the agricultural interests of the country. We are to-day deploring the movement of the population to the cities, and we are everywhere urging a movement to the farms. But nothing is done except a lot of talking. If there is anything that will do something toward keeping the boys on the farm and give some inducements to migration to the farms from the large cities, it will be a good agricultural credit system.

There is another provision in this bill that is of some importance, and that is the provision, under section 28, authorizing the organization of branch banks in foreign countries. A short time ago I read a book on South America, and in that book the author pointed out that foreign countries like Germany, France, and England are maintaining branch banks in all parts of that continent, and so helping the business and commerce of these countries with the South American countries. Thus far the United States Government has not permitted national banks to branch out into foreign countries. I believe that this provision will facilitate and add materially to our foreign commerce.

Most of the large bankers of the country are opposing this bill. Wall Street surely opposes it. The men who have had complete control of credits, and thereby are dictators to the business world of America, are surely opposed to it. The men who have been dictators to the smaller banks of the country and have had them at their mercy; the men who have been gambling in Wall Street and have manipulated finance for their own benefit; the men who have exacted large profits from the management of the finances of the country at the expense of the business man, the farmer, and laborer, these men are naturally opposed to currency legislation of this kind.

What is the main objection that they have to the present bill? One of the main reasons why they are against the bill is because the Federal reserve board, under whose control the proposed system will be, is to be wholly a governmental body and not a body created by the banks. Just because the Federal reserve board is to be appointed by the President of the United States it will throw the business into politics, they say. Such an argument is ridiculous. We to-day have the Interstate Commerce Commission, and no one claims that it does not do its duty as between the public and public-service corporations. We to-day have the Civil Service Commission, and no one has yet charged that it is not performing its duty irrespective of politics. Those opposed to the Government controlling the banks under this system lose sight of the fact that banking is a semi-public business; that banks are public-service corporations just as much as railway, telegraph, and telephone companies. They lose sight of the fact that banks are not chartered for the benefit of the stockholders only but for the benefit of the public, and that being true, the public has the right of regulation and supervision over them.

I believe this is a good bill. I believe that it will accomplish what we are seeking to accomplish. We are trying to establish a better cooperation among the banks and a systematic Government control and regulation of reserves, so that when an emergency arises they can be used to relieve conditions and prevent a panic. I think that this bill provides for closer and better cooperation among our banks, and especially in time of need. We are seeking to provide an easy and natural flow for

the currency of the country through the channels of commerce in order to avoid occasional currency stringency, and I believe this bill provides for that. No one claims that this bill is absolutely perfect. What bill is perfect upon its passage? What system of banking and currency has anyone to propose that will be absolutely perfect? If there are defects in this bill, time will demonstrate, and we can always improve on the system later. Time will demonstrate and educate, and we can make improvements later.

I believe that this bill will put an end to any monopolistic control of credits in this country. It will emancipate the business man, farmer, and laborer from the money power which has made them do its bidding.

This bill is not a panacea for all evils, nor is it a monster that will destroy what we have. Not at all. It is, I believe, a step in the right direction. If by its passage we can in a large measure prevent the conditions which existed in 1873, 1893, and 1907, we have done more good by its passage than has been done by any legislation passed in a century.

Mr. HAYES. Mr. Chairman, I yield 30 minutes to the gentleman from Illinois [Mr. MADDEN]. [Applause.]

Mr. MADDEN. Mr. Chairman and gentlemen of the committee, when the President of the United States delivered his message to the Congress on the question of currency legislation, which is now pending, he indicated the necessity for such legislation on the theory that the people of the United States were to be made free by reason of the enactment of the tariff law which is now soon to become a fact. What he meant by freedom is something that he did not explain, but I assume that his meaning was that the people of the United States were to be free to compete with the world, that we were to open the markets of America to the products of European labor, and that we would be free to compete in the American market with the labor of every other nation under the sun. And so he said when that time arrived we would need all the tools with which to take advantage of the opportunities which this freedom of action would give to us, and the tools which he described we needed would be greater elasticity of currency. My own judgment is that this bill is not going to produce that situation. In the first place, I do not think we will have any special need for additional currency if the situation arises that I think will result from the enactment of the present tariff law. If it produces anything like other tariff laws passed by the Democratic Party, we will find labor out of employment, mills closed, and smokeless factory chimneys. But we are considering a bill now to provide the means by which we can take advantage of this greater freedom.

Mr. SLOAN. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. SLOAN. If I understand the gentleman's point of view, it is that this bill is to be used as a fire extinguisher rather than an instrument of commerce.

Mr. MADDEN. Well, that would be my conclusion. [Laughter on the Republican side.] I did say that we were considering the currency legislation which is to furnish the tools that the President of the United States described we needed. I made a mistake when I said that, for we are not considering that question. It has not been submitted to us for our consideration. The Democratic caucus has given some consideration to the question in its own way behind closed doors and without giving the Members of Congress of the opposite party any opportunity whatever to hear even what was said.

Legislation for the regulation of the credits of the country should be considered most seriously before enactment. It should be the disposition of those charged with responsibility to enter upon the consideration of such an important question with an open mind. No avenue likely to be able to furnish information should be closed. The best advice that experts can give should be sought and welcomed.

No more important question than that affecting the fabric of the country's credit can come before the Congress. Any action calculated to destroy confidence in our financial system should be approached with the greatest care. The success of every business enterprise in the country depends on the ability of our people to secure credit. Due care should be taken to prevent either contraction or inflation of our currency. Either inflation or contraction is fraught with great danger. It should be the fixed policy of the Congress to make the currency of the country the best in the world. Nor should the advice of the banks be ignored on so important a question. The banks are owned by our people. Their success should be considered in any consideration of the currency question.

The rights of the depositor should be well guarded. The borrower, too, is an important factor. He should not be over-

looked. The bank is the instrument through which the commercial life blood of the Nation flows. No obstacle should be put in the way of its freedom of movement. Indeed every facility should be provided by law for the diffusion of this commercial life blood into the channels of trade.

That our present currency system should be more elastic, more responsive to the Nation's business needs all will agree. That some new method should be devised for the basis of credits has long been the opinion of those familiar with the inflexible system now in vogue. The question of what that method should be has been a perplexing one. Some believe the cure for all of our financial ills is the establishment of a central bank with branch offices conveniently located throughout the country. Others, remembering the old United States bank case, seem afraid of it. They see Jackson's ghost in every suggestion for the creation of such a bank.

The bill before Congress has many of the elements of the central bank in it but does not approach it in point of efficiency. The bill now pending provides for the creation of 12 Federal reserve banks with not less than \$5,000,000 capital each, and such number of branches as may be considered necessary and convenient, not to exceed one for each \$500,000 of the capital of the Federal reserve bank. It provides for the creation of a Federal reserve board, consisting of seven members, all to be appointed by the President and confirmed by the Senate, who are to have general control over all the Federal reserve banks of the country, power to require one Federal reserve bank to rediscount the discounted prime paper of other Federal reserve banks in times of emergency; to suspend for stated periods every reserve requirement of the act; to add to the number of cities classified as reserve and central reserve cities; to suspend the officials of Federal reserve banks and to require their removal for cause, for incompetency, dereliction of duty, fraud, or deceit, subject to the approval of the President of the United States.

The national banks of the country are required by the terms of the act to subscribe for stock in the Federal reserve banks equal to 20 per cent of their unimpaired capital, 50 per cent of which must be paid in cash and within 60 days after the subscription. They must also pay into the Federal reserve banks 3 per cent of their total deposits. The capital of all the national banks of the country amounts to \$1,050,000,000, and the deposits on the 1st of June, 1913, were \$7,124,000,000. So that the payments to be made during the first 60 days to the Federal reserve banks amount to \$318,000,000, \$105,000,000 of which is capital and \$213,000,000 of which is reserve. If the national banks fail to become participants in the Federal reserve banks within one year they must surrender their charters and cease to do business as national banks. If they do become participants they must pay in an additional 2 per cent of their deposits.

Although the national banks are, under the terms of the bill, to be the owners of the Federal reserve banks, they are to have no voice, no representation on the Federal reserve board, which is to be strictly political. A knowledge of banking even is not required. Will it work? Is it wise to put our entire fiscal system under political control? It seems to me not. The banks should be allowed representation on this important board. They should be allowed to select that representation themselves. Unless such representation be allowed, I shall not be surprised if the national banks refuse to become stockholders in the Federal reserve banks and go out of the national-bank system, taking out State charters instead. It will be unfortunate if this legislation does not recognize the justice of the claim of the national banks to representation on the Federal reserve board. The withdrawal of the national banks from the system will make this law a dead letter if passed. But if even they elect to continue in the system I think the bill unworkable. Under the terms of the bill I feel certain the credits of the country will be enormously contracted and may result in the forced liquidation of many important business enterprises, causing chaos, stopping the wheels of progress, closing factories, mills, and workshops and throwing labor out of employment.

I am anxious to see our currency system reformed, and shall be glad to vote for any measure which will make for greater elasticity and at the same time embodies the elements of safety.

This bill does not appeal to me. The framers of the bill seem to think currency legislation a political question. Far from it. It is a question which affects every citizen in the land and should be considered along broad lines of public welfare. The man on the street, the man on the farm, in the factory, the store, on the railroad, in the bank, the law office, the judge on the bench, the woman in charge of the household, all—every one is interested to know that whatever currency legislation is

passed will not make it harder to get a dollar. Will this bill do that? Let us see.

The national banks have an aggregate capital of \$1,050,000,000, and actual money amounting to \$917,000,000. Their deposits amount to \$7,124,000,000, or \$1 in money for \$8 of deposits. If, out of the \$917,000,000 in money the banks are required to pay 10 per cent of their capital on their stock subscriptions into the Federal reserve banks or \$105,000,000 and 3 per cent of their deposits into the Federal reserve banks within 60 days as the law requires them to do, or \$213,000,000 it will be seen that they have turned over to the Federal reserve banks \$318,000,000, or more than one-third of all their cash and would have on hand but \$599,000,000. On the basis of \$8 deposits to \$1 cash this would reduce the power of the banks to grant credits from \$7,338,000,000 to \$4,792,000,000, thus contracting the credits \$2,544,000,000. The loans and investments of national banks amount to \$7,336,000,000 exclusive of the bonds used as a basis of circulation. National bank deposits amount to \$7,124,000,000. It will be seen that the loans about offset the deposits, thus showing the amount owed by the banks to the public to be about what the public owes the banks.

The Federal reserve banks with a capital of \$105,000,000 and reserve deposits paid in of \$213,000,000 would have money amounting to \$318,000,000. Being obliged to hold 33½ per cent reserves against their total demand liabilities the Federal reserve banks would not be able to expand their total liabilities beyond \$954,000,000. Having already assumed liabilities for reserve deposits amounting to \$213,000,000, their net expansion capacity would be reduced to \$741,000,000. And this would be the limit of their rediscounting capacity to the member banks whose contraction of credits has been shown to be \$2,544,000,000. Deduct the amount which the Federal reserve banks could rediscount, \$741,000,000, from the bank contraction and we have \$1,803,000,000 less capacity to accommodate the public than now.

It is proposed to transfer bodily from the national banks one-third of the money now in their vaults to the vaults of the Federal reserve banks. The money now in the national bank vaults forms a basis of credits in the ratio of one dollar in money to eight dollars of credits outstanding. Section 14 of the act fixes the credit expansion of the Federal reserve banks on the basis of 33½ per cent money reserve against their total liabilities. They are therefore restricted in their credit expansion to three dollars of credit to one dollar in money. As a basis of credit, therefore, one-third of the money now in the national bank vaults would lose two-thirds of its expansive power, or the difference between eight dollars in credits to one dollar in money and three dollars in credits to one dollar in money, or a contraction with the transfer from the national banks to the Federal reserve banks of \$1,803,000,000. At the end of 14 months the bill requires the national banks to increase their deposits with the Federal reserve banks to 5 per cent, thus making a further contraction of the credits. The bill in its present form should not pass. I hope it will not. But it seems as if the Democrats in the House, working under the instructions of the President and tied hand and foot by the caucus, with no right to think, and surely no right to amend, are determined to, as far as the House can, enact this piece of folly into law. [Applause on the Republican side.]

Mr. GLASS. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Why should the House act as slaves if they are to represent a free people?

Mr. GLASS. Will the gentleman yield?

Mr. MADDEN. I do.

Mr. GLASS. I desire to ask the gentleman if when the last time he had occasion to act upon currency legislation he did not stand in a Republican caucus and help adopt a Republican caucus measure and bring it upon the floor of this House, giving four hours debate and precluding the offering of a single amendment?

Mr. MADDEN. I had the honor of standing on the floor of the House and considering the question long before it went to the caucus, and voted for it in the House; but that was a measure for temporary relief. It was not a measure placing the currency system of the United States in the hands of a political board.

Mr. GLASS. At the same time when the gentleman came on the floor he was not free.

Mr. MADDEN. I was absolutely free.

Mr. GLASS. You would not permit an amendment to be offered to this bill.

Mr. MADDEN. I want to say to my friend from Virginia, since I have been a Member of this House that no power connected with the Government or any caucus has ever taken away

my freedom of action. I have stood here free and ready to act according to the best judgment I had, and if I could not do that I would refuse to be a Member of the House. [Applause on the Republican side.]

Mr. GLASS. But did not the gentleman vote for a caucus-gag rule which limited debate to four hours, instead of the four days that we are giving you, and denied the right to offer a single, solitary amendment to the bill? [Applause on the Democratic side.]

Mr. MADDEN. I presume so.

Mr. McKENZIE. Mr. Chairman, will my colleague yield?

Mr. MADDEN. Certainly.

Mr. McKENZIE. I will ask my colleague if that was not a conference, rather than a caucus, that the gentleman mentions?

Mr. MADDEN. No; I think it was a caucus. Why not perfect the bill here? Why not send it to the Senate in perfect form? Why make the House a joke?

Mr. GLASS. Is the gentleman talking about the Vreeland-Aldrich bill? [Laughter on the Democratic side.]

Mr. MADDEN. I am talking about the Glass bill. I am talking about the Democratic caucus and the President's instructions to the Democratic Party. I am talking about the Democratic Party's refusal to allow other Representatives to have an opportunity to consider the question.

Why did the House Committee on Banking and Currency refuse to hear the bankers of the country? They and other experts have recently been heard by the Senate Committee on Banking and Currency and have furnished a fund of information which should have been in the possession of the House committee before this imperfect measure was reported. It is not now too late to make it a perfect law. But will the Democrats of the House consider their caucus obligation paramount to the welfare of the Nation and the prosperity of our people? If they will, it is useless to hope to amend the bill. The Republicans are not numerous enough, and the Democrats, under the gag rule of the caucus, are mere automatons.

The bill should be amended to read that every National bank and State bank and trust company may subscribe to the capital stock of the Federal reserve banks. That the directors of the Federal reserve banks to be appointed by the Federal reserve board shall be legal residents of the district in which the Federal reserve bank to whose directory they are appointed is located. That the Federal reserve board shall have at least three of its members elected by the Federal reserve banks from the membership of the stockholding banks instead of being appointed by the President. That no power shall be vested in the Federal reserve board to remove any director authorized to be elected by the stockholding banks. That the directors of the Federal reserve banks be empowered to elect the chairman of each board. That membership in the Federal reserve banks shall be voluntary—not compulsory. That the provision for a Federal advisory council without power is misleading and should be stricken from the bill. Notes issued by Federal reserve banks under authority of the Federal reserve board should be obligations of the issuing bank and under no circumstances become the obligations of the United States.

Unless the bill is amended in these and many other respects I predict the failure of the law. Should the national banks refuse to participate and go out of the system the Government 2 per cent bonds now on deposit with the Treasurer of the United States, amounting to approximately \$700,000,000, would be thrown on the market and in all likelihood fall from par to 75 cents on the dollar, thus causing a loss to investors of \$175,000,000.

Mr. MAPES. Mr. Chairman, will the gentleman yield for a question?

Mr. MADDEN. I have only a moment, but I yield.

Mr. MAPES. In case the national banks should refuse to join the reserve banks and surrender their charters and want to retire their national-bank circulation, does the provision which prohibits canceling in any one year more than 5 per cent of their 2 per cent bonds upon which their circulation is based conflict with that provision?

Mr. MADDEN. The provision for the cancellation of 5 per cent of the Government bonds every year only applies to banks that remain in the system. The banks that go out of the system would have to take down their Government bonds and sell them for any price they could get for them. That is the provision of the bill.

I hope that thirst for power will not take the place of reason; that politics will not be enthroned at the head of the Nation's finances; that currency reforms, if effected, shall be reform in fact, not in name; that whatever legislation be enacted may build up, not destroy the fabric of the country's credit, and that

the business of the Nation may go on successfully and the happiness of our people be assured. But I am not at all certain that if this bill is enacted into law such a condition will continue. There is only one hope I have that gives me courage, and that hope is that when this bill leaves the House, as it will, in its present form, it will go to another body that will exercise the judgment that ought to be exercised for the benefit and in the interest of a free American people. [Applause.]

Mr. GLASS. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, and had come to no resolution thereon.

ENROLLED BILL AND JOINT RESOLUTION SIGNED.

The SPEAKER announced his signature to enrolled bill and joint resolution of the following titles:

S. 2711. An act to provide for the acquiring of station grounds by the Great Northern Railway Co. in the Colville Indian Reservation in the State of Washington; and

S. J. Res. 68. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the commission, etc.

ADJOURNMENT.

Mr. GLASS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 5 minutes p. m.) the House, under the order heretofore made, adjourned until Thursday, September 11, 1913, at 11 o'clock a. m.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. ESCH: A bill (H. R. 8046) to promote the safety of employees and travelers upon railroads by requiring the use of the block system and automatic train-control devices by common carriers engaged in interstate commerce, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. LAFFERTY: A bill (H. R. 8047) defining the limits of mining locations on the public domain, relating to the patenting of lode claims, providing for the filing of notices of location of all mining claims in the local land offices, and for other purposes; to the Committee on the Public Lands.

By Mr. FRENCH: A bill (H. R. 8048) to amend section 6 of the act of Congress of June 17, 1902, entitled "An act appropriating the receipts from the sale and disposal of public lands in certain States and Territories and the construction of irrigation works for the reclamation of arid lands"; to the Committee on Irrigation of Arid Lands.

By Mr. UNDERWOOD: Resolution (H. Res. 248) moving to nonconcur in gross in the Senate amendments to H. R. 3321 and agreeing to a committee of conference asked for by the Senate on the disagreeing votes of the two Houses; to the Committee on Rules.

By Mr. HUMPHREY of Washington: Resolution (H. Res. 249) directing the Secretary of Agriculture to give to the House full detailed information in regard to any contracts made or proposed to be entered into between the Santa Barbara Tie & Pole Co. and the Secretary of Agriculture; to the Committee on Agriculture.

By Mr. CARTER: Joint resolution (H. J. Res. 129) authorizing the Secretary of the Interior to make a per capita distribution to the enrolled members of the Choctaw and Chickasaw Tribes of Indians in Oklahoma of funds held in the Treasury to the credit of said tribes; to the Committee on Indian Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANTHONY: A bill (H. R. 8049) granting an increase of pension to Lemuel Evans; to the Committee on Invalid Pensions.

By Mr. BALTZ: A bill (H. R. 8050) granting an increase of pension to Levi North; to the Committee on Invalid Pensions.

By Mr. CANTRILL: A bill (H. R. 8051) for the relief of Oldham County, Ky.; to the Committee on War Claims.

By Mr. CULLOP: A bill (H. R. 8052) granting a pension to Virgil O. Adams; to the Committee on Pensions.

By Mr. CURRY: A bill (H. R. 8053) granting a pension to J. P. Bickford; to the Committee on Pensions.

By Mr. FOSTER: A bill (H. R. 8054) granting a pension to Clifford Ulrich; to the Committee on Pensions.

Also, a bill (H. R. 8055) granting a pension to David Pruitt; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8056) granting an increase of pension to John H. Speer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8057) granting an increase of pension to William M. Sprinkle; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8058) granting an increase of pension to Robert L. Bennett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8059) granting an increase of pension to Leander C. Johnson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8060) granting an increase of pension to L. Jones; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8061) granting an increase of pension to George W. Young; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8062) to remove the charge of desertion from the record of Armstrong Hunter; to the Committee on Military Affairs.

Also, a bill (H. R. 8063) to remove the charge of desertion from the record of Jesse W. Jackson; to the Committee on Military Affairs.

By Mr. MAGUIRE of Nebraska: A bill (H. R. 8064) granting an increase of pension to Oracle Shores; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8065) granting an increase of pension to James W. Sweet; to the Committee on Invalid Pensions.

By Mr. MOSS of West Virginia: A bill (H. R. 8066) granting a pension to Margaret Morgan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8067) granting a pension to Rebecca A. Thomas; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8068) granting an increase of pension to Daniel Snider; to the Committee on Invalid Pensions.

By Mr. SPARKMAN: A bill (H. R. 8069) granting an increase of pension to Mary A. Durrance; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BARCHFELD: Petition of local union No. 1252, United Brotherhood of Carpenters and Joiners, of America, of Pittsburgh, favoring the passage of legislation granting the right of suffrage in the District of Columbia; to the Committee on the District of Columbia.

By Mr. ESCH: Petition of rural letter carriers of Sauk County, Wis., favoring the passage of legislation for certain improvements in the delivery of mail; to the Committee on the Post Office and Post Roads.

By Mr. LEVY: Petition of a bankers' conference held in Chicago, Ill., and the joint banking and currency committee of the State Association of Bankers, Minneapolis, Minn., relative to the Glass-Owen currency bill and suggesting certain changes; to the Committee on Banking and Currency.

Also, petition of the Association of German Authors in America, New York, protesting against taxing books printed in languages other than English; to the Committee on Ways and Means.

Also, petition of the Buffalo Chamber of Commerce, Buffalo, N. Y., favoring the passage of the Underwood tariff bill, and relative to the appointment of collectors of revenues; to the Committee on Ways and Means.

Also, petition of the World's Purity Federation, La Crosse, Wis., and the Minneapolis Civic and Commerce Association, Minneapolis, Minn., favoring the passage of House joint resolution 125, relative to appointing delegates to the Seventh National Purity Congress, Minneapolis, Minn.; to the Committee on Foreign Affairs.

Also, petition of the Beggs & Cobb Tanning Co., Winchester, Mass., asking a change in the wording of paragraph 503 of House bill 3321, relative to oils and greases; to the Committee on Ways and Means.

By Mr. SUTHERLAND: Paper to accompany bill (H. R. 8042) granting a pension to Charles B. Cundiff; to the Committee on Invalid Pensions.

SENATE.

THURSDAY, September 11, 1913.

The Senate met at 12 o'clock m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

The Journal of yesterday's proceedings was read and approved.

IMPORTATION OF TEAS.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, stating that in response to a resolution of the Senate of February 28, 1913, he had transmitted copies of all correspondence, rulings, reports, etc., relative to the importation into this country of green teas or colored teas, and requesting that these documents be returned to the department, where they are seriously needed for reference.

Mr. GALLINGER. I move that the request of the Secretary of the Treasury be complied with.

The VICE PRESIDENT. Without objection it is so ordered, and the papers will be returned to the Treasury Department.

WASHINGTON AND GEORGETOWN GAS LIGHT COS. (S. DOC. NO. 185).

The VICE PRESIDENT laid before the Senate a communication from the Commissioners of the District of Columbia, transmitting, in response to a resolution of the Senate of the 2d instant, certain information relative to the action taken by them to enforce section 11 of the act of Congress, approved March 4, 1913, so far as the same may affect the Washington Gas Light Co. and the Georgetown Gas Light Co., in the District of Columbia; which was referred to the Committee on the District of Columbia and ordered to be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the Speaker of the House had signed the following enrolled bills and joint resolution, and they were thereupon signed by the Vice President:

S. 2711. An act to provide for the acquiring of station grounds by the Great Northern Railway Co. in the Colville Indian Reservation in the State of Washington;

H. R. 3406. An act to authorize the construction of a bridge across the Sabine River at Orange, Tex.; and

S. J. Res. 68. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the commission, etc.

PETITION AND MEMORIAL.

Mr. TOWNSEND presented a petition of the Board of Trade of Fremont, Mich., praying for the adoption of a 1-cent letter postage; which was referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of Detroit Court No. 1, Guardians of Liberty, of Detroit, Mich., remonstrating against the enactment of legislation to make October 12 in each year a public holiday to be called Columbus Day, which was referred to the Committee on the Judiciary.

CONTRIBUTIONS FOR CAMPAIGN PURPOSES.

Mr. CLAPP, from the Committee on Privileges and Elections, to which was referred the bill (S. 192) to limit the use of campaign funds in presidential and national elections, reported it with amendments and submitted a report (No. 112) thereon.

PORT OF DALLAS, TEX.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 4937) extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement, and I ask for its immediate consideration.

The VICE PRESIDENT. The Senator from Texas asks for the immediate consideration of the bill just reported by him. Is there objection?

Mr. GALLINGER. Let it be read for the information of the Senate.

The VICE PRESIDENT. The Secretary will read the bill.

The Secretary read the bill, as follows:

Be it enacted, etc., That the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement, be, and the same are hereby, extended to the port of Dallas, in the State of Texas.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PANAMA-PACIFIC INTERNATIONAL EXPOSITION.

Mr. SIMMONS. On behalf of the Committee on Finance, I report back favorably without amendment the bill (H. R. 7595) providing for free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors. I ask unanimous consent for the present consideration of the bill.

The VICE PRESIDENT. The Secretary will read the bill.

Mr. SIMMONS. The bill is the same as the one which passed the Senate some time ago. That bill was read, and, if it is permissible, I will ask unanimous consent to dispense with the reading of the House bill.

The VICE PRESIDENT. Is there objection to dispensing with the reading of the bill by unanimous consent? The Chair hears none. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. SIMMONS. I move that the bill (S. 2433) providing for free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors be recalled from the House of Representatives, and when it is recalled that it be laid on the table.

The VICE PRESIDENT. The bill will be recalled and then ordered to lie on the table.

BILL INTRODUCED.

Mr. CATRON introduced a bill (S. 3112) to authorize the Secretary of the Interior to acquire certain right of way near Engle, N. Mex., which was read twice by its title and referred to the Committee on Public Lands.

THE CONGRESSIONAL DIRECTORY.

Mr. FLETCHER. I call up from the calendar the joint resolution (S. J. Res. 66) providing for a second edition of the Congressional Directory for the first session of the Sixty-third Congress. I wish to move its indefinite postponement.

Mr. GALLINGER. It was reported adversely, and the question will be upon agreeing to the report.

The VICE PRESIDENT. The question is on agreeing to the report.

The report was agreed to, and the joint resolution was postponed indefinitely.

SUPREME COURT DECISIONS.

Mr. SHAFROTH. I wish to call up Senate resolution 103, which proposes to annul Senate resolution adopted February 20, 1885, providing for furnishing to Senators pamphlet printed copies of the decisions of the Supreme Court of the United States. I ask for the immediate consideration of the resolution.

Mr. NORRIS. I should like to say to the Senator from Colorado that while I have no particular interest that I know of in this matter, when the resolution was called up once before the Senator from Minnesota [Mr. NELSON] took quite a deep interest in it, and he is not in the Chamber now.

Mr. SHAFROTH. I have talked with the Senator from Minnesota [Mr. NELSON]. I told him that when I called up the resolution I would modify it so as to provide for the printing at the rate of 20 cents per printed page, and that seemed to be satisfactory to him. It is his desire that these decisions shall not be dispensed with, but to have them furnished at a much lower rate.

With relation to the rate, I wish to say that the Senator from Florida [Mr. FLETCHER] had communication with the Public Printer with regard to the printing of the Supreme Court decisions, and the Public Printer has written to him to the effect that the cost to the Government for furnishing 100 extra copies to the Senate would be 5 cents per printed page. I propose to amend this resolution, so as to make the rate 20 cents per printed page to this man. He has called on me, and he says he will not do it for less than 50 cents a printed page. He has been charging 80 cents per printed page. In my judgment the price is outrageous, and I am satisfied that when he finds he has to furnish them for 20 cents or not at all he will conclude that it is to his interest to furnish them at 20 cents per printed page.

With this in view there is an amendment which I expect to offer and for which I have the consent of the committee. We have thought that 20 cents per printed page would be ample and that he would furnish them at that rate, and if he should not

we would make some other arrangement with relation to the printing.

Mr. NORRIS. I should like to make an inquiry for information. They are printed by some private individual?

Mr. SHAFROTH. Yes, sir; they are printed by a private concern, and they have cost the Government for three months over \$468.

Mr. NORRIS. If we cease to get them here they will be printed just the same?

Mr. SHAFROTH. They will be printed by the Supreme Court. The committee to which I belong, and which has had this matter under consideration, has no jurisdiction over the appropriation for the Supreme Court for the printing of its decisions.

Mr. NORRIS. I should like to inquire of the Senator if his proposition is to reduce the price of the entire outfit?

Mr. SHAFROTH. No, sir.

Mr. NORRIS. Just the price of those which come to the Senate?

Mr. SHAFROTH. Just those that come to the Senate, because the Committee to Audit and Control the Contingent Expenses of the Senate does not have any control whatever over the expenditures of the Supreme Court.

Mr. NORRIS. I know, but it is within our jurisdiction in connection with the House of Representatives to change the law in that respect.

Mr. SHAFROTH. Oh, yes.

Mr. NORRIS. I should like to suggest to the Senator that the Committee on Printing could bring in such a measure.

Mr. SHAFROTH. The Committee on Printing has such a measure under advisement now.

Mr. NORRIS. It seems to me that they could well investigate it and bring in a proper amendment to prohibit the exorbitant price, if it is exorbitant.

Mr. SHAFROTH. The price which is paid by the Supreme Court is \$2.95 a printed page. What the Committee on Printing ought to do is to see whether these decisions can not be furnished by the Public Printer at an estimate of \$1.95 a printed page, and I hope that will be done.

Mr. NORRIS. I hope so.

Mr. SHAFROTH. In the meantime numerous Supreme Court decisions are going to be rendered pretty soon, and the result will be, unless we change it now, that this firm will still furnish the advance sheets to the Senate at the rate of 80 cents per printed page.

Mr. NORRIS. I wish the Senator would have his proposed amendment read so that we may understand just exactly what it is.

Mr. SHAFROTH. I will read it myself. The resolution which is now before the body reads:

Resolved, That Senate resolution adopted on the 20th day of February, 1885, providing for furnishing to Senators pamphlet printed copies of the decisions of the Supreme Court of the United States, be, and the same is hereby, annulled.

The amendment is to strike out the word "annulled" and, beginning with the last clause, make it read:

be, and the same is hereby, amended by adding to the last word of the same the following:

"At a cost not to exceed 20 cents per printed page."

That will make the resolution stand with a limitation of the cost to 20 cents per printed page. As to the decisions printed for the Supreme Court and the cost of them, that matter will be handled by the Joint Committee on Printing of the Senate and House.

Mr. MYERS. Mr. President, I would ask the Senator from Colorado if this is not practically certain to dispense with the advance sheets of the Supreme Court decisions which have been furnished to Senators.

Mr. SHAFROTH. I think not, because I believe it is to the contractor's interest to furnish them at 20 cents a printed page, and if he does not, we can devise some way to have them printed. They can be reprinted, I think, for less than he has been charging the Senate.

Mr. OVERMAN. They are furnished by the reporter of the Supreme Court, are they not?

Mr. SHAFROTH. No; they are now given to a firm for the purpose of printing the Supreme Court decisions early, just as soon as they are gotten ready by the Supreme Court.

Mr. OVERMAN. But they are furnished by the reporter?

Mr. SHAFROTH. I do not know whether they are furnished by the reporter or by the clerk of the court. I think they are furnished by the clerk, and then these copies are furnished to the Senate by this firm. He strikes off 350 copies which he furnishes to the Supreme Court and to the clerk of the court. Then he strikes off a copy for each Senator and furnishes those to the Senate. He has charged the Senate 80 cents per

printed page, and it struck me, when I first looked at his bill, that it was more than is ordinarily charged for printing briefs; and on that account that it was too high. We had an inquiry in relation to it, and the printer said that he would consent to reduce the price to 50 cents per printed page. We thought that was too high. We then had an estimate made by the Public Printer, and he said the furnishing of the extra copies would cost the Government 5 cents per printed page. We then thought that, allowing the contractor 20 cents a page would be ample to remunerate him and to give him a reasonable profit, if not a large profit.

Mr. OVERMAN. We have an official, who is known as reporter to the Supreme Court, to whom we pay a large salary. He furnishes to the Secretary's office advance sheets of the decisions of the Supreme Court. I wish the Senator would look into the matter. I think there might be a saving to the Government of about \$100,000 a year in the printing and purchase of the United States Supreme Court Reports, if they were printed at the Government Printing Office in this city, instead of the printing being let out by contract. I am heartily in favor of the resolution, because I am satisfied this printer will furnish the copies at the price suggested; he has the sheets anyway; and 20 cents a page is enough to pay for copies.

Mr. BRADY. Mr. President, I am heartily in favor of the resolution offered by the Senator from Colorado [Mr. SHAFROTH], but in case the printer refuses to print these advance sheets for 20 cents a page, what position will the Senate then be in?

Mr. SHAFROTH. We can enter into negotiations with other printers or we can get them printed at the Government Printing Office.

Mr. BRANDEGEE. We can not hear what the Senator from Idaho says.

The VICE PRESIDENT. The Senator from Connecticut states that he was unable to hear what the Senator from Idaho has been saying.

Mr. BRADY. I was asking the Senator from Colorado [Mr. SHAFROTH] in what position the Senate would be in case the printer who now furnishes these reports refuses to print them at 20 cents a page?

Mr. SHAFROTH. It is likely that when the next general appropriation bill is considered this whole matter will be gone into, and probably the Public Printer will be directed to do the printing of the Supreme Court decisions and to furnish these advance sheets. If that is done, the additional cost would be small—5 cents per printed page. But in the meantime we probably shall have many decisions that will be rendered by the Supreme Court in October when it meets, and it seems to me that we ought, without disturbing the contract at the present time, limit the amount which is to be paid by the Senate for these copies. I think the printer will furnish them at the reduced rate; that is my judgment.

Mr. BRADY. I think that is entirely correct, but in case he does not furnish them, I think the Committee on Printing should make some arrangement by which these reports will be furnished at a reasonable price.

Mr. SHAFROTH. They undoubtedly will be. The amount paid by the Supreme Court is a very large one, it seems to me, and, in addition to that, the printer gets a certain amount for revising and correcting them. I noticed one bill where he was allowed \$1,000 for that which is usually done free of charge by the printer who furnishes the lawyer's brief. On that account the Committee on Printing is likely to take up this matter, readjust it, and have the printing done at the Government Printing Office. Until that occurs we ought to be furnished with copies of these decisions—at least some Senators think so—and by putting this price at 20 cents per printed page, it seems to me that we would secure that result.

Mr. GALLINGER. Mr. President—

Mr. MYERS. I think I have not yielded the floor.

Mr. GALLINGER. I beg the Senator's pardon. I did not know the Senator had the floor.

Mr. SHAFROTH. I think I have the floor, but I will yield to the Senator.

Mr. MYERS. I think the Senator is mistaken. I was recognized by the Chair.

Mr. SHAFROTH. Very well.

Mr. MYERS. I merely wished to claim the floor in order to yield to the Senator from New Hampshire [Mr. GALLINGER] and to the Senator from Colorado [Mr. SHAFROTH]; that is all. Then I want to say a word.

Mr. SHAFROTH. Proceed. I thought the Senator from Montana had asked me a question.

Mr. MYERS. I yield to both Senators.

Mr. GALLINGER. Mr. President, I will occupy but a moment, and I thank the Senator. I was about to say that I have

very little personal interest in this matter. I do not read these decisions, but undoubtedly they are valuable to some Senators. The fact is that we of our own volition made the contract at 80 cents a printed page, as I understand. The firm printing those decisions has now agreed to print them at 50 cents a page, and it is proposed by the committee that we shall establish a new price of 20 cents a page. That is a violent reduction; and I have an impression, without knowing very much about the matter, that it will quite likely result in the firm declining to do the printing at that price. I presume, however, that in that case there will be found some other way out of it, if Senators want these decisions.

Mr. OVERMAN. If the Senator will allow me to ask him a question, inasmuch as the printer is paid a large price for the full report, does not the Senator think he could afford to furnish the advance sheets for 20 cents a page?

Mr. GALLINGER. It is very easy for a Senator to say that a firm can afford to do a thing; I do not know whether they can or not. If they can, it is inconceivable to me that the Senate made this contract for 80 cents a page.

Mr. SHAFROTH. There never was a contract; there was simply a resolution authorizing the Clerk to have these copies delivered to Senators.

Mr. GALLINGER. It is equivalent to a contract, however. The Senate ordered the work done at a certain price, and it seems to me that, if we are to revise this entire matter, if the Committee on Printing is to bring it up and have the printing done at the Government Printing Office, where I think it ought to be done, we might well accept the terms that this firm has offered, reducing the price from 80 cents to 50 cents a page, and not undertake this method of assuming that we can arbitrarily reduce a price 75 per cent that we ourselves established and expect the work to be done. It is rather an unusual method of procedure, and it seems to me like an attempted economy on a small matter in rather an extraordinary way.

Mr. SHAFROTH. Mr. President, if the Senator from Nebraska will give me his attention just a moment, I wish to say that I promised the Senator from Minnesota [Mr. NELSON] that I would try to get this through upon a reduced price, and he said, "All right," that he did not want the contract annulled; but since the remarks of the Senator from New Hampshire [Mr. GALLINGER], it might be that the Senator from Minnesota would think that this was an indirect way of dispensing with the requirement that copies of the decisions should be furnished to the Senate; and if the Senator thinks that this amount would not be satisfactory to the Senator from Minnesota, I would rather not press the matter until he comes into the Senate.

Mr. NORRIS. Mr. President, I should like to say to the Senator from Colorado that I have not talked privately with the Senator from Minnesota on the subject. All I know is what he said on the floor of the Senate. Personally I do not believe the Senator from Minnesota would regard it in that light; it does not seem to me as though he would. So far as I am personally concerned, I think the Senator from Colorado is taking a course that would not be objected to by anyone.

Mr. SHAFROTH. Does the Senator know whether the Senator from Minnesota is in the city?

Mr. NORRIS. I do not.

Mr. MYERS. Mr. President—

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Montana?

Mr. SHAFROTH. I do.

Mr. MYERS. Mr. President, I was mistaken in my statement. The Senator from Colorado [Mr. SHAFROTH] had the floor. He was correct.

Mr. SHAFROTH. The Senator from Georgia [Mr. BACON] informs me that the Senator from Minnesota [Mr. NELSON] told him last night that he was going to leave the city, to be absent for a week. I feel that if the Senator from Minnesota would object to this that I should have to move to reconsider, and probably again bring the resolution before the Senate. I will press it now, however, and if the Senator from Minnesota on his return objects, I will ask to have the matter reconsidered.

Mr. LA FOLLETTE. Does the Senator from Colorado say that he will not press the matter now?

Mr. SHAFROTH. I say I will press it now, and if the Senator from Minnesota on his return objects, I shall move a reconsideration.

Mr. CHAMBERLAIN. Mr. President, I should like to ask the Senator from Colorado if he has investigated the matter to ascertain where this 80 cents a printed page goes—who gets the money?

Mr. SHAFROTH. It goes to a firm here in the city. I have their bill.

Mr. CHAMBERLAIN. What I want to know, Mr. President, is whether a portion of this money goes to the reporter of the Supreme Court? I imagine it is one of those little grafts that have slipped into the charges that the clerks of these Federal courts make.

I introduced a resolution in the Senate a short while ago, which has been referred to the Committee on the Judiciary, providing for an investigation of the fees that are paid to the clerks of the Federal courts, with a view of having a bill presented to lop off some of the very charges that the Senator from Colorado [Mr. SHAFROTH] is now seeking to have cured. I think if the Senator will investigate the matter he will find that there is some sort of an arrangement between the printer and probably the reporter, under the terms of which the reporter and the printer divide this 80 cents a printed page.

I want to say to the Senator from Colorado that I am heartily in favor of his resolution; and, further than that, I think the whole system ought to be abolished. There is not any reason why the Members of the Senate could not go into the Library or into the room of some committee to examine the Supreme Court Reports and these advance sheets without putting the Government to the expense of having each Senator furnished with a copy of the decisions.

Mr. SHAFROTH. I will state that the bill which I have here takes in the numbers furnished between February 6 and April 30. It is made payable to C. E. Bright, and is sworn to by him as due to him. It amounts to \$468.80 for that period of time—three months.

Mr. KERN. Mr. President—

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Indiana?

Mr. SHAFROTH. I yield.

Mr. KERN. I wanted to ask what amount is paid by the Supreme Court or by the Government per printed page?

Mr. SHAFROTH. The amount paid per printed page is \$2.95, and that is paid to the firm or individual whom I have named.

Mr. KERN. Mr. President, I had four years' experience as reporter of the Supreme Court of Indiana and as such had sole charge of the publication of the reports. Based on my experience in that capacity, I will say that this charge is simply iniquitous. In Indiana under the present arrangement the decisions of the supreme court of that State are printed by the State and sold to the members of the profession at a dollar and a half a volume of 700 printed pages, at a profit to the State. The Indiana Supreme Court reports are printed on practically the same kind of paper as are the reports of the Supreme Court of the United States, with the same sort of binding and the same number of pages, and for the printer of the decisions of the Supreme Court of the United States to charge \$2.95 a printed page is simply an outrage.

I will say that the decisions of the Supreme Court of the United States or the advance sheets are furnished to at least two great publishing houses—the West Publishing Co., of St. Paul, and the Lawyers Cooperative Publishing Co., of Rochester, N. Y. The clerks of the various State supreme and appellate courts of the country furnish advance sheets of decisions to these publishers, for which they receive considerable remuneration. Doubtless the clerk of the Supreme Court of the United States or the reporter also get considerable sums for these advance sheets in addition to their regular remuneration.

I think this subject demands very close investigation. It seems to me there is a great raid on the Public Treasury in this printing matter that will amount in the course of a year to a very large sum of money.

Mr. SHIVELY. Very much larger than the salaries.

Mr. KERN. Very much larger than the salaries, I think.

Mr. SHAFROTH. I will state, Mr. President, that the Supreme Court decisions could be purchased from the West Publishing Co., advance copies thereof delivered to each Senator, and a bound volume supplied at the end of the year to each Senator for less than the three-months' bill which has been presented to the Senate by this printer. It seems to me that this resolution will secure copies of the decisions, and if it does not then we can devise some other way of getting them.

Mr. BRISTOW. Mr. President, if the Senator will pardon me, that one three months' bill is simply for running 100 extra copies off the press, and that is all there is to it.

Mr. OVERMAN. That is all it amounts to.

Mr. SHAFROTH. That is all there is to it.

Mr. FLETCHER. Mr. President—

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Florida?

Mr. SHAFROTH. I do.

Mr. FLETCHER. I merely desire to make the observation that the matter here referred to is for additional copies. The contract with the printer for printing the advance sheets was made through the Supreme Court; either the reporter, the clerk, or the court itself in some way lets that contract. The Senate has ordered the additional copies.

When this matter came up heretofore the Joint Committee on Printing undertook to make some inquiry about it. We found that the 80 cents a page was a very excessive charge, and that we could have the work done at the Government Printing Office, as the Senator from Colorado has already stated—

Mr. SHAFROTH. At 5 cents per printed page.

Mr. FLETCHER. At 5 cents per printed page for the additional copies of the advance sheets.

Mr. SHIVELY. Let me ask the Senator where are the advance sheets printed?

Mr. FLETCHER. They are printed here in the city by a private firm under a contract through the Supreme Court.

Mr. SHIVELY. At 80 cents a page?

Mr. FLETCHER. The contract for printing the original copies is considerably more than that.

Mr. SHAFROTH. That contract is for \$2.95 a printed page.

Mr. FLETCHER. Yes; \$2.95 a printed page.

Mr. SHAFROTH. And the Government Printing Office could print them at \$1.95 a page and furnish the additional advance sheets to the Senate for 5 cents a page.

Mr. FLETCHER. The Senate passed a resolution calling for a copy of the advance sheets for each Senator, and they are furnished at 80 cents a page. If the original printing were done by the Government Printing Office, they would furnish the additional copies at 5 cents a page. Under the resolution offered by the Senator from Colorado the advance sheets will continue to come, provided they will be furnished at 20 cents a page. I think beyond any question the Senator is entirely within reason as to the proper allowance for that amount of work.

As to the printing of the Supreme Court Reports, the Joint Committee on Printing has, in fact, already taken that up with the clerk. The clerk replied that we must take it up with the court; but as the court are on vacation, we have not yet reached any conclusion about it. We are going into that subject, so that eventually the Joint Committee on Printing will probably be able to report some steps that will lead to a readjustment of the whole subject of the printing of the reports of the Supreme Court.

Mr. CATRON. I should like to inquire of the Senator from Colorado how many copies of these reports are furnished to the Supreme Court at the rate of \$2.95 a page?

Mr. SHAFROTH. Three hundred and fifty copies of the decisions in pamphlet form. The Public Printer has estimated that the 350 copies can be printed at the Government Printing Office at a cost to the Government of \$1.95 per printed page; and he says the additional 100 copies of advance sheets furnished to the Senate could be furnished at an additional cost of 5 cents per printed page.

Mr. GALLINGER. Mr. President, if the Senator from Colorado will permit me—

Mr. SHAFROTH. Certainly.

Mr. GALLINGER. In reference to my observations a few moments ago, I wish to say that I do not want to be understood as opposing the proposal which the Senator from Colorado has made to the Senate. My only anxiety was in behalf of those who care to receive copies of these reports; I do not care about them; but we ought not, without due consideration, deprive those who want them of the privilege of receiving them.

From what has been said, it seems to me that this whole matter ought to be taken up seriously, either by the Committee on Printing or by some other committee of this body. As the Senator from Indiana [Mr. KERN] has well observed, the price paid per printed page for those reports is an abomination, as it seems to me—and I have some knowledge of the art of printing. I hope that the Joint Committee on Printing will take up the matter, go to the bottom of it, see that we pay a fair price for the printing that is done for the Government, and that we are not imposed upon.

This printing ought to be done at the Government Printing Office. We have the best printing house in the world; we have it well equipped with everything that is necessary to do any kind of printing, and why we should go outside and make contracts with private concerns surpasses my comprehension. I say this because I am deeply impressed with the suggestions that have been made along that line.

Mr. SHAFROTH. I entirely agree with the Senator that it ought to be taken up by the Committee on Printing, and it

will be; but so far as concerns the jurisdiction of the Committee to Audit and Control the Contingent Expenses of the Senate, of which I am a member, we have jurisdiction only as to furnishing the decisions to the Senate.

Mr. GALLINGER. That is all. I shall not, therefore, oppose the proposition the Senator makes, although it occurred to me at first blush that if we reduced the price one-half, rather than 75 per cent, perhaps it would be more equitable, pending an investigation. But if the Senator has looked into the matter, and feels that his proposition is a fair one, I have nothing further to say.

Mr. WILLIAMS. Mr. President, I rise merely to add that I have only one doubt about the report which has been made by the Committee to Audit and Control the Contingent Expenses of the Senate, and that is as to whether the reduction we have made is not too small. I think we might have made a greater reduction without any unfairness to anybody, and still these people could have made these additional copies at a very considerable profit to themselves. But I very heartily indorse the proposition that comes from the committee.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

The Senate, by unanimous consent, proceeded to consider the resolution.

Mr. MYERS. Mr. President, now that the resolution is before the Senate I wish to say that I am opposed to the abolition of furnishing these advance sheets to Senators. If the resolution passes in its present form, I think it will result in such abolition. It seems to me incredible, when a man says a thing is worth 80 cents a page and he will not do it for less than 50 cents a page, that he will come down and take 20 cents a page.

I move to amend the resolution so as to make it read "at not to exceed 40 cents per page." Then, if you can get it done for 5 cents a page, very well. It leaves it in the discretion of those in charge to get it down to 5 cents a page if they can, or 20 or 30 or 40.

Mr. BRANDEGEE. I will ask to have the resolution read. I have not heard it read in full.

The VICE PRESIDENT. The Secretary will read the resolution as proposed to be amended by the committee.

The SECRETARY. The junior Senator from Colorado [Mr. SHAFROTH] proposes to amend Senate resolution 103 as follows—

Mr. GALLINGER. Let the original resolution be read.

Mr. BRANDEGEE. Let the whole resolution be read.

The SECRETARY (reading)—

Resolved, That Senate resolution adopted on the 20th day of February, 1885, providing for furnishing to Senators pamphlet printed copies of the decisions of the Supreme Court of the United States be, and the same is hereby, annulled.

The junior Senator from Colorado [Mr. SHAFROTH] proposes an amendment, as follows:

In line 5 strike out the word "annulled" and insert "amended by adding to the last word of the same the following: at a cost not to exceed 20 cents per printed page."

Mr. BRANDEGEE. Mr. President, let the Secretary read the latter part, where the amendment comes in. It strikes me that it does not make sense.

Mr. GALLINGER. It does not.

The SECRETARY. It is proposed to strike out the word "annulled" and add the following:

Amended by adding to the last—

The VICE PRESIDENT. The Secretary will read back enough of the resolution to give the context.

The SECRETARY (reading)—

That Senate resolution adopted on the 20th day of February, 1885, providing for furnishing to Senators pamphlet printed copies of the decisions of the Supreme Court of the United States, be, and the same is hereby annulled.

It is proposed to strike out the word "annulled"—

The VICE PRESIDENT. The Chair requested the Secretary to read the resolution as proposed to be amended, leaving out the word "annulled."

The SECRETARY (reading)—

Be, and the same is hereby, amended by adding to the last word of the same "at a cost not to exceed 20 cents per printed page."

Mr. BRANDEGEE. Then the resolution would read "be, and the same is hereby, at a cost not to exceed."

Mr. SHAFROTH. No; "be, and the same is hereby, amended."

Mr. BRANDEGEE. Then let the Secretary read it in that way.

The SECRETARY (reading)—

Is hereby amended by adding to the last word of the same the following: "at a cost not to exceed 20 cents per printed page."

Mr. BRANDEGEE. I do not think that makes sense.

Mr. GALLINGER. It does not.

Mr. SHAFROTH. Give it to me; I will read it.

Mr. SMITH of Georgia. Read it the way it would read if amended.

Mr. SHAFROTH. There is a resolution which provides that the Secretary of the Senate shall furnish to the Senate 100 copies of these decisions. The first object of this resolution was to annul that resolution and not to have any of these copies, but since we have reconsidered the matter and want the decisions we have changed the pending resolution so that instead of the resolution adopted in 1885 being annulled it will be amended by adding to the last word of the original resolution "at a cost not to exceed 20 cents per printed page." That makes complete sense. The resolution, therefore, will read as follows:

Resolved, That Senate resolution adopted on the 20th day of February, 1885, providing for furnishing to Senators pamphlet printed copies of the decisions of the Supreme Court of the United States, be, and the same is hereby, amended by adding to the last word of the same—

That is, the original resolution—

the following: "at a cost not to exceed 20 cents per printed page."

Mr. GALLINGER. Striking out the last word?

Mr. SHAFROTH. Yes; striking out the last word.

The VICE PRESIDENT. The question is on the amendment of the Senator from Montana [Mr. MYERS], who moves to amend the amendment by striking out "20" and inserting "40."

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Colorado [Mr. SHAFROTH].

Mr. LANE. Mr. President, before the question is put I should like to ask the Senator from Colorado why the matter can not be settled by having this printing done by contract upon bids submitted as a result of public competition.

Mr. SHAFROTH. You can not very well have the copies furnished to the Senate under a separate contract, because you would have to set up the type and issue the 100 copies, which would cost probably 80 or 90 cents, or perhaps a dollar, per printed page. But the original matter is in the hands of the Joint Committee on Printing, and they expect to make some arrangement of that kind.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Colorado [Mr. SHAFROTH].

The amendment was agreed to.

The resolution as amended was agreed to.

PROPOSED PROCEDURE.

Mr. KERN. Mr. President, I ask unanimous consent for the following agreement:

That the Senate shall adjourn to-day until Monday, the 15th day of September, and then meet and adjourn for three days, and continue to so meet and adjourn until the conference committee heretofore appointed to confer with the House conferees on House bill No. 3321 shall be ready to report the conclusions of such committee to the Senate, and that no business shall be considered by the Senate during that period.

Mr. LA FOLLETTE. Mr. President, I ask that the request for unanimous consent may go over.

Mr. WILLIAMS. I wish to suggest that if the request for unanimous consent is to be put it ought to be amended. It is possible that the House may send over the banking and currency bill, and that the Senate committee may be ready to report upon it before the conferees upon the tariff bill are ready to report.

Mr. KERN. It has been determined already that that is absolutely impossible.

Mr. JONES. Mr. President, nobody can hear this conversation.

Mr. KERN. I had a consultation yesterday with the members of the committee and they say it can not be done.

The VICE PRESIDENT. Senators complain that they can not hear what is going on.

Mr. BORAH. Was this proposition submitted by the Senator from Indiana as a motion or as a request for unanimous consent?

Mr. KERN. As a request for unanimous consent.

The VICE PRESIDENT. Objection is made by the Senator from Wisconsin [Mr. LA FOLLETTE].

WOMAN SUFFRAGE.

Mr. ASHURST. Mr. President, I shall not ask unanimous consent or make a motion until I first make a short explanatory statement.

From the Committee on Woman Suffrage, on June 13, 1913, I reported favorably a joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

I desire to ask unanimous consent that the Senate proceed to the consideration of the joint resolution. I may state, in this connection, that if such unanimous consent should be granted, and it should become, as it would, the unfinished business, I should not expect to press it during the next 30 days, or to interfere in any way with currency legislation. I desire, however, and I am sure I express the sentiment of a large number of Senators, that the matter shall be voted on within the next two or three months; and if it is the unfinished business it will be discussed.

I therefore ask unanimous consent that the Senate proceed to the consideration of the joint resolution.

Mr. OVERMAN. Mr. President, I object. I do not think we ought to take up the matter now. We have not a quorum here this morning.

PRINTING OF MAP.

Mr. GALLINGER. Mr. President, there is on the calendar, under Rule IX, a motion that the map of the United States as marked and referred to by Mr. CUMMINS during the delivery of his address on H. R. 3321 be printed in the CONGRESSIONAL RECORD as a part of his address. The map has been printed in the RECORD, and I ask that the motion be stricken from the calendar. It simply burdens the calendar.

The VICE PRESIDENT. Without objection, the motion will be stricken from the calendar.

ADJOURNMENT TO MONDAY.

Mr. KERN. I move that when the Senate adjourns to-day it adjourn to meet on Monday next, September 15, at 12 o'clock meridian.

The motion was agreed to.

PARADES IN THE CITY OF WASHINGTON.

Mr. JONES. I ask unanimous consent for the present consideration of Senate bill 2415, relating to the exclusion of traffic from streets and avenues of the city of Washington during parades.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

Mr. SMITH of Georgia. What is the bill, Mr. President? I did not hear what it was.

Mr. JONES. I will say to the Senator from Georgia that it is a bill which has been reported unanimously from the Committee on the District of Columbia, and indorsed by the commissioners, growing out of the difficulties in connection with the parade here on March 3. It invests the commissioners with authority which is absolutely necessary for the protection of such parades. It is a short bill.

Mr. SMITH of Georgia. Mr. President, I do not think we want to take up any bills to-day unless their consideration is absolutely necessary, and I object.

Mr. JONES. Mr. President, I hope the Senator will not object to the consideration of the bill. It is a local bill and applies only to the District of Columbia.

I will say to the Senator from Georgia that the special committee which was appointed to investigate the difficulties attending the woman-suffrage parade here on March 3 found that the real cause of the difficulty was the fact that there was no authority to exclude traffic from the Avenue for a sufficient time before the parade was to start in order to furnish an unobstructed passageway. That committee recommended this legislation, the bill was introduced, and it is approved by the Commissioners of the District of Columbia and by the committee.

Mr. WILLIAMS. What is the character of the bill?

Mr. JONES. The bill gives the commissioners authority to grant permits to hold parades on the streets of the city. It also gives them authority to exclude traffic from the streets for a sufficient time before the beginning of such parades in order to insure proper protection to them.

Mr. WILLIAMS. Does the bill, furthermore, provide that they shall not have parades on streets upon which street cars are run?

Mr. JONES. No; it does not.

Mr. WILLIAMS. It ought to.

Mr. JONES. It does not limit it. The bill leaves to the commissioners the matter of granting permits as to any street.

Mr. WILLIAMS. There ought to be an absolute provision that the street cars of a great city like this shall not be stopped for parades of any description. There are plenty of streets without street cars upon them where parades can pass without having the entire business of the city and everybody personally inconvenienced just because the commissioners want to give somebody a right to hold a parade upon Pennsylvania Avenue.

I am not speaking now of this particular case. This parade was more important than most parades, but it always struck me that people could do their parading upon streets that were not congested and upon streets that did not have street-car service.

Mr. JONES. I take it that the commissioners would exercise a reasonable judgment and discretion.

Mr. WILLIAMS. They have not done so hitherto; and in this particular case they granted the right to have the parade on Pennsylvania Avenue.

Mr. JONES. Oh, no; they did not. We granted that right by resolution of Congress.

Mr. WILLIAMS. I do not know whether the commissioners would have any better sense than we have had or not.

Mr. JONES. I think on special occasions Pennsylvania Avenue is the proper place to hold a parade. I should not like to see the parade on the 4th of March in connection with the inauguration of the President of the United States put off on some side street somewhere.

Mr. WILLIAMS. That is a totally different affair; but even with regard to that, in the first place, the fool parade ought to be done away with altogether.

Mr. JONES. I agree with the Senator in that.

Mr. WILLIAMS. In the second place, if we are going to have it, we ought not to allow it to impede the people who are going along attending to their everyday business. It is just a sort of holiday for people who come here to "procession," if I may use the word.

Still the 4th of March is a totally different thing. It is the occasion of the inauguration of the Chief Magistrate of the entire United States, and there might be an exception made in that case. But for other parades of any description that I can think of, unless it were a returning army to be disbanded after a great war, or something of that kind, when the power of Congress could be specially invoked, a mere parade ought not to be allowed to disturb the legitimate business of a great city.

Mr. JONES. If the Senator thinks an amendment should be inserted here, prohibiting parades on streets where street cars run, I should not object to its adoption.

Mr. WILLIAMS. I should like to see that done, in language prohibiting parades upon streets where street cars run, unless by express permission of Congress.

Mr. BORAH. Mr. President, I wish to say that I fully agree with the Senator from Mississippi that if there is any occasion at any time when the street cars of this city show a disposition to run they ought not to be interfered with.

Mr. JONES. I would accept an amendment of that sort.

Mr. SMITH of Georgia. Ordinarily I should not object to a request on the part of the Senator from Washington to take up a bill, but nearly all of us have made our arrangements to be occupied away from the Senate this afternoon, supposing that the session would be very short. We must have an executive session, and it is on account of the peculiar condition of affairs to-day that I enter an objection.

The VICE PRESIDENT. Objection is made.

PROPOSED PROCEDURE.

Mr. KERN. I ask the Chair to lay before the Senate a proposed unanimous-consent agreement.

The VICE PRESIDENT. The Secretary will read it.

The Secretary read as follows:

Unanimous agreement:

That when the Senate meets on next Monday, the 15th instant, no legislative business shall be considered.

Mr. GALLINGER. That is right.

The VICE PRESIDENT. Is there objection to the unanimous-consent agreement?

Mr. BORAH. Mr. President, I am not going to object to the unanimous-consent agreement, but there are some of us who are a great ways from home, and if it could be determined what the program is going to be here for any reasonable length of time it would be a great convenience to those who would like to take occasion at this time to visit home. If there is going to be an adjournment every three days, of course, it necessitates our remaining here. On the other hand, if it should be determined that we are not going to do anything for two or three weeks, it would permit us to arrange an entirely different program.

While I am not going to object to this unanimous-consent agreement to-day, I should like to say to the Senator offering it that when we meet upon Monday we ought to determine, if we can, what we are going to do for the next two or three weeks.

Mr. KERN. I will say to the Senator from Idaho that before he came in I asked for a unanimous-consent agreement that the Senate adjourn for three days at a time until the conference committee on the tariff bill was ready to report, and that no

business be transacted in the meantime. There was objection to that, and therefore I—

Mr. BORAH. That objection was made after I came in; I heard it. I am not finding fault, except to say that I presume by Monday all parties can determine what the program should be.

Mr. KERN. I think that is the understanding.

Mr. BORAH. If there is to be an adjournment every three days, of course we must submit to it.

Mr. KERN. I think it is the understanding that next Monday we will come to some determination as to the program for the week.

Mr. MYERS. Mr. President, a parliamentary inquiry. I suppose under the agreement proposed the introduction of a bill would be permitted?

The VICE PRESIDENT. The Chair would rule that that is legislative business.

Mr. MYERS. That it could not be introduced?

The VICE PRESIDENT. That would be the ruling of the Chair.

Mr. MYERS. I ask that it be modified so as to say "except the introduction of bills." I am expecting suggestions from the Interior Department relative to an important bill which I have been requested to introduce.

Mr. KERN. I have no objection.

Mr. JONES. Is there a request for unanimous consent pending?

Mr. KERN. Yes.

The VICE PRESIDENT. There is.

Mr. JONES. I should like to hear what it is.

The VICE PRESIDENT. It will be read by the Secretary.

The Secretary read as follows:

That when the Senate meets on next Monday, the 15th instant, no legislative business shall be considered.

Mr. JONES. Mr. President, I can not consent to a proposition of that kind. It seems to me if we have to stay in session we ought to carry on business, and there is no reason why those of us who have to stay here should not transact business. I will not consent to-day to a proposition of that kind.

The VICE PRESIDENT. Objection is made to the request of the Senator from Indiana.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 12 minutes spent in executive session the doors were reopened, and (at 1 o'clock and 17 minutes p. m.) the Senate adjourned until Monday, September 15, 1913, at 12 o'clock m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate September 11, 1913.

ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY.

Charles J. Vopicka to be envoy extraordinary and minister plenipotentiary of the United States of America to Roumania, Servia, and Bulgaria.

SECRETARY OF LEGATION.

Jefferson Caffery to be secretary of the legation of the United States of America at Stockholm, Sweden.

REGISTERS OF LAND OFFICES.

F. F. Fritz to be register of the land office at Minot, N. Dak.
Edwin M. Starcher to be register of the land office at Gregory, S. Dak.

Paz Valverde to be register of the land office at Clayton, N. Mex.

RECEIVERS OF PUBLIC MONEYS.

Kirk E. Baxter to be receiver of public moneys at Belle-fourche, S. Dak.

D. E. Burkholder to be receiver of public moneys at Gregory, S. Dak.

Abraham Hogeland to be receiver of public moneys at Lewistown, Mont.

Thomas E. Owen to be receiver of public moneys at Clayton, N. Mex.

Joseph E. Terral to be receiver of public moneys at Woodward, Okla.

PROMOTIONS IN THE NAVY.

Lieut. Commander Ridley McLean to be a commander.

Lieut. Commander Stephen V. Graham to be a commander.

Lieut. Louis J. Connolly to be a lieutenant commander.

Lieut. Thomas R. Kurtz to be a lieutenant commander.

Lieut. Harold E. Cook to be a lieutenant commander.

Lieut. (Junior Grade) John B. Rhodes to be a lieutenant.

POSTMASTERS.

GEORGIA.

G. L. Carson, sr., Commerce.
Alman G. Hockenhull, Cumming.
L. M. Peacock, jr., Eastman.

REJECTION.

Executive nomination rejected by the Senate September 11, 1913.

POSTMASTER.

Patrick H. Tiernan to be postmaster at Macomb, Ill.

HOUSE OF REPRESENTATIVES.

THURSDAY, September 11, 1913.

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We bless Thee, Almighty God, our Heavenly Father, that in spite of the untoward circumstances of life, in spite of the evil and sin we see around us, there is more good in the world than evil; that the trend of men's hearts is upward, not downward, heavenward, not hellward; that there is hope in the promise that good shall overcome evil; and we most fervently pray that we may strive as individuals and as a people for the spreading of Thy kingdom, that righteousness, peace, and good will may reign supreme in every heart, and old earth be filled with joy and gladness. Through Jesus Christ, our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

THE TARIFF.

Mr. HENRY. Mr. Speaker, I offer the following privileged resolution from the Committee on Rules.

The Clerk read as follows:

House resolution 248 (H. Rept. 70).

Resolved, That upon the adoption of this resolution it shall be in order to move to nonconcur in gross in the Senate amendments to H. R. 3321 and agree to a committee of conference asked for by the Senate on the disagreeing votes of the two Houses, and the House shall without further delay proceed to vote upon said motion; and if said motion shall prevail a committee of conference shall be appointed without instructions, and said committee shall have authority to join with the Senate committee in renumbering the paragraphs and sections of said bill when finally agreed upon.

Mr. HENRY. Mr. Speaker, I move the previous question on the resolution.

The question was taken, and the Chair announced that the ayes had it.

Mr. MANN. Mr. Speaker, I ask for the yeas and nays, and pending that I make the point of order that no quorum is present.

The SPEAKER. The question is on ordering the yeas and nays.

The question was taken, and the Speaker announced that there were 35 yeas and 22 noes.

Mr. HARDWICK. Mr. Speaker, the gentleman from Illinois made the point of no quorum. With that point pending, the House can not even determine that it will order or refuse the yeas and nays until the point of no quorum is decided.

The SPEAKER. Evidently there is no quorum present.

Mr. HARDWICK. The only reason I make the inquiry is that it will be more convenient to have a call of the House and a vote at the same time.

Mr. MANN. I think the gentleman from Georgia is correct, and that is the reason I made the point of no quorum, in order to have an automatic roll call.

The SPEAKER. The roll call takes place automatically.

The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and Members who are in favor of ordering the previous question will, when their names are called, answer "yea" and those opposed will answer "nay." The Clerk will call the roll.

The question was taken; and there were—yeas 187, nays 83, answered "present" 3, not voting 156, as follows:

YEAS—187.

So the previous question was ordered.

The Clerk announced the following pairs:
Until further notice:

Mr. McCLELLAN with Mr. J. R. KNOWLAND.

Mr. CURLEY with Mr. CRAMTON.

Mr. RICHARDSON with Mr. PORTER.

Mr. METZ with Mr. HINDS.

Mr. BELL of Georgia with Mr. BURKE of South Dakota.

Mr. O'LEARY with Mr. AINEY.

Mr. MCCOY with Mr. STEVENS of Minnesota.
Mr. TALBOTT of Maryland with Mr. MERRITT.
Mr. SHERLEY with Mr. GILLET.
Mr. FITZGERALD with Mr. CALDER.
Mr. CARTER with Mr. MCGUIRE of Oklahoma.
Mr. BUCKNER with Mr. HAWLEY.
Mr. MCGILLICUDDY with Mr. GUERNSEY.
Mr. THACHER with Mr. WINSLOW.
Mr. REILLY of Connecticut with Mr. WILDER.
Mr. PALMER with Mr. PATTON of Pennsylvania.
Mr. MCANDREWS with Mr. ROBERTS of Nevada.
Mr. FIELDS with Mr. GOOD.
Mr. DALE with Mr. CARY.
Mr. CONRY with Mr. BRYAN.
Mr. BROWN of West Virginia with Mr. ANTHONY.
Mr. EVANS with Mr. MILLER.
Mr. KEATING with Mr. LA FOLLETTE.
Mr. ASHBROOK with Mr. BARCHFELD.
Mr. MURRAY of Oklahoma with Mr. BROWNE of Wisconsin.
Mr. CONNOLLY of Iowa with Mr. BURKE of Pennsylvania.
Mr. CANTRILL with Mr. BRITTEN.
Mr. CARAWAY with Mr. EDMONDS.
Mr. CARLIN with Mr. FARR.
Mr. COVINGTON with Mr. GRAHAM of Pennsylvania.
Mr. FAISON with Mr. COPLEY.
Mr. FINLEY with Mr. GREENE of Massachusetts.
Mr. FOWLER with Mr. GRIEST.
Mr. GOEKE with Mr. HAMILTON of Michigan.
Mr. GOLDFOGLE with Mr. HAMILTON of New York.
Mr. HAMLIN with Mr. HUGHES of West Virginia.
Mr. HEFLIN with Mr. LENROOT.
Mr. KINKAD of New Jersey with Mr. KENNEDY of Rhode Island.
Mr. LEE of Pennsylvania with Mr. KISS of Pennsylvania.
Mr. MORGAN of Louisiana with Mr. LANGHAM.
Mr. LINTHICUM with Mr. LEE of Pennsylvania.
Mr. NEELEY with Mr. MARTIN.
Mr. O'HAIR with Mr. PARKER.
Mr. PATTEN of New York with Mr. MOORE.
Mr. RAUCH with Mr. SHREVE.
Mr. RUCKER with Mr. MORIN.
Mr. SABATH with Mr. SMITH of Idaho.
Mr. SHARP with Mr. VARE.
Mr. SMALL with Mr. WALTERS.
Mr. TAYLOR of Alabama with Mr. WOODRUFF.
Mr. THOMPSON of Oklahoma with Mr. DANFORTH.
Mr. WHITE with Mr. MOTT.
Mr. MURRAY of Massachusetts with Mr. ROBERTS of Massachusetts.

For the session:

Mr. HOBSON with Mr. FAIRCHILD.

Mr. SCULLY with Mr. BROWNING.

Mr. SLAYDEN with Mr. BARTHOLDT.

Mr. O'SHAUNESSY with Mr. DAVIS.

Mr. AIKEN with Mr. BELL of California.

Mr. BROWNING. Mr. Speaker, I voted "no." I have a general pair with my colleague [Mr. SCULLY], and I wish to withdraw my vote and answer "present."

The name of Mr. BROWNING was called, and he answered "Present."

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present; the Doorkeeper will open the doors. The gentleman from Texas has 20 minutes, and the gentleman from Kansas [Mr. CAMPBELL] has 20 minutes.

Mr. HENRY. Mr. Speaker, I would like to ask the gentleman from Kansas if 20 minutes to a side will be satisfactory to his side of the House?

Mr. CAMPBELL. Mr. Speaker, I have requests for much more time than 20 minutes, and would like if the gentleman from Texas would submit a request for unanimous consent for additional time.

Mr. HENRY. Mr. Speaker, I ask unanimous consent that there be one hour's debate on this resolution, 30 minutes to each side; 30 minutes to be controlled by myself and 30 minutes by the gentleman from Kansas [Mr. CAMPBELL].

The SPEAKER. The gentleman from Texas asks unanimous consent that there be one hour's debate on this resolution, one half to be controlled by himself and the other half by the gentleman from Kansas [Mr. CAMPBELL]. Is there objection?

Mr. MURDOCK. Mr. Speaker, I would like to ask the gentleman from Kansas how much time we are to have out of that?

Mr. CAMPBELL. Mr. Speaker, I shall yield 10 minutes of that time to the gentleman from Pennsylvania [Mr. KELLY].

The SPEAKER. The gentleman from Kansas announces that he will yield 10 minutes of his 30 minutes to the gentleman

from Pennsylvania [Mr. KELLY]. Is there objection to the request of the gentleman from Texas for one hour's debate? [After a pause.] The Chair hears none, and it is so ordered.

Mr. HENRY. Mr. Speaker, the rule is very plain and speaks for itself. It is well understood that the Underwood bill, which has just been passed by the Senate of the United States, has been amended in something like 600 or 700 particulars, and if all those amendments were considered under the regular procedure and sent to the Committee on Ways and Means it would take several weeks to finish the consideration of the bill. The country is expecting action on the subject of tariff legislation and the sooner it is concluded the better. It is right that I should state that the rule is the same as the one which sent the Dingley bill to conference.

It is practically the same as the rule sending the tariff bills of 1883, 1890, and 1894 to conference. Therefore it is the usual and the accepted way of dealing with such problems as this. There is nothing novel about it; there is nothing unwise about it; and it is entirely proper that this bill be sent to conference promptly in order that it may be disposed of as soon as practicable.

Mr. Speaker, I reserve the balance of my time.

Mr. CAMPBELL. Mr. Speaker, after I have consumed nine minutes I ask that I be notified.

The SPEAKER. The gentleman desires to be notified in nine minutes?

Mr. CAMPBELL. Yes.

Mr. Speaker, the gentleman from Texas [Mr. HENRY] lays emphasis upon the fact that the country is anxiously awaiting the enactment of the Underwood bill into law. He failed to state just what country is anxious for the enactment of this bill into law. [Applause on the Republican side.] As a matter of fact, manufacturers and farmers and business men and wage earners of every country in the world but ours are anxious for the early enactment of this bill into law. [Applause on the Republican side.]

The bill proposes to make it easy for the producers in every country in the world to bring here the products of their industries and dump them into the market of the United States—the best market in the world. This bill is for the benefit of Europeans and of Asiatics and of the people who inhabit the islands of the sea that are not under the American flag.

I had a talk a few days ago with a manufacturer from northern France, who has been in this country since a few days after this bill passed the House, and he is almost peeved because it has taken so long to reach a final vote on the bill. He has appointed what he calls agents in this country and wants to say to them, "Go to work; this is the tariff schedule."

He is very anxious that the conferees shall agree at the earliest day possible, because his agents in New York, Chicago, Philadelphia, Cincinnati, Pittsburgh, St. Louis, Kansas City, and in all the larger cities of the country are waiting to begin taking orders from American merchants for goods manufactured in northern France. He says that, of course, he will have to enlarge his factory and employ an increased number of men in order to supply the American trade with the product of his cotton mills. He is anxious that this rule be agreed to and that the bill be sent to conference without further debate, so that he can begin to reap an early benefit from the enactment of this bill into law.

Has anyone heard of an American manufacturer who produces goods that will meet foreign competition who is contemplating an enlargement of his factory or an increase in the number of his employees because of the enactment of this bill into law? There are none. Every laborer in this country who labors in an industry that produces competitive products will suffer from competition with laborers employed in other countries at a wage much less than he is paid here.

The gentleman from France to whom I have referred candidly stated that he had been in cotton mills in the United States; that he had found the same kind of machinery that he has in his mills; that he found the same efficient employees here that he has in his mills. "But," he said, "in this country you pay from four to four and one-half times more wages to laborers upon the same machines than I pay in my factory, and therefore I shall have an advantage in supplying the American market with what it wants." And he is right about it, and that is why your law will injure our people and help the people of other countries.

I am not surprised, therefore, that the countries outside of the United States are anxious for the early enactment of this bill into law, and I am not surprised at the apathy and the apprehension of American manufacturers, farmers, laborers, and business men everywhere in this country.

Oh, yes, they say, "Just as well let it pass." The order for their execution has been issued, and they may just as well have it to-day as next Friday. They are simply waiting for the inevitable hour when they shall have to say to some of their men, "We will have to lay you off. Our salesmen have notified us that they can not sell our products, because foreign goods supply the demands of the market. This bill will permit merchants and manufacturers from every country in Europe and from Asiatic countries, from Japan and China and India, to sell the same kind of goods that we produce in the American market on almost equal terms with our own products."

Mr. Speaker, I fear that our laborers will walk out of factories in which they have been steadily employed at an increasing wage for 16 years, and that many of them will remain out of employment during the time that this law remains upon the statute books.

You have stated that this rule is almost word for word the rule that sent the Dingley bill to conference. Ah, but the purpose of the Dingley bill was vastly different from the purpose of this bill. The purpose of that bill was to open the idle industries of this country to labor that had been unemployed for three years under a Democratic tariff. [Applause on the Republican side.] And in all human probability the next rule that is brought into this House upon a tariff bill will be upon a bill that repeals this law and enacts one that will again open the idle industries of the country to the unemployed laborers of our land. You can not supply the American market with the products of foreign industries and keep the American laborer employed.

You will do well to bear in mind that behind every cheap product of labor that is sold in the United States there is a cheap man getting a cheap wage; and the American laborer will refuse to lower himself to either the standard of living or the standard of wages that is given to his foreign competitor, whether he is employed in Europe or in Asia. [Applause on the Republican side.]

The SPEAKER. The gentleman has occupied nine minutes.

Mr. CAMPBELL. Mr. Speaker, I reserve the balance of my time.

Mr. HENRY. Mr. Speaker, I yield five minutes to the gentleman from Georgia [Mr. HARDWICK].

Mr. HARDWICK. Mr. Speaker, I have been somewhat amused as well as pained at having to listen to the swan songs of Republican orators on this tariff question. My friend from Kansas [Mr. CAMPBELL], who has just taken his seat, tells us that the Dingley bill was presented to the American people to accomplish a vastly different purpose from this bill. I agree with him. The Dingley bill was framed in the interests of certain classes of the American people, and this bill that we present is framed in the interest of the masses of the American people. [Applause on the Democratic side.] I am not here, however, to bandy words with these gentlemen on this tariff question at this late hour. This is not the time for argument or for prophecy on this great question, because this bill is not to be tested by the arguments that are made for and against it or by the prophecies that are ventured for and against it, but by the acid test of actual trial; and it seems to me that when we are about to submit this bill to that great test, after it has been fully argued so that the country fully understands it, after every item in it has been weighed in the balance, after everything in it has been duly and fully and carefully considered, it ill becomes us at this late time to stop and protest against an expeditious treatment of the subject, no matter what the views of the Members are upon the tariff question, whether they favor this bill or whether they oppose it. American business men everywhere are demanding that we put an end to the period of uncertainty which is always involved in tariff changes, whether the changes be upward or downward. It seems to me, Mr. Speaker and gentlemen, that we can accomplish no more useful purpose and serve no better purpose than by proceeding with the smallest possible delay to enact this bill into law and let the trial begin. We welcome it. We are not afraid of it. It will disprove our theories or it will disprove yours. It seems to me that after this bill has been tried the country will be in a position to tell whether the woeful prophecies of such gentlemen as our friend from Wyoming [Mr. MONDELL] are well founded, or whether the hopes that we on this side entertain and confidently express are well based.

At any rate this is no time to talk. The time for action is here, and we do not propose to fritter away time in this body and further to tax the patience of the American people by considering in detail each one of the nearly 700 items of amendment that the Senate has put upon this bill. It is the purpose of this committee and the purpose of this side to send this bill

to conference at the speediest possible moment, and we here and now express the hope that the conferees will agree just as soon as possible and get this bill enacted into law at the earliest possible moment. [Applause on the Democratic side.]

I yield back the remainder of my time.

Mr. CAMPBELL. I yield to the gentleman from Pennsylvania [Mr. KELLY] 10 minutes.

Mr. KELLY of Pennsylvania. Mr. Speaker, I ask to be notified when I have occupied five minutes.

It seems to me, gentlemen of the House, that the debate on this rule has traveled far afield, and that the gentleman from Kansas [Mr. CAMPBELL] and the gentleman from Georgia [Mr. HARDWICK] have both neglected the important matter before us at this time. I agree, however, with the gentleman from Georgia that the Democratic Party, in passing the tariff bill which is soon to become a law, is only carrying out the promises given to the American people, and that they deserve credit for it. I would say further that if the party of the gentleman from Kansas [Mr. CAMPBELL] had maintained its promises to the American people and reduced the tariff burdens when it promised to do so, it would not now have so negligible a minority on this side of the House. [Applause on the Democratic side.]

I would not desire to attempt to unduly delay the passage of this bill. I believe with the gentleman from Georgia [Mr. HARDWICK] that the American people ask that this bill be put through as speedily as is consistent with justice, and that uncertainty be removed, but this rule is so unjust and outrageous in principle that I say to you that the American people will not stand for such tactics as this. No argument of necessity for prompt action can justify this flagrant disregard of the principle of free representation.

Here is a rule which is the acme of the system of caucus and special-rule legislation that we have seen in operation during this session. Here is a rule which has three separate gags in it. It gags us from an opportunity to nonconcur in the separate amendments and secure a vote. It prevents the House from instructing the conferees and requires an immediate vote. There are three distinct gags, and I say that it is the most flagrant combination of the gag and caucus rule which has so far characterized this session.

The history of freedom has been the history of battles for the right of popular bodies to initiate and amend legislation. Despotism has always fought against the right to amend, and we have seen in the history of this tariff bill the same despotic control and amendments prevented by the caucus. The tariff bill was passed without a fair chance to amend. The majority of the majority controlled it, and in the last analysis the towering figure of the gentleman from Alabama [Mr. UNDERWOOD] controlled fully the action on the bill in caucus. It came into the House, and no amendment was permitted to the House. It goes into the Senate in the same way, the same method is followed, and now it comes back into the House with the proposition that we shall not have the right to vote on 676 amendments which have been tacked onto it in the Senate. I want to say to you, Mr. Speaker and gentlemen of the House, that there should be an opportunity for us to go on record on these important matters.

Mr. MONTAGUE. Will the gentleman yield?

Mr. KELLY of Pennsylvania. No; I have not the time.

Mr. MONTAGUE. I only wanted to ask the gentleman how he voted.

Mr. KELLY of Pennsylvania. I have not the time to yield to the gentleman. I want to say that the question here is not a question of delay; it is a question of having a fair, free, and full discussion of amendments which have been tacked on by the Senate. This debate shows that the same methods have been used by the Republicans and the Democrats. One says that this is the same rule introduced into the House on the 8th of July, 1897, in exactly the same words by Republicans, and the Democrats fought the bill in almost the same words that the Republicans are fighting it to-day. You can see the sham battle in this proposition, for it is only a question of who controls the power of legislation and who makes objection to it.

The American people will not stand much longer for this sham battle between the Democratic Party and Republican Party. They are becoming convinced that there must be a real effort made against special interests which work in secrecy. I am convinced that sooner or later, when they shall be positively convinced beyond peradventure that the revolution they accomplished in order to put into power a Democratic administration and two-thirds of the House has been fruitless, when they become convinced that they have been tricked again and have come under that despotic power they had repudiated in the other party, they will then and there demand that the power

of legislation be given into the hands of a new party, into the hands of those who have taken the stand against special privilege and government by the few.

The SPEAKER. The gentleman has used five minutes.

Mr. KELLY of Pennsylvania. Mr. Speaker, I reserve the balance of my time.

Mr. HENRY. Mr. Speaker, I am somewhat surprised at the attitude of the gentleman from Pennsylvania, for my understanding is that he voted for the Underwood bill when it passed the House.

Mr. KELLY of Pennsylvania. I did.

Mr. HENRY. I think he was right, I think it is the best tariff bill that has passed Congress during the history of our Government.

Mr. KELLY of Pennsylvania. I voted for it on the ground that it improved conditions, but that does not mean that we ought not to have a fair and full opportunity to vote on these amendments of the Senate.

Mr. HENRY. I think that the bill has been fully and fairly considered in the House and in the Senate. Mr. Speaker, I now yield five minutes to the gentleman from North Carolina.

Mr. POU. Mr. Speaker, the gentleman from Kansas is a little different from the bourgeois of France who never learned anything and never forgot anything. I do not say that he never learned anything for that would not be true of our genial friend, but he certainly has forgotten. He has entirely lost sight of the fact that we had an election in this Nation of ours.

Mr. MANN. In Maine last Monday.

Mr. POU. Yes. In Maine the Democratic Party held its own and came within less than 200 votes of polling the strength that it polled in November. Now the gentleman from Kansas certainly forgets that we who are supporting this tariff bill and this rule have an enormous majority in this House, that we have a majority in the Senate as well, and that in our action to-day we are simply obeying the mandate of the American people expressed with such emphasis at the polls in the last general election. The Ways and Means Committee has presented a bill which is so good that when the roll call was had in the Senate the leader of the party to which the gentleman from Pennsylvania [Mr. KELLY] belongs felt constrained to vote with the Democratic majority. [Applause on the Democratic side.] We were not dependent upon the power of a majority of one that we had, but the provisions of this bill appealed so strongly to certain gentlemen of the Bull Moose Party that they felt in duty bound to unite with the Democratic majority, and I shall expect to hear the gentleman from Pennsylvania vote "aye" upon the final roll call upon this conference report.

Mr. KELLY of Pennsylvania. I shall. [Applause on the Democratic side.]

Mr. POU. Now, again, Mr. Speaker, none of the dire predictions of our Republican opponents have come to pass. They said if we carried the country in the last election factories would become idle and wages would go down. They said that the farmer's products would immediately go down, down in price, whereas exactly the contrary has come to pass. Industry and manufacture are prospering, and there certainly has been no general decrease in wages so far as I know. The panic which you Republicans predicted has not come, and farm products are bringing an enormous price. Mr. Speaker, the country expects us to pass this bill and pass it quickly, and we are here to perform that duty. Whatever some Frenchman may have said to the gentleman from Kansas, the situation is just this: If the country approves what we do here to-day, then in the next Congress we will still have a Democratic majority. If the country does not approve our record in this Congress, then our majority in this House may be reversed. We are willing to take the risk, and in order to expedite the passage of this tariff bill it becomes necessary to adopt this rule, which is exactly similar to several adopted by our Republican friends under similar circumstances. So, Mr. Speaker, we feel if we are to carry out the command clearly and plainly expressed by the American people at the last election we should adopt this rule and proceed to make the Underwood-Simmons bill a law at the earliest possible moment.

I reserve the remainder of my time.

Mr. CAMPBELL. Mr. Speaker, I yield six minutes to the gentleman from New York [Mr. PAYNE]. [Applause.]

Mr. PAYNE. Mr. Speaker, when this bill left the House about four months ago I remarked to my friend from Alabama [Mr. UNDERWOOD] in reference to something he had said to me about history of four years ago that when this bill came back from the Senate he would not be able to recognize it if he met it on the street. Now, if you gentlemen who have this bill in your hands will take and run over it casually in this way, it

will appear to you that every paragraph in the bill has been amended; but that is rather a hasty conclusion, because there are some paragraphs that have escaped and have been kept exactly as they were in the Underwood bill as it left the House, but nearly every one of those paragraphs were copied in the Underwood bill from the best tariff law ever put upon the statute books. [Applause on the Republican side.]

Whatever fault you may find with that law, that is still true. I had forgotten, however, there is one tag that was left in the bill by which the gentleman might recognize it, possibly, as his offspring and that of the gentleman from the White House, and that was they have preserved the number "3321" of the House bill. [Laughter on the Republican side.] Why, so many things dear to the gentleman's heart have gone out of the bill. There was the "dumping clause" that he talked about so eloquently, and then there was the 5 per cent discount in duties on goods brought here by American vessels, which was to build up the merchant marine of the country. But they have gone into the scrap heap by the amendments of the Senate, and the gentleman will come in here by and by with tears in his eyes and tell what the wicked Senate have done to this bill and he could not help it. Then the gentleman had what he said was a substitute for our maximum and minimum provision, which was not any substitute at all or of any use whatever in the bill, simply enacting something that was in the law now by which we made Cuban reciprocity and some other agreements. But the Senate comes in here with a maximum and minimum provision; but, good Lord, what a provision it is!

Why, it provides that the President of the United States shall determine when some countries are acting unjustly toward us in regard to articles of our trade going into their country, and when he has determined that there shall be a proclamation, and then "the following duties shall go into effect." What articles do they select to put those duties on? They are brought to pick out those articles that go to the breakfast table of the people of the United States, articles used to clothe the people of the United States, necessities of life, which you are going to give free to the people. They even put sugar on the list, with a duty of 15 cents a hundred at 75° and an additional two-tenths of a cent up to 96°. And the funny thing about it is that this very bill provides by a Senate amendment a higher rate of duty on sugar for the next three years, namely, one and a quarter cents per pound.

How is the President going to put that thing into operation? Look at pages 54 and 280 of the bill and you will find it impossible by this bungling attempt, this cheat by way of reciprocity.

Why, the gentleman from Alabama [Mr. UNDERWOOD] might consent to that thing, but no President who was sane would ever put it into effect in the United States. It puts a duty of 15 per cent on wool and leaves the woolen manufactures at the same rate of duty that they are paying now. It puts a duty of 3 cents on coffee, and so on, all down the line, and it puts a duty on meats.

But in the course of his reign the President in the White House will never dare to avail himself of that reciprocity provision, because it decreases the rate of duty on sugar during the next three years, during which time he is going to enable the people of Louisiana to work out their salvation. [Laughter on the Republican side.]

Why, I could talk for four weeks on this bill, on the Senate amendments alone. Some of those amendments ought to be adopted. I only wish I had time. If I had time, I think I could present them to the House in such a way that some of them would be adopted, if you people over there did not skulk off into caucus in the meantime and receive your advice and get your cue and then vote the wrong way. [Laughter on the Republican side.]

Oh, what a beautiful bill this bill is going to be when it gets on the statute book. It was a daisy when it left the House, but it will be a whole field of wild flowers when it is finally finished. [Laughter on the Republican side.] The Senate have declared the same principle in the bill whenever they have amended it—of giving everything to the foreigner and not helping the people of this country. [Applause on the Republican side.]

The SPEAKER. The time of the gentleman from New York has expired. The gentleman from Texas [Mr. HENRY] is recognized.

Mr. HENRY. Mr. Speaker, I yield three minutes to the gentleman from Illinois [Mr. FOSTER].

The SPEAKER. The gentleman from Illinois [Mr. FOSTER] is recognized for three minutes.

Mr. FOSTER. Mr. Speaker, the gentleman from New York [Mr. PAYNE] complains a great deal about the amendments that have been put upon this bill in the Senate. I want to call to

his mind the fact that when the bill which bears his name came back from the Senate nearly all of the schedules were very materially raised, and when the bill finally became a law it was higher than the one that preceded it.

Now, the American people have gotten tired of paying tribute to the special interests of this country, and last fall, in no undecided terms, did they say that they proposed to quit paying a portion of their earnings to these interests in our country that have grown so rich under the benefits of Republican tariff bills of the past. We were commissioned to write a tariff bill that would give relief to the consumers and to deny to these special interests those rights that they have enjoyed for so many years under the kind of tariff bills that you on that side have written into law.

I believe that when this bill comes back to the House for final action it will be adopted here and will meet with the approval of the American people. [Applause on the Democratic side.]

I think that we can trust the House conferees when they meet with the Senate conferees to fairly adjust these differences, and wherever these rates have been made lower the House conferees will agree to them. And I think that the bill will be such as to meet the approval of Members of this House, not only upon this side, but also upon that side, except a few stand-pat Republicans who are standing out regardless of what the will of the American people may be or how they have spoken in the past.

I realize that my good friend from New York [Mr. PAYNE], the former chairman of the Committee on Ways and Means, must stand up for the bill which bears his name, but which is soon to be buried in a timely grave, with no mourners save himself and a few Members on that side.

Oh, I know he wishes that it might soon be forgotten, but in the time to come it will be looked back upon as the iniquitous measure which bears the name of the distinguished Member from New York, and the American people will realize what it cost them under that law while it remained upon the statute book. [Applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. KELLY of Pennsylvania. Mr. Speaker, I yield five minutes to the gentleman from Kansas [Mr. MURDOCK].

Mr. MURDOCK. Mr. Speaker, how devious and subterranean are the ways of a tariff bill. We have now arrived at a new stage of the Underwood measure. First, it was framed by the Democratic members of the Ways and Means Committee of the House—

Mr. MANN. Oh, no; by the President.

Mr. MURDOCK. Then it was put through a Democratic caucus under their guidance and brought before the House itself; it passed through here virtually unchanged, then it went to the Senate a perfect bill from a Democratic viewpoint.

After long discussion and amendment the Senate returns it to us with 676 amendments; amendments that are not trivial, but which go to the vitals of the measure itself. This body to-day as a whole has no knowledge of those amendments. There has been no time for this membership to read those amendments, much less understand them. Very few of the men in this body know where those amendments are, what they are, and what schedules they affect. There are not 10 men within the sound of my voice who can tell how many changes were made in the agricultural schedule or what they were. Let me inform them. In the agricultural schedule 36 changes were made. In the cotton schedule there were 21, virtually a complete change of all of that schedule. In the woolen schedule there were 25 changes and in the metal schedule 70.

Now, I say this to the House: A tariff bill is not written in the Ways and Means Committee. It is not written, as the gentleman from Illinois [Mr. MANN] suggested, in the White House. It is not written in the Finance Committee of the Senate and it is not written either in the Senate or the House. A tariff bill is written in conference. Talk about insidious lobbies! The lobby in this country knows that the major items in a tariff are not fixed either in the Senate or the House proper. When a tariff bill is under consideration the lobby watches the conference, because there occurs the real legislation on the major items in controversy, and every man who knows how a tariff bill is written knows that I am telling the truth. The controverted items in this bill are the major items in it, and in this bill they number 676. This House and the Senate are not going to write those 676 items into their final forms. That is to be done in conference.

The men who laid the foundations of this Government took precautionary steps against the power of conference. They provided that when a bill had passed the House and was amended

in the Senate and came back to the House the membership of the House should have a right to consider separately the Senate amendments. The power of the individual in this body is theoretically so great that yesterday when the gentleman from Alabama [Mr. UNDERWOOD] rose he had to observe the rules which our forefathers gave us; he had to ask unanimous consent that this amended bill be considered out of the ordinary channel. It was within the right of every Member of this body under regular procedure to stop this extraordinary proceeding. The men who founded this Government gave every man here the right to have a voice in the framing of the final form of a tariff bill. Now, what happened?

Objection to unanimous consent was made, and then the Democrats did exactly what the Republicans have done for years. There is no difference between you. There is no more difference between you than there is between tweedledee and tweedledum. Three years ago to-day you Republicans did just exactly what you Democrats are doing to-day. What does the special rule mean? It means that you take out of your own hands and place in the hands of a little group of men the making of your tariff bill. You will not again have opportunity for separate votes. It is now or never. If you want to adopt this kind of rule, go ahead and do it; but I say to you, gentlemen on the majority side, that when you tear down the integrity of the ordinary rules of representation, when you take away from yourselves and from me the right to a voice in the final framing of a great revenue tariff bill, you are untrue to the people and you are untrue to the representative form of government. [Applause.]

Mr. HENRY. Mr. Speaker, I yield one minute to the gentleman from Tennessee [Mr. SIMS].

Mr. SIMS. Mr. Speaker, I expect to vote for this rule. I do not see any other way to bring about what we all want, which is the expeditious passage of this bill. But in voting for this rule I do not want anybody to understand that I am opposed to amendment 609 of the Senate, taxing trading in cotton futures, which will accomplish that for which we have been fighting in this House for 20 years. This amendment will everlastingly abolish and destroy gambling in cotton futures on the exchanges of the country. I hope that the conferees will agree to this amendment without any change unless it is a beneficial one; and then I hope legislation will follow it to prevent gambling in wheat and corn, and to forever stop gambling in every species of farm products. To defeat this amendment now will be regarded as a setback to the efforts that have been made by the people of this country to destroy trading, not in cotton, but in the name of it, by which cotton itself has been adversely affected, as well as every industry dependent upon it for many years. [Applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. HENRY. Mr. Speaker, I yield one minute to the gentleman from Indiana [Mr. GRAY].

Mr. GRAY. Mr. Speaker, it has always been my practice to vote against the previous question where there has been no opportunity for full discussion. But this discussion began in the early springtime and has continued during the long, weary months of a torrid summer. The birds have nested and flown with their young; the flowers have bloomed and faded; the harvests have ripened and been garnered in; the beetles are already singing the dirges of a dying year; the autumn has come with the sere and yellow leaf of decay, with wailing winds and naked woods and meadows brown and sere; the first breath of winter is upon our cheek to chill us.

Looking squarely at my platform pledges to the people, I was ready to vote for the previous question. [Applause.]

Mr. HENRY. Mr. Speaker, I yield one minute to the gentleman from Georgia [Mr. BARTLETT].

Mr. BARTLETT. Mr. Speaker, as to what this Democratic tariff bill is and upon what it is based, I desire to extend my remarks in the RECORD by printing an editorial in this morning's New York World. It meets with my approval, and I think it should meet with the approval of all those who are familiar with the facts.

The SPEAKER. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD by printing an editorial. Is there objection?

There was no objection.

The editorial is as follows:

BY A FREE CONGRESS.

It is easy to criticize particular schedules of the Underwood-Simmons tariff. It is easy to criticize particular schedules of any tariff. But whatever may be the faults of the Underwood-Simmons measure, it is an honest tariff, enacted by a free Congress.

Its mistakes are honest mistakes. Its shortcomings are honest shortcomings. Its errors of judgment are honest errors of judgment.

This tariff was framed in the open, not in secret. Its schedules were not prepared by special interests seeking their own private profit and

accepted by subservient committees. Its rates were not manipulated by lobbies masquerading in the guise of disinterested patriots. It was not bought and paid for in campaign contributions. No Member of Congress who helped pass it was engaged in manipulating the stock market while he was manipulating the schedules.

It is the first tariff in 50 years which was passed by the representatives of the people and not by the representatives of privilege and plutocracy. President Wilson describes the contest as "a fight for the people and free business which has lasted a long generation." It was even more than that. It was a fight for honest representative government.

The interests that framed the McKinley Act had no share in the Underwood-Simmons bill. The Gormans and the Smiths who mutilated the Wilson bill had no opportunity to mutilate the Underwood-Simmons bill. The men who bought the Dingley tariff from Mark Hanna found no market in the Sixty-third Congress. The protected extortionists who persuaded the Republican Party to commit suicide with the Payne-Aldrich bill had a different kind of administration to deal with this time. The National Association of Manufacturers who "accelerated" poor Taft's Tariff Board had to deal with a President who publicly denounced the lobby. They had also to meet an exposure of their methods in the World's Mulhall revelations which have destroyed the most complete conspiracy that special privilege ever organized for the secret control of government.

Differences of opinion in regard to particular schedules become insignificant in comparison with the spirit and manner in which the Sixty-third Congress has done its work. Regardless of all criticisms of rates and clauses, this bill marks in tariff making the actual restoration of government of the people, by the people, and for the people in all that the term implies. Tariffs come and tariffs go, but a free Congress is the highest manifestation of republican self-government.

Mr. HENRY. Mr. Speaker, the remainder of my time will be consumed in one speech.

Mr. CAMPBELL. Mr. Speaker, I yield five minutes to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Speaker, on May 8 the House passed the Underwood tariff bill. After some discussion that bill as reported to the House, contained 218 pages. Yesterday we received from the Senate the bill, with Senate amendments to it consisting of 126 pages. The silk schedule in the bill when it passed the House consisted of two pages. The Senate amendments to the silk schedule in the bill consists of eight pages. And so on through the bill. The original bill was considered by a Democratic caucus. Democrats at least had an opportunity to offer amendments to it, to offer arguments concerning it, but the Senate after four months of consideration has proposed to the House 576 amendments, many of them of vast importance, many of them containing new propositions, and now the other side of the House, which for years has declaimed against this method of procedure, proposes to hog tie itself, deliver over every power it has, and cast this bill to the tender mercies of four Democrats, to be named by the Speaker.

I do not know what this side of the House would do; time will prove what this side of the House would do in handling a tariff bill. Time never will prove what my distinguished friend from Kansas [Mr. MURDOCK] would do if his party was in control. He will always be at liberty to rail at Democratic procedure and against Republican procedure, because he will never receive the acid test of action. He always will be permitted as long as he is in politics to live in declamation. [Applause.]

Mr. Speaker, this bill will soon go to the country. It will soon be tried before the people. You are confident on your side that it will be successful. Let me remind you that you have been equally confident before whenever you have had the power. You were equally confident when the Wilson bill passed; you were equally confident when we passed the Dingley bill; you were always confident. And yet, Mr. Speaker, notwithstanding the profound efforts of our distinguished Speaker, of our distinguished Secretary of State, of the distinguished gentleman formerly Secretary of the Interior, and many other gentlemen in both the Democratic and Progressive Parties, already the tide has turned, already the people are ready to turn you out of power and restore American supremacy in American markets. [Applause on the Republican side.]

Mr. HENRY. Mr. Speaker, I yield the balance of my time to the gentleman from Alabama [Mr. UNDERWOOD]. [Applause.]

The SPEAKER. The gentleman from Alabama is recognized for 13 minutes.

Mr. UNDERWOOD. Mr. Speaker, we confront the final stage of writing a tariff bill. There is criticism by the opposition of the rule that is presented here to-day to enable the Congress to act with reasonable speed in concluding its deliberations.

The rule that is under consideration to-day is practically the same rule that has been adopted when every tariff bill has been sent to conference since the enactment of the tariff bill of 1883. It is in identical language with the rule that was adopted four years ago when the Payne tariff bill went to conference and the distinguished leader of the minority voted for that rule. [Laughter and applause on the Democratic side.] I criticized the rule at that time. [Laughter on the Republican side.] But I did not criticize the rule because it was sending the tariff bill to conference where action could be had, but I criticized it

because before the adoption of the rule this House had never had an opportunity to consider the bill. [Applause on the Democratic side.]

No man can say that there has ever been a bill presented to the House of Representatives where there was more freedom of amendment and debate than there was in the consideration of this bill before the House. [Applause on the Democratic side.] The previous question was ordered by unanimous consent on the general debate. Throughout the five-minute rule those in control of the bill continually yielded to the minority the time that they wanted to discuss the bill. There was not a gentleman on this floor who desired to offer an amendment to this bill who was deprived of that opportunity. That was not the case when the Payne tariff bill was before this House, or the Dingley bill, either. They were passed under rules that prevented consideration of the items of the bill by the House. Now the question under consideration is as to whether or not we shall follow the procedure laid down by the rules and send this bill back to the Ways and Means Committee, which could be done without a vote of this House, for consideration, or whether we shall send it to another committee composed of gentlemen from both Houses of Congress. Gentlemen say it is depriving the House of action on this bill. If we brought the bill back from the Ways and Means Committee the House would have to act on it. No matter what this conference committee does, their action will not be final until it is ratified by this House. Of course, I take it for granted that my friends in the opposition will not control the action of the House when the conference committee comes back, but it is not intended that they should control the action of the House. The American people decreed otherwise. [Applause on the Democratic side.] But when your conference committee comes back here with its report it must be ratified by the House before the bill becomes a law, and the adoption of this rule is not in any way preventing the final ratification of the bill by the constituted majority of the American people upon the floor of this House. If we do not adopt a rule of this kind, with 600 amendments it would probably be a month or more before the bill could go back to the Senate and be considered in conference. If I judge rightly the sentiment of the American people, as expressed in the press of this country, both the Democratic and Republican newspapers, it is that they desire immediate action on this bill. The Democratic press of the country, as voicing the sentiment of the Democratic people of the country, are satisfied with the bill and want it enacted into law. The Republican press of the country, voicing the sentiment of their party, have repeatedly said that this bill should be enacted speedily, that the American people should have an opportunity to give it a tryout, that delay was interfering with business, that delay was disturbing the business interests of the country, and the entire press of the country to-day is calling for immediate action.

The adoption of this rule means action. If the bill is right, if the bill will bring benefits to the American people, as we believe it will, then the speedier it is enacted the better for the American people. If the bill is a mistake, an error, then we had better try it out, and it is for your benefit that the American people should find out as soon as possible. Nothing can be gained by delays. As to the Senate amendments to this bill, there are many of them I do not agree with. Of necessity the Senate of the United States, representing one constituency, and the House of Representatives, representing another constituency, there must be compromises on great legislation of this kind before it can be enacted into law. But there is this to say as to this bill which can not be said as to other bills that have gone to conference in the past: The differences between the two Houses as expressed by these amendments are solely questions of revenue. There is no special interest that has its hand marks on this bill, either on the original bill or on this legislation. [Applause on the Democratic side.] For the first time in four decades we send a bill to conference that is the product of the brain and work of the representatives of the American people and not the work of special interests who desire protection. [Applause on the Democratic side.] So far as the bill is concerned, personally I have no fear of what will be the result. It has been before the country in the main since the 7th day of last April. There never has been a great tariff bill pending in the Congress of the United States during that length of time before that has affected the business interests and the business life of the Nation as little as this bill has. [Applause on the Democratic side.] The business of the country has moved along smoothly. There is no threat of panic or disaster. The country to-day is ready to accept the bill and do business under it, and all they ask and all they desire is that the uncertainty of its enactment into law may be speedily determined and that they may have an opportunity to adjust

themselves to the new business conditions and move on to good times and prosperity. [Loud applause on the Democratic side.]

The SPEAKER. The question is on agreeing to the resolution.

Mr. MANN. On that, Mr. Speaker, I demand the yeas and nays.

The SPEAKER. The gentleman from Illinois [Mr. MANN] demands the yeas and nays.

The yeas and nays were ordered.

The SPEAKER. The Clerk will call the roll. Those in favor of the rule will answer "yea"; those opposed will answer "nay."

The question was taken; and there were—yeas 190, nays 86, answered "present" 5, not voting 148, as follows:

YEAS—190.

So the resolution was adopted.

The Clerk announced the following additional pairs:
Until further notice:

Mr. BEALL of Texas with Mr. BURKE of Pennsylvania.

Mr. RODDENBERY with Mr. BUTLER.

Mr. CLARK of Florida with Mr. DANFORTH.

Mr. DOUGHTON with Mr. COPELY.

Mr. GORDON with Mr. EDMONDS.

Mr. KORBLY with Mr. SHREEVE.

Mr. HOUSTON with Mr. ROBERTS of Massachusetts.

Mr. HAMILL with Mr. LENROOT.

Mr. NEELEY. Mr. Speaker, I desire to vote.

The SPEAKER. Was the gentleman in the Hall listening?

Mr. NEELEY. No, sir; I was not.

The SPEAKER. Then the gentleman can not vote.

The result of the vote was announced as above recorded.

The SPEAKER. The resolution is agreed to, and the bill is sent to conference. The Clerk will announce the names of the conferees on the part of the House.

The Clerk read as follows:

Mr. UNDERWOOD, Mr. KITCHIN—

Mr. MANN. Mr. Speaker, not yet. Under the rule the House has not yet disagreed to the Senate amendments.

The SPEAKER. That is true.

Mr. UNDERWOOD. Mr. Speaker, when a similar rule was adopted four years ago, the Speaker immediately appointed the conferees without any intervening motion.

Mr. MANN. I can not help that. Because they did wrong four years ago, that is no reason why we should do wrong now. We have on the minority side now a man who is alert. We did not then. [Laughter.]

The SPEAKER. The language of the rule is:

Resolved, That upon the adoption of this resolution it shall be in order to move to nonconcur in gross in the Senate amendments to H. R. 3321 and agree to a committee of conference asked for by the Senate on the disagreeing votes of the two Houses, and the House shall, without further delay, proceed to vote upon said motion; and, if said motion shall prevail, a committee of conference shall be appointed.

Mr. MANN. In the course of time the gentleman from Alabama will learn that rule by heart.

The SPEAKER. The gentleman from Alabama can make his motion.

Mr. MANN. Certainly. The gentleman can move to nonconcur in gross.

Mr. UNDERWOOD. Mr. Speaker, I move that the House agree to the conference asked by the Senate on the disagreeing votes of the two Houses, and that the Speaker appoint a committee of conference to act with the committee on the part of the Senate.

Mr. MANN. The gentleman's motion is to disagree to the Senate amendments in gross and to agree to the conference?

Mr. UNDERWOOD. Yes. I make that motion.

The SPEAKER. The gentleman from Alabama moves to disagree to the Senate amendments in gross and agree to the conference asked by the Senate, and that the Speaker appoint the conferees.

Mr. MANN. On that motion I ask for the yeas and nays, and pending that I make the point of order that there is no quorum present.

The SPEAKER. The gentleman asks for the yeas and nays, and makes the point of no quorum present. The Chair will count to see if there is a quorum. [After counting.] One hundred and seventy Members present; not a quorum. The Doorkeeper will lock the doors, the Sergeant at Arms will notify absentees; those in favor of the motion will answer "yea," those opposed "nay," and the Clerk will call the roll.

The question was taken; and there were—yeas 185, nays 78, answering "present" 5, not voting 161, as follows:

YEAS—185.

So the motion of Mr. UNDERWOOD was agreed to.
The following additional pairs were announced:
Until further notice:
Mr. TEN EYCK with Mr. JOHNSON of Washington.
Mr. CLAYPOOL with Mr. FESS.
Mr. HUMPHREYS of Mississippi with Mr. KINKAID of Nebraska.

Mr. MURRAY of Massachusetts with Mr. MARTIN.
Mr. STEPHENS of Texas with Mr. SMITH of Minnesota.
Mr. STEPHENS of Nebraska with Mr. DANFORTH.
Mr. GREGG with Mr. COPELY.
Mr. KENSLEY with Mr. HINEBAUGH.
Mr. PETERS with Mr. LANGHAM.
Mr. STANLEY with Mr. BELL of California.
Mr. UNDERHILL with Mr. EDMONDS.

The result of the vote was then announced as above recorded.

The SPEAKER. A quorum is present, and the Doorkeeper will open the doors. The motion of Mr. UNDERWOOD is carried, and the Clerk will announce the following conferees.

The Clerk read as follows:
Mr. UNDERWOOD, Mr. KITCHIN, Mr. RAINEY, Mr. DIXON, Mr. PAYNE, Mr. FORDNEY, and Mr. MURDOCK.

EXTENSION OF REMARKS.

Mr. HELVERING. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD, commenting on some extracts from a paper printed in Skowhegan, Me.

Mr. MANN. To what does it relate?

Mr. HELVERING. It relates to the late Maine election.

Mr. MANN. I am glad that there is one Democrat who is not trying to forget it. All of the rest of them are. [Laughter on the Republican side.]

The SPEAKER. The gentleman from Kansas asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its Clerks, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 221. An act for the relief of the Garden City (Kans.) Water Users' Association, and for other purposes.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 221. An act for the relief of the Garden City (Kansas) Water Users' Association, and for other purposes; to the Committee on Irrigation of Arid Lands.

THE CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union, for the further consideration of the currency bill, H. R. 7837.

The motion was agreed to; accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. GARNER in the chair.

Mr. HAYES. Mr. Chairman, I yield one hour to the gentleman from Iowa [Mr. PROUTY].

Mr. PROUTY. Mr. Chairman, I wish to give notice that at the proper time I will offer an amendment striking out the word "national" in the ninth line, on page 3, and striking out the word "shall" and inserting the word "may" in the tenth line on the same page, and striking out all of section 8. The effect of this amendment is to allow all banks—State, private, and national—to subscribe to the stock of the regional reserve banks, but coercing none of them to do so. I offer this to guarantee the constitutionality of this bill if it shall pass.

I have other objections to this bill. Most of these have been ably voiced by others, and I will therefore confine my discussion to one question, namely, the constitutionality of that provision in the bill requiring national banks to subscribe one-fifth of their capital stock and 5 per cent of their deposits as the fund constituting the working capital of the reserve banks.

The national banks now have about \$1,000,000,000 of capital and about \$8,000,000,000 of deposits. Of this they are required to subscribe 20 per cent of capital and pay in 10 per cent and 5 per cent of their deposits. Assuming that all the national banks would enter this arrangement, they would pay into the reserve banks about \$100,000,000 of capital and about \$400,000,000 of deposits, making a total of \$500,000,000. This \$500,000,000 constitutes the only free working capital of the reserve banks. It is true that under section 16 the Federal Treasury is required to deposit all moneys held in the general fund with these reserve banks, but that section provides that interest may be required on this deposit. It is also true that the Federal Government, under section 17, may furnish to these reserve banks Treasury notes, but the same section expressly provides that the reserve banks shall pay interest on these notes at a rate to be fixed by the reserve board. It is fair to presume that this board will charge a fair rate of interest upon both Federal deposits and Federal notes, and I therefore leave out of my calculations in this matter any earnings that might come to these reserve banks from the use of Federal money or deposits.

It will be noted that the money that the banks are required to deposit with the Federal reserve banks is not allowed to draw interest, while the Government's does. These deposits by the banks are not, in fact, reserve of the banks subscribing. They are not like the reserve now held by such banks in correspondent banks. They can not draw on them. Under no circumstances can they use them. So far as being available for the use of banks in time of emergency they might as well be locked up in safety vaults and the key thrown in the river. This bill expressly provides that they "shall not be diminished." Therefore they become as much a part of the actual capital of the reserve banks as the subscription to the capital stock. We then have \$500,000,000 of the money belonging to the subscribing national banks tied up as working capital in these reserve banks.

The national banks last year earned 11.66 per cent on their capital. I think it perfectly fair to say that these reserve banks could earn at least 4 per cent on the total amount of their working capital, and I will, for convenience, use that rate for figuring. I do not claim that these figures are absolutely correct, but they are sufficiently accurate to reveal the point for which I am contending. Figuring on this basis the total earnings for these reserve banks would be \$20,000,000 a year. Of this amount \$5,000,000 would go to the paying of the 5 per cent on the \$100,000,000 capital subscribed by the banks. That would leave \$15,000,000 to be divided as follows: Seven million five hundred thousand dollars to the surplus fund until that fund had reached 20 per cent of the capital and \$7,500,000 to be divided, 40 per cent to the banks and 60 per cent to the Federal Government. That would make the banks receive during the time that the surplus was being accumulated \$3,000,000 as a pro rata dividend which, added to the regular dividend of \$5,000,000, would make \$8,000,000 a year for the \$500,000,000 capital furnished, or 1.6 per cent interest on the amount so furnished. The Government during the same time would receive yearly \$4,500,000 without having contributed a dollar either to the expense, the capital, or the risk of the reserve banks. At the rate I have assumed the surplus would reach 20 per cent within three years. After that time there would be \$15,000,000 each year to divide between the banks and the Government. The banks would get \$6,000,000 and the Government \$9,000,000. During that time the banks would get yearly \$5,000,000 of dividends and \$6,000,000 of the pro rata dividends, or a total of \$11,000,000 for the furnishing of \$500,000,000 capital, or a rate of 2.2 per cent interest per annum. The Government during the first three years would receive \$4,500,000 each year, or \$13,500,000 for the three years. For the remaining 17 years of the 20-year period provided in the bill the Government would receive \$9,000,000 a year, or \$153,000,000 for the period. The \$20,000,000 surplus by section 7 becomes the property of the United States. This would make a total of \$186,500,000 which the Government would make out of that transaction, and the banks would make an average of 2.11 per cent interest on the capital that they furnished to the reserve banks. Under this law this \$186,500,000 goes to the direct benefit of the United States, and it is set apart by the act itself as a fund from which to pay off and discharge the "outstanding bonded indebtedness of the United States."

Now, the national banks are forced to go into this measure regardless of their wishes and regardless of their interests. They are compelled to furnish this capital for this very small compensation under the pains and penalties of slow but sure death. I shall consume the time allotted to me in attempting to demonstrate to this House that this is a violation of the

fifth amendment to the Constitution of the United States, which, among other things, provides that—

No person shall * * * be deprived * * * of property without due process of law, nor shall private property be taken for public use without just compensation.

In order to intelligently understand the purpose of this provision and the dangers it was designed to prevent, it is necessary to trace the origin and abuse of power that preceded its adoption.

The principle of the fifth amendment first found expression and effect in the thirty-ninth article of the Magna Charta. Prior to that time the rights of private property were held of slight tenure when needed or desired by the whims, caprices, or greed of kings. The property of individuals was escheated, confiscated, and even forcefully seized under all kinds of pretexts whenever the war chest of the ruling monarch needed replenishing or whenever he wanted money or land to gratify his own ambition or reward his faithful henchmen. This method of securing funds for the public treasury was practiced more or less by all the Kings of England, but grew in abuse during the reigns of Kings Henry and Richard and became intolerable under the reign of King John. Of his reign an English writer has said: "The whole machinery of justice was valued primarily as an engine for transferring land and money to the treasury." This abuse became so oppressive and intolerable during his reign that the people of England rose up in revolt and, backed by an organized and equipped army, demanded of King John either that he should abdicate the throne or sign a bill of rights which they had prepared and proposed. After much parleying and with threatening coercion the people at last wrung from that weak and profligate King the great charter of their liberty, commonly called the Magna Charta. If one will read carefully the history of events preceding and the negotiations and parleyings that took place at Runnymede between the King and the committee of barons at the time that these articles were signed, he will find that the principle involved in the thirty-ninth article was the one that the people most uncompromisingly demanded and that King John most reluctantly granted.

It was the central demand of that great movement. These articles were signed on the 11th day of February, 1215, and constituted the first official declaration of popular supremacy and individual rights. They provided that private property should not be taken for the sovereign's use, nor could any person be deprived of private property, except upon a judgment of his peers in accordance with the law of the land. It substituted the power and judgment of the people for the hitherto capricious judgment and wish of the sovereign. This document had been cherished as the palladium of English liberty for nearly six centuries before the Constitution of the United States was written, and had been interwoven with the laws and jurisprudence of that country, including the American colonies. Yet, strange to say, the authors of the original Constitution omitted, by accident or design, this limitation upon the power of the Federal Government. This omission constituted the center of objection to the adoption of the Constitution by the several States. At one time it threatened seriously the ratification of the Constitution. It was not until Madison and other friends of the Constitution, through the columns of the *Federalist* and in speeches before the several State legislatures, had promised to present an amendment at the first session of Congress protecting the people against the exercise of this Federal power that the requisite three-fourths of the States were induced to ratify and make effective the Constitution. It was in response to this demand and promise that Madison, at the first session of Congress, offered this amendment among others for adoption. The first amendments to the Constitution were all clear limitations upon the power of the Federal Government. Every court that has considered the question has held that this fifth amendment is a limitation upon the Federal Government and not a limitation upon the States. This same limitation, however, was placed upon the States in almost exactly the same language by the fourteenth amendment. Thus we have embedded into our Constitution the proposition that no person shall be deprived of his property except by due process of law, and private property shall not be taken for public use without just compensation.

DUE PROCESS OF LAW.

Now, let us inquire what is the meaning of this clause of the Constitution. By all the authorities "due process of law," as contained in the Constitution, is of the same force and effect as the "law of the land" contained in the thirty-ninth article of the Magna Charta. It means that no private property shall be taken for public use, except in accordance with a preexisting law, and not by law enacted for that direct purpose. It is the

exercise of the judicial power of the Government and not the legislative. Congress has no power to confiscate, condemn, or appropriate a single dollar of private property for the Government's use. It may make laws for the violation of which the judicial department may impose fines and forfeitures and through that process alienate private property for Government benefit. It may make laws for the condemnation of private property for public purposes through proper judicial procedure, but with the express limitation that it can not be so taken without "just compensation." An act of Congress directly condemning a tract of land held in private ownership even for the erection of a national capitol would be of no legal or binding force. It is clearly outside of the legislative power of the Government.

The first clear announcement by the Supreme Court of the United States on this subject was made in the case of *Dartmouth College v. Woodward* (4 Wheat., 519). Daniel Webster made this pronouncement:

By the law of the land is most clearly intended the general law; a law which hears before it condemns; which proceeds upon inquiry, and renders judgment only after trial. The meaning is that every citizen shall hold his life, liberty, property, and immunities under the protection of the general rules which govern society. Everything which may pass under the form of an enactment is not therefore to be considered the law of the land.

Cooley, in his work on *Constitutional Limitations*, page 431, in commenting on this definition, says:

It is entirely correct, also, in assuming that a legislative enactment is not necessarily the law of the land. "The words 'by the law of the land,' as used in the Constitution, do not mean a statute passed for the purpose of working the wrong. That construction would render the restriction absolutely nugatory and turn this part of the Constitution into mere nonsense. The people would be made to say to the two Houses: 'You shall be vested with the legislative power of the State, but no one shall be disfranchised or deprived of any of the rights or privileges of a citizen unless you pass a statute for that purpose.' In other words, you shall not do the wrong unless you choose to do it." When the law of the land is spoken of "undoubtedly a preexisting rule of conduct" is intended, "not an *ex post facto* rescript or decree made for the occasion. The design" is "to exclude arbitrary power from every branch of the Government; and there would be no exclusion if such rescripts or decrees were to take effect in the form of a statute."

In other words, this provision of the Constitution was intended and designed as a limitation upon the power of the legislative as well as the other branches of the Government.

DEPRIVATION OF PROPERTY.

In the first case in the Supreme Court in which this question was involved there was serious contention that there could not be a "deprivation of property" with anything less than the actual physical taking of it, and the dissenting opinion filed in that case so contended; but the majority of the court held that deprivation of property meant anything that deprived the owner of the control, free use, or earnings of it. This holding of the Supreme Court has been uniformly held and maintained by every court that has since passed upon the question. In the case of the *United States v. Lynah* (188 U. S., 469) the rule is clearly stated. That was a case where damage had been done to the land by an overflow caused by public improvement. Counsel for the Government strenuously contended that since the legal title still remained in the original owner he had not been deprived of his property, but the court says:

It would be a very curious and unsatisfactory result if, in construing a provision of constitutional law, always understood to have been adopted for protection and security to the rights of the individual as against the Government, and which has received the commendation of jurists, statesmen, and commentators as placing the just principles of the common law on that subject beyond the power of ordinary legislation to change or control them, it shall be held that if the Government refrains from the absolute conversion of real property to the uses of the public it can destroy its value entirely, can inflict irreparable and permanent injury to any extent, can, in effect, subject it to total destruction without making any compensation, because, in the narrowest sense of that word, it is not taken for the public use. Such a construction would pervert the constitutional provision into a restriction upon the rights of the citizen, as those rights stood at the common law instead of the Government and make it an authority for invasion of private right under the pretext of the public good, which had no warrant in the laws or practices of our ancestors.

The friends of the present bill contend that the legal title to the capital and deposits subscribed to the reserve banks still remains in the subscribing banks. That is true, but the subscribing banks, against their will, are deprived of the use or control of it and a large part of its earnings. All the accumulated surplus up to 20 per cent and 60 per cent of the net profits beyond that go to the Federal Treasury without the Government paying to the subscribing banks a single dollar.

The friends of the bill estimate that in 20 years this will put into the United States Treasury at least \$200,000,000. Every dollar of this is the earnings of the reserve banks upon the working capital furnished by the subscribing banks. It is true, as already pointed out, that the Federal Government deposits its free money in these reserve banks, but they secure interest on that the same as a depositor in an ordinary bank

may receive interest, and as a further compensation to the Government for the use of this money the reserve banks, at their own expense, act as fiscal agents for the Treasury. It is true that the Government furnishes Treasury notes under certain conditions to these reserve banks, but the bill expressly authorizes the charging of a reasonable rate of interest as payment for this service. This scheme, when analyzed to its bottom, clearly shows that the Government is attempting to use its power to compel national banks to use their funds for the creation of a banking system out of which the Federal Government is to reap a large, if not the larger, benefit. This is certainly depriving the banks of at least a part of the profits of their property for the use of the Government.

DEPRIVATION OF CONTROL.

This scheme is certainly a deprivation of the right of control of the property by the persons who are subscribers to the capital stock of the subscribing banks. While technically the capital and deposits of a bank are its property, in equity they are the property of the subscribers and depositors. Let us analyze this situation for a minute. A number of citizens in a local community subscribe their money to the capital stock of a local bank. They do this for the purpose of creating a bank to serve the local community. They intrust the management of these funds to a board of directors and officers which they elect. They intrust the management of these funds to these directors and officers because they have faith in them. This bill comes in, however, and, without their consent, takes one-fifth of the capital stock and places it under the control and management of a board of directors in whose naming they have slight or no voice. The controlling majority of the board of directors of the reserve banks consists of persons in no way connected with the subscribing banks. This is certainly taking from the stockholders of the local bank the control of that much of their property without their consent in square violation of the fifth amendment.

Now, let us take a depositor in a local bank. He deposits his money with that bank on the strength of his faith and confidence in the managers of that bank. This law comes in and takes 5 per cent of his deposits, without his consent and without the consent of the persons to whom he has intrusted the handling of it, and arbitrarily and forcefully places it in the hands of another governing board. Now, suppose that the reserve bank in which it is deposited fails. The depositor goes to his local bank and demands his money. The local banker says: "Under the mandates of the law, I placed 5 per cent of your deposits in this reserve bank which failed. It was taken from me against my wish and will, and I can not return it to you." Now, who loses that? Who should lose it under this system? Somebody has been deprived of this property—either the depositor or the bank. It was forced into the bank that lost it against the wish and will of both the depositor and deposittee. Can it be said logically that this statute is taking this money by due process of law? Is it not rather taking it by the force and effect of a direct statute enacted for that direct purpose?

Mr. PETERSON. Will the gentleman permit an interruption?

Mr. PROUTY. Certainly.

Mr. PETERSON. Did not he know at the time he made the deposit what the law was?

Mr. PROUTY. No; he subscribed to these banks perhaps 20 years ago.

Mr. PETERSON. I am speaking of the depositor you are discussing.

Mr. PROUTY. He is the depositor now. It does not provide the deposit shall be hereafter made, but especially provides that deposits a man made there before this law goes into effect shall be taken.

Mr. PETERSON. Did not he know that the corporation was subject to regulations and the bank would be obliged to obey the law?

Mr. PROUTY. That is a power they have assumed, and if they have that power they can do that; but remember all this money that is taken under this bill, every dollar of it has been subscribed and deposited before this law goes into effect.

Mr. HARDY. Under the law as it stands to-day has the Government the right to dissolve the national banks?

Mr. PROUTY. I will discuss that.

Mr. HARDY. Bearing on the proposition the gentleman is now discussing, it seems to me a pertinent question.

Mr. PROUTY. It is a pertinent question, and I will take pleasure in answering, or rather I will quote from the Supreme Court on that question.

REASONABLE COMPENSATION.

They say that the banks get a reasonable compensation for the use of their money. Do they? It is true that they get 5

per cent and a pro rata of the earnings above that on the capital paid in. But the banks furnish \$4 of deposits to every \$1 of capital. So the subscribing banks pay in \$5 and only get interest at 5 per cent on \$1. This is equal to only 1 per cent on \$5. They therefore only get 1 per cent dividends on the amount of money actually paid in. That is hardly reasonable compensation. It is further claimed that the subscribing banks get additional advantages and compensation in the right of rediscount and the general protection against panics, and so forth. The trouble with this argument is that these things do not constitute "just compensation" provided for in the Constitution. Every court that has passed on the question has held that benefits are not "compensation"; that actual money must be paid by the Government condemning or taking the property. To illustrate, suppose the Government should condemn a piece of land for the erection of a fine building; could it be said that the Government had rendered "just compensation" by proving that the remainder of the party's land had been increased enough in value by the erection of the building to repay him for the land taken? No court has ever so held and no lawyer would so contend. Lewis, in his work on Eminent Domain, third edition, page 502, after reviewing carefully the decisions on the subject, says:

When property is taken for public use, compensation must be in money and not in some so-called general benefit.

Again, in *Missouri Pacific Railway v. State of Nebraska* (217 U. S., 196), the court says:

Ultimate or probable benefits do not constitute "just compensation" within the meaning of the Constitution.

I would not have you think that I am ignorant of or have overlooked the principle which allows the offsetting of damages by benefits in taking property for the public's use. This is done under the exercise of what is commonly called police power—a power that the sovereign uses to protect the health, morals, and general welfare of his subjects. It is not a power that the Government can use for its own purpose or for acquiring property for itself. It can only be used for the benefit of the people and not for the purpose of taking property from the people for the benefit of the sovereign.

Again, let me call your attention to the fact that the 5 per cent dividend is not paid by the Government—not even guaranteed by it. It simply says that the banks may take from the earnings of their own money a dividend of 5 per cent, if it earns that much, and if it earns any more the Government will take a share of it. If you lose the whole thing, the Government will not be responsible for it. This has in it none of the "just compensation" prescribed, defined, and required by the constitutional restriction.

It must be conceded that if the Government has the power to compel the banks to subscribe 20 per cent of their capital, it has the power to make the banks subscribe 50 per cent of it, or, for that matter, all of it. If the Government has the power to take all of the earnings above 5 per cent, it has the power to take that 5 per cent also. In other words, it has the power to take all the capital of the banks and convert it to its own use. I challenge the friends of this measure to point out a single provision of the Constitution which would put any restraint or limitations upon the Government in the exercise of this right, except the fifth amendment; and if it can be so construed as to authorize the Government to take part of one's property without just compensation, there is no reason why it can not be construed so as to take all of it. But every court that has passed upon this question has held that it prevents the Government from taking any of it, except possibly a purely negligible quantity, and no court has gone further.

CORPORATION A "PERSON."

It has been suggested that this provision of the fifth amendment has been confined to individual and not corporate property; that since the corporation is the creature of the Government, the creator can do as it pleases with the property of its creature.

Mr. BARTLETT. I did not mean by the questions I asked to take any such position as that, I assure the gentleman.

Mr. PROUTY. I credit the gentleman with being too good a lawyer for that.

This was strongly contended in the earlier cases. It was claimed that the word "person" in this amendment is a real person and not a corporation. But the Supreme Court of the United States has uniformly held that the word "person" in this amendment includes private corporations. (See 99 U. S., 719; 125 U. S., 188; 216 U. S., 412; 165 U. S., 150.)

In the latter case the court says:

Under the designation of "person" there is no doubt that a private corporation is included.

In the Ninety-ninth United States case, first cited, the court says:

But equally with the States they (United States) are prohibited from depriving persons or corporations of property without due process of law.

The national banks organized under the laws of the United States are private corporations just the same as the State banks organized under the laws of the States. In volume 10, *Cyclopedia of Law*, page 160, the author, after having cited numerous authorities, says:

This is not true of a bank which is organized primarily to further the fiscal operations of the Government and whose stock is exclusively owned by the Government, but a private bank whose stock is owned by private persons is a private corporation although it is erected by the Government, and its obligations and operations partake of a public nature.

The stock of all of our national banks is held in private ownership. The Government does not hold a dollar of stock in any of them. They are therefore private corporations notwithstanding the fact that they perform a limited public function.

POWER TO REPEAL.

But the ground upon which the framers of this bill rely to sustain its constitutionality is based upon the fact that the act of 1864, known as the national banking act, reserved to Congress the express right "to amend, alter, or repeal the same."

Mr. BARTLETT. That is not exactly as I stated it. The Government has a right to repeal that and reorganize the system and create new banks and put such limits upon its new charter and new organization as it sees fit. That is the way I would state it.

Mr. PROUTY. That is, that they have the right to kill the old fellow if he does not give up his money and resurrect another fellow?

Mr. BARTLETT. They have the right to tax them in the manner they desire and they have the right to reorganize them.

Mr. PROUTY. What rights did the man have if he gets a charter?

Mr. BARTLETT. All right.

Mr. HARDY. Will the gentleman submit to one more question?

Mr. PROUTY. Yes.

Mr. HARDY. If the Government has not the right to repeal the Government banking act—

Mr. PROUTY. I concede they have; let us not waste time on that.

They say, in effect, that since the Government reserves the right to repeal the law and thus terminate all the franchises of all the national banks, the Government thereby reserves the power to impose any conditions that it sees fit. In other words, the Government can say, "We will require you to turn over a part of your capital for our benefit under the pain and penalty of forfeiture of your charter." In still other words, "We will impose as a condition of your future existence your voluntary compliance with this mandate to turn over a part of your property for Government use."

Mr. HARDY. Just one more question. Has not the gentleman now abandoned his argument about taking property without compensation of law and attempted to establish the injustice of doing what the law has the right to do?

Mr. PROUTY. No; I think not. What I am trying to say is that the Constitution of the United States throws this protection around people and their property. It tries to protect them against every kind of device and pretext that is used to get it for the Government or State without paying anything for it. That is what this constitutional provision was intended to do. That is what this constitutional provision is for.

A careful analysis of this proposition, however, will show that this is the very abuse of arbitrary power against which the constitutional provision was intended to protect. This is a plain force measure. It does not give the banks the privilege of saying whether or not they desire to enter, but the demand is squarely made to do or die. "Deliver what we demand or we will put you out of existence." This is the exercise of the highwayman's logic. He does not say that you must deliver your property to him. He just calmly says: "You can exercise your own wish in the matter; you can deliver your valuables to me or be shot dead. Take your own free choice."

Mr. PHELAN. I would like to ask the gentleman if he maintains that requiring banks to subscribe to a certain amount of stock, with the ownership of that stock to remain in the bank and the return of 5 per cent to the bank on that stock, is depriving them of any money?

Mr. PROUTY. I do; for in the first place in the meaning of the Constitution it deprives them of control. The bank in which it goes may fail and they may never get a cent, as the Government does not guarantee one dollar shall ever be returned. The

Government takes the control from the individual and runs the banks itself. This is certainly depriving of control.

Mr. BARTLETT. But if the gentleman is correct about it, it is not a matter of amount or degree. It is any amount at all.

Mr. PROUTY. Sure; that is right. If it was 25 per cent it would not make any difference, in my judgment, in the legal discussion.

Mr. HARDY. If the gentleman will permit me one question, Mr. Chairman, I would like to direct his attention to it. I agree with the gentleman that if the Government has no right to repeal these charters, it has no right to impose upon the banks new conditions that they are not willing to comply with. But I do not think that the amendment of the Constitution that provides that property shall not be taken by the Government without compensation would prevent the Government, which grants a charter, with the right reserved to amend or repeal, from repealing it.

Mr. PROUTY. I think I can state that more systematically and perhaps better than the gentleman himself is stating it. [Laughter.]

Mr. HARDY. I do not think that would prevent the repeal of the national-bank act.

Mr. PROUTY. Oh, I can not wait for an argument from the gentleman.

Mr. HARDY. Is it not a question, after all, whether the Government would have the right to establish a banking system with the condition precedent that the bank to be established should accept certain conditions?

Mr. PROUTY. I have no hesitancy in saying that the Government could organize any corporation it saw fit, and if persons or banks went into it they would be bound by it. But that is a different proposition from going out and taking a man by the throat, and saying, "Stand and deliver; your money or your life." If a legal mind can not comprehend that proposition, it can not comprehend the Constitution of the United States. There is a clear legal distinction between the status of the man that voluntarily goes into a corporation and one that is forced to go in—one is voluntary, the other coercion.

It will be noted that this act does not repeal the act of 1864, nor does it forfeit the charter of any bank. I am getting down now to Judge BARTLETT. It simply says: "If you do not surrender to the Federal Government a portion of your property for Government use, we will then exercise our power to destroy you." This can hardly be said to be obtaining property by due process of law. It is the exercise of the arbitrary power to declare forfeiture to enforce compliance with an unconstitutional demand. It is admittedly an attempt to do by indirection that which they could not do by direct enactment. It must be admitted that if this requirement is lawful and constitutional it could be enforced by due process of law rather than by the arbitrary method of forfeiture of franchise.

That is to say, if the Government of the United States has the right to say that a man shall put 25 per cent of his money into this bank it could do it by due process of law without declaring any forfeiture.

Mr. TOWNER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. PROUTY. In a moment I will yield.

Now, suppose Congress would pass a law compelling all the national banks of the United States to hand over 10 per cent of their capital and 5 per cent of their deposits for the purpose of creating a national reserve bank, the profits of which were to go to the Government. If that law would be constitutional, proceedings in court under the head of "due process of law" could be instituted to compel compliance. Does any constitutional lawyer in this House believe for a moment that the Government could in this direct manner and in accordance with "due process of law" enforce such a statute? Would not every court of the land hold that this is taking private property for public use "without just compensation"? If such a statute could not be enforced in the courts, will anyone seriously contend that it is constitutional because it may be enforced by forfeiture and not by "due process of law"?

Every court that has passed on the question has held that the right to amend, alter, or repeal does not carry with it the right to appropriate or confiscate any property. In the *Cyclopedia of Law*, volume 8, pages 1103 and 1104, the author, after having discussed the scope and effect of a reservation of this kind, says:

Since the decision in the Dartmouth College case it has become customary for legislatures to reserve to themselves the power to alter, amend, or repeal corporate privileges, and although the limitations upon this reserve power are not yet well settled, there is no well-considered case in which it has been held that a legislature, under its power to amend a charter, might take from the corporation any of its substantial property or property rights.

I am quoting now from a quotation which in turn is a quotation from the Supreme Court of the United States.

If the Government has no right to appropriate or confiscate by forfeiture, it certainly has not the power to confiscate or appropriate property under threat of forfeiture. In other words, if the Government could not pass a statute declaring a forfeiture of charter and appropriation of the property, it certainly can not lawfully compel the surrender of property under the mere threat of forfeiture. It is fair to say that the learned author, in the citation referred to above, is considering the limitations of the fourteenth amendment upon the power of the legislatures, but every court that has passed upon the question has held that the limitations upon the Federal Government by the fifth amendment and the limitations upon the State legislatures by the fourteenth amendment are identical. In *Twinning v. New Jersey* (211 U. S., 101) the court says:

Of course the part of the Constitution then before the court was the fifth amendment. If any different meaning of the same words as they are used in the fourteenth amendment can be conceived, none yet has appeared in judicial decisions.

In other words, the limitations upon the Federal Government by the fifth amendment are absolutely as broad and inclusive as are the words used in the article of the fourteenth amendment limiting the powers of the States.

The fact that the Government has the power to do one thing can not be made the basis for enforcing a power it does not possess.

But the reserve power to repeal, alter, or amend does not give the legislative power the right either to appropriate or confiscate property. What are commonly known as the Sinking Fund cases, reported in Ninety-ninth United States Reports, page 700, fully discuss this reserve power.

You will all remember the Sinking Fund cases in connection with the Union Pacific cases. They attracted more attention, perhaps, than any other cases. I read. The court says:

We are of the opinion that Congress not only retains, but has given special notice of its intention to retain, full and complete power to make such alteration and amendment of the charter as come within the just scope of legislative power. That this power has a limit no one can doubt. All agree that it can not be used to take away property already acquired under the operation of the charter or deprive the corporation of the fruits actually reduced to possession of contracts lawfully made.

Applying the rule to the bill now before us, it may be conceded that Congress reserves the right to alter, amend, or repeal the law under which they were incorporated, but this does not give the legislative department of the Government the right to confiscate, appropriate, or use for governmental purpose, without just compensation, a single dollar of the property acquired by national banks under the exercise of their charters. Everyone must admit that every dollar of this fund that is taken by this bill from the national banks for the creation of a Federal reserve bank system, in the profits of which the Government shares, is taken from the money and property acquired by these national banks under the charters of the Government.

Mr. PHELAN. The gentleman uses the word "deposits." Will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. PROUTY. Yes.

Mr. PHELAN. Does the gentleman mean that the Government has not the right to require that the reserve that shall be kept in the reserve bank shall be 5 per cent?

Mr. PROUTY. No; I do not claim that; they may be required to do anything that is proper in the exercise of the police power necessary to protect the public. But I will ask the gentleman a question. Does the gentleman think that the Government of the United States has the right to take 5 per cent of anyone's property?

Mr. PHELAN. I will answer the gentleman's question by saying that they are not taking 5 per cent. But the gentleman is not answering my question as to whether or not the bank shall keep in its reserve 5 per cent.

Mr. PROUTY. I have said they can if it is a necessary police regulation.

Mr. PHELAN. Under the banking provision can not they do it without reference to the police provision?

Mr. PROUTY. No, sir.

Mr. PHELAN. They can not?

Mr. PROUTY. They can not take any man's property. I say this for the gentleman's information, and I will challenge any lawyer in the House to deny it—that there is not a single power in the Constitution of the United States by which the Government can take a dollar of any man's property without compensation except by the process of taxation. I do not care how you whip it around the stump or through what kind of devious ways you trace it, there is not a single power given in the Constitution of the United States by which the great, strong arm

of the Government can reach out and take a dollar of the richest or the poorest man's property without compensation.

Mr. PHELAN. If they—

Mr. PROUTY. I see my time is running along fast, and I decline to yield further.

All courts agree that this can not be done even under the guise of pretending to alter, amend, or repeal. In the case of *Shields v. Ohio* (95 U. S., 324) the court, in considering these reserve powers, says:

The power of alteration and amendment is not without limit. The alterations must be reasonable. They must be made in good faith and be consistent with the object and scope of the act of incorporation. Sheer oppression and wrong can not be inflicted under the guise of amendment or alteration. Beyond the sphere of reserve powers the vested rights of property of corporations in such cases are surrounded by the same sanctions and are as inviolable as in other cases.

IT DOES NOT REPEAL.

I concede that Congress in the banking act reserved the right to repeal the charter of every national bank. However unfair it might be to do so, it is possible for the Government to take away the charters of these banks; but the full answer to all contentions along this line is that the present bill does not repeal the charters of the banks. It at most undertakes to force them to do certain things under the threat of the exercise of that power; but Congress can not keep in existence the corporations and at the same time deprive them of their property. Justice Strong (95 U. S., 324) has stated the proposition tersely:

I agree, therefore, that the legislature reserved the power to repeal, alter, or amend the charter, but I deny that under this reserve power it was competent for the legislature to take away the right given to the company, * * * while at the same time continuing the company in existence subject to all the duties imposed upon it. Such an alteration is taking away the property of the company without compensation as much as would be taking away its lands.

The plan outlined in this bill continues the existence of the national banks, and the only material change or alteration of the existing charters of the national banks is the one requiring them to contribute from their capital and deposits to the Federal reserve banks. If we concede that the Federal Government has the power under this reservation to repeal the banking act, and thus forfeit all the charters of the national banks, and that thereafter it could pass a law creating a new system and impose any conditions that it should see fit, it must be clear that this bill does not take that course. Section 8 makes a pretense of dissolution and reincorporation, but a careful analysis of that section reveals the fact that it does neither. It is a very flimsy effort to avoid the effect of the Constitution. It does not repeal the law under which the national banks are organized. It does not take away their charters. Stripped of all its sham and subtle evasion, it is simply a declaration that unless the national banks turn over a part of their capital and deposits to the control and for the partial benefit and use of the Federal Government it will take away their charters and put them out of business; and, in the language of the Supreme Court, is a "sheer oppression and wrong inflicted under the guise of amendment or alteration."

We can sometimes see the print a little more clearly if we hold the paper farther from our eyes. Suppose that some State should pass a law intended to affect the State banks of its own creation in a manner similar to the treatment by the Government in this bill of corporations of its creation. Suppose that such a State should pass a law requiring all of the State banks to contribute one-fifth of their capital and 5 per cent of their deposits for the creation of a central State bank the profits of which were in part to be used for paying off the bonded indebtedness of the State under the pain and penalty of the dissolution of all the State banking institutions upon failure to comply with this demand of the State. Would anyone seriously contend that that would not be a violation of the fourteenth amendment? Would anyone contend that that was taking property by due process of law and not by direct statute? Yet the limitation placed upon the power of the State by the fourteenth amendment is not any greater than the limitation placed upon the Federal Government by the fifth amendment. The State has just as full and complete control of the corporations of its own creation as the Federal Government has over the corporations of its creation. While the courts have been uniform in holding that the States may pass almost any laws regulating, controlling, and limiting the operations of corporations created under their own laws, every court that has considered the question has held that this power does not extend to the taking of any of their property for the use and benefit of the State.

POLICE AND TAXING POWER.

We must not confuse the limitations contained in the fifth and fourteenth amendments with the right of the Government to exercise its police power and taxing power. Neither of these

amendments interferes with the proper exercise of those powers (208 U. S., 173). Neither must we confuse the right of the State or Nation to assert its police powers in the protection of its citizens with the right to take property for its own use. Police power may be only exercised for the purpose of protecting the health, morals, and general welfare of the people, and it has been held again and again that the State may exercise its police power for these purposes, even though it means the destruction of property. But it is limited by the prohibition of the fourteenth amendment from appropriating this property to its own use. To illustrate this distinction: A State has the power to abate a nuisance, and in doing so it might cause the beneficial use of the property to the owner to be entirely destroyed. But suppose by the same act the State would attempt to confiscate that property for the State's use, then it would come in conflict with the fourteenth amendment. In other words, while the sovereign may exercise its reserve police power for the benefit of the citizen, it can not use that police power to convert a dollar of private property to its own use without "just compensation."

The case that the friends of this measure most rely upon in sustaining the constitutionality of this bill is the case of *Noble State Bank v. Haskell* (219 U. S., 104), which is known as the case involving the constitutionality of the law creating the bank-guaranty fund in the State of Oklahoma. That is a case where the State passed a law requiring the banks to contribute from their funds for creating what was known as a depositors' guaranty fund. The constitutionality of that law under the fourteenth amendment was called in question, but the Supreme Court sustained its constitutionality upon the ground of its being the proper exercise of the police power of the State. A careful reading of that case will show that the question here involved was not seriously discussed or decided. In that case no part of the property was taken for the use or benefit of the sovereign State. It was a mere regulation for promoting the general welfare of its subjects. In defining the point at issue the court says:

The substance of the plaintiff's argument is that the assessment takes private property for private use without compensation.

It will be noted that the right of the State to take private property for its own use was not involved. Had the State undertaken to appropriate this property for its own use then it could not possibly be sustained as a police regulation, as I have already called your attention to the distinction that police powers are exercised for the general welfare of the sovereign's subjects and not for the replenishing of the sovereign's exchequer.

In the 154 cases that have been decided by the Supreme Court there is not one case in which there has been a single word intimating or even hinting that a State or the Nation could use its police power to take a dollar of property for the use of the Government.

Mr. BARTLETT. The Nation has no police power except in the District of Columbia and the Territories.

Mr. PROUTY. Oh, yes; it has.

Mr. BARTLETT. I mean the Government of the United States.

Mr. PROUTY. It has in the Territories; and while I have not read all the State cases, I have read a good many. I have read all the cases in which the question has come under the fourteenth amendment to the Constitution of the United States.

Mr. BARTLETT. I do not deny the gentleman's proposition about the exercise of the police power. I am rather seeking to aid him in the statement that the United States Congress has no general police power except in the District of Columbia and other places of that kind. It could not in the exercise of the police power—

Mr. PROUTY. Yes; but four-fifths of all the cases that have gone to the Supreme Court of the United States have arisen under the fourteenth amendment, and those that have been sustained have all been sustained upon the ground of the proper exercise of the police power of the States.

Mr. BARTLETT. By the States; yes. There is no doubt about that.

Mr. PROUTY. But no case has so far developed in which the State has been held to exercise its police power when it took property for itself.

Mr. BARTLETT. No.

Mr. PROUTY. The only clause in the opinion that has the slightest bearing on this phase of the controversy is as follows:

In the first place, it is established by a series of cases that an ulterior public advantage may justify a comparatively insignificant taking of private property for what in its immediate purpose is a private use.

In the Oklahoma case there were certain fees that went to the State, and the question was raised because the State took

those fees; but the court said that was an infinitesimal matter and no real part of the act itself; that it was an insignificant taking.

Mr. J. M. C. SMITH. Will the gentleman yield for a question?

Mr. PROUTY. Yes; if it is a real pointed one. How much time have I, Mr. Chairman?

The CHAIRMAN. The gentleman has 16 minutes.

Mr. J. M. C. SMITH. I wish to ask whether or not it is compulsory for a bank to go into this arrangement unless it wishes to?

Mr. PROUTY. No; it is not compulsory, just as I said. If a highwayman walks up to you and sticks his revolver in your face and says to you, "Give me your money or your life. You do not have to give me your money. It is perfectly optional with you. You can die if you want to." [Laughter.]

Mr. FORDNEY. There is another alternative.

Mr. PROUTY. There is no other alternative than this one if this law is constitutional.

This is in line with the authorities I have already cited, that an insignificant or negligible quantity of property might inure to the benefit of the sovereign without making it unconstitutional, but there is no case holding that any considerable amount of private property may be taken for public use without just compensation under the exercise of what is commonly called the police power. The Oklahoma case is bottomed squarely on the proposition that it is the exercise of the police power for the benefit of the subjects of the State. The court says:

And in the next it would seem that there may be other cases besides the everyday one of taxation, in which the share of each party in the benefit of a scheme of mutual protection is sufficient compensation for the correlative burden that it is compelled to assume. At least, if we have a case within the reasonable exercise of the police power, as above explained, no more need be said.

It clearly holds that the protection of commerce is within the bounds of police power. It holds that the deposits in banks under modern conditions is the only available means of safely keeping money on hand, and that it is clearly within the power of the State to provide ways and means of making the deposits safe and secure. As we have already called to your attention, this does not decide nor attempt to decide the question that I am here presenting to this House. Had the State of Oklahoma attempted by law to take this same amount of money from the banks and put it to its own use it could not and would not have been justified by either the decision or dictum contained in the case of *Noble State Bank against Haskell*, above cited. There is a very clear distinction between the exercise of the police power of the sovereign for the mutual benefit of its people and the exercise of its arbitrary power to appropriate its subjects' property for its own use and benefit. It is barely possible that the constitutionality of this bill might be sustained if it provided for the creation of these reserve banks out of funds of the national banks, provided these banks were allowed to have control of them and have the earnings of their own capital. I think that might be sustained on the ground of the exercise of the police power of the Government. But the very moment that the Federal Government reaches out its hand and undertakes to appropriate this money to its own use or direct advantage it becomes, in my opinion, a clear invasion of the rights of private property against which the fifth amendment is intended to protect.

My attention has been especially called to the language in the supplemental opinion filed in the case of *Noble State Bank v. Haskell* as contradicting my contention. The language there used would seem by analogy to sustain the contention of the friends of this measure, but when the language used is viewed in the light of the law of the case as laid down in the main opinion, it will be seen that there is no real conflict with my contention or the law as established in prior decisions. The court had held in the major opinion that the State of Oklahoma had the constitutional right to make this mandatory requirement under its police power and the supplemental opinion simply declares by way of dictum that the banks had their choice of obeying a lawful demand or of going out of business. In the present bill the national banks are required either to submit to an unlawful and unconstitutional demand or go out of business. They are required to surrender the control and beneficial use of a part of their property to the Government under the pain and penalty of a forfeiture of their charters. It must be plain that there is a distinction between the right of the Government to inflict forfeiture for the failure of a corporation to comply with a lawful and constitutional demand and the right to inflict similar forfeiture for failure to submit to an unlawful and unconstitutional demand. The State of Oklahoma had by that decision a constitutional right to use its police power to conserve the general welfare of its people, but no court

has ever held that the police power could be used to take private property for the sovereign's use. To make the statement clear, the Oklahoma case says submit to a lawful demand or go out of business. This bill says submit to an unlawful demand or go out of business.

TAXING POWER.

I think the friends of this measure will hardly contend that its constitutionality may be maintained on the ground that it is an exercise of the taxing power of the Government. It does not purport on its face to be the exercise of that power, nor is there anything in it indicating that it is bottomed upon that power. I have found no case even squinting in a direction that would sustain the constitutionality of this law on that ground. I therefore find no opportunity or pretext for discussing that proposition at length.

I might suggest, however, by way of passing, that if the friends of this measure bottom its constitutionality upon the exercise of the taxing power of the Government there is no reason why the compulsory process should be confined to national banks. If this law can be treated in any sense as a franchise, business, or avocation tax it could be applied with the same force and effect to State banks as well as to national. This power was fully sustained in the case of *Flint v. Stone-Trimby Co.* (220 U. S., 107), which sustained the constitutionality of such a law even prior to the adoption of the present constitutional amendment allowing the levying of an income tax. The very fact that the authors of this bill did not attempt to make it compulsory as to State banks is a complete admission that it was not bottomed on the power of the Government to levy excise taxes.

EMINENT DOMAIN.

It is true that under this constitutional limitation the Government, in the exercise of its power or right of eminent domain, can take private property for public use. But this is subject to two specific limitations. First, it can only be done by due process of law and not by a law enacted for that specific purpose. Second, there must be just compensation, and this compensation must be fixed by the due process of law and not by an act of the legislative department. As we have already called to your attention, this just compensation can not be met by general benefits. It must be a compensation moving directly from the Government to the party whose property has been taken. As heretofore noted, the Federal Government does not pay or agree to pay or even guarantee the payment of any sum whatever to the national banks for the money that they are compelled to turn over. So under no interpretation of the right of eminent domain could this compulsory feature of the bill be sustained.

There are only these three methods by which private property may be taken for public use, namely, (1) by the proper exercise of the police power, (2) by the proper exercise of the taxing power, and (3) by the exercise of the right of eminent domain. I have examined, I think, all of the cases of the Supreme Court of the United States bearing on this question, and I have examined very many of the textbooks of constitutional writers, and in none of them have I found any hint or suggestion of any other exception or the existence of any other power under which the Federal or State Governments might take private property for public use. The attempt here to take the private property of the bank for public use can not possibly be construed as coming under either of these heads.

NO PRECEDENT ON ALL FOURS.

I admit that in my extended research on this subject I have not found a case involving the exact situation disclosed in this bill. I have not been able to find another case where either Congress or the State legislatures have undertaken to baldly appropriate private property to the use of either the Government or the State, except in purely negligible amounts. I suggest that the only reason for not having a direct precedent on this subject is that no other Congress or legislature ever undertook so bold a scheme. I venture further to suggest that if it had been thought that such power was vested in legislatures or in Congress it would long ago have been invoked.

POWER OF REGULATION.

It may be claimed by some that this provision of the bill may be sustained on the theory that it is the exercise of the Government's power to control the corporations of its own creation. The decisions are replete with confirmations of this power. They say that both Congress and the State legislatures have almost unlimited power in the adoption of rules and regulations which are for the benefit of the public, but every one of the decisions that touches this question says that the line must be drawn at the point where private property is taken for the State's or Nation's use; that that is a clear limitation upon the

power to regulate and that this limitation grows out of the provision of the fifth amendment as applied to Congress and the fourteenth amendment as applied to State legislatures.

In all the authorities I have examined—and I have examined every authority I could find upon the subject—there are three powers that the Government can use to take private property for public use: First, the police power, which the sovereign can not use for its own advantage; second, the taxing power, which it can use for its own advantage; and third, the right of eminent domain, but the right of eminent domain is always accompanied with the proposition of just compensation, and I undertake to say that this law is bottomed upon neither of these. It is bottomed, as I said before, squarely and fairly upon the proposition of the highwayman's logic—surrender or die. [Applause.]

MY MOTIVES.

Both my motives and political sagacity have been called in question in offering this constitutional objection. I have no motive in presenting this objection except that I desire candidly to call to the attention of this House the danger of this law being declared unconstitutional by the highest court of the land. I have no personal purpose to serve. I do not in any manner represent the national banks. I do not own a dollar of stock in them, and never did. I am, however, interested in the general welfare of the country, and I know what havoc and disaster would result if this bill should pass, a start to organization under it be made, and a halt caused by the adverse decision of the court. We would have neither the old system nor the new one, and general demoralization in all business would necessarily result. I am not yet forgetful of the terrible financial disturbance that came to this country in 1893, largely through the effect of the decision of the Supreme Court declaring the income-tax law unconstitutional, and thus depriving the Government of a large amount of funds that it had expected to realize under that act. Many persons upon the floor of this House and upon the floor of the Senate called attention to the unconstitutionality of that act, but Congress drove ahead and passed it anyway. The constitutional question involved in that bill was a close one, so close that it was declared unconstitutional by the Supreme Court by a 5 to 4 vote. There were many prior decisions by the Supreme Court that seemed to sustain the constitutionality of that law, but so far as I am able to find or interpret them there is not a single case in the Supreme Court Reports sustaining the constitutionality of the coercive feature of this bill, and I am only offering the suggestion that I make for the purpose of clearly calling the attention of the calm, sober judgment of this House to the danger of passing this bill in its present form. I fully realize that the raising of this question is not a popular one. I know the old Constitution is in ill repute. I know there are plenty of men that do not consider themselves in the least bound by its declarations; but I care not what others may say or think, I have taken an oath to support the Constitution, "without any mental reservation or purpose of evasion," and firmly believing, as I do, that this bill is unconstitutional, I feel it my imperative duty to express my convictions to this House. That is my only apology for offering what may be said to be a technical objection to this bill.

IF THE NATIONAL BANKS REFUSE.

I also wish to call the attention of this House to the predicament that we would find ourselves in if, after we should pass this bill, the national banks were to refuse to go into the arrangement. If they should refuse to do it, and this law was held to be mandatory, they would be compelled within a year to surrender their charters and reorganize under the various State laws where located. To do this they would be compelled to retire their circulation of about \$700,000,000 now outstanding and would be either compelled to sell the \$700,000,000 of 2 per cent bonds now held by the banks or carry them at the low rate of 2 per cent. It must be apparent to anyone that this would shrink our circulating medium about \$700,000,000 without any provision whatever for creating a currency to take its place. Anyone can readily understand that this would bring on such a severe contraction of currency as to produce a panic that would make the one of 1893 look like 30 cents. But the friends of this bill say that its provisions are sufficiently enticing to induce the national banks and other banks to enter. But they belie their own declaration when they undertake to use coercive measures to force the national banks into it. If their position is correct, that the advantages to be gained by the proposed system are sufficiently attractive to induce banks to enter, then they do not need this coercive feature. But every Member of this House with whom I have talked admits that the national banks would not go into it except for the situation that would await them if they refused. The national banks now hold about \$700,000,000 of these bonds,

bearing interest at only 2 per cent, which they bought with a full reliance upon the Government that they could use them as the basis of a circulation on which they could reap a reasonable profit. If they transform their national banks into State banks, they would have to redeem the outstanding currency, and to do this would either be compelled to sell their bonds or contract their local loans to a corresponding amount.

If these bonds are deprived of the supporting and sustaining influence of the currency-issuing provision they will certainly sink to at least 75 cents on the dollar. They have 20 years yet to run before they are even redeemable. Bonds drawing 3 per cent are now only a little above par, showing that the actual value of money in this country for the very highest class of securities is about 3 per cent. It is easy to figure as a mathematical problem that the difference between 2 per cent bonds and 3 per cent bonds having 20 years to run is a little over 25 per cent, so that if the banks would be compelled to sell their bonds they would probably lose about \$175,000,000. This conclusion is also strengthened by the money markets of the world. There are no securities in any part of the world to-day being floated at 2 per cent on their merits. English consols bearing 2 per cent are to-day quoted at 73.3, and on the same basis American 2 per cent bonds would sink to the same level if not supported by the currency-issuing privilege. This is the club that the friends of this measure think that they hold over the national banks to force them into this arrangement. I for one can not approve nor sanction such methods on the part of a great Christian Nation. It is cruelly saying to the national banks, "We will make you lose not only your charters but \$175,000,000 of your money on our own obligations unless you consent to enter this arrangement." Whether or not this bill or plan is constitutional it is certainly unconscionable, and no nation will long sustain a good name or good credit that deals thus with the purchasers of its obligations. [Applause.]

I was discussing this constitutional question the other day with a distinguished gentleman of this House. He said: "I agree with you." I said: "Then help me." He said: "I can not; I attended the caucus, and I am bound by it. I have got to vote for the caucus bill."

This raised a strange reverie in my mind. I do wonder whether the time has arrived when the obligations of a caucus are stronger and more binding than the obligations of an oath. I do wonder whether caucus rules are more effective than the restrictions of the Constitution. Every Member of this House took this oath:

I do solemnly swear that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without mental reservation or purpose of evasion whatsoever; and that I will faithfully discharge the duties of the office on which I am about to enter. So help me God.

Can it be possible that any Member of this House can consider that he is bound rather by the caucus rule than by his oath to support the Constitution, "without mental reservation or purpose of evasion whatsoever"?

Is it possible that anyone would rather endure the harrows and pangs of a perjured conscience than the frowns of an urgent administration? If that be true, better far that we burn up the Constitution and send men to the caucus conscience free.

Mr. GLASS. I yield 15 minutes to the gentleman from Mississippi [Mr. HARRISON].

Mr. HARRISON. Mr. Chairman, our present currency system is antiquated and not in keeping with the times. While Mr. Chase and his coworkers in establishing, in 1864, the present bank-note system, secured by Government bonds, doubtless hoped that it would be so elastic as to respond to the changing demands of commerce and trade, yet the primary purpose of the system was to finance the Civil War by creating a market for the sale of the bonds of the country. As to the latter object the system was a success, but as to the former the plan has been a failure.

To every student of finance it is self-evident that a steady increase in population or a steady expansion of industrial activity, all other things being equal, call for more currency. The harvest months in agricultural localities require more currency than the early springtime, and the logging season in timber districts requires more currency than the selling season. The ideal system of bank-note issues, therefore, is that system which provides automatically for such varying demands.

A currency which is inadequate to the needs of every condition that might arise will result in the sudden pulling down of the reserve money of city banks and a consequent forced reduction of their loan accounts.

These problems have been present throughout the history of our national-bank-note circulation. Being influenced by law on the pledge of the United States Government bonds, the national-

bank-note circulation is necessarily influenced by the amount of such bonds actually outstanding—their increase or decrease. A heavy decrease in the outstanding public debt would naturally cause a reduction in the bank-note circulation. A large increase in the Government debt, it is reasonable to suppose, would cause an expansion of bank notes. A currency built upon the basis of Government-bond security has not responded with automatic elasticity to the changing requirements of trade.

A period of great prosperity and trade activity normally calls for increased currency which bank notes theoretically should provide. It is such periods, however, that bring larger public revenues, which revenues are used in the reduction or redemption of the public debt. As an illustration, from the year 1879 to 1892 this country had a most wonderful growth. Her smokestacks were belching with activity, her spindles humming with the music of prosperity, cities were being built, railroads constructed, and the whole country was alive with an industrial awakening. It was a time when currency was needed to be utilized; and yet during that period, on account of this commercial and industrial activity, the outstanding interest-bearing debt of the United States had decreased from \$1,797,643,700 in 1879 to \$585,829,330 in 1892. What then happened to the bank-note circulation? I answer by quoting from Mr. Alexander Noyes's excellent paper on this subject. He says:

At first, through the large converse operations in the public debt, the national banks were enabled moderately to increase their circulating notes. This process, however, raised the price of the Government bonds requisite to secure the notes. The 4 per cents, which had sold at 99 in 1879, got up to 121½ in 1882. This of itself discouraged purchasers to take out new circulation and tempted the banks to retire their outstanding notes and secure the profits on reduced bonds. The surplus revenue continuing and itself upsetting the money market through the flow of actual cash to Washington, where it was locked up in the vaults of the Treasury, Congress in 1888 authorized the use of that surplus not only for the redemption of Government bonds already matured but for purchase of unmatured bonds at a premium. During the next four years no less than \$235,000,000 was expended by the Government in buying back its bonds at the market price, which at one time, in 1888, under these bids by the Treasury, rose to 130 on the market. Such a price prevented the buying of Government bonds for new bank-note circulation and greatly stimulated the sale of bonds held to support outstanding notes, and by July, 1891, the country's total bank-note circulation was down to \$167,577,214; that is to say, between 1883 and 1891 the country's bank-note currency had actually been reduced 53 per cent.

During this period the use of money for purposes of trade had increased 54 per cent when the bank-note currency which should have served that trade had decreased 53 per cent. But let us see how the Government bank-note system worked under reverse conditions—under conditions of industrial and commercial depression. In 1893 came the panic—the panic which so often has been laid at the doors of the Democratic Party, but which in reality started under the Republican administration and which was dumped on the Cleveland administration by the Republican Party. In 1894 came a period of prolonged trade inaction. Now, during such a time the system which had failed to give an elastic currency when needed and had worked so badly in times of great activity proceeded to make trouble during dull times in trade in exactly the opposite way. In two years after 1892 trade activity had decreased 26 per cent while the bank-note circulation had increased 18 per cent. In other words, the present system had by actual experience proven itself to be a failure in responding to the demands of an active and expanding trade; that it responded quickly and in large numbers when not needed and balked when the whip of commercial and industrial activity was applied.

The wealth of the United States since the establishment of this antiquated system has grown from approximately \$16,500,000,000 in 1864 to \$110,000,000,000 in 1912. The credit of the United States has increased proportionately much greater. And so if the United States must keep abreast with the times we must substitute for the present currency system a system that will be commensurate with the industrial growth of our Nation and that will respond with automatic elasticity to the needs of commerce and changing requirements of trade. The inelasticity of our currency and the concentration of the money in one locality, to there be controlled by a few financiers, constitute, in my opinion, the greatest evils of our financial system.

I trust that I have sufficiently illustrated the first proposition, and we need only to recall the panic of 1907 to convince ourselves of the truth of the latter. No more flourishing times had the United States ever experienced than for a decade immediately preceding the panic of 1907. New lands had been opened up, oil fields uncovered, cities had sprung up like magic, millionaires were made overnight, railroads had been constructed in all sections, industries of every kind were flourishing, banks were declaring large dividends, and an air of prosperity pervaded all sections. But prosperity of this kind breeds a spirit of recklessness that inoculates a people with a virus of speculation, and is likely to dethrone prudence and

conservative action. And so it was that under the spell of prosperity, and the very defective banking system then in existence—and which we still have—the banks in every village and city throughout the country kept a large part of their balances on deposit with the banks in New York. It has been stated that 50 per cent of the deposits in the banks of New York City are the deposits of the banks throughout the United States. This money when deposited in New York City was loaned, in many instances, by those banks at a high rate of interest to the speculators on the stock exchange in Wall Street; and just in proportion to the needs of the stock gambler for money in New York the rate of interest increases or decreases, and as it increases the money market of the country contracts, and as the money market tightens confidence weakens. And so it was in 1907 that, due to the fact that the banks of the country had concentrated their deposits in New York City, where they were unavailable when needed, in many sections of the country the banks were unable to pay their depositors money on demand. This, I say, is one of the greatest evils that exists in our present financial system, and any measure this House might pass deconcentrating the reserves of the country and destroying the power of a few men to control the money of the country would be a blessing not only to the business interests of the country but to all the people.

This bill cures both of these evils. The first by the Government issuing notes to the Federal reserve banks according to the needs of trade and commerce to any amount that is secured by safe commercial paper and where a special reserve account of gold or lawful money equals in amount 33½ per cent of the reserve notes. Through this process and the provisions of the bill under which it works a member bank in my district can take \$50,000 of lawful money and \$150,000 worth of good commercial paper, properly indorsed by the member bank, to the Federal reserve bank and have issued to him \$150,000 of Treasury notes. The member bank can use these funds in paying off its depositors if it desires, or can lend \$100,000 of it to its customers, take the notes that it receives from the loans, together with \$33,333.33, again to the Federal reserve bank, and obtain through its indorsement \$100,000 more of these notes. Of course the issuance of these loans on the part of the Federal reserve banks is subject to the discretion and judgment of the Federal reserve board, but the illustrations I have given show in theory the good that may come from the workings of the bill to a section or bank in times of need. In other words, it is a guaranty to a bank in the country that no financial conditions will probably arise that will prevent the bank from readily realizing on its resources and promptly accommodating its customers.

The second: By the terms of the bill the United States is divided into 12 regional reserve districts, and the reserves of each district will be kept in each district for the use and benefit of each district, subject only to extraordinary cases where money is needed in one district and not required in the other, or needed in one and not required in the 11 others. This one may be permitted, in the discretion of the reserve board, to borrow from the 11 others. In other words, the practice in the past of every bank in the country keeping a large proportion of its money in New York for the benefit of the New York bankers and stock gamblers will no longer be followed, but this money will be deconcentrated into 12 centers throughout the country for the benefit of every section.

Mr. Chairman, although the powers conferred on the Federal reserve board by the terms of this bill are large and powerful, yet for my part I would prefer that power exercised through the instrumentalities of the Federal reserve board, who are to come from the people and answerable to the people and whose service, I believe, will be in the interest of the legitimate business of the country, rather than to see it continued under the domination of the Wall Street financiers, whose selfish interest has been a cancerous sore upon the financial system of this country for over half a century.

Now, Mr. Chairman, I do not intend to discuss the details of this bill. They are too many. The chairman of the committee and his coworkers on the committee have ably and fully discussed them. I am heartily in favor of this legislation. There are some features of the bill that if I had been permitted to I would have changed, but we can not all get everything that we desire. The currency system is so complicated and susceptible to so many varying, honest, opinions that necessarily in passing a bill through this House and Senate none of us can get all we want and must compromise some of our convictions as to details. The provision in the bill relative to exchange charges does not meet my idea. I think it is a bad provision, and I hope that before the bill receives the approval of the President that it will be so written that coun-

try banks will not be forced to act as the agents for city banks and wholesale houses in collecting and remitting checks and drafts without exchange charges, thereby necessarily incurring expense and risks and being prevented from making any legitimate and reasonable charge. Without imposing further upon the patience of the House, I desire to give my especial approval to the provisions I have already mentioned and to three other features of the bill. First, the reserve provision. Under the present national banking law the reserve must be maintained at 15 per cent—6 per cent to be retained in the vaults of the bank and 9 per cent in the reserve city banks. Under this bill the reserve is reduced to 12 per cent, only 4 per cent of which is required to be maintained in the reserve bank and 8 per cent, if desired, in a member bank, thereby providing for a larger working asset for the banks.

Second, the farm-land loan provision. Heretofore no national bank under the law was permitted to loan money on improved farm lands, a prohibition that worked injuriously and discriminately against the farming class of our citizens. I have never been able to see the logic in the law that prevented the man who owned an improved farm from borrowing money and securing it by a mortgage on that farm if he so desired. For the first time in the history of the national banking law this provision will be incorporated into the statute, and I hope that before this Sixty-third Congress will have expired that we shall be able to write into law a rural credit system that will be in keeping with the progress of other nations and that will serve the great rural class of our population. In my opinion, after we have passed the present tariff bill and this currency bill no subject is so important and means so much to that class of our citizenship, upon whose efforts cities are fed and the prosperity of the people is founded, as a full, fair, modern, and comprehensive rural credit system. [Applause.]

Third, the rediscount provision. We have recognized in this provision the importance of not only rediscounting the paper of the commercial and industrial interests of this country, but of the great agricultural interests as well. To my mind this provision in the bill will mean more to the farming class of our people than any provision in it. It will enable the tobacco grower in Kentucky and Virginia to have his note rediscounted that is secured by a tobacco warehouse receipt, the wheat grower in the West by his elevator receipt, and the cotton planter of the South by his cotton warehouse receipt. And while this provision guarantees to the tobacco grower of Kentucky and Virginia, the wheat farmer of the West, and the cotton planter of the South the right to borrow money from national banks on such collaterals, and thereby aid them in securing a fair and reasonable price on their capital and labor, it at the same time justly prohibits the rediscounting of any paper secured by speculative stocks and bonds. It is a poison to unsafe banking and a tonic of inspiration and encouragement to every honest commercial, industrial, and agricultural enterprise.

Mr. Chairman, this bill has my hearty support, and I wish for it not only a quick passage through this House, but a safe and speedy journey through the other end of the Capitol. The country needs it and the people want it, and we should hasten to give it to them. [Loud applause.]

Mr. STONE. I now yield 30 minutes to the gentleman from Missouri [Mr. BORLAND].

Mr. BORLAND. Mr. Chairman, the administration, with the assistance of its Democratic House of Representatives, has prepared to carry out its pledges to the American people to provide a system of currency reform which shall be in the interest of all of the people in all sections of our common country.

It is much easier for men to make theoretical criticisms of a public measure than it is to address themselves to the constructive work of statecraft. It is especially easy to make theoretical criticisms of a new plan, such as the one before us. No general reform of our banking and currency system has been attempted for half a century, and in that period the whole economic and social condition of our country has changed. The demand for banking and currency legislation has become very widespread in our country, and it is a demand which must be answered frankly and fairly and with a due sense of the responsibility of action. It must be answered in the interest of all of the people—the big business man, the little business man, the banker, the manufacturer, the farmer, and the laborer. We must remember that the humblest American citizen has at stake the future destiny of himself and his family in the common prosperity of the country. His stake is just as great to him as the millionaire's stake is to him. It is his all, and one man's all is as important to him as another man's all. It is my belief that these views dominated the construction of the present currency bill. No man can say that in practice it will

not develop some points of weakness, for no law has ever sprung fully matured from the brain of a single set of legislators. If it be right in principle and sound in theory it can always be adapted to changed conditions.

I am not one of those who indulge in unbridled criticism and abuse of the present banking system. With all its faults it has proved infinitely better and more acceptable to the people than that system of banking which preceded it. On the whole, the national-bank law has been a great success, which is all the more surprising because it was a war measure and primarily designed to furnish a market for sudden large issues of United States bonds. Under the national banking system we have had a safe national currency for 50 years, every dollar redeemable in gold and every dollar worth as much in one part of the country as in another. Under this system we have had a constantly increasing number of national banks to transact the ordinary commercial business of the country. These banks are under national supervision and have been singularly fortunate in combining local enterprise with national strength. The loss to note holders in these banks has been absolutely nothing and the loss to depositors has aggregated only a fraction of 1 per cent of the total deposits in 50 years. These are elements of strength which are not to be overlooked.

The defects of the national banking system are equally plain. The only national function which they perform which entitles them to be chartered by the Federal Government is the power to issue circulating notes. These notes are secured upon a deposit of United States bonds which the issuing bank must make with the Comptroller of the Currency. This note issue is found, therefore, to be inelastic. It can not contract and expand with the needs of the business of the country, but must contract or expand in obedience with the supply and price of Government bonds. Our National Government has been a great gainer in the last 50 years by this system, as it has been enabled to sell its bonds bearing a much lower rate of interest than the bonds of any other country. The saving of interest as compared with the public debt of other countries has been tremendous. The last issue of Government bonds available for note circulation bore only 2 per cent interest. There never has been and is not to-day any other nation in the world that could borrow money on bonds bearing less than 5 per cent interest. The inelastic feature of our national currency, however, is a defect which is fatal to the system. The United States has been gradually reducing its public debt, until to-day it has the smallest public debt per capita of any nation in the world. The amount of Government bonds available for national-bank circulation is only \$900,000,000. Of this amount, nearly \$700,000,000 is now held by national banks to secure their note issues. It is apparent, therefore, that we must either continue a national debt for which we have no need or we must find some other basis for note issues.

The agitation for a change in our national banking and currency laws began some five years ago with the creation of the National Monetary Commission. That commission, or the Republican members of it, presented what is known as the Aldrich currency plan. Immediately a general agitation all over the country arose in favor of the hasty adoption of that plan. A more mature consideration has shown that those of us who were opposed to the plan were right. However, the agitation has had the very beneficial effect of inviting a full discussion of the currency problem which has resulted in utilizing many of the sound theories of finance which were developed by the National Monetary Commission. I believed at that time, and so expressed myself, that the system of bond-secured currency could be extended in a safe and practical manner. I believed that the bonds available for note circulation could be made to embrace approved State, county, and school district bonds whose validity had been established by a judicial decree and were incontestable. There is an immense amount of these gilt-edge bonds in the country. The supply is ample and if the only purpose in view were to provide an enlarged currency I still think that would answer. But a deeper and more thorough study of the problem convinces me that an enlargement in the volume of currency was not the only reform needed. In my judgment the purposes to be met by currency legislation are:

First. A provision for an elastic currency sufficient in volume to meet the growing commercial demands of our country and based upon some principle which would cause a prompt expansion and contraction in response to the demands of trade.

Second. A provision for rediscounting of commercial paper so that sudden demands upon a solvent bank for ready money may be met without harsh pressure upon business men who are borrowers from the bank and without casting suspicion

upon the bank for exercising a perfectly proper and natural function.

Third. The divorce of legitimate business from speculation, so that the business man and the producer shall no longer be at the mercy of panics brought about solely by speculative operations.

Fourth. The expansion of our foreign trade so that business men selling goods abroad may have the same banking facilities as their competitors in rival commercial countries.

No banking and currency legislation will meet the demands of the American people which does not embrace all four of these propositions. It goes without saying of course that the currency provided must be sound, that it must be protected against inflation, and that independent banking must be protected from the overpowering influence of larger financial groups. I fully believe that the pending legislation accomplishes each of these purposes. The differences between the pending bill and the Aldrich bill are greater in principle than they are in method.

The Aldrich bill provided for a central reserve association, which was in effect a banking trust. It was the form which is now familiar to lawyers, known as a holding company, the most effective form of a trust. Instead, however, of the holding company owning stock in the constituent companies the plan was reversed and the constituent companies were to be stockholders in the holding company. The holding company would be a private corporation, yet it was to be placed exclusively in control not only of the currency and credit of the country and the reserves of all of the banks, but it was to be the sole depository of the Federal Treasury. It is true that there was an elaborate, complicated, and puzzling system provided for the election of directors which was said to be for the purpose of securing democracy in the management of this holding company, but nobody ever heard of democracy existing in a private corporation. A private corporation is a beneficent despotism or else it is a failure. No sensible man doubts that this particular corporation would by some form of manipulation at elections come under the control of one man or a group of men. In that case all of the small banks of the country would be helpless, having no appeal even to the Government. The Aldrich plan proposes the creation of local associations, it is true, but these local associations were not corporations and had no power except that they were required to guarantee paper offered by their members for rediscount. They were entitled to charge a fee for so doing and seemed to have had the powers of life and death over the small banks which were members. These were the vicious elements of the Aldrich plan. It provided further that the national reserve association would be capitalized at 20 per cent of the capital of the banks eligible for membership. This would make its capital approximately \$300,000,000. The sound features of the Aldrich plan were the provision for rediscount of short-time commercial paper, the issuing of circulating notes based upon such discounts, and the extension of the banking system to foreign business, including the purchase of acceptances.

The Glass bill, now under consideration, repudiates the idea of a holding company or central bank, which shall be a private corporation. It creates 12 reserve associations in different parts of the country which are endowed with real powers and which are controlled by the banks of the respective sections of the country. This change from 1 central association to 12 neutralizes to a much larger extent the danger of the centralization of the money and credits in one section of the country. This centralization of credits, or so-called Money Trust, has been one of the principal causes of the periodic panics and business depression which have afflicted our country.

Some of those who were hostile to the present plan complain that these 12 reserve associations, whose capital stock is 20 per cent of the capital stock of the member banks, will draw a large amount of available capital from the banking business. These critics were all enthusiastically friends of the Aldrich plan. They overlook the fact that the Aldrich plan called for a central bank with a capital of \$300,000,000, which must be drawn from every section of the Union, while these 12 reserve associations under the Glass bill represent a combined capital of only \$100,000,000, which is not centralized in one place, but scattered in 12 localities. Many other comparisons might be made between the Aldrich and the Glass bills, but the one fundamental difference is in the control. The Aldrich plan provided for a private corporation, which should be given extraordinary powers over the credit of the country and even over the Treasury of the United States. The Glass plan provides for a central board of public officials, who have no private interests to serve, but whose sole duty is to represent the people of the United States

in enforcing the law and preserving equality, soundness, and solvency in commercial banking. This is the great difference between the two plans, and it is a choice which must be made on principle. Either the control of credits and money must be turned over to the banker or it must be retained in the hands of the people of the United States and their representatives. The Glass bill does not make the national reserve board a corporation. It is simply a board of public officials similar to the Interstate Commerce Commission or any other governmental agency through which the people exercise administrative control. Complaint has been made about the large powers of this board, but it is said by those who have made a careful study of this matter that the powers are not greater than those now vested in the Secretary of the Treasury and the Comptroller of the Currency. If this is true, then the criticism of the powers of the board are not justified. As every political office must be filled by a mere human being infallibility of judgment can not be expected. It may be that the board will make mistakes and occasionally exceed its powers. It is not conceivable that any President can be found who would knowingly appoint or continue in office a corrupt or incompetent board charged with such an important duty. The white light of publicity is the strongest protection against corrupt action by a public official, and no set of men will stand in a stronger glare of public opinion than the members of this board. On the other hand, if the Aldrich plan were followed and the control were turned over to a private corporation, what guaranty is there that self-interest, greed, and unsound judgment would be entirely lacking from the management?

Mr. PLATT. Will the gentleman yield?

Mr. BORLAND. For a short question.

Mr. PLATT. I do not disagree with what the gentleman said, but does not the gentleman think that the glare of publicity which applies to those men who manage these banks would secure the same thing?

Mr. BORLAND. Not necessarily. I am not prepared to say that greed, self-interest, lack of judgment, or incompetency of management would be entirely absent from the board of directors of the private corporation nor a board of any men chosen by these special interests affected. We must trust to the wisdom, capacity, and judgment of the men composing the national reserve board, for evidently we must trust to the wisdom, discretion, and capacity of some set of men. It is not a choice between an absence of monopoly and this centralized control of the Government. It is the difference between the centralized control in private hands, which has been amply demonstrated by the hearings of the Monetary Trust and by the hearings of the Monetary Commission, and a centralized control in the hands of the people themselves with the great white light of publicity beating upon it. I am in favor, unhesitatingly, of the latter. As between those two there is but one safe choice, and that is the control of the people; and, as I say, the difference is deeper in principle than it is in method.

We want a currency and banking system that will meet the needs not only of the banker, but also the needs of the manufacturer, the merchant, the business man, the wage earner, and the farmer; for every man's stake in the prosperity of the Nation is just as great to him as the stake of any other man. When all of us and each of us, from the laborer and the farmer to the exporter and the mariner, has his "all" at stake in the prosperity of the Nation, that "all" means as much to him as the "all" of the millionaire.

Mr. BURKE of Pennsylvania. Mr. Chairman, will the gentleman yield on that very point?

The CHAIRMAN. Does the gentleman yield?

Mr. BORLAND. I will yield for a brief question.

Mr. BURKE of Pennsylvania. The gentleman states that this bill should provide for the wants of the farmer and the wage earner. He believes, of course, that we should provide for them equally. Does the gentleman believe that it is a fair provision to discriminate in favor of the farmer and against the wage earner in the matter of loans?

Mr. BORLAND. I do not think that there is any such provision in the bill. But I will say this to the gentleman—

Mr. BURKE of Pennsylvania. I will put it in another form, so as to be absolutely fair with the gentleman. There is one provision in the bill that authorizes the banks to loan money on unencumbered farm land. If a man in a city district or a town owns a piece of unencumbered real estate that he has earned by the sweat of his brow he is not permitted under this bill to go to the bank and secure a loan upon it. Is not that a clear discrimination in favor of the farmer and against the gentleman's friend, the wage earner, of whom the gentleman speaks so well and so eloquently?

Mr. BORLAND. I am sorry that I can not go into the rights of this wage earner who owns this business block in my town.

Mr. BURKE of Pennsylvania. That is an abstract proposition.

Mr. BORLAND. If my time permitted I should like to discuss his rights more at length, but I will say to the gentleman that commercial paper and commercial transactions are not a class question to my mind. They are a community question. They show to a high degree the interlacing of human rights and human interests. If a manufacturer discounts a note in bank, he discounts it for the purpose of turning out a given product. He pays the cash out in wages or for raw material from the farmer. If a farmer makes a note in the bank, he does it for the purpose of buying implements, machinery, and supplies for the farm that makes a crop. If the merchant makes a note in the bank, he makes it for the purpose of buying goods from the jobber and selling them to the consumer. There is no class distinction in short-time commercial paper. It does the great volume of the country's business. It differs widely from the question of speculation in real estate, be it city or farm. It differs widely from speculation in stocks and bonds in Wall Street. It is the question of the movement of crops, which are the fruit of the toil of the farmer and of products which are the fruit of the toil of the wage earner, moving them from the man who makes them to the man who consumes them, and when commercial paper is so used, it represents the volume of American business.

Mr. BURKE of Pennsylvania. The gentleman would not regard the purchase of a 25-foot lot and the erection upon it of a humble home in the city as a matter of speculation, would he?

Mr. BORLAND. I am not going to answer that question, principally because I have not the time.

Mr. BURKE of Pennsylvania. I would like to ask the gentleman—

Mr. BORLAND. I will ask the gentleman not to interrupt me, because my time is limited; not by myself, but by those who are to follow me.

Mr. BURKE of Pennsylvania. I do not want to embarrass the gentleman, but I would like a reply.

Mr. BORLAND. It does not embarrass me at all. If the gentleman will bear with me in patience, I think he will find all his questions answered before I get through.

The general plan of the Glass bill is to allow banks which are members of the reserve associations to discount with the associations prime commercial paper and to take therefor note issues of the reserve associations, which will form an expansive currency which will meet the needs of business in different localities. This currency must be secured by a gold reserve as well as by deposits of the discounted securities, and therefore it will retire itself rapidly when not needed. This has been called "asset currency," and so it is. We have never had anything but "asset currency" in this country, except the gold and silver certificates and the greenbacks. All of our national-bank notes are "asset currency," except that they are secured on one form of assets, to wit, Government bonds. The asset currency provided for in the Glass bill is secured upon current commercial transactions which liquidate themselves within a comparatively short time without undue pressure on the borrower. The difference between short-time paper and long-time paper is not the difference in its intrinsic soundness, but a difference in what the bankers call its liquid character.

Many loans which are unquestionably sound would not be available or safe for asset currency. For instance, a loan upon a business block or any other piece of real estate made for 50 per cent of its value, having five years to run, would be unquestionably sound. In some respects it is the soundest form of investment. But such a loan can not be liquidated within a reasonable time without great hardship upon the borrower. Usually the borrower does not expect to pay the loan when it is due, even though it runs for five years, but expects to renew part or all of it. If he be compelled to pay it, it frequently happens that he must sacrifice the property at public sale. In case there is a general business depression and there is no sale for that class of property, which may be intrinsically valuable, an enforced payment of the loan would absolutely ruin the borrower and in many instances demoralize the entire community. It will be easily seen that loans of this character, while they may be perfectly safe in the sense that the lender will never suffer ultimate loss, would not be available for asset currency. Let us take another illustration which goes to the other extreme. Loans made on Wall Street on call upon the credit of stocks listed upon the stock exchange are also perfectly sound. The lender runs very little chance of a loss. He has the tremendous advantage of being able to put the property which is security for the loan on sale at a moment's notice and turn it into cash, and yet these loans are not a proper basis for asset currency. The reason is that they are wholly of a speculative character.

They do not represent actual transactions of trade nor the movement of products along the channels of commerce from the producer to the consumer. They represent nothing, in fact, except the gambling instinct of a man who thinks he can buy stock for a rise or sell it for a fall. These transactions bear no relation or proportion to the actual legitimate business of the country. The more money that is available for loans of this character the more speculation will be invited, and the same stocks and bonds in the market can be dealt with a hundred times a day without adding a dollar to the wealth on the total assets of the Nation. The greatest evil of our present banking system is that it accumulates an increasing amount of money in New York City, which tempts its use in speculation of this character. When the money of the country is all tied up in this class of transactions the legitimate business man a thousand miles from New York, who is producing wealth and making the real prosperity of the Nation, finds himself totally without currency or credit and his operations come to a standstill. Here we have a stock brokers' panic such as we had in the fall of 1907 in the midst of an era of plenty. It is apparent therefore that no system of banking is sound which encourages the use of the accumulated money of the people for purely gambling transactions. Therefore this class of loans, liquid though they may be, are forbidden by the Glass bill to be used as a basis for rediscount in the reserve associations. What is the best class of assets that would be used for rediscount and the basis for asset currency? The answer is: Short-time commercial paper representing actual business transactions in the movement of products from the producer to the consumer which will liquidate itself in the natural course of business when the goods get to market and without any other pressure on the borrower. This is the class of assets which the Glass bill says may be used for rediscount.

This class of commercial paper is a true index of the volume of commercial business in the country. The actual volume of commercial business in the country is the proper gauge by which to measure the need for currency; therefore a currency based upon these transactions adjusts itself naturally to the needs of trade. When we say the needs of trade it will readily be seen that this does not embrace any particular class of business. It takes in everybody from the wage earner and farmer to the exporter and mariner. Although the manufacturer may make the note in bank he does it for the purpose of paying wages while he manufactures his product for market, or for the purpose of paying the farmer for the raw material. If the farmer makes the note he does it for the purpose of paying the merchant for the implements and supplies needed to run the farm. If the merchant makes the note he does it for the purpose of buying goods from the jobber to sell to the consumer. There is no class distinction in relation to who happens to make the commercial paper.

One of the best features of the Glass bill, and one which will commend it to all banks, especially country banks and small banks, is the provision for rediscounting commercial paper with the national reserve associations. Banks have been almost unanimous in expressing themselves that this is the one great need of the financial system of to-day. Under this plan a bank which is perfectly solvent and which has its vaults full of good assets can take a portion of those assets to the central reserve association and turn them temporarily into money with which to meet any sudden demand made upon it, or with which to stop a run upon it. The fact that a bank has this facility for obtaining funds will go a long way toward preventing local panics, which are often disastrous to perfectly sound banks. It will also enable the bank to meet the needs of its customers for more currency at certain seasons of the year or under certain conditions of trade. At the present time the banks have no central fund from which to draw, and they must carry currency in their vaults, especially for times of panic or depression, not because they need it but because they must protect themselves against disaster. As the demand in the community for currency becomes louder the banks are frequently compelled for self-protection to withdraw large sums from circulation. This always emphasizes the severity of a panic and makes it fall with bitter force upon the customers of the bank, honorable business men who have spent a lifetime in trying to establish a successful and beneficial industry. Many a business man who has lived a long and honorable commercial career and who has blessed the community with his energy and business sagacity has found himself facing the bitterest hour of his life when he is called upon to liquidate his loan in the bank, when he knew that he was perfectly solvent and when he knew that he could not raise the money. If there were no other feature in the Glass bill but this, it would commend itself to every business man and banker in the land.

Another good feature of the plan, about which I have already hinted, is the separation of legitimate business from speculation, so that a panic brought on by speculation will not drag down the business man. Most panics are the result of an inflation of credit in speculating investment. It is true that occasionally a country or community reaches a point of business depression through a failure of crops or other natural causes affecting the productive energy of that community. In our country, however, this has rarely been the case. Our country is so vast and its productive energy so tremendous that it can scarcely be said that our panics are due to such a cause. The truth is that with us an era of prosperity is usually followed by an era of inflation and reckless speculation. The mountain of credit mounts higher and higher by the gambling and speculating operations or the investment in enterprises which are not producing a return, but which are merely a capitalization of the hopes of the future. Finally the structure of credit can no longer stand the strain and the crash comes. Unfortunately the ruin does not fall solely upon the authors of the wrong. It falls upon the heads of every honest business man in the land, on every farmer, every wage earner, and even upon the helpless women and children. Those of us who were born and reared in the West know something of the bitterness and privation which follow a financial panic. No man has reached mature age who has not that page written in the book of his memory. We westerners have been repeatedly the helpless victims of panics that we did not cause. Fortunately each succeeding panic has fallen with less force on the West as we have grown in wealth and commercial importance. The panic of 1873 was a stock-brokers' panic, but it followed an era of reckless speculation in western lands and securities. It carried down every bank in the West, with rare exceptions. The panic of 1893 was a stock-gamblers' panic, world-wide in its causes, which followed an era of reckless real estate speculation and railroad building, and it was accentuated by a general crop failure. The panic of 1907 was a stock-gamblers' panic, pure and simple. It came in a period of unusual prosperity, and its effects were less severe, although its actual extent was greater than our preceding panics. In the panic of 1873 the West was like a barefoot boy who had been turned out houseless and homeless to seek his fortune in a hostile world. It was not difficult to bring him down to the point of starvation. In 1893 the West was like a young man just grown to manhood, who was trying to set up housekeeping and establish a business for himself. He was doing business on borrowed capital and credit and, of course, it was not difficult to wreck his slender resources. But when our speculating friends pulled off the panic of 1907 they found that the West had grown to stalwart manhood. His judgment was mature, his business was sound and prosperous, his pens were full of fat cattle, and his bins were bursting with grain. The stock-jobbers' panic of 1907 could embarrass the West, could check his business, could make him do business on cashiers' checks and slips of paper; it could rob him of his gold and his currency, but it could not wreck his fortunes. [Applause.] It fell with the greatest severity upon the East.

In New York City during the winter of 1907-8 a charitable Jewish baker gave away at midnight each day the stale bread of the day before. By dusk the bread line began to form, and by midnight it trailed its hideous way around several blocks. In the West there was grain and cattle in abundance that could not get to market. In the East, in the heart of the metropolis of the greatest and richest Nation upon the globe, there was a bread line winding itself like a hideous serpent and poisoning the vitals of American business life and American family life.

Then and there the doom of the party that put that law on the statute book was written. [Applause on the Democratic side.] Right there good men resolved that there would be no more bread lines in this country.

Mr. BURKE of Pennsylvania. Is the gentleman referring to the Wilson bill?

Mr. BORLAND. My Republican friend's question and his talk about currency reform in the interest of the masses remind me of a friend of mine in Kansas City. He went to New York, and some fellow came along—rather a spruce-looking fellow, although his cuffs were pretty shiny. He went up to this friend of mine, this business man, and said: "You don't know me." My friend answered, "You are perfectly right; I do not." He said: "I didn't expect you would, but I shall never forget you if I live to be a thousand years old. Two years ago I met you here on Broadway, and at that time you did me a kindness that I will never forget. I was down and out. I had just 10 cents in my pocket, and it was a question whether I would buy strychnine or jump off the East River bridge. But I met you, and a sudden impulse seized me after I looked into your face, and I told you my situation. You put your hand in your pocket

and gave me half a dollar. I went down town and got a sandwich and a cup of coffee, and I felt a good deal better. I went over and got a shave, and my self-respect began to come back. Then I went and hunted myself a job at \$9 a week. It wasn't much, but I got a clean room and new laundry. I felt like a man again. I worked at that until I got money ahead and then struck out West. I made up my mind to go to the Klondike. I made up my mind that no man could take greater chances than I would. I went to the gold fields. I stayed there 18 months in the cold and in the solitude, and I struck it rich. When I came back I had cleaned up enough so that I was a rich man beyond the dreams of avarice. I hadn't a friend in the world. My friends had cast me off. I did not know where my relatives were, and I made up my mind that I would go back to New York and find the fellow that gave me the start in life and give him every dollar I have in the world. I was living simply for him. Well," he said, "I came down to New York, and I have been here, and I see that you are the man that saved me. You made me a man, a millionaire; every dollar I have belongs to you." My friend from Kansas City began to get interested, and he said, "Well, what happened?" "Well," the fellow said, "I'll tell you. I hung around here a while and finally I got into Wall Street and they got my money, and now what I want to ask you is if you will let me have another half dollar." [Laughter.] Our Republican friends have dragged us through three bitter panics, and now they come and talk about currency reform, and want to know if we will give them one more chance.

There is no disposition on the part of the American people to give that system another chance. That panic of 1907 was an inexcusable crime, commercially and politically. That panic was caused by a congestion of speculative securities in the banks of New York, which was the direct result of the accumulation of bank reserves in the metropolis whose only use was for loans upon the New York Stock Exchange. This panic was broken by the Secretary of the Treasury, Mr. Cortelyou, depositing in the banks of New York City controlled by J. Pierpont Morgan & Co. an aggregate of \$29,000,000 of Government money, to be loaned on the stock exchange and thus to carry the speculative securities until they could release the money of the people for its legitimate use in the producing districts.

And the next day Mr. Morgan, with the power of a Caliph of Bagdad, sent for the president of the New York Stock Exchange, Mr. Thomas, and said, "I have decided to loan \$25,000,000 on the New York Stock Exchange to carry these securities." He had \$29,000,000 of your money to do it with and he actually loaned, according to the testimony, \$18,600,000 to break that panic. What rate of interest he got did not appear. What rate of interest he paid to the Government does appear. That was the result of the banking system of 50 years of Republican rule, and now they come back and say if we will give them another half dollar they will try to make good.

Mr. PLATT. Will the gentleman yield for a question?

Mr. BORLAND. For a short question.

Mr. PLATT. Was there any better way to break that panic than the one the gentleman named?

Mr. BORLAND. That panic, after three panics of that kind almost identical, was a reflection either upon the motives or the methods of the party in power.

The accumulation of a vast amount of the people's money in one center invites speculation, and speculation is followed by panic as certain as night follows the day. If there were no other feature to the present currency bill than the divorcing of the bank reserves from speculation, this alone would commend it to every right thinking mind.

The last great feature of the bill is its influence upon the expansion of foreign trade. For many generations our country has been an exporter of raw material. We have always had a substantial balance of trade in our favor, but it has been the result of the exportation of cotton, wheat, tobacco, and beef. We have now reached the turning of the balance. Our exports of raw materials and practically all food products have been decreasing rapidly. Our home consumption of food products has more than kept pace with the supply. On the other hand, our exports of manufactured products have steadily increased. Of course, when we sell manufactured products abroad we are selling in a free-trade market in competition with the entire world. We have long sold our raw materials in a free-trade market, our cotton, wheat, and beef, and therefore our farmers have never had any advantage of the protective-tariff system. It has now gotten to the point where even the manufacturer must sell abroad cheaper than he sells at home or lose his market, and the Democratic doctrine of tariff for revenue only has come to stay. I am one of those who believe, however, that the manufacturer should have all of the legitimate rights and ad-

vantages in common with other lines of business in the country. The protective tariff policy has caused a prejudice against manufacturers in some sections which is not justified.

As a matter of fact, it is an economic loss for any nation to export raw material when it could export the finished product. The nearer a product is brought to the finished state where it is used by the consumer the more capital and labor are expended upon it. It is an economic loss for us to export wheat when we could export flour, because the flour represents that much more American capital and American labor. Similarly, it is an economic loss to export flour when we can export biscuits and bread products. When our business men enter into competition with the foreign trade they find that every great commercial nation has a system of banking which is designed to facilitate its foreign trade. German banks have branches in all of the countries where German merchants seek business. British banks are known the world around. In addition to this, the banking system is somewhat different from ours. The banks are permitted to buy acceptances based upon shipments of goods abroad, and carry those acceptances instead of compelling the merchant to tie up a portion of his own capital. Goods are sold abroad on credit running from 6 to 18 months. Examination of the Glass bill will show that for the first time in our banking legislation provision is made for banking facilities in our foreign trade. One of the amendments proposed to this item was to reduce the time on foreign acceptances from 6 months to 90 days.

I resisted very vigorously, and with success, this proposed amendment. It would have had no other effect than to tie the hands of our bankers and other business men in competition with the banks and business men of other countries, who are our commercial rivals. The minimum time for foreign sales is six months, and it would be the height of folly for us to limit our banking acceptances to a shorter length of time which would be insufficient for a foreign trade. I hope and believe that under the Glass bill a tremendous impetus will be given to American trade abroad. We are about to complete the Panama Canal, which will give us access to the west coast of South America. All of Central and South America is our natural trade territory. One of the principal articles which they must buy in all of those countries, except Argentina and Uruguay, is flour. American enterprise can secure the flour trade of Central and South America, but we must compete with the wheat fields and flour mills of Canada. It is folly for us to handicap ourselves with a provincial system of banking while our Canadian rivals enjoy almost unlimited facilities. What is said of the flour trade may be said of numerous other manufacturing industries of this country. The manufacturer is entitled to fair treatment. It is true that he is not entitled to charge a higher price to American consumers by virtue of a protective tariff than he charges to a foreign competitor, but outside of that he is all right. Every dollar he brings into the country adds to the wealth of the Nation, and is expended in wages and raw material.

I would not attempt, even if I felt able, to answer all of the criticisms of this bill. Every new measure will have its critics and many theories may prove to be wrong. I can only state what I believe to be the principles upon which the bill was constructed and which I believe are the correct principles. I believe that these principles will appeal to the American people and that they will demand their enactment into law. After all, they amount to the great political principle which is the foundation of our party—equal and exact justice to all and special privilege to none. [Applause.]

Mr. HAYES. Mr. Chairman, I yield one hour to the gentleman from Minnesota [Mr. LINDBERGH].

Mr. LINDBERGH. Mr. Chairman, I would like to give notice now that I have got about a six hours' speech and I want to get some of my views to the House before I get through, and as I have to confine myself to the hour, I therefore desire to state that I would like not to be interrupted while I am speaking.

Mr. WINGO. Did the gentleman ask that he be not interrupted while speaking?

Mr. LINDBERGH. Yes.

Mr. WINGO. I had intended to ask some questions, and that is the reason I asked the gentleman the question.

Mr. LINDBERGH. I would like to accommodate the gentleman from Arkansas, but to do so would take from me the time that I need.

LOTS OF TIME TO TRIFLE, BUT NONE FOR THE PEOPLE.

By the rules of this House I would be allowed an hour to discuss some personal grievance, if I had one, that related to my official privileges. Any Member would be allowed that much time. By the rules of the House I am allowed only one hour to discuss as important a question as ever is considered by the

House. It is a question that involves the well-being of all the people of the United States. Not more than a half dozen Members will be allowed even an hour, and most of them no time.

PEOPLE DO NOT GET JUSTICE.

Any person would need at least four hours to properly discuss a financial bill, but the House, that is yearly growing in disfavor because it takes weeks to consider trivials, cuts the time short when things of importance to the people are before it. In the hour that I have I wish to emphasize one thing particularly, and that is that under the present system of administering the finances of the people the overwhelming majority of them have no possible chance to succeed. It is not possible for 1 per cent of the people to succeed as well as the natural conditions would make easy if it were not for the burden imposed on them by this system. The Government has kept in force a policy, the very enforcement of which has all along made it certain that the people could not obtain their just dues. It is a matter of plain calculation that the interest, dividends, rents, and profits that are charged by the few who control the bulk of property, and especially by the bankers to whom the people leave their cash savings, make it impossible for the people generally to succeed. The property that is now owned by less than 25,000 families, they, by governmental policy and the law, are privileged to charge the other 19,975,000 families interest, rents, and dividends enough to absorb every dollar's worth of property that the latter have in less than one generation, and at the same time get the bulk of the products of the labor they perform. That is our present system of finance, and it is not in the least to be interfered with by the Glass bill. The burden of excessive interest is to continue. The Glass bill would prolong it for another 20 years, unless the people should elect a Congress that would relieve them of its burden.

I challenge those Members in charge of this bill to give four extra hours of time, to permit me to show the amount of accumulated wealth that a few persons control, and for those Members to answer from actual computations whether or not there are several monopolists, each of whom could, by the rule permitting the compounding of interest, profits, and so forth, in the manner of the bank practice, accumulate in a generation the equal of all the property possessed by the plain people, and in the meantime take all the profits from their labor above the amount required for a bare subsistence. I would show conclusively, without possibility of successful contradiction, that there are many fortunes controlled by single interests, any one of which could, under the present rules of financiers, absorb all the property the plain people have in less than two generations, and combined as they are they are able to and do take so much profits from the products of the labor of the men and women of this country that it leaves to the vast majority merely a bare subsistence. If the membership of this House would submit the real facts as they are to all the people of this country, so that they would be understood by the voters, not a Representative in the House who has taken part in limiting the Glass bill to the feeble provisions of reform that it contains would ever return. It is only because of the rules and the practices by which the House is governed that such feeble legislation can be made to appear satisfactory. It is because the public is not informed of the real truth. That remains concealed, and Congress after Congress convenes and expires, doing as little of the real substantial things that would promote the general welfare as the Members dare with any hope of their return.

Mr. Chairman, it is because of the influence of the dollar and its power to control the actions of men and women that Congress, in its present consideration of the currency bill, is dealing with the greatest of all problems. Immense responsibility rests upon the Members to frame and pass a bill which will be true to all the people. Every personal consideration or party prejudice and every consideration of whatsoever character that does not comprehend all humanity as its beneficiary should be left outside of Congress.

It is not my purpose to show that this bill is more vicious than the system which it seeks to amend. I propose to show that it would perpetuate the system which actual experience proves to have been the cause of centralizing wealth, so that a few have robbed the people generally. It is perpetuating a system the very purpose of which is to enable the money loaners, rent collectors, dividend beneficiaries, and speculators generally to take advantage of the actual producers so as to control production and fix prices. They pay those who perform the manual and mental labor barely enough for subsistence and charge the consumers so dearly that the majority of the people barely subsist. It is the Government's policy, if this bill is adopted, to perpetuate the system by which the rule of geometrical progression in compounding frequently the interest, dividend, and profit collections so as to force the people generally into a state of sub-

serviency in order to pay the specially favored the profits on the material wealth which the system makes it easy for them to control. It gives to those possessing the material things a power to control the actions of humanity generally to its own disadvantage.

THE DOLLAR IS NOW KING.

We are acting upon the most vital problem before the American people. It is in every respect a world problem. This money problem has more influence on the civilized people than all other problems combined. It should not be so, but it is. Under existing conditions employed by people it has more to do with the cost of living than all other problems combined. That should not be so either, but it is nevertheless. It has more to do with the life and character of the individual citizen than all other things combined; and this should not be so, but it is. Civilization has reduced its economic problems to calculations in dollars, and the dollar is king over all the people of the world.

THE DOLLAR CLASSIFIES THE FAMILIES.

The figures that I shall use to explain this subject are approximates but will aid us to understand equally as well as if it were possible to give them exact. There are approximately 20,000,000 families in the United States. Their earnings as well as their expenditures are measured in dollars. The advantages and enjoyments that these families are able to procure are largely determined by the number of dollars they have to spend. Estimating the average income to be \$1,000 for each family, the total earnings of 20,000,000 families would be \$20,000,000,000. Many, in fact most of them, have not \$1,000 annually. Some have more and a few have very large sums. Taking \$20,000,000,000 as a basis for the total income, our calculations will be plain and we will know that we are right in principle. The \$20,000,000,000 measures what the plain people can spend for their living and other expenses. They earn that and use it to buy the things they need the most. The first thing to inquire is, how do the families get the money?

HOW DIFFERENT FAMILIES LIVE.

Answering that inquiry, divide the families into two classes: (a) Those that earn their living, and (b) those that have their living without earning it. The first class are those who perform the social service, manual and mental, required for the keeping up of a vital civilization. Those who do not perform that service belong to the second class. The same family may be in both classes; that is, may perform a social service and at the same time have greater advantages than the value of that service justifies in return. If we will keep these distinctions in mind in analyzing the monetary problem, we shall not only understand the reason for the increasing cost of living, but we shall know the remedy.

The reason for classifying families into two divisions arises out of the fact that those in one division work for a living and those in the other get a living without working. By an ingenious scheme invented by the money lenders to charge exorbitant interest, dividends and profits compounded, a comparatively few people have been able to appropriate the inanimate substances, like the dollar in the vault, the organic structures created by God, as well as those made serviceable by the work of men, the patents, the mechanical devices, and all things tangible as well as many that are intangible. These are held in monopoly control as capital, privileged by legislative, executive, and judicial acts to levy interest, dividends, and profits that vitalize these inanimate materials, which are stacked up on the one side against single-handed human energy on the other. That is what creates the two divisions of families.

VITALIZING PROPERTY TO CONTROL MEN AND WOMEN.

The civilized governments of the world have vitalized property which is the product of human energy and credit which is supported by human energy by extending to it the privilege to levy upon humanity excessive interest, dividends, and profits, compounded, so that in the geometrical progression of its centralization it forces industrial and debt bondage upon an overwhelming majority of the people. Knowing that to be a fact, it is for us to ascertain substantially the proportions of the two divisions in order that we may determine the effect the passage of the Glass banking bill would have. Considering the problem concretely, I shall use no more detail than is absolutely necessary to determine positively the effect, and from that the principle that should guide us.

ORE IN MOTHER EARTH AS AN EXAMPLE.

Within 30 years it has been discovered that the Minnesota iron-ore supply is enormous. Several years ago it was asserted from reliable sources that the ore that had then been discovered lying in the bowels of the earth in that State alone was worth \$500,000,000. Since then additional quantities have been discovered. These ores are owned by a few men who capitalize

them; that is, socially vitalize the ore before any human energy is expended upon it. This vitalization of the dead ore means the privilege, supported by legislative, executive, and judicial acts, to collect from those who make their living by toil a so-called "reasonable profit" on so-called "vested capital." That is, the few owners are permitted by social order to capitalize these ores at \$500,000,000 and more and collect from the working people everywhere \$25,000,000 or more annually for the ore in the earth before the hands of the men required to get it out shall be paid any more than enough for mental subsistence. By that means there is set aside \$25,000,000 or more for families who have performed no service to improve the social welfare. The capitalization of the iron interests, from the ores in the ground to the finished product in the factory, is several billion dollars. The annual dividends upon this would probably exceed \$200,000,000. Before any dividend can be declared all expenses, including wear and tear, high-salaried officials, and poorly paid wage earners, must be paid. The dividends represent simply results from dead matter socially vitalized so that these may be used by their few owners. Every dollar in interest, dividends, and profits based upon a material substance will buy the same as the dollar paid to the farmer, the wage worker, or others who perform a social service by manual or mental work.

HOW THEY TAKE THE PEOPLE'S EARNINGS.

Since I have illustrated the principles governing in the one case it is unnecessary to enter into so much detail in regard to others governed by the same principle. Let us list a few of the dividend-property interests; that is, the annual dividends and interest paid upon dead matter holding the people in bondage:

Iron and steel interests of all kinds, including interest paid	\$200,000,000
Real estate, buildings, etc.	2,000,000,000
Petroleum and oil in all its forms	150,000,000
Copper in all its forms	75,000,000
Woolen, cotton, leather, rubber, etc.	200,000,000
Banking and brokerage in credits, etc.	500,000,000
Railways of all kinds for transportation	1,000,000,000
Miscellaneous	2,000,000,000

These figures are simply used for illustration. If a careful investigation were made for a complete list of the dividends, rents, interest, and profits made in speculation off dead matter and credit dealings, it would be found to be not much short of the aggregate received by those who perform the social service, mental and manual, required to keep up civilization.

Mr. HAYES. Will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. LINDBERGH. I will later. I would like to wait until I get through with the subject I am now considering.

I have not verified the figures named, but I claim absolute verity as to the principles involved. We all know that we have upon one side a vast capitalization centralized into the ownership of a few. This capital is vitalized by the social status that is given to it by the laws and usages of the country, so that this dead capital draws from the people who perform the mental and manual work and are the support of the country excessive dividends and profits. It is accomplished by enforcing longer days' labor, keeping wages low, paying the farmer less for his products, and charging all the people more for what they consume. It makes men and women the slaves of those who monopolize the credit based on the people's toil, which in turn gives to a few a monopoly of the material substances. The interest and dividends always grow by the geometrical progression of frequent compounding, while men and women wear out their lives submitting to this process, the most of them going to their graves after having spent years in actual want of those things that under any reasonable social governmental regulation would have resulted in their favor from the service they performed.

USURY TABLE SHOWS THE "NIGGER" IN THE WOODPILE.

The following interest table, compiled by a former Librarian of Congress, will assist in forming a conclusion as to the immense power of interest, dividends, and rent when applied to the accumulated property interests of the monopolists. The table runs, at \$1 loaned for 100 years at compound interest, as follows:

6 per cent per annum would amount to	\$340
8 per cent per annum would amount to	2,203
10 per cent per annum would amount to	13,808
12 per cent per annum would amount to	84,075
18 per cent per annum would amount to	15,145,007
24 per cent per annum would amount to	2,551,798,404

We need not expect to escape it by reason of the years it takes. The process has been at work for many years already and has been forcing the cost of living higher all the time. We have been feeling it a long time.

THE SPENDTHRIFTS LIVE ON THE SWEAT OF OTHERS' BROWS.

Without claiming accuracy for the following figures, but unqualifiedly claiming certainty for the principle involved, I will say as a basis for calculation that the net profits per annum on capital and speculation is \$10,000,000,000. That represents what the monopolists save out of their business after paying the expense of running the business. Let us divide it into two parts, \$5,000,000,000 for the annual expenses of spendthrift families and \$5,000,000,000 for surplus—increased capital for the people to pay interest on. How many families there are who live as parasites and have the frills and furbelows of the vain rich I am unable to say. It may be 200,000 or 300,000 out of the 20,000,000. These spendthrift families are worse than parasites, for they waste and destroy. Therefore we will place these upon one side and the more than 19,000,000 other families who depend for their living upon the daily work of one or more members of the family we will place upon the other.

THE WAY THEY DO IT.

We will assume the total annual income of the working families to be \$20,000,000,000. That does not represent capital invested, but it represents the result to them from their energy expended. It was the life and energy of the men and women—life itself. It has to be sustained with food, clothes, shelter, and entertainment. The family securing only \$1,000 in a year will be compelled to indulge very sparingly, and will wish for much that they are entitled to that they can not have. As the income is increased the wishes may be more nearly satisfied, but on the whole the saving average is small, and the more than 19,000,000 working families are compelled to consume or use the things that are controlled by monopoly, and therefore buy from the monopolists who have, by the Government policy allowed, been able to charge interest, rents, dividends, and profits equal to \$10,000,000,000 in a year; that is to say, the men and women receive in wages and salaries and for farm product, and so forth, \$20,000,000,000, but must pay most of it for the monopoly-controlled products, out of which monopoly saves \$10,000,000,000 for the profit account alone.

TAKES ALL TO PAY THE PROFITS TO MONOPOLY.

Thus we see that while the people have been able to collect for the manual and mental service they render \$20,000,000,000, they have to pay nearly all of it out for the things they consume, and the little profit that a few of the plain people save is insignificant when considered with reference to their number, and is deplorable when measured alongside of the enormous profits of the special interests. That is the effect of the present system which the Glass bill proposes to continue and to tie the people to for 20 years more. This was the proposition of the money loaners in 1862, when they quietly circulated the Hazard circular, which read as follows:

Slavery is likely to be abolished by the war power and all chattel slavery abolished. This I and my European friends are in favor of, for slavery is but the owning of labor and carries with it the care of the laborers, while the European plan, led on by England, is that capital shall control labor by controlling wages. The great debt that capitalists will see to it is made out of the war must be used as a means to control the volume of money. To accomplish this the bonds must be used as a banking basis. We are now waiting for the Secretary of the Treasury to make this recommendation to Congress. It will not do to allow the greenback, as it is called, to circulate as money any length of time, as we can not control that. But we can control the bonds, and through them the bank issues.

In 1877 there was another circular sent out to confidential friends—bankers—that carried out the same idea, and it was for the same purpose, with the determination that they should control absolutely the currency circulation of this country. And in 1893 another circular was sent out that I saw myself, advising the banks of this country, those to whom they dared send it, to bring on a stringency in order to produce a general request on the part of the business men all over the country to appeal to Congress for certain legislation that should favor the bankers.

BANKS TO GET THE MONEY IN THE UNITED STATES TREASURY.

Under the Glass bill the banks will no longer need the bonds. They will use the money that is in the United States Treasury, loan it to the people and get the people's notes, and have currency issued by the United States on these notes for the banks.

But, passing that scheme for the present, I call attention to the effect this vast accumulation of profits by a few has on the cost of living. The cost of living in the true sense is what you give to get the dollars and what you get when you pay the dollars. That is the whole thing in a "nutshell" under the present system. We want to know the effect of the system, and then we shall know how to create an honest dollar. The Glass bill dollar is the same as we have had all along and out of which the few have grown rich by the process that

I have described. It is the exorbitant interest that increases the wealth of those who control it. This interest is compounded, and the geometrical increase enables the few to make industrial slaves of the many, as was proposed by the Hazard circular.

THE GREATEST OF OUR BURDENS IS THE DIRECT RESULT FROM THE PRESENT BANKING AND CURRENCY SYSTEM.

The speculation and gambling that is incidental to our banking and currency system is simply appalling, and it is absolutely ridiculous that we should tolerate it and pay the cost of its continuance. Before considering a few of its details let us make a partial review of the burdens that accrue to us as a result. When we examine our losses, even in part only, and see how great is our sacrifice because of our stupendous stupidity in supporting such a system, no doubt we shall be more interested in the manner in which it is operated. Of course, it is not a pleasure for one to feel that he has been fooled, but our appetite for information ought to increase when we realize that we could double, yes, multiply many times, the advantages we would receive in return for our daily expenditure of energy if a proper system were to be instituted.

It is worth while to know that there are simple remedies which would, if applied, overcome certain conditions that are immensely complicated and tremendously cumbersome because of their falsity. It is always easier to deal in truth and honesty, and follow these to their legitimate ends, than it is to construct and adjust a false superstructure upon a false base. But, even if no remedy were possible, we should still seek to know about the game that is being played by the speculating interests. We certainly do not wish the financially fat fellows to be able to look beguilingly into our eyes and with the concealment of their innermost amusement and delight at our stupidity in permitting ourselves to be so bamboozled talk brazenly about the game that they are playing, knowing all the time that we do not understand it. We wish to know the truth about this, even if we do feel humiliated because of our having previously been ignorant of it.

COSTS THE PEOPLE IMMENSE SUMS.

Here are some figures: In the year ending June 14, 1912, the 7,372 national banks cost us \$450,043,250.04 to operate, pay their losses, dividends, surplus, and so forth. Up to June 14, 1912, 17,823 State and private banks had reported, and approximately 4,000 banks had failed to make any report. The 25,195 reporting banks operating in 1912 held individual deposits of \$17,024,067,606. Including those not reporting there were 28,995 banks conducting business in 1912, and the sum it cost the people to operate these, pay losses, dividends, and so forth—I believe it a conservative estimate—would exceed \$1,300,000,000 or approximately \$14 for every man, woman, and child. This is more than it costs to run the United States Government, all things included. But large as this sum is, it does not include any report of the operations entered into by the bankers for their individual consideration. That, no doubt, far exceeds the mentioned sum, because bankers have unusual opportunities to speculate and many of them do speculate on a large scale.

On January 1, 1911, the report of 7,140 national banks showed that they had \$1,005,740,915 of capital stock paid in, and \$662,090,881.82 surplus. The surplus is that part of the profits not declared as dividends. On September 4, 1912, there were 7,397 national banks, and their capital stock was increased to \$1,046,012,580, their surplus to \$701,021,452.71, and their undivided profits on the last date, less expenses and taxes, were \$242,735,174.37. The dividends on the stock of national banks in 1912 were 11.63 per cent. But large as these dividends, surplus, and undivided profits are, we have not reached the climax of this system of extortion, which the Glass bill will allow to continue.

THE VALUE OF CREDIT.

We seem never to have learned the value of credit or to know that we ourselves form the basis for it. We are capitalized as so much stock on hand owned by the trusts. A few of us get into the deals, some on a small scale and a comparatively few on a large scale, and a half dozen or so have become the real kings of finance. Of course, it is necessary for the kings of finance to have, scattered throughout the land, underlings who help them gather in the products of our applied energies, and these involuntary contributions of ours are afterwards distributed among the favored. Naturally, the underlings are given some crumbs and some of them even fair slices, but, considered in a general way, all of the crumbs and slices are distributed in proportion to the capacity the underlings possess for playing the game well. The whole loave are only handled by the kings of the system, and it is through the expenditure of our united energy that they are enabled to amass this so-called wealth.

WHAT WALL STREET TELLS US.

Now, in 1913, there are approximately 30,000 banks. Their number, capital, and surplus continually increases. On the basis of that fact the Wall Streeters tell us that the capital of the banks is less concentrated now than it was formerly. They intend by that assertion to lead us to believe that they have less control. I shall prove, however, that the banks are merely the nests from which the Wall Streeters gather the people's financial deposits; that these deposits and the credits built upon their use as a means of amassing capital and levying interest are ever so much more serviceable to the bankers than the capital stock. A large part of the capital stock is consumed in the purchase of fixtures and buildings that serve the banks for offices. The more numerous the banks are and the more widely scattered through all communities the greater is the control the Wall Streeters obtain. The people deposit their money in these banks and a large part of the money is used by the Wall Streeters as if they actually owned it, and upon its use they base an enormous credit system.

THE TRUTH ABOUT IT.

No bank is organized with the idea that its capital is the basis upon which it secures its main profits. No bank would be organized unless its organizers believed that they could secure the use of the people's savings in a larger amount than the bank's capitalization. Take, for instance, the following six banks in New York City: First National, Chase National, Hanover National, National Bank of Commerce, National City, and National Park. Their deposits on September 4, 1912, amounted to \$830,444,142, while their capital stock was only \$73,000,000. Approximately the deposits equaled eleven and one-half times their capital, exclusive of surplus. Is it not very foxy of them to try to divert our attention from this fact to a consideration of the location of bank capital? When I use the phrase "Wall Streeters" I do not confine it to those having offices in Wall Street. The Wall Street system is maintained in all of the large cities, and I include within the term "Wall Streeters" all those supporting the Wall Street system, wherever they may be.

HOW IT AFFECTS WAGES AND THE HOURS OF LABOR.

In 1900 there were 13,977 banks, which includes nonreporting banks. In 1912 there were 28,995 banks, and in that time the deposits increased from \$7,688,986,450 to \$17,494,067,606. Their surplus increased in a still greater ratio, and in the meantime they paid large dividends. It must be apparent to anyone that the money with which to pay the expenses incurred by operating this system—by which I mean to include the whole system of trusts—is collected from the people by capitalizing the products of our energy and even discounting the future in the form of stocks, bonds, and securities issued, on which they collect dividends and interest. This is being accomplished by a reduction of our wages and of the prices for which we sell our products or the services we render, as well as by increasing the price of what they control that we must buy.

By inversion this prevents a proper reduction in the hours of labor. These have not decreased, nor has our pay increased proportionately with the new mechanical devices and the new methods of application which have immensely increased our productive energy, but the additional product which has resulted from their use has been capitalized in order that the dividends which we pay shall increase. All of these things were scientifically figured out, then commercialized, then speculated, and finally gamblized both as to the present and the future. All have been overdone and all pooled as a common charge against the products accruing from the expenditure of our life's energy.

Many of us were children when the extortion began, and we can hardly blame our parents for permitting the initiation of what we have allowed to be developed into a full-fledged, scientific, legalized system of extortion. But now, since we understand its effects, the people ought to look back on this Congress with shame if we permit its continuance by passing the Glass bill instead of getting down to work and framing a really good bill.

BANK CAPITAL.

Omitting the banks not reporting, of which there were more than 4,000 in 1911, the 25,195 that did report up to June 14, 1912, showed—

Capital stock paid in	\$2,010,843,505.43
Surplus	1,554,981,106.44
Undivided profits	581,178,042.47

Total accumulations, capital included..... 4,177,002,654.34

I desire to say that what Mr. HAYES said in his speech yesterday in regard to expansion of credit was absolutely correct. There is an expansion of credit. You can not get around it

when you have over \$17,000,000,000 deposits in the banks and only about \$1,700,000,000 in actual money.

Mr. MURDOCK. Will the gentleman yield before he passes from that subject?

The CHAIRMAN. Does the gentleman yield?

Mr. LINDBERGH. Just for a question, if I can answer it quickly.

Mr. MURDOCK. The gentleman has charged that the national banks have about \$1,700,000,000 cash and the people have on deposit in the banks over \$17,000,000,000. Now, does the gentleman mean to say that the banks of the country loan every dollar of currency they have eight times over?

Mr. LINDBERGH. They do more than that—about ten times over.

Over \$4,000,000,000 bank capital. That is approximately \$44.40 for each man, woman, and child, and the bankers actually believe we owe them that, notwithstanding that it is practically a capitalization of ourselves, the same as a farmer capitalizes the growth of his hogs, but with the advantage to the hogs, because the farmer takes good care of the hogs until they are sold to be slaughtered. And what is more, this \$44.40 is the nest egg only. We have already paid several times that to them in dividends. But greater than both combined are the profits from the speculation and gambling indulged in by the king bankers and by many of those to whom they loan the people's deposits. The banks are merely the nest eggs of the whole system. Those who gather from these nests have the greatest opportunities.

If we were to look into the banks just before they close we would find in them persons from the business houses depositing their daily collections. In the earlier banking hours we would find such people making deposits as the farmers, wage earners, and others who do not collect each day the returns of their labor and business affairs.

WALL STREET GATHERS IN THE PEOPLE'S DEPOSITS.

Out of the 94,000,000 of us all who are engaged in work or business of any kind for which we receive cash are trotting immediately to the receiving windows of the 30,000 banks and trust companies and passing over their counters our hard-earned cash. This cash is flowing from these 30,000 banks into Wall Street and other speculating centers like a flood stream. It is the use of these deposits by the speculators that gives the Money Trust its power over the people. Indeed the Wall Streeters have had all the greatest opportunities, for this practice has been going on for a long time.

You may say, "Yes, but the banks loan part of the people's deposits back to them." That is true, but eventually it works out to the satisfaction of the Wall Streeters. Of course, they want enough cash left back in the respective communities from which it pours in so that our country's industries, whatever they may be, may be operated. That is on the same principle that a farmer will always keep breeders to replenish his live stock. The Wall Streeters know that the harder we work in order to produce commodities of whatever kind the more we will have to turn over to the rich. The industries must be active everywhere in order to concentrate the cream of their products into the vaults of the banks, and finally into the control of the trusts and special interests.

Yes, there are 30,000 banks in the small towns, villages, and great cities that serve as nests into which the eggs are dropped; that is, our cash. The total of our individual deposits for the year 1912, in the banks making reports to the Comptroller of the Currency, was \$17,024,067,606. Add to that the deposits in banks not reporting and the total will be correspondingly increased. That enormous amount was supplied by us as a result of the expenditure of our energy and labor, and it is important that we should know what good, if any, comes from our supplying these banks with working material to be used under the present system. Let us see what comes out of it.

THE WAY THE MONEY THAT COMES FROM THE PEOPLE'S WORK IS SPENT.

Go into any large city and it will be found that what our fathers and we have built does not satisfy present desires of the money kings, so we are expending our energy in tearing down our past work and rebuilding anew for future use. Some of us may get some benefit from this, but there is no way we can avoid paying for the entire production. It is an economic fact that whatever energy this generation spends it pays for. Any person who will investigate on his own account will believe that the immense production of property now for future use and also that produced to satisfy the vain rich has had most to do with increasing prices.

The railway systems have been enormously extended. In 1850 there were 8,571 miles of railway in the United States;

in 1909 there were 236,838 miles. The passenger traffic has increased approximately 300 per cent in 20 years and the freight over 300 per cent. Billions of dollars were expended in building railways in that time, systems suited to last as long as the earth stands. Tunnels alone within New York City, built within the last few years, have cost about \$500,000,000, and an order has been made for \$257,400,000 more. Old buildings torn down and new ones to take their place, which will last hundreds of years, have lately been and others are being built in this country costing in the billions of dollars; canals, the Panama alone to cost \$500,000,000 when fortified and complete, have been and are in process of construction; bridges alone in one city cost nearly \$200,000,000; two railway terminals in the same city, cost \$200,000,000.

Take one item as an illustration and consider it from its different angles.

The Pennsylvania Terminal in New York City cost approximately \$100,000,000, and was opened November 26, 1910. The New York Times, in an editorial commenting on it, said:

In a sense it is proper to speak of the Pennsylvania Terminal as a gift to the city. It would be very difficult to show that the road would receive a direct return from its expenditure; that is, that the fares paid for new passengers attracted to its lines by this terminal will suffice to pay interest on its cost.

The editorial did not consider that when the Pennsylvania Railway system undertakes to bolster its freight charges, it figures in the \$100,000,000 terminal as a part of the cost of its system on which the Supreme Court holds that it has a right to base its charges, and that in fixing them it has a right to a reasonable rate and that no legislative body can confiscate its property by reducing the rates below a reasonable earning on its capital investment.

The Times editorial, further commenting, says:

The Pennsylvania Railroad is a great corporation and is not exempted from the widespread feeling of hostility to corporations which has been engendered in this country by the talk and the writings of countless demagogues and agitators. The Pennsylvania Terminal, admirably serving the needs and promoting the conveniences of the public, a magnificent structure which is an adornment to the city, is this corporation's reply to the flow of reckless and irresponsible abuse of corporations.

Here again the editor failed to comprehend the fitness of things. The Times errs in its consideration of the Pennsylvania Terminal, for without this new magnificent \$100,000,000 terminal the company was, with its old terminals and system of ferries, consistently serving the public, and, as further stated by the Times—

The road was not compelled to build this station either by law, by any public service commission's mandate, or by popular clamor.

But, as the Times stated, it was a purely voluntary addition to its property, the idea of which was born in the mind of A. J. Cassatt.

The directorate of the company erected in a conspicuous place in the station a bronze statue of Mr. Cassatt, with the following inscription carved on the stone setting:

Alexander Johnston Cassatt, president Pennsylvania Railroad Co., whose forethought, courage, and ability achieved the extension of the Pennsylvania Railroad into New York City.

To the millions of people who will annually inspect it, this inscription may be a suggestion that they are being daily charged on the food they eat, the clothes they wear, and the luxuries, if any, they enjoy, their quota for the construction, maintenance, and interest on the capital invested for this "purely voluntary addition" to the world's greatest terminals.

The truth is that the terminal is an involuntary gift to that city by the people generally, and is not a voluntary gift by the Pennsylvania Railroad Co., as suggested by the Times, but was voluntarily built by the company, and its cost is added to the freight and other charges on the food the poor people of New York and elsewhere eat and the clothes they wear. Not only that, but every farmer and laborer in the United States, and all people, in fact, are by the law of general average being taxed for that terminal. It subtracts from the advantages of the people and is one more of the colossal monuments of vested property on which to tax us and our children and all future generations so long as we measure progress by an erroneous money standard.

And the Times, to further display the sophistry of its editorial writer on that occasion, wound up the editorial:

The new station is not only an example to other public-service corporations, but should serve to warn the public against too ready acceptance of the doctrines and calumnies of self-appointed teachers and guides who make the vilifying of great business concerns their profession.

Surely "the example to other public-service corporations" served to cause another great railroad in the same city—the New York Central—to build a like terminal. These and other

stations in other cities, costing extravagant sums, all have their share in making the cost of living higher, for all these railroads charge higher freight rates in order to get "reasonable profits" on the capital invested. Consult the court decisions about that. The courts have answered by decree—a grim reality that was far removed from the editorial inspiration of the Times.

These "purely voluntary additions," as the Times calls them, are built in many cities without regulation, excepting that suggested in the inscription referred to as Cassatt's "forethought, courage, and ability," and the "vested interest" in them appeals to all future people with a court's decree—"we, the vested interests, have a right to charge the people interest on our capital and add it to the freight rate on your food and your wares and make you and your posterity pay for it." To have escaped this decree you should have been born before civilization commenced.

CAPITALISTS SCHEME TO WORK THE PEOPLE.

The inducement for building exclusively for the use of the future is that capitalists find in it a means of converting the collective energy of the people into producing a fixed capital, and then charge the people interest on their capital that they have created by their own energy.

It does not require a profound student to see that the collective energy of the people applied to the use of modern machinery controlled by the Morgans, Rockefellers, Cassatts, and others will rapidly produce a capital so enormous that the "vested rights" as now interpreted by the courts will, if we let things go by this plan, make us and our posterity the abject serfs of the capitalists.

The value of the property in the United States is approximately \$150,000,000,000. Following the construction of the courts the owners are entitled to charge the people first for expenses of its maintenance and preservation and in addition a "reasonable profit," which would on compounding double in about 10 years, be four times in 20 years, and eight times in 30 years. At that rate the average interest charge per capita 30 years from now would exceed the present average earnings of the wageworker. If that is to be permitted, none but the capitalists would then be able to educate their children. Already 80 per cent of the capital is controlled by about 2,000 individuals.

LISTENING TO POLITICIANS.

Instead of looking at the economic facts and the industrial tendencies of things, we have drifted into the habit of turning away from these and listening to politicians tell how they are going to remedy this high cost of living with a simple revision of the tariff and a banking and currency bill based upon a false premise. The Glass bill provides upon its face for an additional tax upon the people. It is the sheerest nonsense to talk about reducing materially the cost of living by either of these bills as they stand to-day before Congress. The longer we are fooled with that pretense the more difficult it will be to solve the real economic problems in a proper way, and the greater the sacrifice will be.

Going into this subject further, let us look at things as they are simultaneously with considering things as it is reasonable that they should be. By doing so, plainly the conditions confronting us will become so self-explanatory that we will see at once that we have a remedy for most of our ailments within our control, one that can be simply and easily applied. We need not waste time in envying or criticizing the wealthy, for as many advantages as they have we can have with less encumbrance.

WE WANT THINGS THAT WE CAN USE.

Mankind can not much longer continue in the folly of producing for so-called profit as the main incentive, for with that as the first incentive is what creates the very wealthy. The incentive that should govern in production is necessity—the people's actual requirements. In other words, production should be so regulated as to practically produce those things which would supply the urgent, necessary, and desirable common demands. That is economic law, and, if followed, development and production would be natural and not abnormal. We would all have what is properly due us if that were done.

NEW YORK CITY PLAYS THE BIG GAME.

Let us consider the city of New York as a concrete example. It is the most conspicuous example in existence of reckless and wanton extravagance, of social practices and business methods and management that contribute to the high cost of living. New York City is the Babylon of the twentieth century, anno Domini, on a modern and exaggerated scale. New York City's development to its present proportions is based on forced and abnormal conditions that have been and are an injury to the Nation. That city's growth looks greatest now, but it will ultimately break down from its own burdens.

The New York Times, July 7, 1912, devoted a page to the city's subways. It began with the following headlines:
Billion-dollar subway world's greatest undertaking.

It had pictures of the late J. P. Morgan and also Jacob Schiff as the bankers backing the scheme. It also showed three of the managers of the subway systems. In large type, formed into an inverted pyramid, appeared the following:

Greatest amount ever spent in a similar area since the world began. It makes the building of the pyramids a small task, and the new addition to the system alone cost more than the Panama Canal.

I direct special attention to the fact that the subways are not New York's prime development, but rather an incident of its growth. They are merely one of the evidences of its extravagances. Every year substantial and valuable buildings, enough in number to make a respectable city in themselves, are destroyed in order to give place to more costly and elegant ones—some of them the world's tallest and most expensive. The cost of the Singer Building was mounted into additional millions to make it the tallest building in the world. The directors of the Metropolitan Life Insurance Co. appropriated the funds of its policyholders to build another that would eclipse the Singer Building, at least in height. Including the grounds, it cost approximately \$22,500,000. The Metropolitan Life Building could not long retain the distinction of being the tallest, for the Woolworth Building is still higher.

Building after building has been constructed in the million-dollar class in that great city until their aggregate cost may be reckoned in the billions. That is the scale by which things are done in New York City. It is a city of extremes. Even so-called society must there outdo in extravagant expenditure all other places. Even Paris, the example the rest of the world apes in some of its dress and fashion parade, can not equal it.

It is a great picture to see New York by day or night. Its playhouses, its hotels, its clubs, its magnificence in a hundred or more ways amazes the average spectator. He thinks he sees the wonders of New York when he makes such a visit. But all that is visible to the eye is but the pin-money expenditure from the main field of speculative operation, of which neither the humble inhabitant nor the visitor ever gets a view.

IF WE COULD SEE THE BOOKS.

If the visitor could see the books of account and know and understand the operations of those who run big business—financial, industrial, and speculative—he would be amazed to see the methods by which the few have not only levied on the industry of all the people in order to maintain the extravagances to which I have referred, but who have also in the same manner amassed the vast individual fortunes through which they now grasp the control of the country's finances, its principal industries, the transportation and distribution agencies, and the main material resources. In the handling and operating of these the toiling millions are employed. In what these toilers produce and in the productions of the farm lie the principal wealth of the country. Upon it capitalists draw for the building of the greater cities, more railways, more canals, more of everything that gives place to permanent investment to employ the profits they get out of our present money system, which the Glass bill proposes to extend for another period of 20 years.

SAPPING THE PEOPLE.

Whatever view we may take as to the advisability of the great and constantly increasing construction that is in process for the sake of investment—whether we favor it or not—we know that it saps the energy of the people and takes too many of us out from the occupation of producing the actual necessities for physical existence, such as food, clothing, shelter, and so forth. Further, it prevents us from securing the necessary time for personal, moral, and intellectual improvement.

The number of people now occupied in constructing for purely speculative and investment purposes and for the purpose of satisfying the vanity of the rich, in proportion to those so occupied in any previous generation, is so much greater that no one should look much further for the principal reason why we pay more for the necessities of life than we formerly did. To illustrate the point stated, I shall again consider the city of New York.

REDUCE HOURS OF LABOR AND INCREASE ADVANTAGES.

In this great city we are furnished with examples of the principal causes for the high cost of living. These suggestions should also teach us how the cost may be greatly reduced and at the same time how farm products and the wages of labor may be increased in their purchasing power, with employment for all and the hours of labor per day reduced, thus giving all people more time for study and improvement and the enjoyment of their rights. This again would build up the villages and small cities, making thousands of small distributing centers instead of a few that are overgrown.

HOW WALL STREET SCHEME WORKS.

Two new terminals in New York City, the Pennsylvania and the New York Central, cost approximately \$200,000,000. They consist of huge piles of iron, stone, glass, and so forth, orderly shaped, chiseled, and arranged into two beautiful, massive depots, the approaches through tunnels and over numerous tracks. Those terminals are exclusively the product of labor. True, their material substances are of the creations of nature, but the work of forming them into shape for use is entirely labor's. We may ask of what effect is the manner of their construction in the consumption of our time and the power of machinery and whether they were really necessary. At \$1,000 per annum there would have been directly employed 40,000 people for a period of five years—some in the quarries getting the rock out of mother earth, some getting the ore, some upon the railroads and the ships, some in the smelters and factories, and others immediately upon the grounds and buildings.

At the same rate, the families dependent upon them would add 160,000 more people. While the number of people and the time employed is stated only approximately, it nevertheless serves to show the conditions. Whether there were more or some less employed is not material. The number directly employed does not take into consideration those more remotely occupied in supplying their necessities, namely, the farmer who produces the wheat, the miller who grinds the flour, the baker who makes the bread, and the merchant who sells and delivers it to these men as food to keep them and their families alive while they construct these terminals. Then, again, we have the farmer who raises the sheep and furnishes the wool, the spinner, the weaver, the tailor, and so forth; in fact, all who produce the things to wear; and still, again, the builders who construct the houses for these families and those employed in the transportation of all these materials. Further, all of us thus remotely employed must in turn be supported with many of our necessities from still more remote operators. The response that I frequently receive to these statements is that we must have work, eat, wear clothes, be sheltered, have entertainment, and that there is no loss even when we produce extravagant structures, because it gives employment. That is where shortsightedness so frequently is shown.

THE REAL MEANING OF IT.

Let us see what it means to employ 40,000 people to produce in our generation expensive buildings, tunnels, grades, and all of the other things to which I have referred, to construct the terminals that will last hundreds of years. Practically 200,000 people were supported for five years by the rest of us while they were building these two New York terminals—mere incidents in that city's growth. These people produced neither food, clothes, nor shelter for themselves. Others of us did that for them, and therefore we all work more hours each day to supply them what they eat and wear. They competed with the rest of us in consuming the food, clothes, and other necessities of life and produced nothing except terminals. These terminals are like a drop in the ocean as compared with the great number of other structures that are permanent in construction and will last for many centuries, and some of them forever, all of which we pay for with our energy at the time of construction.

THE TRUTH THAT IT TEACHES.

The truth that it illustrates and teaches us is that in our own generation we make improvements that will be for the use of future generations. Those of us who are thus occupied must be furnished with all of the necessities of life. Of these we produce no part. No one should claim that the production of these structures is desirable simply because they create a condition that gives us employment. We have passed the period when such a claim should receive our respect. We should seriously consider ways in which we can use our modern machinery, better appliances in the production of the actual necessities, conveniences, and luxuries, so as to insure our having them with less cost of energy than is now required of most people to even secure their barest necessities.

A DISTINCTION.

It might be claimed that the New York terminals were a necessity. As a matter of fact, that city and the traveling public entering it had better facilities before the new terminals were constructed than we have in most of our cities. I have been in New York many times before and since, and while I acknowledge that the new terminals are more convenient than the old, there is no such material difference as to justify the charge and incumbrance placed upon humanity for the new terminals.

Some who believe in living in luxury and extravagance and who do not take into consideration the welfare of the people as

a whole would advocate, possibly, that it was necessary to have the additional advantages afforded by the \$200,000,000 terminals. If we allow such an argument to prevail, there is no limit placed upon those who control the centralized wealth making expenditures whenever they choose, and relying upon the decree of the courts holding that they are entitled to recover a reasonable rate of interest upon the capital invested. The people should not be compelled by any decree of the court or by any Government agency to pay interest and dividends upon investments which are not first determined to be necessary for the general welfare.

HOW THE PLAIN PRODUCERS LOSE OUT.

The first point to be noted in connection with this extraordinary investment development of the present generation, of which New York City furnishes the most conspicuous example, is the fact that modern machinery, appliances, and human energy is so largely monopolized in the production of buildings, railway systems, canals, harbors, and other improvements that give so little present service as compared with their use by future generations. How can we expect to reduce the cost of living and the hours of the laboring day and at the same time increase the production of the necessities of life if we use up most of the machine power and human energy in producing things which are principally for investment.

VESTED CAPITAL AND THE TOILERS.

The second point that I wish to impress is the fact that in addition to consuming our energy in the production of things for remote generations there is also the fact that production thus obtained is, under present practice, centralized into the control of a few individuals. That production is called vested capital, on which the general public is taxed rent, dividends, and interest. Thus we see it is not only the burden of production that is heaped upon the toilers of the world, but afterwards there is the burden of maintenance in addition to the interest charge. It must be plain to any thoughtful person that the methods of business as now employed and the manner in which we are producing is one of the principal causes for the high cost of living, and if we would remedy that difficulty we shall have to prevent the excessive interest and dividend rate, which the Glass bill will not prevent. If people were employed in the proper proportion throughout the different industries and occupations that produce or supply the necessities and conveniences that we require, we should then have those necessities in greater abundance and with less expenditure of time and money.

In no way can economic order be restored while the business intercourse of the country is enthralled by the banks holding the exclusive monopoly in the distribution of money and credit. The monopoly thus held by the banks is what has been the breeder of the other monopolies. It has been the cause of building up special privileges which have resulted in the country adjusting to the demands of those privileges instead of adjusting to economics.

PEOPLE FORCED INTO WRONG POSITION.

By reason of the money and credit monopoly the people have been forced to leave the pursuits of life that would have been most suited to produce the abundant supply of the things that would make most people prosperous and contented. The majority of them seem to be living to accommodate monopoly—to work for it. For instance, by one section alone of the Glass bill at least \$250,000,000 would be taken out of the United States Treasury for the use of the banks. The banks would pay to the Treasury a small rate of interest and loan two-thirds of the \$250,000,000 to the people at excessive interest. They will reap a direct benefit of approximately \$5,000,000 annually on that, and as this \$250,000,000 from the Treasury would be legal money they will build up a credit from it for several times a greater sum. We know that the credit expansion based on a sum of real money is very great. It is not overestimating to say that the benefit that the banks would get out of the \$250,000,000 which the Glass bill would take from the United States Treasury for them because of the credit expansion which they could control would be at least \$25,000,000 annually, and the speculation that would incidentally grow out of it on the part of persons who would take an extra profit would swell the sum total of the cost to the public still more. This money would enter into extravagances such as I have already mentioned. The kind of extravagances thus produced do not contribute to the general welfare, but, on the contrary, they command the expenditure of human energy for the sole purpose of finding reinvestment in order that monopoly may get still more profits, and then again to use these to repeat over and over and again and again, without contributing to the general good of mankind.

CONTRAST OF INCOMES.

Considering this whole problem of the extravagant expenditure of human energy to build up to proportions unnatural to the economic demands, let us revert to the 20,000,000 families for whose government these United States are. Their income, including the rich, I have estimated to average \$1,000 per family annually, or a total of \$20,000,000,000. Whatever the exact sum may be, every family that gets more than the general average proves that the average of those remaining is reduced below the general average.

AN ILLUSTRATION.

The Glass bill is typical of many other things that illustrate the effect of establishing institutions that are arbitrarily forced upon the people without their furnishing a service equal in value to the cost. Under the bill there would be at least 12 new Federal reserve banks which would belong to the bankers whose extravagant system is already an overburden. Each of the 12 banks would have an expensive retinue of officials. I can estimate with sufficient nearness what the cost would be to make it clear that it will be another burden. In each there will be nine directors, a president, cashiers, and other officials. The leading officials in each of these institutions will be high-salaried men, and the aggregate salary list for those not serving in subordinate work would approximate \$100,000. The number of employees would be large, and their wages would soon aggregate \$200,000 in each of the banks. For 12 of such the total cost would be \$3,600,000 per annum, and that does not take into account the Federal reserve board, which would employ a large force of secretaries, clerks, and so forth. But all this does not account for a new coterie of millionaires that will be developed by the inside knowledge that would be obtained by a few. And yet all this is unnecessary because there is a more simple remedy.

I shall not carry out another illustration in detail, but I call attention to the fact that the membership of this House is 200 in excess of a good working body. It costs the people no less than \$2,500,000, with all the incidental expenses, per annum to support the supernumeraries. My reference to these two cases is merely to show that what it costs is paid out of the earnings of those who are engaged in manual and mental work that actually contribute to the real necessities. In a general way let us see if we can approximate the result to the people generally of the whole extravagant system that grows out of a false money and credit control.

AVERAGES ANALYZED.

Total number of families in the United States, 20,000,000; total income, approximately \$20,000,000,000; average income of each, \$1,000. It is not improbable that 300,000 families get interest dividends and profits equal to \$7,000,000,000. Now, while that sum does not necessarily reduce the income in dollars to the average family, it does reduce the amount that the average family can buy for the \$1,000. In other words, the 19,700,000 families who perform manual and mental service may actually have an income of \$20,000,000,000, but when they pay out that sum they are charged enough more for what they buy so that \$7,000,000,000 is taken as profits by the other 300,000 families. The consequence is that in the things that the people consume the 19,700,000 families get only the equal of \$13,000,000,000 worth of these things. The rest is taken as profits by the 300,000 families. Divide the \$13,000,000,000 by the 19,700,000, to show the real value of what the average family get, and it will equal \$667 minus; divide the \$7,000,000,000 income of the 300,000 families, to show the average amount of their income, and it will equal \$23,333 plus. That is only the beginning of the process—merely the first step to indicate the real cause of the high cost of living that grows out of this system of finance that is being played against the people who really earn their living. I am not seeking to extend the compilation to obtain the last degree in the computation. It is only the general truth that I seek to make clear.

MONSTROUS FALSITY.

My purpose is to have the system understood, and then each person may follow out the computation to any degree that the truth in principle will justify. He will find that he can carry it much further than I have in my remarks, because I can not have the time. As the increasing income ascends this scale in amount, it will be found that a few run into the millions of dollars per annum. In the final analysis it will be found that the great majority of the families work long days and receive little of the advantages that this day and generation would, under any reasonable régime, give to them. They barely subsist, seeming almost as if they existed to perform the horse and

ox work for the few. A comparatively few families get along better than the great majority, because of favorably arranged surroundings or because of closer relations to the specially favored who may take from their superabundance to pay them to help carry out this system. In varying degrees of circumstances the families, as they extend along the line from the great majority who do the work and are most poorly paid to the most richly paid, we shall find the evidences that should convince us of the absolute monstrous falsity to the general needs that our financial system serves.

LABOR SHOULD PRODUCE ITS REWARD.

One more economic truth I wish to state before considering the remedy. I hear too many say that all these extraordinary things to which I have referred furnish labor for the workers, as if the workers existed only to work. No intelligent, honest student will for a moment claim that it is a benefit to make a man work unless that work results in the production of something necessary. The placing of capital for investment solely with reference to what it will pay back in dividends without considering what service is to result to the people generally from the enterprise is a double crime: First, in expending human energy for an unnecessary thing; second, in the burden that it imposes upon those called on to pay the future dividends. Most of the people are working a large part of their time to support the extravagances of the specially favored.

The farmer who produces the agricultural products, the wage worker who works in the factory or on the railway or elsewhere, the salary worker in mental or other performance, and the independent operators in the useful enterprises each and all do contribute from the results of their energy to maintain the extravagances of a false system. Work and enterprise are natural, but there is no reason why it should be directed to serve monopoly. There is every reason why it should be utilized in the interest of the workers themselves.

THE CRIME OF CIVILIZATION IS USURY.

Our present money and credit system does not measure value. It simply controls value. There is but one true measure for the value of things, and that is their service value. An honest dollar should pay what it costs to get it. If it brings more, the excess is usury, and some one is penalized. If we would have equality of opportunity so far as rules may give it, we shall have to abolish usury. No greater rates of interest should be permitted by a Government than is consistent with a proper conservation of a correct system. Money and credit must serve and not enslave. It must represent value, and not a power to limit men. But we can not prevent the charge of usury until a system is established that the people will accept as better than the usury system.

ABSURDITY OF THE GOVERNMENT PAYING USURY.

Nothing in all history is so ridiculous, nor so expensive, as the practice of letting the money lenders control the money and credit. Credit should be free—that is, as near so as possible—to everyone who can produce value on which credit is based. No monopoly should be given to bankers to distribute credit or money. Every enterprise that contributes to the general advantages should be as freely admitted to the Government to secure the Government's support of the credit to which it is entitled as the bankers are and upon equally favorable terms.

Why should the great farming industry, why should the wage-workers and working people in general, why should the great manufacturing industries, why should any enterprise necessary to the general welfare be compelled to go to the banks for money and credit? All of these can and would be so organized as to utilize the credit to which their service entitles them if the Government would guarantee their credit in the way that it supports the monopoly of it in the hands of the bankers. That would destroy the bankers' monopoly and immediately the bankers would adjust themselves to become the people's agents instead of their masters. They have the position that makes it natural for them to conduct the exchange credits. They can serve a great and good purpose, and if it were not for the monopoly of which they have taken advantage to satisfy their constantly developing greed they would serve the purpose of making the exchanges more cheaply than any other agency could.

The only way to establish industrial and commercial independence is to have an honest exchange system. It can not be accomplished while the banks have a monopoly of the distribution. The control of the money, in its issue and distribution both, in its inception is a Government and not a bank function. To give the banks the monopoly of the distribution is as dangerous to the welfare of the people as if the bankers also issued

the money. The banks are in the business exclusively for the profit they can make. They are now bound unto each other by a community of interest, and are organized into voluntary associations for the purpose of the promotion of their special ends. Under the Glass bill their voluntary organizations would become legalized into one great monopoly, the only private monopoly which the Government has supported by statutory acts. There is the monopoly to distribute the funds of the people to the borrowers upon payment of usury to be added to the cost of the people's living. The Glass bill would continue that monopoly.

WHAT WE PROPOSE INSTEAD OF THE GLASS BILL.

We should provide a revenue system by which the Government taxing powers shall be represented by United States currency drawn on the people of the United States, to be disbursed through the governmental agencies on appropriations by Congress for services rendered or to be rendered the Government, to inaugurate, develop, and maintain an American financial policy and currency system which will liquidate and eventually abolish debt—national, State, and municipal—and put the public and private enterprises, industries, and exchanges upon a sound economic basis and remove the power of private interests to monopolize the mediums of exchange and for other purposes.

FISCAL DEPARTMENT.

We should establish a new fiscal department of the United States as an adjunct to and within the jurisdiction of the Treasury Department of the United States, to be administered by a nonpartisan board, subject to the will of Congress.

UNITED STATES CURRENCY.

In pursuance of the power conferred by the Constitution upon Congress to coin money and regulate the value thereof, the fiscal department should issue a new United States currency, which should be in the form of public-service certificates and state upon their face in substance that the bearer had performed a public service of the value stated in the certificate, and the same should be the lawful money of the United States, and should be receivable at par for all debts, dues, and demands, public and private, within the jurisdiction of the United States, in such quantities and in such denominations as the public interest requires, and in all cases, except where otherwise specifically provided, should first be placed in circulation by being earned in public service of the Government or in the supply of some material needed for Government use, and then for its full par value, and should not, after returning to the Government, be again reissued or circulated except for a like purpose.

DISTRIBUTION OF UNITED STATES CURRENCY.

We should have the fiscal department issue United States currency to carry out the appropriations made by Congress to the various departments of the Government for all public purposes that require the expenditure of public funds. That when funds have been appropriated by Congress and the United States currency issued to cover such appropriations, the fiscal department, for the convenience in the transaction of business through the Government disbursing agencies, would deposit such currency, as well as checks, drafts, and other receipts of the Government in national and other banks, or in postal savings banks, for checking accounts, but banks should not be required to pay interest on such accounts, because they would be placed there for the convenience of the public and not for speculative purposes. Deposits of checks, drafts, and other evidences of dues to the Government might be made in the banks, but otherwise United States currency only would be deposited in the banks by the Government, which currency, when so deposited, would be held as a specific fund to special deposit, but checks and drafts and other evidences of dues to the Government deposited by the Government would not be distinguished from or have any privileges or preference over other deposits of individuals, whether private or otherwise, in the same banks. No deposits would be made in banks for the purpose of creating surplus therein, but merely to accommodate the transaction of public business. The banks would, as long as there remained a credit to the Government's general account, pay checks drawn by the Government agencies out of the general account, and the use of the special deposits of United States currency in payment of such checks would be prohibited until the general account had been exhausted, in which case payment would be made out of the special deposit.

CANCELLATION OF EXISTING CURRENCY.

We should have all United States notes, currency, gold and silver certificates, and national-bank notes a full legal tender for

all debts and dues, public and private, in the United States, its Territories, and possessions, except debts or contracts existing at the time of the passage of a proper act, which by their terms are payable in some other form of money or material, but while in circulation represent the money and currency aforesaid, as well as all existing coins should not be deprived of their present qualifications, and the outstanding United States notes, currency, gold and silver certificates, and bank notes should be redeemed on demand in such other form of money as is now provided by law; and as soon as practicable after any United States notes, currency, gold and silver certificates, and bank notes come into possession of the Secretary of the Treasury for redemption the same should be canceled and destroyed, provided that when such redemption is of national-bank notes the amount canceled should operate in liquidation of an equal amount of United States bonds securing the same, except that any national bank might, by giving the fiscal department such notice as the said department may require, have the national-bank notes redeemed and reissued by complying with the laws as to the maintenance of security, and no such notes, currency, or other certificates should be reissued except as provided. All existing laws for reissuing or recirculating any such notes, currency, or certificates should be repealed. When gold or silver become the property of the United States their legal-tender quality, except as to subsidiary coin required for circulatory purposes for small change, should cease and the gold be reserved for use in the redemption of outstanding obligations and for use and in aid of interstate exchanges.

The fiscal department should be authorized to purchase gold from time to time at the marketable value if necessary for either of said purposes, and also when in its judgment the national debt could thereby be better and sooner extinguished, and except as authorized by a proper act the United States should receive gold for coinage only; the purpose should be solely to affix the governmental stamp of weight and fineness to such coins, but all coins so made after the passage of a proper act should have no legal-tender quality. A charge equal to the cost of coining the same should be made, which coin should forthwith be removed by whoever it might have been coined for, and no department of Government should give storage facilities to any gold bullion or coins not belonging to the United States or issue more gold or silver certificates. After a reasonable lapse of time a storage charge equal to the cost of maintaining the same should be charged and collected on all gold and silver held against outstanding certificates, because it should be the ultimate purpose and policy to remove the Government fiat from all metals and reduce metals to their commercial commodity value.

AID TO THE STATES.

It should be the policy to aid all States of the Union whose laws confer upon them, or give their executive or other State functionary, the power to borrow money on the credit of the State or to guarantee the obligations and debts of their counties, towns, boroughs, villages, cities, municipalities, school districts, or political divisions for any just and recognized public use, for the purpose of defraying the current expenses of the State or any of its political subdivisions for which the people of the State or political division are taxed. Rules and regulations would provide for a uniform expenditure by the States, so that the issue of United States currency and the volume would conform to the demands of business, public and private, avoiding alike redundancy and insufficiency, and no State should pay out the currency secured from the Federal Government except for the full face value of the same in service to the public for public purposes for which the people would be annually taxed, so that the same would be returned in the payment of such taxes through the usual methods.

NATIONAL PUBLIC WORKS AND IMPROVEMENTS.

The fiscal department should devise plans whereby Congress would be guided in the enacting of legislation to authorize the fiscal department to establish a system of national public works and improvements adapted at all times to give immediate relief to all congested labor conditions within the territorial jurisdiction of the United States and render available all surplus labor and insure against enforced idleness and the ills incident thereto by means of the inherent powers of the Government to establish justice and promote the general welfare.

AID TO THE AGRICULTURAL AND HORTICULTURAL INTERESTS.

The fiscal department should proceed with all reasonable expedition to communicate and cooperate with the authorized representatives, organized and unorganized, of the agricultural and

horticultural interests of the Nation, with a view to the adoption of a plan and policy of systematizing the production, storage, transportation, and distribution of agricultural and horticultural products, to the end that both the producers and consumers of such products would have complete emancipation from the present extortions of speculators and manipulators in these products and of organized and trustified storage, elevator, and transportation combinations now monopolizing the same and controlling and manipulating the prices of such products both to the producers and consumers. A system of Government loans to owners and operators of improved agricultural and horticultural lands should be provided upon such terms as would amply insure the repayment of such loans, at a low rate of interest, ultimately to be reduced to a nominal interest barely sufficient to reimburse the Treasury as soon as the national debt could be extinguished.

GOVERNMENT LOANS TO WAGE EARNERS.

The fiscal department should proceed with all reasonable expedition to communicate and cooperate with the organized and unorganized wage earners to consider and devise a plan and policy for a system of Government loans to wage earners at the lowest rate of interest consistent with the cost and integrity of the service, which loans would enable them to provide homes independent of real estate speculators to further protect wage and salary workers from the overcharge made by loan agencies.

AID TO MANUFACTURING INDUSTRIES.

The fiscal department would proceed with all reasonable expedition to an inquiry into the conditions of the manufacturing industries of staple products in the United States and Territories with a view to ascertain the state of such industries and devise plans for the inauguration of a policy to aid and assist such of those manufacturing interests as were involved in monopolistic combinations, or were able and disposed to extricate themselves from existing monopolies, which plans would involve a system of Government loans and advances to such manufacturing interests as were able to insure the repayment with the lowest rate of interest consistent with the cost and the integrity of the service.

IN GENERAL.

The fiscal department would investigate into the financial conditions of all legitimate industry, work, and enterprise of whatsoever character, the pursuits and results of which under proper conditions promote the general welfare and ascertain what plan or plans, if any, could be contrived for their aid by extending Government loans to them or such of them as required aid.

The fiscal department in its administration would take notice of the economic fact that payment by the Government for a service to the Government involves a collection from the people of an equal amount plus the expenses of collection, and that the issue of United States currency in payment of Government expenses creates a demand on the part of the people equal to the currency required to be returned to the Government in cancellation of taxes or dues; and further, that economic private enterprise (eliminating speculation) for the production of commodities, or the rendering of services for the use of others, legitimately involves the return of commodities or services of equal value, whether the same is accomplished by direction or by indirection, and that whenever actual commodities or services are not immediately or directly exchanged in a cancellation of the respective obligations, then a credit representative is necessary, and so far as possible, in a practical sense, when applied to the affairs of the people as they exist, the obligations of credit should be liquidated without the burden of a greater change than is consistent with the cost and integrity of an honest and just system; therefore in the supply of United States currency guaranteed by the credit of the people as a medium of exchange the volume to be placed in circulation should conform to the needs of commerce, avoiding alike both redundancy and insufficiency, and with that as the purpose the fiscal department would make estimates and report to Congress for its action.

AUTHORIZING BANKS TO BORROW RESERVES.

The banks could be permitted to borrow from their own reserves if in the opinion of the fiscal department the public interests required the extension of any such loan or loans, and upon furnishing securities approved by and deposited with the fiscal department in such amounts as the fiscal department demanded.

The further details in regard to a plan may be seen in my minority report. The time remaining does not permit me to complete my speech. In order to clear up a few of the things

I wish to say, I shall insert in the Record, as a part of my remarks, my minority report on the Glass bill. Unfortunately for the people they do not have time, or at least do not think they have time, to study what the real trouble with our social system is, and yet if the truth were realized there would be no time that could be spent so advantageously from the viewpoint of real gain as to give these questions proper study. I believe that if every adult would spend an hour each day for a year in a careful analysis of the methods by which a few acquire the main part of the wealth, thereafter the income of the plain people would more than double and their advantages would be many times greater than they are now.

Many of the new arrangements and the most valuable discoveries made in each decade were ridiculed in the decade previous as the visionary dreams of those who were working out their solution. The mind that harnessed steam and made it work for all men; the mind that sent kites to the sky to play with electricity and plan its harness; the mind that arranged wires to send long-distance messages and to carry even the voice in a whisper across a continent; the mind that contrived the apparatus by which to transmit and receive human messages through trackless space on the air waves; the mind that devised the machines with which men fly; yes, the minds that devised political and social reforms and more than a thousand other discoveries that serve this generation were first criticized as the visionary and impractical dreams of persons supposed to have unbalanced brains. Sad, is it not, that those who seek to build for the good of all men should be stamped by the unthinking as calamity howlers and dreamers. And now, after all the examples that history has furnished, we still denounce as visionary the work of those who discover new scientific facts, give the world new inventions, and inaugurate new methods and systems for the common welfare.

But hold for a minute lest we enthuse too greatly over the higher civilization. What has it all resulted in? The great discoveries have constantly amazed and electrified the world. People have advanced more than a hundredfold in economic effectiveness; their mental realization has immensely increased and possible social opportunities enormously enlarged; still there has been no correspondingly equitable individual benefit. As a result of the new order there are a few multimillionaires, but the most of us are striving with difficulty to obtain the bare necessities of life; and yet, notwithstanding this great difference in the control of the material agencies, there is, perhaps, no difference in the average capacity of intelligence on the part of the poor as distinguished from the rich. Then why should there be such a difference in their life results? This is a fact that I have attempted to explain in part.

Knowledge is the means by which we can determine the relations that should be maintained in order to promote the common welfare. How can we have anything even approaching equality of opportunity until the people in general understand the political, economic, and social forces that are in operation. Until we do there will be no official, industrial, and social discrimination, and consequently the enormous inequality between people will continue. The few who are informed and understand will use their knowledge to their selfish advantage and keep the rest of us working for them. Why should we continue to follow the same methods that boss politicians, subservient to the interests, have planned for us? Shall we still allow them to continue to employ graft and use patronage in order to serve the interests so that they can get from them campaign funds and other favors? Shall we follow their selfish purposes and tag as "calamity howlers" and "dreamers" those who point the way by which to improve conditions? Shall we fear them and fail to adopt the improved systems proposed in our generation and which would satisfy our most urgent needs? Surely, after all that has passed, we can not believe that we can trust the management of the Government to political bosses who dole out to their favorites all the offices of public trust and to the special interests favors in the shape of legislation and otherwise. By these methods our greatest material resources have become the property of the specially favored. Surely they should not be allowed to pilot the ship of state. We should no longer be herded by the political bosses within so-called party lines in order that they may manage the Government.

No statesman with the interest of the people at heart, and who has observed in the last few years the traducing of expressed party principles as well as the subversion by party bosses of the machinery of government to the interests of the few, will say that this is rightly a government by parties. Those who do state this are either wittingly or unwittingly the spokesmen for the special interests. The political parties in

these last years have divided the people. The bosses have controlled the machinery of the parties and regulated them by the caucus system. Further, the caucuses have been divided into factions, each in turn controlled by bosses, so that practically a government by party proves to be a government by the special interests. The special interests court the party in control. It matters not to them which party. All they want is that the people should be divided into parties, the parties divided into caucuses, and the caucuses into factions. The strongest faction is generally controlled by the bosses, for the interests always deal with the bosses. As a result he who fights to keep the government within party control usually fights for the special interests.

Nothing is so beautiful as the truth when it stands out prominently in contrast to error. Nothing suggests more clearly the duty of the people to themselves and toward each other than a well-regulated family. There all is consistent. Each fills the place in life that is natural, and the parents naturally respond to all the requirements of their children. But they do not allow them to remain dependent beyond the period of childhood, nor do they contemplate becoming dependent upon their children. Each trains to respond to the laws of God and develops in human sympathy from the purity of his nature and seeks to fill true purposes in life, and especially to be self-sustaining. The ability of mankind to increase in population without men becoming incumbrances on each other is dependent on the working out of this same principle. It should be bred into children from infancy, and if it were not for the oppression forced upon the family from the errors of society and the failures of government every well-regulated family would succeed without difficulty.

In my remarks I have shown that very many people are idle and that still more are engaged in occupations that do not produce the necessities of life nor those things that contribute to the common needs of either themselves or others. These are not self-sustaining. They compete with the rest of us who do produce in consuming the products that are necessary. It is apparent, therefore, that those who are idle and those who are engaged in occupations that do not produce necessities or furnish conveniences that people in general can enjoy are an incumbrance on the rest of us. That is why all able-bodied persons should be self-sustaining. Of course, that does not mean that each person should produce what he eats, wears, or enjoys, but it does mean that he must, in order to be self-sustaining, produce or furnish something that fills the actual needs of humanity. The teacher, for instance, produces no material thing, but does fill a necessary place, and therefore comes within the purview of a producer. The same is true of all persons who perform necessary social service, manual or mental, or either.

The following is my minority report on the Glass bill.

THE GLASS BILL, H. R. 7837.

"The Glass bill, as drafted, is merely a new form for the administration of a false old system. It leaves the worst of all features in the present financial scheme unchanged; that is, the burden of excessive interest. It provides upon its face for a financial stringency and possible panic in its inception as a result of the forced shifting of cash and resultant transfer, and therefore a disturbance of credit. After the shift would be made and the adjustment was finally completed, with the exception of a provision for the issue of asset currency, it would be an improvement over the present method of finances. The disadvantage that would arise by shifting of cash balances and early disturbance of credits may be remedied by simple amendments.

"The most disappointing thing about the bill is that it provides no relief from existing economic evils. That relief is due to begin with an improved money system. The Glass bill proposes to incorporate, canonize, and sanctify a private monopoly of the money and credit of the Nation—to remove all the people's money from the United States Treasury and place it in the vaults of the banks to be used by them for private gain. It violates every principle of popular, democratic, representative Government and every declaration of the Democratic Party and platform pledges from Thomas Jefferson down to the beginning of this Congress.

"Those of the committee who favor the bill have worked diligently and with earnestness and ability to modify the details in dealing with finances, but have done nothing to correct the grossly false basis on which finance is now operated; that is, the fact that financing in the present way is a burden instead of an assistance to trade and commerce. Severe as my criticism of the bill may seem, still I believe that with some few amendments the system that the Glass bill would put into operation

would be less severe on the people than our present system. I do not object to it because of any unfavorable comparison with that now practiced, but base my objections on the ground that now, while we are at it, we should instead pass a good bill.

"In submitting a minority report I have two purposes in view: (a) To offer suggestions for amendments in the Glass bill that would make it simple, more responsive, and less expensive to operate; (b) to offer a new bill to form the basis for an American financial policy to place public and private enterprise, industry, and exchanges upon a sound economic basis and destroy the power of private operators to monopolize the mediums of exchange.

"Those who are responsible for the draft of the Glass bill undoubtedly hope through its enactment to remove from finance the frequent stringencies and occasional panics that develop. The plan they offer, once it became operative and adjusted to, would probably remove some of the danger elements that in the past have driven the country into frequent money stringencies and occasional panics; but as an effective remedy it is inadequate. The very basis of the system that is sought to be patched is false.

"The Glass bill would make a change in the administration of the present system, but no change in the money basis. The design of the bill is to lessen the immoderate and violent fluctuations that result from the present method of financing. For that reason a Member who does not consider the bill satisfactory may vote for it nevertheless. We should first do all we can to secure the enactment of a good bill. This is not a good bill, but with a few amendments it may be better than no bill.

"Business is now operated under a highly technical credit system based on a small amount of lawful money. Twenty-five and possibly more dollars of credit exchanges, on the average, for each dollar of actual cash paid, but credit as a rule is directly related to the location of actual money. It is through the banks that most of the credit extensions occur. The cash is in reserve for the final balances. Comparatively little of the cash in the banks moves at all. It lies in the vaults year after year without going out on any mission of business.

"This bill proposes to shift a very considerable part of the bank cash. It would require several months at the very least to adjust credits to the shift. The volume of credit would be disturbed to a very much greater extent than the shift of cash. Business would be disturbed by the change unless provision were made to keep credit from being interfered with.

"The general public gets no direct connection with the Glass bill for purposes of securing either credit or cash. The public will still be forced to go to the banks. Therefore if the bill is to become operative, the banks will have to come under it. The national banks would only be compelled to do so, but if they alone do, it will hardly be satisfactory, because they do only about one-third of the banking business.

"SOME ACTUAL CONDITIONS TO BE MET.

"On April 4, 1913, the deposits held by national banks required them to hold a reserve of \$891,794,905. They were \$15,691,784 short—below the reserve requirements. If they had been compelled to subscribe for Federal reserve bank stock under those conditions, what would have happened? Their capital stock was approximately \$1,050,000,000, which would have required them to pay \$105,000,000 for stock within 60 days. This sum would be transferred to an entirely new field of financial development. In addition to that, under the law they would have been required to make good the \$15,691,784 shortage in reserve within 30 days; an old provision which is carried into this bill. The State banks were practically in the same condition, and if they, too, come in, as the bill contemplates, the demand for ready money would have exceeded \$200,000,000 for Federal reserve bank stock alone, and a much greater shift of deposits would be required. All things considered, it is not improbable that a shift of near half a billion dollars would have to be made.

"A MONEY STRINGENCY AND POSSIBLE PANIC.

"The contraction which would come about in making such a change—that is, in the shifting of cash from its old moorings and the still greater credit disturbance—would result seriously and bring about a great loss to the people. A statement of some actual facts will illustrate sufficiently. In a general way the results would be the same from an analysis of any bank report made in the last 10 years, but to be specific I take the banks' reports to the Comptroller of the Currency September 4, 1912. I call attention merely to a single bank in each of the States having a representative on the Banking and Currency Committee. I show the capital stock, the amount it would have

to pay under this bill, and the actual lawful money contained in its vaults, as follows:

	Capital.	Assessment.	Money in bank.
Barnesville National Bank, Minnesota.....	\$25,000	\$2,500	\$2,514
People's National Bank, Virginia.....	50,000	5,000	3,931
Whitland National Bank, Indiana.....	25,000	2,500	1,237
People's National Bank, Rowlesburg, W. Va.....	25,000	2,500	1,536
First National Bank, Hudson, Ohio.....	50,000	5,000	3,657
First National Bank, Almena, Kans.....	50,000	5,000	2,556
Irving National Bank, Irving Park, Ill.....	100,000	10,000	7,798
Athol National Bank, Athol, Mass.....	100,000	10,000	6,582
Comanche National Bank, Comanche, Tex.....	100,000	10,000	6,637
First National Bank, Perry, Ark.....	25,000	2,500	1,688
First National Bank, Wellington, Colo.....	25,000	2,500	1,203
Heard National Bank, Jacksonville, Fla.....	1,000,000	100,000	80,826
First National Bank, Alex, Okla.....	25,000	2,500	1,503
Gaffney National Bank, South Carolina.....	150,000	15,000	9,725
First National Bank, Vacaville, Cal.....	50,000	5,000	3,501
Union National Bank, Brunswick, Me.....	50,000	5,000	4,238
Grange National Bank, Chester, Pa.....	100,000	10,000	9,112
Farmers & Mechanics' National Bank, Jefferson, Iowa.....	40,000	4,000	1,877
First National Bank, Baldwinville, N. Y.....	100,000	10,000	8,225

"These responsible banks on the date named did not have sufficient lawful money in their vaults to meet the requirements of the Glass bill. Many of the banks have more cash than is necessary, but the banks listed above are not isolated cases. Substantially the same condition exists in all the States. Hundreds and hundreds of banks would be required to pay out, within 60 days after the organization commenced, all the cash in their vaults, and many more of them would have barely enough. In the aggregate they would not have enough.

"Instancing this condition, in South Carolina there were 46 national banks on September 4, 1912. On that date six of them did not have enough lawful money in their vaults to pay for the stock they would be compelled to take. What would happen under such conditions? These banks would, of course, draw on their reserve banks for the money due from them. Simultaneously the reserve banks would be called on to return to the other banks their reserves and pay for Federal reserve bank stock.

"Let us take the National City Bank of New York as an example. It is a central reserve bank, required by law to keep 25 per cent lawful money reserve. On September 4, 1912, its deposits were \$239,669,430. It required a legal reserve of \$59,917,357, but it had only \$48,364,892 lawful money in its vaults. It was owing to other banks, included in the \$239,669,430, approximately \$100,000,000. These banks, under the operation of the bill, would be compelled to draw on the National City Bank for money to pay subscriptions for Federal reserve bank stock, and also to cover in these banks within 60 days a 3 per cent reserve. The country banks do not, as a rule, carry more reserve cash in their vaults than the law requires and could not draw directly from their vaults. In addition to that, the National City Bank would be required to pay \$2,500,000 for capital stock. The statement of September 4 shows that the National City Bank had not sufficient lawful money to meet any such demand. It may be suggested that it had \$38,296,647 checks and exchanges outstanding; but, admitting that, and that these come in rapidly, as many more are put out in the regular course of business. The commerce of the country demands transmission through the mails, express, and in clearance agencies enormous sums. Under the terms of the bill this one bank would probably be compelled to transfer more than \$100,000,000. I do not plead for that bank. Its stockholders have fleeced the people of this country, but what applies to the demands that are to be made on that bank applies to the demands that would be made on banks generally in the proportion of their business. A scramble would take place among the banks to get in shape to meet their obligations. Naturally they would demand payment of the borrowers. A stringency would result, and possibly a panic. In such an emergency the borrowing people would suffer, because they are absolutely tied to the banks, and the Glass bill would make no change in that respect. If everybody would remain perfectly calm and make no demand for impossible things, the shift could be made under the stress without an actual panic.

"COMPENSATING PROVISIONS TO THE BANKS.

"There are some compensating provisions in the Glass bill that would aid the banks in changing from the present system to the proposed system, provided that no excitement would arise until they were made effective. The Federal reserve board may suspend for 30 days, and renew the suspension for periods of 15 days, any and every reserve requirement contained in the bill. Aid would also be given to the banks by a deposit of all the funds in the Government Treasury. Still

further aid might be provided by a loan of United States currency. But the organization would have to be complete before that could be loaned. Much loss might occur in the meantime.

"It is claimed by this bill to give considerable control and management of the banks to the Government, but it reserves no power in the Government to aid those who need money to do business with. Those who actually use the money to carry on business are compelled to go to those who use money simply for the purpose of charging a profit out of handling it. That is, the banks and money lenders make a profit out of those who use money. The latter have no other purpose whatever. This bill makes the bankers the "go-between" between the Government and those who use money only as a means to deal in the material and social exchanges that are essential to civilization, the only true purpose of money. This bill provides for the continuation of an actual extortion fostered by the Government against the freedom of business intercourse among the people. It recognizes the superior sovereignty of the embodied institutions of money over any power of government, so that neither the Government in its sovereign capacity nor the people, or their representatives, can initiate the placement of one dollar of monetary function into actual exchanges among the people, except through the agency of organized money lenders with purely selfish interests. The Glass bill positively abolishes the United States Treasury and the public money of the people, and substitutes the so-called Federal reserve banks, which by the terms of the bill are to be the exclusive stock of the bankers. It reduces the people's Treasury Department and the Bureau of Printing and Engraving to the position of a job-printing house for the private use of the bankers.

"It is an advantage to the banks to have the Government print and engrave the money, so long as the banks may have a monopoly of its distribution. This bill continues and affirmatively gives them that monopoly. They have held it for a long time in the past, and now Congress is about to bow its subservience in more positive express terms of a statute than heretofore. Ask, Where will the people go to borrow money after this bill goes into effect? Congress has been slipped into the halter by the money lenders, and they seem to have supplied themselves with a double hold—a chain in addition to the strap.

"Those who wish to use money for the purpose of its service to a freedom of trade by the people among themselves find no Government-supported source of supply except the exclusive monopoly granted to the banks. These banks have the means and do compel the people to pay for the use of money a rate of interest that forces the majority of mankind into needy circumstances and deprives all but a few of a proper compensation for their lives' efforts. No one should assume because of all this, and because the bankers get the lion's share of profits, that bankers are disposed to be vicious. We should change the system and not blame the bankers. In the process of changing the system the people should address themselves first to a subservient Congress.

"The Glass bill, being distinctively a banker's bill, and all who are not bankers being compelled to go to the banks for accommodations, we should at least make it easy for the banker to help borrowers whenever he is willing. If this bill is passed without some minor amendments, to make the transfer from the old to the new system easy, the bankers will be compelled to retrench until they can adjust to this new system. They will not only be compelled to withhold further credit during that period, but many borrowers will be called on to pay notes while the adjustment is going on. For that reason, if the general plan of the bill is to be adopted, some amendments can and should be made to obviate the tendency to create a stringency. The banks will not wait for help, but will help themselves by calling on borrowers to pay. It evidently is the opinion of those who favor the bill that the Federal reserve board will waive the affirmative requirements to enable bankers to shift from the old to the new system without disturbance. Admitting that the board would do so is not sufficient to the business world. Bankers are cautious business men and will resolve all doubts in favor of safety, and therefore call in loans until they are prepared to meet the most difficult provisions of the bill. The bill should be made right to start with so far as human foresight can make it and still have the saving clauses to meet any oversight.

"FEDERAL RESERVE BANK STOCK ASSESSMENT.

"Instead of making a call for 5 per cent instant and 5 per cent within 60 days, it should be made in several smaller calls distributed over a period of a year. There is, however, no need of so much centralized capital as would occur in these banks. The security of the depositors in a bank depends on the good

management more than on the amount of its capital stock. The funds in the control of a good management in a bank are usually several times greater than its capital. A 5 per cent assessment on the capital and surplus for the establishment of the Federal reserve banks would serve the country better than a larger assessment upon the capital alone. I believe that 3 per cent on the combined capital and surplus would be still better, because that would leave more money for use in the proximity of its origin, where it belongs.

"ASSESS COMBINED CAPITAL AND SURPLUS.

"Assessments should be made both on the capital and surplus. The surplus of a bank is as much a part of its capital as the capital itself is. It would be an injustice to the smaller banks unless the assessment is made on both capital and surplus. The 37 national banks in New York City, for example, had September 4, 1912, a capital of \$120,200,000 and a surplus of \$128,255,000; while taking, for instance, the first 37 banks listed in Minnesota, which is a fair average for country banks generally, their aggregate capital on the same date was \$1,425,000 and their surplus \$458,615. Now, if this new system is to be a protection to the banks or if it is to be a burden to them, in either case let them pay for the one or the other in a proper proportion. The bill should be amended to have the assessment made on the capital and surplus both.

"BANK RESERVES.

"The reserve requirements should be reduced immediately to 20 per cent for all reserve banks. That would help the banks to meet the demands of the country banks for a return of their funds. As the bill is, the reserve banks would simultaneously be compelled to press collections—first, in order to meet the demands from the country banks for their reserves; second, to subscribe for stock in Federal reserve banks; and, third, to transfer a part of their own reserves to the latter. The period of adjustment should be more graduated and the reserve requirements reduced. Since the banks have absolute control of the distribution of money to borrowers, they should not be prevented from loaning at times and in places when and where the money is needed. The formative period of adjustment to the requirements of this bill would prevent that unless amendments are made.

"CAPITAL CAN NOT BE SIMULTANEOUSLY PROVIDED FOR 12 FEDERAL RESERVE BANKS, WHICH MIGHT RESULT IN THEIR BECOMING ONE CENTRAL BANK."

"On page 3 the Glass bill provides for not less than 12 Federal reserve banks with capital equal to 20 per cent of the capital stock of the banks subscribing, and for one-fourth to be paid in cash, and also that no Federal reserve bank shall begin business until \$5,000,000 has been paid in. Since the Federal reserve banks would be started by the national banks alone, as they alone would be forced to join, they, with an aggregate capital stock of less than \$1,100,000,000, even if they should all join, could not start 12 Federal reserve banks on a 5 per cent assessment with each a paid-in capital of \$5,000,000, as the bill requires. Furthermore, it would be impossible to equalize to approximately equal the capital in all districts. It is necessary, therefore, to amend on page 3. The bill would serve the country better by making the stock of the Federal reserve banks equal to 3 per cent of the unimpaired combined capital stock and surplus of the subscribing banks and permit them to begin business when \$1,000,000 is paid in. Under the provisions of the bill the Federal reserve board may name the 12 Federal reserve districts and the cities for their banks. The city of New York should and of course would be named as one of the 12. Chicago would be another. The influence of the moneyed interests could easily prevent all of the districts except New York City from completing the organization unless the provision forcing banks to become members is held constitutional, which is somewhat questionable. The larger banks would have to join in order to have capital enough for 12 reserve banks. The larger banks are controlled by stockholders who support the Wall Street system. Anyone who has investigated the influence of that system knows that its influence in a case of this kind would be all powerful. The New York district under that condition might complete its organization and the rest drop out by default. Then there would be one central bank controlled by Wall Street stockholders. The Federal reserve board would have some influence, but not sufficient to help the general public out of the difficulty that would arise from such a condition. It is not within the power of the Federal reserve board to complete a single organization if the banks do not affirmatively act.

"INCREASE AND DECREASE OF CAPITAL STOCK.

"Sections 5 and 6 provide that when banks reduce their capital, or dissolve, or become insolvent, the Federal reserve bank shall pay therefor a sum equal to their cash-paid subscriptions on shares surrendered. In times of panic or financial stress

this provision would weaken the Federal reserve banks. The banks holding the stock could dissolve, reduce their capital stock, or go into insolvency, thus not only avoiding the whole or a part of the responsibility to carry the Federal reserve banks through financial storms, but actually thereby reinforce their individual holdings by reducing those of the Federal reserve banks. This should be so amended that payment for shares surrendered would be made at such time as the Federal reserve board from time to time provides. No solvent bank should be permitted to surrender its stock at a period when in the opinion of the Federal reserve board the general public interests, on account of financial stringency, require the Federal reserve banks to have all their resources available to meet the more general demand.

"SMALL BANKS SHOULD BE ADMITTED.

"The second paragraph of section 10 should be amended so as to provide that no bank should be excluded from becoming a member bank of a Federal reserve bank because of the amount of its capital stock, so long as its capital stock and surplus remained unimpaired, if in every other respect such bank was qualified. The welfare of the whole people requires the thrift of every community. The small communities are as essential as the large ones, and their banks should receive the same treatment as those of the larger cities.

"FOREIGN AGENCIES.

"The last paragraph of section 15 should be amended so as to prevent instead of permit Federal reserve banks opening accounts or establishing agencies in foreign countries. Since it is proposed by this bill to turn over to the Federal reserve banks the Nation's funds, we should not entangle them further by permitting the Federal reserve banks to establish agencies in foreign countries for speculation. The foreign banks authorized by section 28 of the Glass bill would attend to foreign business.

"GOVERNMENT DEPOSITS.

"It may be questionable whether it is constitutional to deposit Government funds in the banks except in consequence of appropriations made by law. Funds that have not been appropriated must remain in the Treasury. Subdivision 7 of section 9, article 1, reads:

"No money shall be drawn from the Treasury but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

"It may be that any funds that have actually been appropriated can legally be deposited in the banks. However, passing that question, the adoption of a policy to continually keep on deposit all the public funds in the banks is at least doubtful. The bankers claim that the money is being taken out of business to pay the Government demands and should be deposited in the banks in order to pass back into business. If its doing so were confined to legitimate business and did not enter into speculation and gambling, there would be more virtue in the claim.

"A concrete illustration exists at the present time to show the effect of the use of the public funds. The first \$10,000,000 that the present Secretary of the Treasury deposited in the summer (1913) in the banks on 2 per cent interest basis probably did no good, because it was immediately absorbed by Wall Street and used to exploit the people. The bank statements show that it quickly gravitated to Wall Street. I do not make the statement in criticism of the Secretary. It did not happen to be a good time to make the deposit. On the other hand, the later and larger deposits being made by the Secretary of the Treasury in the banks in the South and West come at an opportune time. It will help to move the crops and to steady conditions and prevent financial stringency.

"The undesirability of keeping all the public funds on deposit in the banks all the time is, I think, manifest. At certain periods there is a great demand for money to move crops. When crops have been moved the demand for money weakens and it piles up in the banks. The banks loan it out then at lower rates of interest. The speculators have taken advantage of those conditions in the past years to reduce the price of farm products when the farmers sell their crops. They hold the money tight then, but when the farmers buy what they require the speculators would have the money market easy so as to make the farmers pay high prices. In that way the speculators have practically fixed prices. When the farmer sells he is compelled to take the price the speculator offers; when the farmer buys he gives the price the speculator demands. That is one of the troubles with the present system, and this Glass bill does not furnish a sufficient remedy.

"If the banks are given all the public funds at all times, as the Glass bill provides, there will be times when they will not be in demand for legitimate commercial business. They will then

be loaned to the speculators, who will exploit the people. Then when the demands of legitimate trade come again the money market will become tight. The farmer, the merchant, the manufacturer, and others will be compelled to compete with the speculators to borrow money. The interest rates will be raised. There will be no place then to give relief like that at the present time being extended to some sections of the country by the Secretary of the Treasury. The discovery that such relief can be given has come too late, for we will hardly have more than a sample of its effect until the Glass bill will become a law and will take the public funds and place them where they will be available to speculators in competition with legitimate commerce. It may be contended by those favoring the bill that the banks can secure Government note issues at any time they wish. That is true if the Federal reserve board would approve, as very likely it would if the public interest required, but that is a protection available to the banks alone. They may apply if they wish, but neither the Federal reserve board nor the public at large could force such an application to be made. The banks are in the business solely for profit. It is for their interest to keep the rates of interest as high as they can, and it will make no difference how much the public may be in need of more money, the banks will make no application for Government note issues till such time as the public is willing to pay a larger profit than the banks can make without. The banks can bring out the note issues if they wish, but no one else can.

"NOTE ISSUES MADE ASSET CURRENCY.

"For more than a half century the money lenders have ridiculed the issue of United States currency based on the credit of all the people. Now they ask the United States to issue notes on the credit of the people, but not for the people nor in their interest. Instead it is proposed to organize the private banks into 12 or more special corporations and issue this currency on the security of notes, bills of exchange, acceptances, Government, State, and municipal bonds. In other words, it is to be a form of asset currency supported by the Government but given to special interests to be vested by Congress with full and complete authority to scalp from the people and generally exploit them.

"By section 7 in this bill the Government is to divide the profits that the Federal reserve banks get out of the people; that is, the Government is to print and engrave currency for these private corporations and give them the monopoly of loaning it, and whatever they are able to force the people to pay for the use of it such proceeds, after the corporations have first taken out the expenses and 5 per cent profit for themselves, the excess will be divided between these corporations and the Government. Considering section 7 in connection with the note issues which the Government is supposed to charge for, and also in connection with the charge to be made upon Government deposits, this section 7 establishes a vicious principle. Upon the note issue as well as the Government deposits, the policy of making a reasonable charge can not be reasonably questioned. That is clearly within the Government right as well as a fair policy, but this section goes further, and provides that after the special private corporations to which Government note issues and Government deposits have been furnished and a proper charge made, that after these corporations have gotten out of the people a reasonable return, that is 5 per cent as fixed by the bill, then whatever in addition to that that can be extorted from the people the Government will divide with the banks.

"No one other consideration in connection with the business dealings of the people with each other is so important as the money and credit system. The authority for the money, as well as the support of credit, depends for its stability on the Government. In the extension of the advantages sought to be derived from the use of money and a practical use of credit the power of the Government is absolutely essential. Any proper considerations by Congress of this subject are necessarily national in their scope.

"It is the acme of absurdity for Congress to place between the people and the Government itself an agency in the absolute control of the distribution of money and the use of credit that would be valueless without the guaranty of the Government, and yet that is the identical thing that has been done by Congress, and the Glass bill emphasizes the absurdity.

"Why should Congress place a controlling agency, employed for private gain, between the people and the Government of the United States? That is what has been done by giving to the banks the exclusive privilege of the use of the Government credit. Why is it proposed that the banker should take the merchants', the manufacturers', and other notes, as well as the bonds of towns, villages, cities, States, and even the Na-

tion's bonds, to the Government and get currency, and at the same time refuse the producers themselves, the makers of those notes and obligations, an equal privilege? The absurdity of the Government giving away its own credit to corporations to exploit the people is incomprehensible. The bankers are not to blame. Congress is to blame for giving away the people's rights and bestowing them upon the banks.

"It is true that Congress possesses the authority and has the power to strip the banks of their exclusive monopoly, but the most of us have not the courage, and therefore we have the absurdity of the Congress of the United States giving to special interests the Government credit—the credit of the people—thereby forcing the people to borrow at exorbitant rates of interest the very money that their own Government issues on their own credit. The fiat of the Government is stamped upon the coins and the currency and then given to special interests and used as a means to pauperize the people. If the exclusive privilege were not given to the banks, then they would become the people's natural agents, but with the exclusive monopoly they become the people's masters.

"The notes, bills of exchange, acceptances, bonds, etc., are the limited currency of those giving them—limited in its circulation by the credit that one or more persons are willing to give to it. By this Glass bill it is proposed to give the credit of the Government to these and create an endless chain by means of which the Government is to manufacture asset currency for the banks.

"GOVERNMENT FURNISHES CAPITAL.

"The Glass bill proposes to deposit all the Government funds in the banks. In the past the funds have been approximately \$250,000,000 and the sum increases with the growth of Government business. Of this first sum of the people's own money to be taken from the United States Treasury the banks may loan to the people two-thirds and keep one-third in reserve. They will get the people's notes, bonds, and so forth, for approximately \$165,000,000. Then, under section 17 of the Glass bill, they will be allowed to take these notes and bonds to the United States Treasury and deposit them and get United States currency. This currency they will take out and loan to the people and get an additional supply of notes and bonds. In the meantime they will have collected a lot of interest on the first installment, and, with that reloaned to the people, they take all the notes and bonds they get and come back to the United States Treasury for another supply of United States currency, and, as previously, they run out again and reloan that currency to the people, and now again they have still more interest collected from the people which they will have reloaned, so they add that and come back to the United States for still another supply of currency. If it were only the Treasury funds they were to have it would be hampered some by the reserve required to be back of the note issues, but they also get the deposits from member banks and can do the same with those.

"Thus we see that the specially created interests which the Glass bill proposes to make will get the funds in the United States Treasury and a large part of the individual deposits of the people, loan them out to their owners, the people, get the people's notes and bonds drawing interest, and keep re-turning over and over, again and again, for United States currency to loan. Thus it is to continue 'world without end,' the people encumbered without end. It is to be a never-ending pulley, with boxes attached, leading from the banks into the Treasury of the United States, taking into the boxes the people's money, bringing it out from the Treasury of the people and into the banks, to be loaned to the people themselves at a price to be in the exclusive control of the banks. The Glass bill proposes to protect the individual bank that rediscounts with the Federal reserve from exorbitant interest rates, but none but member banks can apply, and the bill gives no individual borrower any protection as against an unreasonable charge of interest by the bank.

"In accordance with the legislative and executive policy, and upheld by judicial decrees, running through their official acts, to be found in statutes, department orders, and judicial decrees, the people have been given into bondage. In less than 100 years the expense of administering the investment of the money that this Glass bill alone authorizes to be taken by the banks out of the United States Treasury, plus the compounding of interest, at the rates that banks charge and collect from the people, would absorb the equal of every dollar's worth of property now in existence and still leave a deficiency on which to declare the people bankrupt. I challenge any honest person to compute the cost to the people. If he does, he must admit the truth of the statement. A somewhat similar process to that which this bill makes possible for the pyramiding of loans from the use of currency authorized to be given to the banks has existed for a long time by the use of deposits and credits for loans based on

bank accounts, and we are paying now in the high cost of living partly because of that practice. A vast majority of the people have no property, but live from hand to mouth on the little part they get from the results of their daily toil. The rest is absorbed to pay the toll that the Government practically provides for the banking and other special interests.

"THE ABSORBING POWER OF INDIVIDUAL FORTUNES.

"By reason of the policy followed by the legislative and executive departments, and supported by the judicial, there are several individuals in these United States, each of whose fortunes are now large enough so that 6 per cent annual interest compounded, as is the custom, computed for 100 years, would furnish the owners with all the luxuries and extravagances of life, such as the families of the wealthy usually indulge, and, in addition, enable them and their successors to their fortunes to absorb the equal of the whole wealth now existing in this country. There are more than a thousand others who in twos, threes, fours, fives, and sixes could do the same thing. They are all levying a tax, burden, or whatever you wish to call it on us every day of our lives.

"It is a fact that any and all the legislation that has been advocated by the political leaders will have mighty little influence in solving the cost of living. It is not in the tariff bill, nor is it in the currency bill. It will not come out of a bill that comes out of secret meetings and closed caucuses. There can be only one purpose for doors being closed to the public, and that is to whip subservient Members into supporting something that does not give the people that to which they are really entitled. This Glass bill is an example of that. Those who provide us with bread and butter and with the clothes that we put on our backs and the shelter for our bodies are the last to be served. These, who are the source and very basis for the supply of life's necessities, are deferred to a future period, while the Glass bill that we are called on to enact continues the system which gives to special interests a monopoly control of the distribution of money. Those who toil must support it and must appeal to these special interests and pay them the toll for its use, with not one word in the entire bill placing a limit on that toll.

"It is generally pretended that the reason the money supply is out of proper commercial adjustment at certain periods is because of the extra demand for the movement of the crops. It is true that there is a farmer's demand, but the trouble with the reformers is that they do not intend to give the farmer the remedy. The farmer is put off till the last. His rural credit system can wait. The speculating interests are to be first supplied with funds to speculate on the farmer's products. This bill in one of its sections is expressly against the farmer. It offers a sop in section 26 by permitting the national banks to loan on improved farms for nine months, which would be of little, if any, value to a farmer. The farmer, unless in desperate straits, would be foolish to mortgage his farm for so short a period, but section 17 of the bill discredits the farmer's note by refusing to permit it to be used as security for United States currency, but allows most other kinds of paper to be taken. There is nothing better than a note secured by a farm mortgage. Farm-mortgage notes should be accepted the same as merchants' notes and others when they have the same period to run before maturity. A large amount of farm-mortgage notes are coming due within 60 and 120 days all the time; that is, a farm mortgage, after it has run to within a period of 60 or 120 days of maturity, it makes no difference how long it was made for originally, even if 10 years, is as good as any other short-time note, and the bill should be amended to take such notes.

"While I regret it, I am not surprised that the President might advocate a bill that he could not possibly have had time to study, for his multifarious duties make it impossible for him to give detail study to these matters, but Members of Congress have time and are not excusable for submitting a bill so weak in its value to the public. It may be better than what we have now in practice, but the people are entitled to a bill worth 100 cents on the dollar.

"Various other amendments of lesser importance could be made to the Glass bill, improving it, to which I shall not call attention in this report, rather leaving them to be considered on the floor of the House. In suggesting the amendments that I have, it is not with the intention of approving the bill even if the amendments are adopted. The amendments would improve the bill, and with them in I could vote for the bill when all things possible had first been done to adopt a good bill.

"The Glass bill is unfitted to an adjustment of the greatest financial problems that now confront the people for solution. If it were to be amended so as to meet the necessities of the present times, even the title would have to be stricken out, and

other substituted, all the sections rewritten, and there would be nothing left to resemble the original.

"NEW LEGISLATION AND NOT PATCHWORK IS NEEDED.

"Congress was called into extra session to legislate with a view to reduce the cost of living. All honest people must commend the purpose. Earnest efforts have been and still are being made to accomplish that result, but on account of peculiar partisan practices and false rules for the government of Congress, for which men and not parties are at fault, Congress does not have presented to it in form to vote on measures suited to the people's most urgent needs. Secret committee meetings and secret caucuses frame bills, bind and gag the attending Members, and by a system of evading record votes on separate important provisions, prevent the passage of legislation that would result in a substantial reduction of the cost of living.

"Unless some sudden change takes place in the government of Congress that is not apparent at this time nothing that is here being done will reduce materially the cost of living to those who earn it by their daily work. The reason why may be easily understood by anyone who will carefully study the conditions. Such a study will reveal to anyone the leading cause for the high cost of living. When one understands those he will know that the two bills which by the rules governing Congress are permitted to be acted upon will not accomplish the result demanded.

"In the hopes that the people, as well as their representatives in Congress, may give this most serious matter attention early enough to change the course of things here to give them a better turn, I have labored to point out a few things that must be done if we would give the people any material relief. I am not given sufficient time to state all the facts that I wish to in this report. I have no greater capacity than other Members, but I have put in the time to investigate carefully the conditions. I have gone out among the people and seen the rich and poor in actual operation in business and work and have studied them there as well as in their homes. I have had enough experience in various ways to enable me to understand quite well why it is that a few people are now getting all the wealth that results from the labor of people generally, and what is more important, I know that the power of the few to outrageously extort from the people generally can be prevented. For the information of any Member who has not had time to make the investigation for himself and who wishes to study the subject further from my viewpoint and so informs me I will furnish a book which I have just published on Banking and Currency and the Money Trust, and also a speech which I delivered in the House August 2, 1912.

"THE LOWER COST OF LIVING AND ITS RELATION TO MONEY AND CREDIT AND TO INTEREST, DIVIDENDS, RENTS, AND PROFITS.

"We must have food, clothes, and shelter, and require the instruments with which to ply our daily work. These are the prime necessities, and are made available only as the product of labor. They determine the initial cost in living. When the means of the individual units in our social order—that is, of the people—are safeguarded and kept unencumbered while they provide their prime necessities, their securing benefits from the social order in excess of such prime requirements will be assured as a consequence. A few concrete illustrations will make that clear.

"It must be kept in mind that the Government of the United States and of the several States has established a policy supported by general practice, by statutes, and the decrees of courts that the owners of property are legally entitled to a rate of interest or dividends or profit return that in and of itself encumbers all people. The people must have the use of the property or the products from its use, and therefore are compelled to pay the interest. The power of its enormous burden I show in the following interest table compiled by a former Librarian of Congress. This table shows the growth of \$1 by compounding interest in the manner of the banks. One dollar loaned for 100 years would grow as follows:

Interest at—	
6 per cent per annum would amount to.....	\$340
8 per cent per annum would amount to.....	2,203
10 per cent per annum would amount to.....	13,808
12 per cent per annum would amount to.....	84,075
18 per cent per annum would amount to.....	15,145,007
24 per cent per annum would amount to.....	2,551,798,404

"I shall cite a few individual cases from which Members of Congress can easily determine that not only on paper and in theory is the Government supporting a policy of pauperizing the people, but it is actually pauperizing them by its support of this practice. Use the table above, and from it the tremendous power of interest and dividends to oppress the plain producers may be seen. The individual fortunes are stacked up against the people's daily energy, so that from the products of their toil

the interest, dividends, and rents must be paid. It means that dead capital is stacked up against human life so as to make humanity subservient to so-called 'vested rights,' by law privileged to take an extortionate toll for the use of substance which has been produced by the people's own toil. That is the encumbrance to which I referred as being directly and indirectly responsible for the high cost of living. No bill that would properly deal with this problem has been permitted by the so-called 'leaders' in this Congress to get a fair hearing. On the contrary, the 'leaders' have appropriated the public committee rooms and the Halls of Congress as well, corralled subservient Members, locked the doors to keep the other Members and the public out, and produced bills that Members have been coerced to support under the guise of harmony in a party.

"The following cases to which the table of interest may be applied is illuminating:

"From the testimony given by George F. Baker, president of the First National Bank of New York City, before the committee appointed to investigate the Money Trust we learn that the operations of a single bank produced in 50 years profits equal to \$86,000,000, or 172 times its original capital. If that bank continues to do business and is allowed to pile up profits in that geometrical progression it alone, on an original investment of \$500,000, in less than 100 years would have the power to extort from the people more than the equal value of all the existing property in the United States, and that bank is but one of the 30,000 banks operating on an uneconomic system.

"The capital stock of the national banks alone, in 1912, was \$1,046,012,580. The dividends paid for the year ending June 30, 1912, averaged 11.66 per cent, which was in addition to the accumulation of a large surplus. Going at that rate, compounded as the banks do, they would have the equal of the entire present valuation of the country absorbed in less than 50 years and would have the surplus from year to year to do anything they wish with. These dividends are over and above all the expenses, which include pay for the clerks and high salaries for the officers connected with the banks. That is not all; the bank officials have unusual opportunities, and most of them do speculate in various ways, and in the aggregate they get greater profits from deals that make no return to the banks than the actual dividends declared. What I have named includes the national banks alone. There are more than twice as many other banks, loan and trust companies of the different kinds. These do about twice as much business as the national banks. That is just one great interest, the banking and financial.

"There are the railways, the steel and iron companies, the oil companies, the coal companies, the telegraph and telephone and numerous other companies, besides a thousand or more great individual fortunes, that concentrate into very limited control the principal part of the active capital in the country. This is held on one side by the so-called capitalists, protected by the 'vested rights doctrine,' which means law, that enables them to extort from the people in what are called dividends, interest, rents, and profits, an amount that, as shown by the interest table given before, is absolutely sure to keep the cost of living high and to keep the people working to support that system. By that system any person who can get a few thousand dollars can live in idleness or as a spendthrift on the interest that the working people of this country are forced to pay.

"Members of Congress are intelligent. What I have already stated is sufficient to show any intelligent person that our present system is a fraud on the people. No intelligent, self-respecting people can long tolerate a governmental system which by its established and expressed policy places an unnecessary burden on the citizenship. I shall not multiply the examples showing the injustices created by the policy of government. A word to the wise is sufficient. To others it would be hopeless to pile up examples.

"WE REQUIRE TO LIBERATE THE PEOPLE FROM EXCESSIVE INTEREST.

"Under the Glass bill the amount of money that would be exclusively within the control of the banks within a few months after its becoming a law would be increased. The bankers' powers to collect interest would be considerably augmented. It is on that account that the Glass bill does not provide a remedy to meet the people's greatest necessity.
